Patsey, handled by his owner, Mr. R. C. Van Horn, is well known. He has quite a turn of speed and shows considerable hunting sense. He has been trained to flush his birds to order and evidently thinks it great fun, but the judges apparently were of a different opinion, and he failed to obtain credit marks for his brilliant offorts in this direction. Gay is a very nice moving little bitch with a fair rate of speed and lots of style, handled by Titus. They were put down after lunch in an open field and worked toward a plum thicket near where a bevy had been seen to settle when we came up to lunch. Patsey went below the thicket and pointed a hare while Gay went up to the thicket and got on the birds. As Titus came up a single flushed near him and as he went ahead the remainder went. One of them flew directly over Patsey and he remained steady, but as the bird fell to Titus's gun and fluttered on the ground just beyond him he broke in and retrieved it. The bird was then thrown and Gay also retrieved it. Working down to some woods we turned along the edge when Patsey made a point to a single that was flushed by Gay as she came down wind toward him. A little further on Gay made a stylish point, but soon went on. Patsey then made a point, and as his handler came up jumped in and put up the birds. Soon after Gay pinned one that flushed as Patsey drew toward her. Patsey then pinned one and Gay drew past him and stole the point, the bird going a few seconds later. As the dogs went on a bird flushed near them as they disappeared in the thicket. Both then pointed with Gay ahead, the bird flushing wild as the handlers came up. We then turned back to the horses, which had been left outside the thicket, and the judges compared notes and awarded the heat to Gay Gladstone. Down twenty-seven minutes. This ended the first series with the following result:

Summary First Series.

Ben Hill beat Beaumont.
Lillian beat Gladstone's Boy.
Don's Dot beat Dora.
Daisy F. beat Pet Gladstone.
Dan Gladstone beat Lady C.
Noble C. beat Lufra.
Sportsman beat Chickasaw II.
Minnie S. beat Bridgeport.
Richmond beat Jack Cade.
Bob Gates beat Niobe.
Gay Gladstone beat Patsey D.

Second Series.

DAN GLADSTONE AND NOBLE C.

In the regular order of running Ben Hill and Lillian came together in the first heat of the second series, but Mr. Stephenson succeeded in convincing the judges that the rule allowing a change in the regular order of running when two dogs owned or handled by the same person came together, applied in this case, and they decided that Ben Hill and Don's Dot should run together and Lillian and Daisy F. Mr. Stephenson owns Ben Hill and handled Lillian, Ben being handled by Mr. Bevan. This was an ingenious plan, to say the least, as thereby both dogs had a chance to remain in for the next series, whereas if they ran against each other one must drop out. After Ben Hill and Don's Dot were put down, Mr. Rose, the handler of Daisy F., protested against the change, and pending a decision the running of the first two brace was postponed, and the third brace in the series, Dan Gladstone and Noble C., was ordered to be put down. At a meeting of the Executive Committee in the evening it was very properly decided to sustain the protest of Mr. Rose. The rule was made to protect the interests of the owner or handler having two or more dogs entered in the same stake, and was never intended to encourage combinations whereby owners or handlers could obtain an advantage over their competitors. Dan and Noble were very nearly matched in

speed and range. Both are very stylish, Dan having a trifle the best of it. They were put down at 2:48 in sedge on a slope. Dan challenged at old scent but could make nothing of it. A little further on Noble half pointed, but the birds, a brace, flushed wild before he had an opportunity to locate them. Soon after both pointed, but moved on as the handlers went ahead of them. Noble got it right, and roaded out the trail nicely, the bird flushing near Stephenson, who killed it, and Noble retrieved well. A little further on Dan made a point, and Noble close to him backed or pointed, we could not determine which. As the handlers came up both dogs drew on, and pointed simultaneously a bevy that was flushed to order nearly between them. Short killed one and Dan retrieved it. We then turned through some woods, leaving these birds, and beat out considerable ground to a thicket, where Dan made a very stylish point to a bevy, Noble backing him nicely. Short to order put them up and killed one, Dan retrieving it well. Casting up the hill, Dan soon had one fast that Short to order flushed. Dan then pointed a hare, and a little further on one flushed near Noble, and he was unsteady to wing. He then made a nice point to a single, and Dan backed him. Stephenson to order flushed the bird. Soon after one got up near Dan and he pointed where it flushed. Noble then got in a good point that Dan at once honored in fine style, the bird going as the handlers came up. The work here was very lively, the dogs jumping into points almost faster than we could note, both doing brilliant work, which was greatly admired by those who were fortunate enough to see it. Dan pinned one that was put up to order, and at the same time one flushed near Noble, who just then pointed one that his handler flushed to order. As soon as this bird was in the air Dan had one that Short put up to order. Dan then pointed where one had been flushed, and a few yards further on he pinned a single that Short put up and killed, and Dan retrieved it well. This ended the work here and a long turn was taken without result, except that both pointed a hare. Finally, in some woods on a sidehill, Dan found a bevy and pointed it nicely. Noble, not seeing him, came up below, and beyond him, and stopped just as the birds went. Some claimed that he was also entitled to a point, we thought that he stopped either at sight of the birds or at the noise they made just as they rose. Following the birds up to the top of the hill, Dan flushed one and stopped to wing and Noble backed him. Dan, when sent on, took a few strides and made an elegant point that Noble at once honored in his best style. Short put up the bird, and the heat was ended with Dan the winner. Down one hour and twenty-six minutes. This was the most brilliant heat of the meeting, both dogs doing excellent work and running a very close race.

SPORTSMAN AND MINNIE S.

This brace was put down at 4:18 in a cotton field. Minnie made a point but soon went on. Turning into some sprouts Sportsman pointed a single that Tucker, to order, flushed and killed and Sportsman retrieved it. Meantime Minnie pointed but went on. Sportsman then dropped just as one rose in front of him. Soon after he made a point and Minnie backed him, but nothing was found. A little further on Minnie flushed one, but the judges were not near enough to see the work. She soon put up another, this time in full view of the judges. Sportsman then half pointed just as one flushed wild, and soon after he flushed one. We then crossed an open field and Sportsman made two or three points, but it was so dark that nothing could be seen and the dogs were ordered up. Down fifty-seven minutes. We then returned to town, and in the evening the judges compared notes and decided the heat in favor of Sportsman.

THURSDAY.

BEN HILL AND LILLIAN.

Wednesday morning it was snowing great guns and the day was unfit for work and no attempt was made to start, every one being content to stay indoors. On Thursday morning the sun shone bright, but the air was crisp and cold. There were two or three inches of snow that lay lightly on the sedge, almost covering it from sight, and the promise for sport was not very flattering, but birds were found more plentiful than on the preceding days and the scent appeared to be good after the sun had warmed up the atmosphere and fair progress was made. Leaving the hotel at half past nine we went to the Hunt Farm, and Ben Hill and Lillian were ordered to be put down. Before starting Mr. Stephenson stated that he would run the heat under protest. They were then cast off in a cornfield near where a bevy had been flushed by the horses, and worked toward a thicket where a portion of the birds had settled. Lillian had never hunted in snow and she started at a moderate pace. Ben Hill went at a good rate of speed and did not appear to mind the snow. Lillian made a cast up to the thicket and half pointed at the edge, and Ben backed her very nicely. She then drew on into the thicket and flushed a single. No more of the birds were found and the sedge beyond was beat out, but nothing was found, and we turned back. Ben made a cast around to the thicket and pointed in the open a few yards from the edge. Lillian saw him, but refused to back and stole in ahead of him and also pointed. As the handlers came up two or three birds flushed and flew a few feet and settled at the edge of the thicket. Lillian was jealous and unsteady, Ben behaving very well under the trying circumstances and drawing steadily on the birds. Bevan finally flushed one and drew up his gun to shoot, but took it down again, stating to us after the heat was over that he refrained from shooting at the command of Mr. Stephenson, who told them that Ben should not win under any circumstances. During the remainder of the heat Bevan worked his dog under orders from Stephenson, taking him away from the vicinity of birds, while Lillian was given every opportunity to find them. So manifest was the collusion of the handlers that in justice to all and in the interest of fair play, the judges should have ordered them up and declared both dogs out of the race and at once reported the case to the executive committee of the club, but after some poor work by Ben Hill, who was evidently rattled by the manner in which he was handled, and two or three points by Lillian, the last one very well done, she was declared the winner. Down forty-nine minutes. This heat was simply a farce, and the conduct of the handlers cannot be too strongly condemned, and it is a duty the club owes itself to fully investigate the matter and so dispose of the case that in future it will be impossible for the offense to be repeated. We do not intimate that Mr. Stephenson intentionally did wrong, but he acted from a mistaken sense of honor in sacrificing the chances of his own dog in order that the dog of his friend might win.

DAISY F. AND DON'S DOT.

This brace was put down in a field of sedge at 11:14. Beating through the field and some woods to an open field, both dogs ran up to a hedge. Daisy disappeared behind it, and Dot turned up toward the upper end, and also disappeared in the thicket. Before the judges came up two birds were seen to go from the thicket, and as we came up Daisy was half pointing on the opposite side, while Dot was in the hedge. It looked like a point for Daisy and a flush for Dot, but no one was near enough to see the work. We then went along a cotton field near a house, where Daisy made a nice point to a bevy and Dot backed her in good style. Rose put up the birds and scored a miss. Following the birds into some woods Dot pinned one and Daisy backed her handsomely. Short flushed and winged a bird that Dot retrieved alive in good form. Daisy then crossed a deep gully, and as she came back one flushed near her at the edge of the bank, for which she was not to blame. Dot then pointed, but moved on before her handler came up. Daisy made a short cast and stopped on point, and Dot backed her as Rose came up. Daisy sidled round, and getting the wind drew on and located in fine style. Rose put up the birds and killed one that Daisy retrieved in good style. Dot broke in at shot but at once stopped to order. Working toward the birds, Daisy flushed one on bare ground and stopped. The spectators flushed three or four, and we turned up the gully and worked some distance. Finally Daisy was lost, but soon found on point to a large bevy that flushed as Rose went up. This ended the heat with Daisy the winner. Down fifty-three minutes.

RICHMOND AND BOB GATES.

This was the last brace of this series, Gay Gladstone having a bye. They were put down in an open field at 12:26. Richmond started rather slow, but soon warmed up and showed as much speed and style as his competitor, Bob ranging somewhat the widest. After a short spin they were sent round to get the wind and worked toward the large bevy found by Daisy in the previous heat. Bob, beating up a hollow, ran up a single, and soon after another went near him. He had the wind in his favor, but at the distance it could not be determined whether the birds flushed in front or to one side of him. Richmond was on the bank of the gully, and catching scent, commenced roading just as Bob came up beyond him and pointed. Richmond roaded out his bird and also pointed a few seconds later. Short put up the bird in front of his dog and killed it, and Richmond retrieved it. Stephenson then flushed the bird in front of Bob and missed it. Bob then came round near Richmond and both got a point at the same time, and a bird was flushed to each, the remainder of the birds then going. A little further on Bob made a false point and Richmond backed him. Turning back across an open field to a thicket Richmond made a gamy point to a bevy, and Bob backed him in fine style. Short, to order, put up the birds and missed. Bob was sent after the birds, while Richmond swung back into the thicket and a bird flushed near him, when he stopped on point to another one that went a second later. Meantime Bob flushed one, and stopped to wing, and as he went on three or four more got up near him. Both then went down the run on a path along a thicket, with Bob some yards ahead, Richmond pointing a bird that Bob had passed, and Short flushing it to order. Bob at nearly the same time turned into the thicket and pointed, but nothing was found. We then turned toward lunch, Richmond casting back and pointing, but no bird was found. A little further on Bob made a stylish false point at the edge of a gully, and Richmond backed him very nicely. We then took a long turn across the fields without result, except that Bob pointed, but went on before his handler came up. They were ordered up at 1:40, and we went to lunch. During lunch the judges announced that they had decided the heat in favor of Bob Gates. Down one hour and fourteen minutes. This decision greatly surprised us. Bob may be the better dog, but in this heat Richmond was clearly ahead and entitled to a win. Gay Gladstone having a bye, this ended the second series, with the following result:

Summary Second Series.

Lillian beat Ben Hill.
Daisy F. beat Don's Dot.
Dan Gladstone beat Noble C,
Sportsman beat Minnie S.
Bob Gates beat Richmond.
Gay Gladstone a bye.

Third Series.

GAY GLADSTONE AND LILLIAN.

These two were nearly equal in speed, range and style. They were put down after lunch in a cottonfield and worked down across a branch and up the opposite slope where Lillian pointed at a brush heap. Gay, refusing to back, drew up and also pointed. Stephenson went ahead, when Lill drew on a few steps and again pointed in elegant style. Stephenson put up the bevy and killed two, each dog retrieving in good form. When ordered on through some sedge Lill whirled on a beautiful point to a small bird, and Gay backed her to order very prettily. Lill then flushed one and stopped and another one went. Gay came up and pointed just as one flushed. Both disappeared over a knoll and we heard a bird go, but could not see how it happened. We then turned back and beat out an open field to some woods, Lill disappearing over the bank. Gay soon came near there and made a beautiful point to a bevy that flushed as handlers and judges came up, and Lill was found on point to the same bevy some 20yds. beyond Gay. Lill probably pointed first, but as she could not be seen both were entitled to a point. Taking a turn in the woods to get the wind, several flushed near Lill and she stopped to wing, and Stephenson, claiming a point, flushed two or three more near them. Lill showed good judgment in remaining steady, but the point was a very doubtful one. Gay then made a cast to the left and pointed under a fallen treetop. Titus flushed a squirrel that ran up a tree. He then, thinking that Gay had pointed it, ordered her on, but she refused to stir, and after considerable trouble a bird was flushed just in front of her. When sent on she took a few strides and jumped into a nice point to a single that went a second or two later. We then crossed a gully and worked up to the edge of the woods, when Gay made a beautiful point and Lill backed him nicely. Titus put up the bird and hit it hard, but it went on. Turning the corner of the woods Gay cast down in a hollow and made a very gamy point to a single, Lill backing in beautiful style. Titus flushed the bird and missed it. We then took a turn in the woods and swung back to the same field, and a bevy flushed near the dogs, but we could not see whether either was to blame or not. Following up the birds in the woods, Gay pointed just a second before the bird went, and a little further on she pointed a bevy, and Lill refusing to back, stole the point and then drew on and flushed them. Soon after Lill made a nice point and Gay backed her to order, and the bird was put up by Stephenson. Gay then got in three points in rapid succession. Two of the birds flushed wild, and the last one was put up by her handler. The dogs were then ordered up and the judges consulted for nearly five minutes and then ordered them to go on. While the judges were consulting Lillian had struck the trail of running birds and pointed, but no bird was found and she was called back. As soon as the word was given Lill again took up the trail, and following it up, pointed a bird that her handler put up. As soon as the bird was flushed Lill cast ahead and pinned another one and Gay backed her in fine style. Stephenson flushed the bird and Lill again cast ahead on the same trail and soon had another one fast that her handler flushed and missed. They were then ordered up and the heat was awarded to Lillian. Down one hour and twenty-five minutes. Up to the time when the judges consulted, Gay was so far ahead that we were greatly surprised to see the brace put down again. Lill did some beautiful work in the running birds, but she obtained her knowledge of their locality by working while not under judgment, and even with this advantage Gay was still ahead, and the heat should have been decided in her favor.

DAISY F. AND DAN GLADSTONE.

This brace was put down in the woods where the last brace was taken up. In speed and style they were nearly equal, Daisy having the widest range. Working back to a branch we turned along the edge of the woods, where Daisy pointed a hare. We then crossed a road, and soon after Daisy made a nice point, Dan backing in fine style. As the handlers came up two bevies flushed a short distance apart and settled in some sprouts. When ordered on Dan made a nice point where the birds flushed from, and a little further on Daisy pointed a hare. Daisy then made a stylish point to a part of a bevy, and Dan in the thicket below her also pointed the same birds, which flushed as the handlers came up. Following the birds into the thicket both challenged, and one flushed near Dan. Soon after Dan pointed a hare, and at the same time Daisy pinned a bird that Rose put up and missed. She soon had another one fast. Rose went up and flushed one, but Daisy held her point, and another one was put up in front of her. Birds were now getting up wild all around, and both pointed once or twice on the scent, and as they went on one flushed near Dan. Following them Daisy pinned one that Dan flushed as he was coming down wind toward her before he saw her, and soon after another one got up near him. Daisy then pointed just as one went; she held her point, and Dan coming up also pointed, and two more were flushed in front of them. A little further on Dan flushed one down wind, and soon after Daisy got in a good point, and Dan backed her nicely. Rose put up the bird and missed, and Dan broke in but stopped to order. We then turned toward home and went a long distance without a find, the dogs being ordered up at 4:52 with Daisy the winner. Down one hour and three minutes. This ended the work for the day.

FRIDAY.

SPORTSMAN AND BOB GATES.

Bob had the advantage in speed and way of going. In style when on game there was not much to choose between them. They were put down on the Hunt Farm at 9:04, where Ben and Lillian commenced their heat. There had been some rain during the night and much of the snow had disappeared. The wind was high and there were occasional showers during the heat. Starting off down wind we went a long distance with nothing done, except that Sportsman made a point, to which nothing was found. Finally Bob found a bevy and made a point that Sportsman at once honored. Stephenson put up the birds and scored a miss. Following them up in a thicket Bob pointed with head and tail high in the air and Sportsman backed him in good style. As Stephenson went up one flushed and then another one went that he missed. Sportsman cast out in the open and pointed, but soon went on. Turning back down the run Bob got in an elegant point that Sportsman instantly honored in his best style. Stephenson put up the bird and killed it, Bob retrieving it well. Soon after the judges compared notes and awarded the heat to Bob Gates. Down fifty-six minutes. This ended the third series with the following result:

Summary Third Series.

Lillian beat Gay Gladstone.
Daisy F. beat Dan Gladstone.
Bob Gates beat Sportsman.

Fourth Series.

LILLIAN AND DAISY F.

The weather during this and the next heat was totally unfit for running a field trial. Heavy showers and a gale of wind made it very uncomfortable, and never having seen dogs work under such conditions, we were greatly surprised to see them do good work in spite of the warring elements. They were put down in some sprouts and worked through to an open field. They were about equal in style and speed, Daisy ranging the widest. Beating out the sedge past the burned cotton gin toa sorghum patch, Lillian ran through to the edge and pointed probably where a bevy had been flushed from, as we found scattered birds near them. Daisy cast up the slope and made an elegant point, which she was ordered to hold for Lillian to come up, notwithstanding that the birds were running away from her. Lillian, after some time, came round, and catching sight of Daisy she hesitated an instant and then stole in and half pointed, but the birds had run and both went on. Daisy roaded them out nicely and again pointed and Rose put up the bird and killed it, and she retrieved it. Lillian then made a cast and flushed one. Daisy meantime worked out the trail and soon had another one fast, that Lillian, coming toward her, flushed. Working down into a hollow Daisy made a point at the edge of a thicket, and Lillian refuse to back and went ahead and stole the point. As the handlers came up Daisy drew on after the birds, which we saw running ahead of her. One ran out in the sedge and Daisy roaded it in capital style, the bird flushing wild before she had a chance to locate it. We then crossed the creek and turned up into some open woods, where Daisy challenged, and getting the direction made a cast across wind and jumped into a beautiful point a second or two before the bevy on bare ground, near the railroad, flushed wild. Following the birds across the railroad Daisy again pointed them and Lillian backed her. Rose, to order, flushed the birds, and before the birds were ordered on Lillian pointed a single that was left, and Stephenson put it up and missed it. The judges compared notes and ordered the dogs on. At the edge of the woods Daisy challenged and half pointed, and Lillian backed her. Both then drew on and Daisy pointed, and an instant later Lillian also pointed, and a brace were flushed between them. Lillian then made a cast in the woods and pointed a bevy, that Stephenson put up and killed one that Lillian with considerable help found and retrieved nicely. They were then worked round toward lunch into a large open field where they were ordered up with Daisy F. the winner. Down one hour and forty-three minutes. We then sought shelter from the rain in an old church and eat our lunch. This ended the fourth series as follows:

Summary Fourth Series.

Daisy F. beat Lillian.
Bob Gates a bye.

Tie for First Place.

BOB GATES AND DAISY F.

After waiting a little over two hours this brace was put down to decide the honors of first place. The weather during lunch had been a trifle more promising, but as soon as a start was made the clouds again commenced a downpour that continued through the heat. The dogs were cast off in an open field across the gully near where we took lunch, and worked through the woods below. Near the upper edge of the woods a bevy flushed wild, and settled along the edge below us. Daisy got the first point on the scattered birds, and Rose put up one that he killed when Daisy broke in, but stopped to order and then retrieved the bird. Meantime Bob pointed twice in the woods above, but nothing was found. He then made a point near the edge that his handler thought was to a hare, but he went ahead and flushed a bird that he killed, and Bob retrieved it. Daisy then made a point to a single that flushed as her handler came up. Taking a few steps Daisy again pointed but was ordered on away from her bird that flushed as the judge came up. Bob then made a nice point but nothing was found, and a little further on he again pointed a bird that went as Stephenson came up. Both then turned down to a brier thicket and pointed at the same time a single that Rose flushed almost under Daisy's nose. A little further on Bob made a point that Daisy at once honored, but Bob soon went on. Turning up a branch the handlers were ordered to keep to the right. Rose obeyed instructions but Stephenson waited on his dog and soon after, some distance to the rear, he called point and was ordered to flush the bird, which he did, and then came across the gully. We failed to learn whether the point was allowed or not, nor could we learn whether Bob had struck the scent before the order to cross the gully was given. If the latter was the case he was clearly entitled to the point, but otherwise he could not score. Both dogs then cut loose and ranged so far that handlers, judges and reporters, although spreading out and covering a lot of ground, failed to keep track of them, and they

were frequently lost, and when again sighted they would be half a mile away. Both were entirely beyond the control of their handlers a large portion of the time. They could neither hear the whistle nor see the motion of the hand, and appeared to be working their handlers instead of the handlers working them. Daisy, a long distance away, did some beautiful work in a cornfield, where a bevy had evidently been feeding. Her persistent efforts to find them as she repeatedly cast in different directions were worth going a long distance to see, but the birds had probably been flushed, as she failed to find them. Soon after this we turned up the slope to the edge of some woods, where Bob pointed the remains of a hare that had been eaten by a hawk. As the judges came up, a bevy of birds down wind some distance away flushed wild and settled in the woods. A point was claimed for Bob, but we were well convinced that he knew nothing of the birds till they rose. Daisy had made a wide cast along the woods out of sight, but Bob was sent directly toward the birds, and soon had a point on a bird that his handler flushed and at once ordered Bob on, but as Daisy was not near, he was ordered up and a search was made for her. After getting the dogs together, both handlers got on horses and the chase was resumed. After going some distance Bob made a false point. Soon after, a bevy was flushed by Mr. Ellison, and the dogs were sent in their direction, but they failed to strike them and the birds were again flushed by the spectators. The dogs were again brought round, and this time they went in the right direction, and Daisy pointed one that her handler to order flushed. Daisy soon made another point, and as Rose went ahead to flush she drew on the track of the running bird, and Bob came round and stole the point and Stephenson put up the bird. Daisy when sent on took a few strides and nailed another one that Rose to order flushed. They were then ordered up and the heat was awarded to Bob Gates, and he was declared the winner of first prize. Down two hours and forty-three minutes. This was a long, tiresome heat, with the rain pouring down in torrents most of the time. It was our impression all through the heat that Daisy was doing the best work, and a careful revise of our notes fails to satisfy us that she was beaten. This finished the work for the day.

SATURDAY.

Ties for Second Place.

NIOBE AND RICHMOND.

The judges decided that these two were the best of the dogs beaten by the winners, and ordered them to run to decide which should compete with Daisy F. for second place. On Saturday morning the weather was fine and good progress was made in the work. The dogs were put down in a cornfield and worked through to some sedge, where Richmond, ranging wide, made a very handsome point to a large bevy and Niobe backed him nicely. Short put up the birds and killed one that Richmond retrieved very well. They were then ordered up and the heat awarded to Richmond. Down eleven minutes.

Final Tie for Second Place.

DAISY F. AND RICHMOND.

This brace was put down in sedge at 8:57 to decide the honors of second place. They were nearly equal in speed and style, Daisy having the best of it in range and judgment. After a turn in the open they were worked toward the scattered birds of the last bevy. Both cast wide and disappeared, and when found Richmond was pointing and Daisy was apparently backing. Short went in to flush but failed to find. The birds had probably run, as a few rods further on Richmond again pointed but went on and soon gave it up. Daisy made a cast down a gully and turned up in sedge and drew to a handsome point on a bevy. Richmond came up, re fused to back, went on and stole the point. Short put up the birds and the dogs were sent in their direction. Daisy going down a gully whirled on a beautiful point to a single that Rose flushed to order. Richmond, behind on the bank in some sedge, made a point, and Short, to order, put up the bird. Daisy then ran up out of the gully and drew to point on bare ground, and Richmond, a hundred yards away, backed her in fine style. Daisy drew on in the sedge and Richmond came up and also pointed and drew on and both gave it up. We then turned back across the gully to some sedge, Daisy made a nice point near some pines and Richmond backed her in his best style. Rose, to order, put up the bird. Richmond soon after pinned a single at the edge of a ravine that Short put up and missed. We then crossed the ravine, where Richmond made two false points and Daisy pointed a hare. They were then ordered up and the heat was awarded to Daisy F. and she was declared winner of second prize. Down fifty-eight minutes. This was a good heat, many of the points and backs being very gamy and stylish.

Final for Third Place.

RICHMOND AND LILLIAN.

The judges decided that Lillian and Dan Gladstone were the best two that had been beaten by Daisy F., and they were ordered up to decide by running which one should run with Richmond for third place. Mr. Bryson announced that he and Mr. Short had agreed to divide, one half to go to Richmond and the remainder to be divided equally between Dan and Lillian, but under the rules that could not be done and the judges were requested to select one of them without running, and they decided that Lillian was the best of the two. Third prize was then equally divided between Richmond and Lillian, and the stake was finished. Following is the complete

SUMMARY.

First Series.

Ben Hill beat Beaumont.
Lillian beat Gladstone's Boy.
Don's Dot beat Dora.
Daisy F. beat Pet Gladstone.
Dan Gladstone beat Lady C.
Noble C. beat Lufra.
Sportsman beat Chicaksaw II.
Minnie S. beat Bridgeport.
Richmond beat Jack Cade.
Bob Gates beat Niobe.
Gay Gladstone beat Patsey D.

Second Series.

Lillian beat Ben Hill.
Daisy F. beat Don's Dot.
Dan Gladstone beat Noble C.
Sportsman beat Minnie S.
Bob Gates beat Richmond.
Gay Gladstone a bye.

Third Series.

Lillian beat Gay Gladstone.
Daisy F. beat Dan Gladstone.
Bob Gates beat Sportsman.

Fourth Series.

Daisy F. beat Lillian.
Bob Gates a bye.

Tie for First Place.

Bob Gates beat Daisy F. and won first prize.

Ties for Second Place.

Richmond beat Noble.

Final Tie for Second Place.

Daisy F. beat Richmond and won second prize.

Final Tie for Third Place.

Richmond and Lillian divide third prize.

THE DERBY.

On Saturday at 10:11 after the finish of the All-Aged Stake the Derby was begun. There were 69 nominations, 25 of them filling—all English setters. They were drawn to run as follows:

Ben Hur against Little Nell.
Cassio against Goldstone.
Dante against Nat Goodwin.
Katrina against Jean Val Jean.
Ruby D. against Talleyrand.
Wanda against Hustling Hannah.
Gladstone's Girl against Chance.
Rubicon against Dan J.
Keystone against Roi B.
Dee against Boon Roy.
Allie James against Luke Roy.
Dolly against Bob H.
Cliff Gladstone a bye.

Nearly all the work was of a superior character, many of the dogs making very brilliant runs. Seven heats were run as follows:

Little Nell beat Ben Hur.
Cassio beat Gladstone.
Nat Goodwin beat Dante.
Ruby D. beat Talleyrand.
Hustling Hannah beat Wanda.
Chance beat Gladstone's Girl.
Keystone beat Roi B.

Katrina was in season and Jean Val Jean will run with Cliff Gladstone. The judges are Dr. Rawlings Young, of Corinth, Miss.; Major W. H. Key, of Florence, Ala., and Mr. H. W. Fuller, of Louisville, Ky.

[Special to Forest and Stream.]

GRAND JUNCTION, Dec. 21.—The weather to-day has been delightful. Birds have not been found plentiful. On Saturday Jean Val Jean was awarded the heat against Katrina. To-day Rubicon Jean beat Dan J. Bun Roy beat Dec. Allie James beat Luke Roy. Bob H. beat Dolly Cliff. Gladstone, a bye. In the second series Little Nell beat Cliff Gladstone. Cassio beat Ruby D. Nat Goodwin beat Hustling Hannah; and the heat between Jean Val Jean and Rubicon was unfinished.

[Special to Forest and Stream.]

GRAND JUNCTION, Tenn., Dec. 21.—The weather has been good to-day. Birds were not found very plentiful, but considerable work was done. In the unfinished heat between Jean Val Jean and Rubicon the latter won. Chance beat Keystone. Allie James beat Bun Roy. Bob H. a bye. In the third series Cassio beat Bob H. Nat Goodwin beat Little Nell. Rubicon beat Chance. Allie James a bye. In the fourth series Cassio beat Allie James. Rubicon beat Nat Goodwin. In the final tie Rubicon beat Cassio and won first. In the final tie for second Chance beat Cassio and won second. Keystone was selected to run against Cassio for third, but it was so late that the heat was postponed until to-morrow. Some of the heats were very unsatisfactory, being decided before much work was done. This was decidedly the case in the final for first place, as but little work was done, Cassio having the best of it. The trials will finish to-morrow if it does not rain.

[Special to Forest and Stream.]

GRAND JUNCTION, Tenn., Dec. 23.—In the Derby Cassio and Keystone divided third. The Champion Stake was declared off owing to the impossibility of securing a third judge.

WINSTED DOG SHOW.

THE second annual dog show held at Winsted, Conn., in connection with the Western Connecticut Poultry Association, took place on Dec. 15, 16, 17. The show was under the management of Mr. F. D. Hallett, who made a most efficient secretary and superintendent, and saw to the care of the dogs as well as providing a very neat catalogue. The entries numbered 105, and the average quality was a decided improvement on that of the show of last year. Mastiffs began the catalogue, and in the absence of Ilford Caution, first went to Don II., who occupied the same position last year. Bessie, a graduate from last year's puppy class, was second in this class. The puppies were all of one litter and the property of Messrs. Coffin, Zimmer & Co. St. Bernards were poorly represented, Lodi being the only one entered. The winning Newfoundland is pretty good in coat but weak in head. He won easily. The deerhounds are all well known. Captain Fred had not a great deal in hand in beating Fritz from the Maple Kennels. They were looking well. Model Doodle got a double first in the bitch and puppy classes. The setters were not strong classes, the best department, strange to say, being in the black and tans, the winners being the well-known Royal Duke and a new bitch to the show bench named Roda. She is likely to be heard of again. The spaniels were good classes, Newton Abbott, much improved and well shown, was in the large class. Helen won the small championship without opposition and Doc not arriving in time for the judging let Nig in for first in the black dog class and special for best cocker. A youngster named Roxy, by Black Pete, was first in both bitch and puppy classes. She is good in head and coat and will be the right size. The only new one of consequence in fox-terriers was a good puppy named Mt. Toby Mixture, a son of Mixture, as his name suggests. This is a very promising puppy, a trifle heavy in ears, but just about the best of his sire's get that we have yet seen. Nullamore won in collie dogs from the very moderate Rex, but was beaten for the special by Glenlivat, who is a puppy of great promise. His dam, Mavis, beat Spoiled Miss for first prize in the bitch class. All four of these winners were out of coat. Robinson Crusoe won the champion prize in bulldogs, but his kennel companion, Hillside, was put behind Caliban in the dog class on the score of condition. Josephine was alone in the bitch class and was looking well. The bull-terrier championship was taken by Count, who never looked better. The Baron beat a new importation, Silver, in the dog class. Rock won in the any-other-bred terriers. He is a Bedlington of more than average quality. The pugs were not a very first-class lot. Young Toby was shown much too fat, while Thunder could have done with some more. Mr. W. Tallman judged setters and pointers and Mr. Jas. Watson the remainder of the classes.

AWARDS.

MASTIFFS.—*Dogs:* 1st, D. Strong's Don II.; 2d, G. L. Foskett & Co.'s Bessie. *Puppies:* 1st, 2d and 3d, Coffin, Zimmer & Co.'s Leon III., Guardian and Boss Jr.

ST. BERNARDS.—SMOOTH COATED—1st, Chequasset Kennels Lodi.

NEWFOUNDLANDS.—1st, E. D. Holt's Prince; 2d, D. E. Barber's Czar.

DEERHOUNDS.—CHAMPION—John E. Thayer's Bran. OPEN—*Dogs:* 1st and 2d, J. E. Thayer's Duncan and Thora.

GREYHOUNDS.—1st, J. H. Seeley's Flash.

POINTERS.—*Dogs:* 1st, A. Collins's Captain Fred; 2d, Maple Kennels' Fritz; 3d, J. W. Tantrum's Don. *Bitches:* 1st, Dr. W. F. Spring's Model Doodle; 2d, Maple Kennels' Bird. *Puppies:* 1st and 3d, Dr. W. F. Spring's Model Doodle and Capt. Bogardus; 2d, V. A. Blakeslee's Duke.

ENGLISH SETTERS.—*Dogs:* 1st, E. E. Sackett's Dell; 2d, J. L. Dean's Nick; 3d, L. M. Camp's Don. *Bitches:* 1st, H. J. Pierre's Flora. *Puppies:* 1st, A. J. Lee's Don Belton; 2d, J. W. Tantrum's Dave Bondhu; 3d, F. F. Slade's Frank. High com., W. W. Buckingham's Nina.

BLACK AND TAN SETTERS.—CHAMPION—E. Maher's Royal Duke. *Dogs:* Prizes withheld. *Bitches:* 1st, O. McArdle's Roda; 2d, B. F. Lewis's Rose; 3d, C. A. Ives's Fannie.

IRISH SETTERS.—*Dogs:* 1st, I. Ferguson's McDuff; 2d, P. C. Laselle's Grouse. *Bitches:* 1st, I. Ferguson's Adaline; 2d, withheld; 3d, D. Maxwell's Press. *Puppies:* 1st, L. & J. Backer's Irish Laddie; 2d, R. H. Burr's Don III.; 3d, I. Ferguson's Adaline.

SPANIELS.—FIELD SPANIELS—1st, A. C. Wilmerding's Newton Abbott; 2d, A. C. Brown's Donuil Dhu. Very high com., W. A. Partridge's Rob.—COCKER SPANIELS—CHAMPION—W. A. Partridge's Helen.—OPEN—*Dogs:* 1st, Mansfield and Hinckery's Nig. *Bitches:* 1st and 2d, S. R. Hemingway's Roxy and Miss Nance.—OTHER THAN BLACK—1st, J. Mansfield's Floss; 2d, A. Scrivener's Rover. *Puppies:* 1st, S. R. Hemingway's Roxy; 2d, E. Lustig's Major.

FOX-TERRIERS.—CHAMPION—J. E. Thayer's Belgrave Primrose.—OPEN—*Dogs:* 1st, W. T. McAlee's General Grant; 2d, J. E. Thayer's Rapy Jack. Very high com., J. E. Thayer's Roby Tyrant II., C. I. Bailey's Mt. Toby Mixture. Com., C. I. Bailey's Miss Slick. *Puppies:* 1st, C. I. Bailey's Mt. Toby Mixture; equal 2d, J. E. Thayer's Meersbrook Nan and G. B. Inches's Muddler.

COLLIES.—*Dogs:* 1st, Chestnut Hill Kennels' Nullamore; 2d, W. J. Martin's Rex. *Bitches:* 1st, A. R. Kyle's Mayis; 2d, Chestnut Hill Kennels' Spoiled Miss. *Puppies:* 1st, A. R. Kyle's Glenlivat.

BULLDOGS.—CHAMPION—J. E. Thayer's Robinson Crusoe—OPEN—1st, E. S. Porter's Caliban; 2d, J. E. Thayer's Hillside. High com., C. D. Cugle's Tosteg. *Bitches:* 1st, J. E. Thayer's Josephine.

BULL-TERRIERS.—CHAMPION—F. F. Dole's Count.—OPEN—*Dogs:* 1st, W. W. Silvey's The Baron; 2d, F. F. Dole's Silver. *Bitches:* 2d, G. H. Dawson's The Duchess. *Puppies:* 2d, G. H. Dawson's The Duchess. High com., J. E. Maddrake's Blanche.

TERRIERS NOT OTHERWISE CLASSIFIED.—1st, W. W. Silvey's Rocks (Bedlington); 2d, H. P. Wetmore's Muff (Scotch).

PUGS.—CHAMPION—Chequassset Kennels' Young Toby. OPEN—*Dogs:* 1st, Mrs. H. C. Burdick's Cricket; 2d, Chequasset Kennels' Thunder. *Bitches:* J. H. Seeley's Susie.

ITALIAN GREYHOUNDS.—1st, E. S. Andrews's Fly.

THE AMERICAN KENNEL CLUB announces through a committee that it proposes to undertake the publication of a stud book. We are given to understand that the promoter of an abortive attempt to publish an "official" book has bequeathed the good will of that unfortunate burden to the club, and now the old experiment is to be tried once more and by new hands. Unhappily past experience has not been of a nature to warrant the public in indulging any anticipation that this attempt will result less disastrously than former ones. It were much to be wished, moreover, that by its actions in far less important matters, the A. K. C. had given ground for confidence that it possesses qualifications essential to the performance of a task of such exacting nature and magnitude as the publication of a stud book.

NEW JERSEY SHOW.—Jersey City, N. J.—*Editor Forest and Stream:* The New Jersey Kennel Club claim March 22, 23, 24 and 25, 1887, for their spring bench show.—C. P. PESHALL, Pres. N. J. K. C.

THE ROSECROFT SALE.—We direct attention to the sale of the Rosecroft Kennels advertised in another column. This offers an excellent opportunity for securing fine stock.

Rifle and Trap Shooting.

Address all communications to the Forest and Stream Pub. Co.

RANGE AND GALLERY.

BOSTON, Dec. 18.—A large number of riflemen assembled at the range at Walnut Hill to-day. The light was very poor, and the fog which set in closed the shooting at an early hour.

Decimal Off-Hand Match.

ST. LOUIS, Dec. 15.—The second weekly shoot of the St. Louis Pistol Club took place at the Laclede gallery this evening, and was very close and exciting throughout, finally ending in a tie between Wells and Thurber on a score of 110 out of a possible 120. In the shoot-off Wells won the medal by 3 points.

LAWRENCE, Mass., Dec. 18.—The regular weekly shoot of the Lawrence Rifle Club was held in Riverside Grove to-day, when the following scores were made. The feature of the day's work was the fine performance of Mr. E. F. Richardson, who made 28 bullseyes out of 30 shots fired, 25 of which were consecutive. The leading score, 93, is equal to the best on record. The conditions were 10 shots, 200yds., off-hand, standard American target. The scores follow:

E F Richardson	10	9	10	10	8	10	9	10	10	9—95
O M Jewell	7	8	8	10	9	9	7	10	10	8—86

J F Butler	5	6	4	6	5	8	5	5	10	3—57

RIFLE NOTES.—The entry of a team from the Massachusetts Rifle Association has been recorded in the Bullard Arms Company's team matches. The match will be shot in the middle of January, 1887.... The Massachusetts Rifle Association will hold its annual meeting and dinner at the Revere House, Boston, on Tuesday, Jan. 11, 1887.... France, Austria, Germany and Italy have each adopted repeating rifles,

CLOSE GALLERY WORK.—The close of the third week of the December prize shooting shows wonderful skill in the contestants. The scores made are the best on record, and are worthy of special comment. The targets are on exhibition at the gallery. Below are the summaries in the various matches:

Decimal Off-Hand Match.

GARDNER, Mass., Dec. 16.—At the last regular meet of the Gardner Rifle Club at Hackmatack Range, they used the new standard American target, distance 200yds., shooting off-hand. The records made were as follows:

G F Ellsworth	82 84—166	H C Knowlton	64 74—138
I N Dodge	80 84—164	E Taylor	64 64—128
G C Goodale	76 81—157	D E Warfield	60 61—121
G R Warfield	71 77—148		

ZETTLER RIFLE CLUB.—New York, Dec. 14.—First competition for the prizes donated by the club Tuesday: 12 ring target, possible 120: M. Dorrier 117, A. Lober 114, L. Flach 113, M. B. Engel 113, Walther 113, C. W. Karcher 111, G. Zimmerman 113, D. Miller 109, C. G. Zettler 109, V. Steinback 103, W. Kleine 107, B. Zettler 107, J. Weigler 107, F. Armbrust 105, G. A. Shurman 103, C. Reitz 102, T. C. Noone 99, A. Hunt 99, M. Trapp 89, G. W. Conner 83, N. D. Ward 80.—N. D. WARD, Sec.

GALLERY SHOOTING.—Headquarters Essex Amateur Rifle Club, No. 326 Bank street, Newark, N. J., Dec. 17, 1886.—*Editor Forest and Stream:* I hereby accept the challenge of Mr. Dorrler to shoot a gallery match for the championship and a prize, provided he will agree to shoot one-half of the whole number of shots at the Essex gallery of this city. I propose to shoot 300 shots each for a prize of $25.—GODFREY SNELLEN.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

THE TORONTO TOURNAMENT.

TORONTO, Dec. 13.—Mr. Wm. McDowall's shooting tournament at Eglinton, which commenced last Wednesday and closed to-day, was an unqualified success from the beginning to the end, in spite of a little kicking over the team shoot. The weather was perfect from first to last. In the first contest at 15 live pigeons for cash prizes aggregating $200, besides consolation prizes, there were 55 competitors from all parts of Western Ontario. For the shoot at 20 blackbirds there were 27 competitors, and for the team contest 6 entries, one team, however, being withdrawn. Messrs. Oulcott, T. Loudon and McDowall, of the committee of management, had all the work to do, and did it well. Mr. T. Loudon was referee, and Mr. A. Loudon scorer. The ball opened on Wednesday with the contest at live pigeons, and resulted in the following having a final go in for the prizes:

Shoot No. 1, at 15 live pigeons.—1st prize $75; 2d, $45; 3d, $30; 4th, $20; 5th, $15; 6th, $10; 7th, $5. Twenty-six yards rise, H. & T. ground traps, 1¼oz. shot, entry $5, Toronto Gun Club rules to govern, 55 competitors:

H H Humphreys	14	Geo Rogers	12
J Forsyth	14	J R Humphreys	12
Wayper	13	D Beldam	12
Griffith	13	E Brown	12
Smith	13	M St. John	12
Dr. Neff	12	R Barrett	12
W S Stroud	12		

Four shot 11, six 10, five 9 and nine 8, the remainder retiring. The shooting off at 5 birds for first resulted in H. R. Humphreys grassing 3 and taking the $75, Forsyth only killing 2 and getting $45. TWayper, Griffith and Smith shared the next three prizes, aggregating $65. J. R. Humphreys killed 4 out of 5 in the shoot off of the ties of 12, and took the sixth prize, while Rogers captured the seventh. For the consolation prizes there were 23 contestants at miss and out, W. Brown, with 4 to his credit, taking first; J. Bell, with 3, second, and G. Carruthers, with 2, third.

Shoot No. 2, at 10 Canada blackbirds—First prize, $30; second, $20; third, $15; fourth, $12; fifth, $10; sixth, $8; seventh, $5; 18yds. rise; birds thrown from five screened traps; 1¼oz. shot; entry, $3; 27 contestants.

Wayper	19	B Ross	14
T Louden	19	G Carruthers	13
W Stroud	17	J R Humphreys	13
Felstead	15	W. Brown	13
Quarrie	15	J Bell	13
Scott	15	Geo Rogers	11
M McDowall	15	J Harrison	10

The remainder retired. In shooting off the ties of 19, Wayper hit 5 and took first. Loudon missed one and took second. W. Stroud got third. Of the ties of 15, Felstead captured fourth prize with 4 out of 5. Quarrie fifth with 3, Scott sixth with the same number, missing on the second shoot off, and McDowall seventh with 2. For the two consolation prizes 9 competed at 10 birds. Bell took first with 6, and Carruthers second also with 6.

Shoot No. 3, teams of five, for five diamond medals, 15 birds each, from 5 screened traps at 18yds. rise; entry per team, $7.50.

Team No. 1.		Team No. 2.	
W Bugg	11	Stroud	12
F Martin	9	Wayper	13
D Beldam	8	Griffith	8
B Ross	8	George	8
George Rogers	12—48	Smyth	10—51
Team No. 3.		**Team No. 4.**	
J Douglass	10	W Felstead	11
F Moffit	7	R J Kidd	13
J Towson, retired	—	A Ellis	9
J Wells	—	Montgomery	6
J Humphreys	— 17	McDowall	7—46
Team No. 5.			
Wickson	9	Bell	9
Scott	12	Brown	5—43
Quarrie	8		

The winning team represented Hamilton, while all the others were made up from Toronto. The first team comprised members of the Toronto Gun Club, and protested that they were not credited with three birds, which would have tied their score with the winners. The latter, however, with equal right claimed the more, and as that would still make them the victors, the protest was not considered.

The above ended the tournament proper, but the sweepstakes were shot, resulting as follows, ten birds for three prizes:

Wayper	9	Stroud	6
Brown	8	McDowall	4
Douglas	7	Bollery	4
Carruthers	7		

Ten birds for three prizes:

Wayper	10	Stroud	8
McDowall	9	Brown	6

Five birds, one prize, including $5 in each, added by J. Oulcott:

Douglass	4	McDowall	4
Brown	4	Bollery	4

In the shoot-off McDowall and Brown again tied, this time at 3, but at the second attempt McDowall hit 4 to 1 by Brown.

NEWTOWN, N. Y., Dec. 14.—North Side Gun Club, L. I., match at five pigeons, 5 ground traps, handicap, 80yds. boundary, club rules.

Barlow	1111101—6	Skelton	1000001—2
Sloms	1110011—5	Grau	1010011—3
Winholz	1111101—6	Merkens	0001011—3
Manning	0110111—5	Lyon	1011100—4
Duryea	0000010—2	Kroger	0111111—6
Ferret	1201110—4	Bolmucke	1111001—5
Dr. Franz	1101000—4		

Ties on 6: Barlow 3, Winholz 3. Second tie, Barlow 0, Winholz 2. Sweepstake, miss and out, 25yds. rise: Dr. Franz 111—3, Ferret 2, Winholz 0, Merkens 2, Sloms 1, Manning 2, Kroger 1.

MEDFORD, Dec. 18.—The rain to-day did not prevent the members of the Wellington Gun Club from making good scores. The winners were as follows: Six pigeons, Lewis; 6 black rocks, Wardwell; 6 blue rocks, Gove; 3 pair pigeons, Stanton; 6 blue rocks, Stanton; 6 blue rocks, Sanborn and Stanton; 6 pigeons, Wardwell; 6 pigeons, Payson and Swift; 6 blue rocks, Swift; 10 pigeons, Stanton, 10.

BROOKLYN, Dec. 15.—The regular monthly shoot of the Coney Island Rod and Gun Club took place to-day at the half-mile track, Parkville, L. I. The birds were very slow and hung around the traps, which accounts for the high scores being made. Out of 93 birds shot at 72 were killed. L. Duryea, from the 29yds. mark, killed 10 out of 11 and won the first prize. J. Lake, 21yds., and R. Monsees, 27yds., each killed 7 straight and divided the second. H. McLaughlin, 27yds., killed 5 out of 7 and took third prize. H. P. Donnelly, 22yds., took the fourth, killing 7 out of 10. Referee, L. P. Van Pelt.

JERSEY CITY HEIGHTS GUN CLUB.—The annual meeting for election of officers for ensuing year took place at the club rooms, Reumpler Hotel, on the 14th inst., and resulted as follows: President, William Hughes ("Old Reliable No. 1"); Vice-President, Dr. F. A. Cummins; Secretary and Treasurer, A. Heritage ("Old South Paw"). Executive Committee—Chairman, P. Farmer Wanser, Dr. J. B. Burdett and Chas. B. Jordon. Official Scorer, Geo. B. Eaton. Sweepstake shooting at live birds and a good time generally expected at club grounds on Christmas Day. All invited.—JACOBSTAFF.

ST. LOUIS.—The Western Gun Club are making preparations for their annual Christmas shoot, and should the weather prove favorable, a general good time is assured. The shoot will be a two days' affair, beginning on the 25th, at 1 o'clock P. M. Peoria blackbirds, clay-pigeons and blue rock pigeons will be the targets used, and nothing but inclement weather will prevent a big time. The shoot will be sweepstakes, open to the world.

JAMAICA, L. I., Dec. 19.—The Washington Gun Club held a shoot to-day at Durller's Park. Not enough of the members were present to make a regular club shoot, but a good match was made between J. Feldhaus, F. Munch, J. Newton and W. Mills, each shooting at 20 birds, 21yds. rise. Feldhaus and Mills tied, each killing 14. On the shoot-off Feldhaus killed 5 straight, Mills missing his fifth bird. Feldhaus took first and Mills took second money. Referee and scorer, C. Dellow.

Canoeing.

WIDE AND NARROW CANOES.

Editor Forest and Stream:

Mr. Clapham's letter in your issue of Dec. 16, contains several statements which are so positively erroneous as to make it impossible to let them pass uncorrected. I therefore trouble you again with the following note:

Mr. Clapham alluded to a race with the Guenn. That race, so far as I can see, has nothing to do with the subject in question. But his remark that any defense whatever was made for her, at that time or at any other, will not bear investigation. I have been particularly careful, even in private, to raise no question as to any of the circumstances under which the race was sailed. He, however, was willing at that time to call the race off, on account of the manifest disadvantage under which my boat labored. But it is hardly fair that he should state his knowledge of those disabilities to be a protest coming from me.

In regard to an offer of another race, I shall be very glad to accommodate him, and will meet him at the FOREST AND STREAM office or other suitable place to arrange particulars.

His statement, too, that one race was open to all the boats at the A. C. A. meet is also distorted. There was a race at the last meet for boats over the limit prescribed by the Association. For that his boat appeared, and, there being no other boats eligible for the class, she had no competitor. This in itself only shows that canoeists are, as a rule, satisfied with the dimensions laid down for them by their Regatta Committee in previous years, and not that Mr. Clapham could not have arranged a race with almost any of the boats there if he had been anxious for one.

Mr. Clapham says that Red Jacket was not allowed even to sail around the course during the race at Grindstone. That is surely an uncalled-for statement, as no boats outside of the contestants in a race are ever allowed on a course during the progress of a race in any properly regulated regatta.

This whole question should be taken out of the plane of canoeing. Mr. Clapham's boat is not a canoe wherever the American Canoe Association standard is recognized as that governing canoes. Boats built outside of it, and which do not come within any definition of a canoe, have no right to the name. Why they should be so anxious for it is beyond me. They are capital single-handed cruising or sailing boats. Their likeness to canoes, however, is only in a whaleboat stern. Then they have certain advantages for comfort in open water which no canoe can have or claim. But that they are canoes I deny, and see no reason why canoeists should be forced, under pain of Mr. Clapham's displeasure, to substitute them for a type of boat they infinitely prefer. They carry two men or more, and it takes a crew of two men to enable them to perform at their best. This crew serves as ballast and an aid in handling, and are, no doubt, both of them comfortable. But the boats should never be compared with canoes, since they have nothing in common with them.

Mr. Clapham is always courteous, always glad of an opportunity for genuine sport, and it is therefore always a pleasure to meet him, on land or on water, but in this instance I think he has let enthusiasm for his chosen type of boat carry him a little further than, on consideration, he would care to go.

NEW YORK, Dec. 18. W. WHITLOCK ("Guenn").

Editor Forest and Stream:

In Mr. Thos. Clapham's letter, published in your last issue, he make some statements reflecting of the regatta committee, and as chairman of that committee I would like to explain.

He says, "Red Jacket was not allowed in the races, and was not allowed to sail around the course with the others when racing," etc.

Event No. 17, sailing, unclassified canoes, no limits in ballast or rig, 3 miles, was put upon the programme to provide a race for just such boats as the Red Jacket. It was dropped for want of any entry whatever. Mr. Clapham, knowing there was such an event, might have made an entry had he desired a race, and I have no doubt but he would have found plenty willing to race him. If he came to the starting point looking for a race his letter is the first intimation that the regatta committee have had of that fact. As for his not being allowed to sail the course with others when racing, I have to say that complaint was made to the committee by some of the contestants in the early races that the Red Jacket interfered with them by taking a windward position at a critical point, consequently we sent a message to Mr. Clapham, requesting him not to go on the course during a race, and I am pleased to say he complied with our request. J. B. MCMURRICH.

HUMBER CANOEING.

A RETROSPECT OF THE SEASON OF 1886.

ALAS! that it should be a retrospect. It seems only a few weeks since we were hopefully looking forward to the opening of the season, and a weary waiting too. Year after year, winter seems to gain upon summer, and it was well on toward the longest day before we realized that boating was possible.

The opening of the season found a contingent of the Humber Yawl Club established on Hornsea Mere, a beautiful sheet of water about 20 miles from Hull. A pretty sight on a fine evening, when the little fleet had got afloat. There goes the Cassy, bright with new varnish; you can tell her by her beautiful lines and spotless sails, with a funny little tender, the Porriwiggle, a 9ft. centerboard, dancing attendance, capable, too, of performing wonderful feats of turning and twisting. Mr. Holmes also contributes a pretty miniature coble. The old Ægir, too, getting into years now, her erstwhile polish having given place to a sober coat of black with white deck. A fine old boat still, with her new racing canvas and trim spars.

Several other canoes swell the fleet and when they are all out, with white sails standing out against the rich spring greens of the surrounding woods, no prettier sight could possibly gladden the eyes of a boating man.

But with advancing summer a feeling of discontent was creeping over the soul of Ægir. The lake was too small and an ever increasing longing was calling her to break her bonds asunder, and on the broad bosom of old Humber to taste once more the joys of freedom, and where could they be found in greater perfection than on that grand highway of commerce with its ever shifting panorama of nautical life. No! the Ægir was out of place amid surroundings of mere prettiness, and one fine evening found her down on the Hornsea beach, well found, well manned and well provisioned and in every way fitted for the voyage.

Once started, the adventurer knows that no harbor of refuge is to be found until the Humber is reached, a distance of thirty-five miles, and the obvious invocation is for an off-shore breeze.

Very little wind and that dead ahead met the Ægir and the coble, which was to accompany her for a mile or two, and very slow progress was made with the assistance of the last of the flood, and with many a good wish the coble turned back for the run home, leaving the Mate and Skipper alone with the shades of evening falling on sea and cliff.

Responding to a call for hot coffee, the Skipper sets the Rob Roy lamp going, dilating the while on the various merits of the apparatus, its efficiency, its simplicity, its safety—Bang! The Skipper found himself in the attitude described as "catching a crab," and the mate would probably have gone overboard astern but for the mizzenmast, and an incipient conflagration was raging in the well. "Does it always do like that?" mildly inquired the Mate. It was only the Rob Roy that had violently exploded, no damage resulting, except to the Skipper's feelings, as for ten years he had placed implicit faith in that identical lamp.

About this time the flood tide was spent, and with a light head wind nothing could be done, so we beached the boat on a smooth stretch of sand where the cliffs receded somewhat. No sooner was the canoe drawn up and left high and dry by the tide, tents erected over the well and all made snug for the night, than with that provoking inconsistency peculiar to the elements, a fair wind caused the burgee to flutter and invited us to pursue our journey. Too late, for the tide had left us high and dry, and after a pleasant stroll in the cool night air we turned in.

How snug our little interior looked, with the lamp burning brightly, and bedding all nicely arranged for the night, and what a low musical murmur the retreating tide sent us to lull us to sleep withal. A last pipe, and a night cap in the shape of a glass of grog, and sleep was sweetly falling on us, when a sudden clamor of voices arose and the tent was rudely shaken.

As we started up with much rubbing of sleep-laden eyes, and a general presentiment of capsizing, sinking, and every possible combination of nautical disaster, it dawned upon us that we were on terra firma, and that our disturbers were a party of belated fishermen. A rugged and bearded face was introduced into the sacred interior of our tent, followed by an arm and a hand, the latter tendering us a large stone jar of ale, which, to judge by the thickened utterance of the voices around, had been already extensively patronized. Some broad Saxon ensued. The party were just in that objectional frame of mind when no amount of snubbing has any effect, and we began to despair of ridding ourselves of their presence, when the Skipper hit upon the happy expedient of igniting a coil of magnesium wire, which cast a sudden and weird glare upon the surroundings, upon which they all decamped uttering surprised maledictions.

Just about 3 o'clock the warning plash of the advancing tide caused us to strike camp with considerable expedition, our first glances falling upon the midnight disturber of our rest. He still clung to the stone jar, empty presumably, at least none was offered to us. History states not where he had been all night, and questioned as to the whereabouts of his companions, he only estimated that they were "over there," pointing vaguely to the stretch of sandy beach. Not such a bad old boy after all, for he assisted efficiently in launching the boat.

Hurrah! A fine, fair, off-shore wind, and all being made snug, the Mate took the helm, and the Skipper, rolling himself in his blanket bag, abandoned himself to a delicious sleep, which later on merged into a half-waking doze and a general consciousness of warmth and easy motion, and a musical murmur of parted waters.

The bright morning sun had mounted the cloudless sky. Mainsail, mizzen and spinnaker were straining at their sheets. The Mate was sitting at the helm with that far away look in his eyes, peculiar to sailors. Simultaneously the Skipper casts off dull sloth and awakes to the facts that it was breakfast time, and that life was a blissful thing.

The Mate's watch below, and the Skipper sat and steered, and headland after headland rose out of the blue sea, and gliding past afforded a moving panorama of ruddy cliffs and bright green sward, and here and there a little cove where the shadows lingered and the miniature breakers flashed and sparkled in the sun on stretches of golden sand. No signs of life, save a white cottage or coast guard station from time to time, while distant spire and church tower told of the sleepy old villages of Holderness.

At last the lighthouse of Spurn showed ahead, and as the tide had fallen considerably, we ran the boats ashore, as there was no getting round the Binks, which barred our onward way, besides which nothing could have been done on the Humber on the ebb. A welcome respite too, and we had time to visit old friends at the lighthouse, experiencing the hearty welcome which has so often greeted us there.

Presently two stalwart forms in white flannels and no stockings appeared in view from the Humber side, proving to be two members of the Trent Valley Sailing Club, whom the spirit of adventure had brought down from Nottingham in their centerboard sailing boat. Needless to say that the sandhills of Spurn witnessed a scene of fraternization.

The tide making, we pushed off to attempt the rounding of the points, always a dreadful operation. Two reefs were pulled down, as a glance had shown us that old Father Humber was angry, and we made for what looked like a smooth place in the line of breakers on the Binks. Smooth indeed! a millstream is a mild form of water power compared with the rush of the flood tide over the reef. A warning scrape, a violent surging broadside on, a staggering helpless roll and a rush of water into the well, and it dawned upon us that this meant a capsize. To pull up the centerboard was the work of an instant, and then a frantic shove with the boat-hook, which of course broke in two, leaving the Skipper helplessly sprawling half on board, half overboard, with a dismal feeling coming over him that it was all up. With admirable presence of mind, the Mate had somehow, in spite of unshipped rudder, got the canoe before the wind, and, a heaven-sent gust of wind intervening, managed to sail her out of danger; whilst, disappointed, "the floods clapped their hands" behind us. "Well I never!" remarked the Skipper, who had by this time managed to haul himself on board, and eyeing the shattered remnants of the boat-hook; the Mate contenting himself with the remark that it was a close shave, with that familiarity with close shaves begotten of years of watery wanderings.

We waited until the flood had made, and rounded the point without further adventure.

The centerboard was a long way ahead of us, and we settled down to a steady beat up stream. There was either a tremendous sea on, or else the lotus-eating life of Hornsea Mere had demoralized us. How we pitched and plunged, and how skillfully the Mate wheedled her through the worst of it, until we gained the comparatively calm waters of the Stony Creek channel, need not here be told.

Only once the Mate cried out, as a wave like a wall rushed toward us, "For Heaven's sake, look out! I cannot get her over this one!" "This one" got over us with a vengeance, coming down on the fore deck with a thundering crash, as if to carry everything away, and the boat groaned and staggered, and then rose triumphantly, but there was a big bailing job for the Skipper, which kept him well occupied for some time.

Having been so long delayed in getting away from Spurn it was late on the tide, and when we had Paull almost within reach we touched the ground, to our intense disgust. An instant retreat was the only possibility, as ten minutes delay would have left us high and dry in the middle of the river. It was dusk and blowing strong, and it was not a comfortable sensation to race madly along with nothing to be seen of the shore but a vague black line especially as we had to give it a wide berth, owing to the numerous stone groins projecting far into the stream, and which would have reduced our boat into its component parts in no time had we struck one of them. Meantime we had the uncomfortable foreboding that we might be swept past Stony Creek, the only possible harbor of refuge, and it was only by mere chance that we detected the entrance. It has no lights and has a particularly offensive groin. The only thing to do was to put her sharp on the wind and head for the creek, and it was a sufficiently uncomfortable moment when we rounded to, gunwale under, in a breaking sea.

Oh! the rest and peace of the harbor when gained. We could laugh at the river roaring like some disappointed beasts of prey outside. A kind farmer living close by bade us welcome, and never was sleep better earned or more delicious. The next morning saw us beating up the Hull, where we found our centerboard friend lying in the old harbor. When we saw her boom sticking out over the counter and her general up-river scale of rigging, we opined, not without reason, that her crew had had a considerable dusting the previous day.

Being the day of the yacht regatta, the river was gay with spotless canvas and many colored bunting; and following in the wake of the yachts might be seen the canoe and the centerboard the latter a "joy for ever" with her bottened lug and jib. Anchors being cast at Paull, a pleasant lunch was served on board the centerboard, and notes exchanged as to the tribulations of the previous day. A genuine Paull day, the bay flashing and sparkling in the sun, and a dreamy haze over the low-lying meadows, and

the swelling outlines of hill and wood, and we lazily basked in the church yard until the white specks in the distance developed into the forms of the competing yachts, and warned us to get up anchor for the run home.

How utterly small a canoe feels as her skipper glances over his shoulder and becomes aware of a towering mass of white canvas, shapely mainsail and trim cut topsail and enormous spinnaker, coming tearing along behind.

Thus swept by the leading yacht, triumphant in her pride and beauty, and soon she was well ahead. But what's up? A sudden shift of wind, and the noble yacht is down on her beam ends, and topsail, topmast and flying kites sink in shapeless ruin just in time to prevent a capsize.

Never was the value of patent reefing gear more apparent, as the squall came whistling along and found the Ægir ready for it under snug double-reefed mainsail.

The following yachts were still carrying their spinnakers, which, however, were handed in time to save their sticks.

It was pleasant once more to join the home contingent of the H. Y. C., which we found established in the old spot in the harbor. The fleet consisting of Mr. Hamilton's new boat, as well as the Tolmthe, Spray and the Bluebottle, and later on a fine sailing canoe, built by Akester, of Hornsea, for Mr. Jacobs, 16'×4' 10".

Circumstances not permitting of a lengthened cruise on foreign waters, the old Ægir drifted down to Paull one fine Saturday afternoon, and her owner having intended to stay two or three days, eventually stayed for three months.

Paull! Where's Paull? I think I hear your readers say. The question is excusable. I have heard otherwise well-informed people say: Where's Hull? and it is excusable if some little ignorance exists as to so unobtrusive a place. It is just the fact that Paull is a little-known, out-of-the-way spot, that constitutes its charm. It is impossible to imagine Paull in any other guise than as we now saw it, and it is to be hoped that many years may elapse before the mania for progress seizes upon it. As it is now, the quiet old spot has a most soothing effect after the noise and bustle of Hull, and nothing is pleasanter than to find one's self down there after the day's work, and to set sail and sail pleasantly over its broad bay. It is an old-world spot, and were it not for the tide of commerce continually rolling past, it might be a bit of the last century. The way to it from Hedon lies across rich grass lands, where cattle graze contentedly in the shade of the noble elm trees, and we catch a glimpse of the Humber and sails of passing ships, as we descend the slope into our village.

We have only one street in our village. No straggling cottages are met with on the way. No, the village street just begins and just as uncompromisingly ends. Our main street, it must be confessed, is just the least bit commonplace, but to see Paull a-rights we must lie at anchor in the bay and then we observe that the houses, which look so demurely on to the street have their picturesque side. Note the charming effects of light and shade as the afternoon sun glows on white gable and red roof, gilding the chalk embankments and playing at hide and seek with the irregular outline of wharf, jetty and seaweed covered piles, for every man is his own engineer and uniformity suffers to the advantage of the picturesque.

Beyond the village we see the Coast Guard station and an old lighthouse, long disused, but contributing with its red tower a warm dash of color to the picture. Beyond this the grassy wood-clad slopes of high Paull. Those grassy slopes mark the spot where men of war that were launched in the old days of wooden walls, days are fast passing into the realm of tradition. To make up we have an enterprising resident at the other end of the village who has a yard where worn out ships are broken up, and many a stout old craft has finished her pilgrimage there. It is a fascinating spot for the small boys of the village, and great is their joy when they can convert the half demolished hull of an old ship into a castle to garrison and hold against all and sundry.

We have a fort, but a sleepy obsolete old fort with out-of-date guns. The military side of Paull life seldom intrudes itself upon us. The fort hides itself behind the woods of high Paull and the garrison is composed of long-service men and it is rarely that a straggler from them shows itself on our street.

Sometimes indeed, to show that it is not yet quite extinct, the fort wakes into life and then the soul of old Father Humber is vexed and his bosom rent by shot and shell and wreaths of blue smoke float lazily away over the trees. On these occasions it is well for the canoeist to give the fort a wide berth.

Our hostelry, the Royal Oak, occupies the center of the street, and a comfortable, homely spot it is, with a capital host and hostess, whose one object seems to be to administer to our comforts; and a rambling sort of storehouse is attached, a very paradise of boating gear, punt guns, sails, spars and nets of all kinds. Our host is abundantly blessed in the matter of children, and finer specimens we need not wish to see. The eldest boy is a great ally of ours, having arrived at an age to go with his father on his shrimping expeditions. He is an inveterate fisherman, and is always engaged in mysterious private ventures of his own with a view to the capture of fish, but we only enjoy his confidence to a limited degree. The other boy—the rest being all girls—the very smallest boy who ever wore a fisherman's Jersey, is a regular young sea urchin. He will be on the water, and in it sometimes, and it is difficult to resist his entreaties to be taken out in the canoe for an evening sail, however much we may know that he has escaped from maternal control. What are the prospects of ultimate bliss compared with the joy of the moment? His greatest glory is when he is permitted to go out in the shrimper, and is allowed to steer for a few moments, and it is a sight to see him plant himself squarely on his sturdy little legs and grapple with the huge tiller.

Standing on the summit of a gentle rise, our church raises its gray old tower above the trees. A pleasant place this old church yard to lie and bask in the warm afternoon sun. The trees shut out the view of Hull, but between them can be caught the sparkle of the river, and its faint murmurs and the whispering voices of the trees blend in a sweet and drowsy lullabay. Nothing breaks the view seaward. A sweep of meadow land, bright with summer coloring, and beyond that the river widening as it goes. I like it best at low tide, when it seems to sink to rest, and the uncovered sand banks glow golden in the sun, and white sails, motionless, stand out against the blue hazy distance. It is a moment of rest and peace, when for a time the cares of life seem as far away as the white sails out seaward.

The graves all look seaward, too, as though their quiet tenants were still looking out for their returning ships. No stately monuments with lying inscriptions, only the humble graves of generations of simple Paull folk. There lie the men upon whom England could rely, when her fleets swept the ocean. The men who sailed those old-fashioned boats, of which a few specimens linger in the harbor, mocking with their bluff bows and clumsy counters the graceful clippers of to-day. Yes! I suppose they, too, in their time, looked lovingly on their unwieldly craft and dilated on their beauties. One gravestone intrudes itself upon my day dream. It records the departure of an old army captain, who, "after surviving many honorable wounds" and many a hard fought field in those old days when England stood alone against a world in arms, came to spend the evening of his life in quiet old Paull. I have grown quite accustomed to my old captain, his grave stands just in my special sunny corner, and I really feel as if I knew him, and lying as I am in the warm grass on this drowsy summer afternoon, I feel that it would be quite according to the fitness of things if he were to stump up the pathway on his wooden leg and salute me with the courtly grace of a by-gone century, and after tending me his silver snuff box proceed to enter into the detailed explanation of the complicated strategy of some forgotten campaign. A little prolix perhaps he is, and apt to get his contending forces decidedly mixed up. I have credited him with a wooden leg, I do not know why; there is no direct evidence to prove the facts, but without a wooden leg and a stiff, tightly tied military queue, I should not know him, and did he appear before me minus such appendages, I should regard him as an impostor.

How did he get to Paull? His very name is forgotten, but to me he is an old friend, and we have a common vested interest in that quiet corner of the old church yard. Peace be with his shade. He, like many others, did his share in building up our great empire, for us to value and guard the sacred inheritance.

I can think of nothing more delightful than the fact dawning upon the awakening senses that it is Sunday morning. No rushing off to catch the early train to town. No! A whole day of open air, and as I sit at breakfast, fully appreciating the fact that I need not hurry over it, I have before me a charming picture framed by the wide open window of my little sitting room. A broad expanse of sunlit water, and in the background Hull. Yes, Hull! certainly, but to-day it is for me but a feature in the landscape. No longer one of its commercial slaves, I can look upon it with feelings of unconcern. Only a few miles across the bay, but it might be a few hundred yards for all it has to do with my life to-day. How bright and beautiful everything is this morning, as I take stock of the immediate foreground. First our two yachts lying at anchor immediately before me. They too seem to realize the fact that it is Sunday and a fine day. How brightly the sun shines on the well set up rigging and white sail covers, and sparkles on brass work and skylight as they bow languidly to each other on the lazy swell of the tide. They seem to be saying to each other, "We are not quite like them, you know," meaning, of course, the shrimpers which lie at their moorings around. Without the dainty fittings and bright bunting of the yachts, the shrimpers are in their line as worthy of admiration. No amount of tar and tan conceal their inborn grace and beauty.

Ah! there is the old Ægir. George, my host's eldest boy, has brought her round from the creek. He has even permitted a couple of his boy companions to accompany him. You can see he is an incipient yacht skipper (and to be such is the grand ambition of all Paull boys) as he sits in an attitude of command at the helm. He is not allowed to hoist the mainsail, so has to make what sailing he can with the mizzen. Now he is ordering his crew to let go the anchor, sails are made up yacht fashion—for the Ægir aspires to be one of the aristocracy—and he sends a string of signal flags fluttering to the mast head, and the old Ægir, like the others, rejoices in the fact that it is Sunday as she lies gently rolling on the ripples of the bay.

Beyond the anchored craft, a few hundred yards away, right in the center of the picture can be seen the buoy marking the tail of the Skitter sand. As every ship making for Hull must pass between me and that buoy, I am well placed for observing the nautical panorama. Here comes the Swedish, closely followed by the Norwegian mail steamer. How nobly they plough their way along with awnings spread fore and aft, and crowded from end to end with Scandinavian emigrants to the land of promise. I feel glad that their first glimpse of old England finds her wreathed in sunny smiles. The officers are clustered on the bridge, we can almost distinguish their features. The flag are stopped at the masthead, and as Paull is passed, burst simultaneously, and house flag, mail flag and glorious red ensign float proudly on the breeze. As I sit here there passes in review quite a naval procession. Schooners beating up stream, sturdy fishing smacks with their red and yellow tanned sails. All sorts and conditions of steamers, from the great Atlantic lines to the fussy little tugs, and perhaps a four masted clipper ship towing up to Hull, with a stray Thames barge and a billy-boy or two.

But the tide is turning and the anchored craft are swinging, and it is time to be off for a long sail down stream, returning with the evening tide. So if we are lazy, and such is alas too often the case, we can sail about in the neighborhood, for in the slack water of Paull bay we are independent of tide, and need not be far away when a white flag flying at the Royal Oak warns us that dinner is under way.

It is pleasant sometimes to vary our Humber cruises by a run up the creek which once bore the wealth and commerce of the world to Hedon. Our creek holds an important place in the life of Paull, and is but a few minutes walk from the village along the river bank, and as we walk along the embankment we notice the Dutch like aspect of the country, lying as it does below the level of high tide, with rich corn land stretching away in the distance, and here and there a farm house embosomed in trees, and gray church towers and red roofs of quiet old villages. It is a picture full of calm and repose, the passing clouds throw broad stretches of shadow over meadow and woodland, the very cattle looking the image of contentment, the only moving thing being the sails of a keel slowly making its way to Hedon and showing above the banks of the creek. The lower parts of the creek is the home of the smaller shrimpers, and no prettier sights can be seen than when the morning tide has lifted them and they are all bobbing about at their moorings, and a procession of fisherman make their way from the village and push off in various shaky old boats. The red sails are hoisted, and one by one the bonny little cutters steal silently out of the haven with the cleverest of maneuvers, for the entrance is narrow, and out on to the broad Humber for the day's work; and the harbor is deserted save by a stately schooner yacht lying dismantled at her moorings, and a few superannuated shrimpers whose history goes back into the night of time.

The Ægir is got under way, and with the flood tide under her has a merry time beating up the narrow creek, and her steersman looks over the country around and wonders where he would land if the banks were to give way.

After a couple of miles of twisting and turning, with Hedon church now ahead, then to starboard, then to port, he arrives eventually at the river head and makes fast to one of the keels that is discharging cargo at one of the wharfs.

A charming picture. It might be fresh from the brush of some Dutch landscape painter. The creek, with a few river craft bright with varnish and paint, and of considerable value in the composition. A warehouse or two, old enough to be picturesque, and rising above the elm trees in the background, the grand old tower of Hedon Church, with delicate tracery of window, pinnacle and buttress looking down protectingly on the red roofs of the old town nestling at its feet. At the head of the creek a windmill, which seems to emphasize the old-world surroundings, and as it emits a musical murmur, it seems to be entering its protest against the hurry and bustle of this steam-driven age, and its sails standing out white against the blue sky, keep time to the chimes of the old church. They are quaint old hymn tunes, which the chimes, with many a pause and start and some little confusion, mark the evening hours withal. No brazen-throated bells these, but subdued and melodious and in harmony with the quiet of the scene.

The keelmen, we know them all now, and have learned to sympathize with them in their hard struggle for existence in these days of depression and low freights, are always glad to welcome the dainty little boat with her white sails and fluttering burgee alongside their great bluff Dutch-built craft, and to make the Skipper free of their narrow quarter decks and snug little cabins with courteous invitation to take a cup of tea with the "missus." It is pleasant thus to while away an hour, as in the quaint incisive West Yorkshire dialect, they tell us of the dangers and tribulations of up-river navigation, and of the good old days before railways had played such have with their trade.

What had been intended for a few days stay at Paull had developed into one of weeks. A really fine summer tempted its prolongation, and it was a happy day when my old mate, the companion of many a jolly cruise, emancipated from hospital work in London, burst in upon us full of enthusiasm and longing for the sea.

Now the Mate is possessed of that wonderful gift of instantly taking first place in public estimation and it was but a short time before he was quite *au fait* in Paull life. With the women he was first favorite, the children adored him and he managed—what the Skipper never could achieve—to become intimately acquainted with all the complicated family ramifications of Paull society, for in Paull everybody seems to be cousins or aunts or uncles to each other.

All too quickly the summer passed away and many a jolly cruise we had and many a pleasant evening sail, often joined for a day or two by the members of the H.Y.C. with their boats when regatta races would be organized and carried out under the criticising eye of the fishermen on the jetty.

When a Paull fisherman is not actually engaged in fishing operations he congregates with others of the craft on the jetty and gazes solemnly riverward or else sit in rows on the banks of the creek and criticises the boats. There is no record of a Paull fisherman deliberately taking a country walk.

There were occasions when our fair friends from Hull would shed the light of their presence upon us and then the Baronet, our host's shrimper, would be requisitioned, and all traces of her daily occupation being done away with, made a first-class yacht. These pleasant days finished up with the proverbial tea and shrimps and even (if our friend L., our musical fisherman, could be found to play us a waltz on the accordeon) with an impromptu dance in the kitchen.

It was pleasant too, when after a long evening sail, and when the canoe had been moored in the creek among the shrimpers lying peacefully at rest, to walk up to the village through the ripening corn fields, and to join the circle in the kitchen where the talk was mostly of fishing and fishing boats, and likewise of yachts. (What an oracle the Mate was on these occasions! He had an impressive way of laying down the law on things which he understood as well as those he did not.) We are very scientific in Paull, and set great store on good lines and fine models. Our host is the owner of one of the crack shrimpers, and had carried off two prizes during the season, for we have our regatta too at Paull, and no one need wish to see finer sailing than we saw displayed as the Baronet and the other clippers were skilfully sailed round a difficult triangular course. It was marvellous to see one man manage an eight ton cutter, set and take in spinnakers, and manage successfully to sail his craft to victory amid the changes and chances of a hard-fought race. On these occasions at the courteous invitation of the "influential committee" (see programme) we accompanied them round the course in one of the largest shrimpers to see fair play.

But all things must end, and summer alas is no exception to the rule. The cornfields which we had watched change from green to gold were now bared of their crops and the harvest gathered in, and the evenings rapidly closing in rendered canoeing impossible, and one Saturday witnessed the closing scene.

For the last time, a fine fleet under the flag of the H. Y. C. casts anchor in Paull Bay after a lively beat through a typical Humber sea.

Our homely quarters were the scene of a good spread, in the preparation of which our excellent hostess and Aunt Polly had surpassed themselves.

The Skipper presided, supported on the one hand by our Nottingham friend, representing the T. V. S. C., and who thus fulfilled a pledge entered on when we last sailed in company, and on the other by the "Mayor of Paull." You will seek the title vainly in any published lists of mayors, but thus we designated one of our oldest and most respected inhabitants. The Mate occupied the vice chair, supported by our two yacht captains, brave in blue coats and gold buttons, and up and down were scattered various Paull fishermen in their Sunday best, and members of the H. Y. C. in their white flannels.

There was the member who, meet him where you may, in crowded streets or country lane, then and there produces for your approval, plans for his next boat, which, like all "next boats," is to be perfection. Then there was the member, who, under similar circumstances, as assuredly produces from his pockets, a half model of his next boat. Both had now got sympathizing listeners, for the Paull fishermen can talk boats until further orders.

Then there was our legal member, who had just let his boat be run into and sunk by a steamer in order to establish his view of the road at sea, and with a claim on the steamer for damage, and a claim on himself for salvage, was quite in his element. A sprinkling of Paull residents and friends from Hull completed the party, which was fully permeated with that mutual sympathy which is a bond of union between all who "go down to the sea in ships."

With the advent of the punch bowl began the eloquence, and it was with feelings of sadness that the Captain bid all welcome, knowing that this in some sorts was the celebration of the obsequies of another boating season shortly to be laid at rest with the golden memories of so many others. Speeches of varied length and merit followed. Needless to state that the Mate was happy in speaking for the ladies. He had doubtless not forgotten our little yachting trips. Then we had a speech from our principal resident bristling with statistics as to the progress of Paull, and predicting a glorious future, and we were informed that building operations had attained a magnitude surpassing anything within the memory of the oldest inhabitant, for were not four new houses actually being built at once! True, they were to replace those which had fallen into dilapidation. Then our Nottingham visitor expressed himself in a neat and appropriate speech, bringing the greetings of the silver reaches of the Trent to the brown stretches of the Humber. Our worthy host of the Royal Oak alone failed us, obstinately declining to get on his legs or utter a sentiment of any kind, and in spite of loud calls continued to puff his long clay with exasperating complacency.

From eloquence to harmony, and some excellent sea songs were given, not by the seafarers present. Sea songs are somewhat of a fraud. Our experience is that sailors, so far from indulging in chronic melody of the rollicking "yeo-heave-yo" type, are given to singing extremely lugubrious songs, dilating at interminable length on some specially dismal subject.

And so, with this little flicker, the season of 1886 died a natural death, and with it were buried many a pleasant memory, not the least pleasant being those in which the fresh breezes and the kindly fishermen of Paull play so conspicuous a part.

All the Humber boats are laid up now. The old Ægir has returned to Hornsea Mere, where, with the Cassy and a few others, she enjoys an hour or two's sail on some rare, fine Saturday afternoon. The winter will proably see several new boats built by Akester of Hornsea, and should the Hornsea Mere Company continue its operations, a considerable impetus will doubtless be given to canoe sailing.

The only cruise of any importance was made by Mr. Holmes on the Norfolk Broads, while the Upper Trent and Witham were visited by the Spray and the Bluebottle.

Mr. Hamilton's new canoe has stood the test of the season, and is a decided success, and Mr. Jacobs's new boat, though appearing ing late on in the season, has won golden opinions. ÆGIR.

KINGSTON UPON HULL, England, Dec. 1, 1886.

THE RACE PROGRAMME FOR 1887.—We have received as we go to press a proposed programme for the races at the next meet, to be submitted to members of the A. C. A. for their suggestions and criticism before being finally adopted.

THE TRAVELERS has paid on accident policies alone over $1,700 a day for every working day of its existence.—*Adv.*

Yachting.

CRUISE OF THE COOT.

XXX.

UPON putting my head out of the cabin at 5 A. M., the wind was found blowing moderately from N. E., with the sky overcast and a heavy bank of threatening clouds rising slowly from the sea. The idea of rounding the Long Shoal was not very inviting for a storm was brewing. But having passed ten days in Stumpy Point Bay, I was impatient and reckless in proportion. The gale, if gale it was to be, would strike in at least from a favorable quarter, enabling me to run before it and round up to westward of the shoal for smooth water. After a hasty breakfast, the mainsail was got on a stretch and with some misgiving the boat cleared out of the harbor. It was not yet blowing hard enough to call for a reef, and being anxious to make all speed possible the precaution of snugging down was omitted. The Long Shoal makes out six miles from the mainland, but has 6ft. of water half way out to the screw spile lighthouse, which marks the tail end of the danger. In heavy weather the sea breaks clear out and runs with great velocity, being often steep enough to "pitch pole" a small boat, or to roll her over if allowed to broach to. With boom well off to starboard the Coot followed the coast down, the wind and sea steadily increasing, a fact which remains almost unobserved when slipping down wind until the time for reefing is past due. Three miles had been made, when suddenly the sky to the southward lightened up. The gray mists and smoke broke away and a lurid red, like the glare of a distant fire, overspread the vault above. In contrast to this the inky blackness of the ugly bank to the northward was forcibly revealed. When clear of the lee made by Stumpy Point, the wind came down in earnest. The black nimbus clouds climbed into the heavens and expanded into great size overhead with appalling rapidity. With them came tearing blasts and a cold, cutting rain astern, everything was shut out in darkness and the blinding sheets of a terrific downpour. From Pamlatan Sound the gale drove the water before it in savage-looking billows, from which it whipped the scud and sent it flying ahead. To turn the Coot for a beat back to Stumpy Point was at once out of question. The gale had broken upon us with so little warning and such fury that the little light-draft craft could not have been kept at it, but would have jumped off into the trough and been overpowered by tons of boarding water. To run her was the only alternative, but even that would have steered her into the long lines of foaming breakers which were already piling in on the sands in the utmost confusion. The sea was rising fast and canvas had to be got off at once or it would go out of the bolt ropes. Watching a lull, the Coot was turned head up as high as she could be made to look for a moment or two. I jammed the tiller hard a-lee, but this was of no avail, for the yacht soon lost her way, and being of light displacement, fell off and gathered sternboard. All this required a little time. Meanwhile, she plunged and rolled so viciously that I expected the spar would be whipped out of the boat. Fortunately it was a fine stick and 7in. diameter. Barrels of water broke aboard all round. First the craft dove head into it as though bound direct for the bottom, then clearing herself with difficulty, she would gamble to windward and pick up six inches in her gangway, and after lifting to the hollow face of the next roller, she would be slid along and scoop up another dose on the leeward roll. The sea was overwhelming the boat with superimposed weight, for the cabin house and cockpit coaming prevented quick escape to the load. The water began slopping over into the cockpit, buckets full at every gyration. The boom dove at every plunge, flew into the air when released and took charge of things generally. The sail slatted and made a racket like a volley of pistols. Things were going rapidly from bad to worse, but I had crawled forward and by dint of extraordinary acrobatics held on for dear life, casting off the halliards and rousing down the luff half way during the instant of poise between each plunge. The boat had by this time fallen off into the trough. She gave one terrible roll to leeward, burying nearly up to the king plank. For a moment she hung as if on her beam ends. The sea rushed into the cockpit like a miniature waterfall. I thought she was gone. But the wave which had wrought the damage passed from under, and the Coot fell to windward with a dull lurch, which announced her half swamped condition. She steadied for the next sea or two as though exhausted with her wild antics. I worked my way aft hastily, broke out a stop from the stern locker, got in the sheet, and rousing the slack sail on the boom, tied down the leech, leaving the bunt of the canvas hanging below the boom like a hammock. At the same time shoved the tiller hard up with one foot, and had the satisfaction to notice a welcome sea cuff the boat's head off, bringing the wind nearly quartering. The cat gathered steerage as I paid out sheet, and was once more scudding before the gale. Keeping the helm a-weather with my back, some of the water taken in was baled out at intervals.

Well nigh used up, I had to stop for breath and put the boat on her right course. She had driven near the breakers, but by keeping her up a little would pass beyond when she could be sent across the shoal and into smoother water. The gale was howling its worst and green mountains of wild water were heaping up higher and higher. To make certain of a safe crossing the yacht had to be sailed well out to the lighthouse, for it was no longer possible to distinguish the tail of the shoal, the water being a mass of soap suds and curling over in boiling foam all round the horizon. The rain had ceased, but the drift was spinning so fiercely that no difference could be felt. My teeth were chattering with the cold and slop after slop found its way down the neck into the innermost recesses of my clothing. The little Coot was laboring and wallowing along more dead than alive. The water broke clear over her cabin house and poured out in streams at the sides and over the counter. She was practically submerged and seldom shook herself clear. The skiff towing astern had butted her nose to pieces and filled several times. By steering with my body I had hauled her up to the quarter and canted her with the painter enough to spill most of the contents. As we approached the shoal the sea grew very bad and I had my doubts about getting over without being pooped and sunk. I was deliberating upon an improvised sea anchor, by which the boat could be eased over the shoal, stern first, without any canvas. It seemed to be the last resort. Just then the skiff capsized. I righted her once, but she turned bottom up again and tacked across the Coot's wake, fetching up with a fearful tug on the double painter. Something had to go, and that soon. Save the skiff or save myself seemed to be the question. There came another awful jerk and another. The third was too much. The painter parted. So did the skiff. The upper strake of the yacht's counter was likewise torn from the hood-ends and opened a gap of half an inch across the ends of the deck planking, through which the water freely trickled down below. I cast one longing glance at the departing skiff and "heaved a sigh of sorrow." For six months she had been my constant companion and to shift without such a useful adjunct seemed impossible. She could not be replaced in the South for want of materials and mechanics. To turn the Coot up in such weather would have been madness. Besides I could not. We had already hauled up into shoal water and with great risk jibed over to port. A mass of cross sea struck the Coot's flaring bow, as she fell nose first into a hollow, carromed up and flew slap into the sail with a dull thud. I looked up with disgust. The blow burst the sail in three places. The gale took hold and ripped up the canvas in long gashes. Nothing now remained but to sink the Coot outright, but we had luckily forestalled the furious elements, both by this time able to haul up for the lee of the shoal. Once across the spit the sea smoothed in a few moments, and with the exception of a further dusting, the Coot lugged her ragged canvas in to the beach where anchor was let go after a very narrow squeak for the yacht and her crew. Never before did a weather shore seem to smile such a generous welcome as the gravelly sands stretching east from Long Shoal Point. Danced a jig, lit a pipe, started the coffee and stood out in the breeze to dry, the recipient of numerous congratulations from myself to myself, supplemented with a feeling of relief, afforded by the prevailing quiet after the rude cuffing from the tempest and the uncongenial mental strain brought about by figuring on probabilities with four boats.

Two hours later affairs wore a brighter look. The forbidding clouds had passed away and the horizon had partially cleared. The gale had materially subsided and was no more than a close reef breeze. I had dried in the wind, enjoyed lunch and a rest, after which the third reef was snugged down in good shape and the sail stitched up temporarily. The next thing was to seek a harbor where permanent repairs could be effected. Far Creek, the nearest settlement, was twelve miles away, and Middleton about sixteen. I had been told that the Coot could not get up Middle River to the latter town, and the chart showed only 1ft. of water. So the boat was got under way for Far Creek, but overstood and brought up in the completion of the adventures of the day. Smooth water and plenty of wind bowled me to the westward until abreast of Long Shoal Point and the bay of the same name. A sand spit makes out half way across the mouth and another runs out to sea from the opposite cape, with most water close in shore. The Coot was hauled up round Long Shoal Point, picking her way by aid of a sounding pole. The lead, I should say, had long ago been abandoned as impracticable in shoal water, a light pole being handier and more certain, and in universal use among the native boatmen. Crossing the bay, the inshore "slew" was found, and with a few inches under her keel, the Coot got out into deep water again. The sea was still running high and the atmosphere so hazy that little could be made out ahead. The shore looked like an unbroken wall of high trees, and no gap into Far Creek could be discerned. The yacht followed the gradual curvature of the forest growth round to the southward, when suddenly a low black line of marshy soil lifted into view, floating, apparently, several feet above the sea level owing to a strange mirage. From my low position in the cockpit nothing like a break in the swamp could be seen, and I kept on in the expectation of opening Far Creek at any moment. One tall surveyor's beacon was passed and a second appeared ahead as if rising straight from the water. These beacons are big tripods stiffened with a few cross braces, and, as I found out later, were intended to warn approaching vessels of the proximity of a low marsh with outlying sand shoals. From a distance they appear to rise out of the sea, for only upon close approach do the marshy points upon which they stand lift into view. The second tripod evidently marked a sharp turn to the westward in the coast line, which I took to be the entrance to Far Creek and boldly steered for the point. When a hundred yards off a long line of breakers burst upon my view. This was ominous, but knowing that the water shoaled rapidly from 18ft. to 4ft. at the entrance to Far Creek, supposed the breakers were produced by the high sea tumbling in upon the flat, and gave them no great concern. Upon closing in on them, however, the line of foaming crests was seen to make out a long way off to sea. Then it suddenly dawned upon me that I had overshot the mouth of Far Creek and was facing the breakers of Gibb's Shoal. I wished to come round and beat back up the marsh to the first tripod, which I now understood to be on the southern extremity of Far Creek harbor. But the sea was very high and the wind coming down in hard puffs. The Coot was not the boat to make anything good to windward under such a crucial test, and rather than drive broadside on Gibb's Shoal in a futile effort to beat back, I resolved to take my chances upon getting over the shoal in safety. The boat was pointed for a 2½ft. slew close in to the tripod with the expectation that the sea would lift her over if she did not stick too fast. In that event—but let us wait until it happens. Perhaps it won't. It did not. The breakers took the Coot by the haunches and lifted her over, with a little wild yawing, into almost smooth water beyond. The sounding pole gave 3ft., then within a boat's length 8ft., from which I knew the harbor to be Middleton Roads. At the worst I could ride out the night right there, as Gibb's Shoal was a breakwater from the east, and if the wind should haul into the southward it would be an easy matter to drift back across the shoal and make for Far Creek. There was still an hour by the sun, and a better harbor could be sought. The yacht was skirted round the semi-circular bight on a hunt for Middle River. That creek was discovered and the boat headed under bare poles to save grounding too hard. Right in the mouth she commenced to bump, and with visions of only 1ft. further up, she was speedily brought to an anchor in a very poor berth. For this there was no help, as Yesocking or Wycsocking Bay to the southward was beyond reach before dark. At every little sea the Coot would come down on her keel with a vigorous protest against such a shabby retreat for the night. The spare anchor and all the after pig ballast was carried forward on deck. Then followed the 5-gallon water breaker, spare gear and heavy stores. This brought her down by the nose to an even trim, and with the rudder triced up to the boom the boat stood afloat. In this detestable plight I drew comfort from Seal of North Carolina, plug cut, and scanned the surrounding country through the glasses. From marshes near the mouth the land rose dry half a mile up, and above some low bushes, growing in clumps, appeared a number of shingle roofs and the gaunt arms of sundry windmills. A sociably inclined calf meandered down to gaze upon the Coot and break the stillness of the eve with an occasional bleat. The foolish shape in which the boat was riding to her gear made me feel a touch of kin with the placid young animal. How the night passed, whether the Coot bumped the bottom or not, cannot be recorded, for I slept like a log after the toil and excitement of the long day.

The sun was streaming in at the cabin windows, all nature had been awake for hours, dogs barked in the town, the meadows were alive with stock of various kinds, the windmills had set sail and were revolving at a tireless rate, and two lumbering canoes were drifting down the creek in a light air, when I turned out to take a look round and pull in the cable to ascertain whether the Coot was still afloat.

When the canoes hove in sight round a bend there was a sudden commotion. Sails came in and poles were manned, by means of which the lumbering craft were soon within hail. "Where are you from?" "When did you get in?" "Right in the shoalest spot of the river." Just my luck. "Three foot of water everywhere else." "You're on the lumps, as we call them." "Schooner pounded her bottom out right there not long ago." "Pilot you up? All right." "First-rate blacksmith in the town." "Come up and have a good time." "Where's your jib?" "New York! What, in this thing?" "Wouldn't like to poke out of the creek in the likes of her." And so it went on. Explanations and wonderment, till one canoe was towed off by the other, while one of the men remained on board to pilot me up to the bridge of Middleton town "to have a good time." Things were got in shape rapidly and the native took the stick. When the old Coot got way on and slipped along in the light air, the worthy pilot was considerably taken aback. He found her so handy and smart in comparison with the tubs of the town that he became quite enthusiastic and fooled round, first trying one thing, then another, till I feared we would ground again. "Plenty of water here, I suppose?" "Yes, indeed, four foot till you get up to the bridge." The words were hardly out of his mouth when the Coot slowed down, stirred up black mud, and came to a stand. "Got a little too close to the point," complacently remarked the pilot. So we did, for you could reach the reeds on the slimy bank. With the oar I started forward to shove off, and had just found a spot hard enough for a brace when the estimable pilot jibed the boom over slam bang and hit me in the small of the back, incidentally also knocking me into the chocolate-hued fluid of the creek, where I fetched up knee deep in mud as soft as mustard, and spluttered and gasped for breath, for the water was fearfully cold. The situation was comical enough—for the pilot. He roared with laughter. "Forgot all about this funny kind of rig. Didn't think the vessel was so far forward." That was all the satisfaction he vouchsafed as I clambered in over the side, minus shoes and hatless, and looking as though dipped into brown paint from the waist down. We got afloat after a while and reached the bridge, upon which the town had assembled to welcome the curious stranger in the curious boat. No doubt I satisfied their liveliest expectations, with limp and muddy clothing, sloppy stockings and chattering teeth. But the pilot soon explained the catastrophe to the worthy burghers of Middleton, whereat they all expressed their sympathy and formed a procession to escort me "to Jim's fire, a few doors up." Jim turned out to be the very village blacksmith I was in seach of. His fire was welcome, and while drying my clothes explained to him about two iron knees with which to bring the counter back to its proper position.

Jim was a colored citizen of pure strain, but a smart and intelligent disciple of Tubal Cain. He went aboard the Coot, put his finger alongside of his nose and came back to work. The iron knees were speedily wrought out of old scrap and coach bolts found to suit. The knees were screwed down to the deck and the counter hove in by the coach bolts. Before noon the repairs had been effected in a subtantial way, Jim had 75 cents, his wife had my washing, and I had an invitation to a buggy ride "round the square," which was to give me an insight into the agricultural wealth of Hyde county. In charge of one of Middleton's nabobs, we spun over miles of excellent country road during the afternoon, and brought up at various great farms which are locally known as plantations. Prosperity and wealth could be traced on all sides. The fields were truly Western in their extent, fenced in and under thorough cultivation. The soil was, in the main, a rich black vegetable mould of great depth and apparently inexhaustible strength. I was told that fine crops of corn had been raised for twenty years in succession off the same ground without artificial fertilizers being called in. Cotton and rice were also staples, but of late much farm produce and market trucking had received more attention, while hogs and cattle thrive in a wondrous way, particularly the hogs. Not the lean, long-legged mountain "choate," with their eyes near the center of gravity of hull, familiar to the foothill counties of the Blue Ridge, but Westchester breeds of respectable pedigree and tremendous displacement. My companion urged his trotting mare at a great pace, pointing out the local celebrities as we whisked along, till Mattamuskeet Lake hove in sight. Across this big fresh-water pond lies the county seat, Fairfield, said to be a veritable garden spot of verdure, with a great stand of corn and prolific in all that enriches the fortunate proprietors of the soil and mounts individual wealth in some cases up to a round million or more. The only drawback to Hyde county is the want of a railroad, but being isolated on a peninsula there is no through traffic or terminus for an iron road, hence transportation remains as it was a century ago, and limits the possible output of the region. The State of North Carolina once came to the aid of the county, and sent down a gang of convicts to dig a canal from Wyesocking Bay into the lake. But the canal filled up so quickly with the drainage of the adjacent plantations that it has shoaled in places to a few inches and is now closed to all but canoe traffic. Along the shores oyster culture has been started. The storekeepers, not having heard of the shiftless sophisms of modern socialists, still believe in grasping all the "uncarned increments" which they can steer into their pockets, and after planting seed oysters wherever the nature of the bottom permits, attend to their regular business while the young oysters set to work to fatten and multiply, their increased market value going to the profit account of the thrifty investors, despite the fact that the oyster does the work while his owner looks on. This industry is still in the stages of experiment, and want of experience will cause loss to some individuals; but there is no doubt a great future for the oyster in Southern waters. The success of the beds means the introduction of canneries and employment of idle farm hands between crops.

The Coot remained tied up to the bridge the next day, which I put in sewing up the gashes in the mainsail and reeving off new lacings. The population of Middleton massed itself on the bridge and had a free show. The news of the arrival of a yacht all the way from New York had spread like wildfire, and many estimable yokels with their families drove into town to attend the circus. The oil stove and a small Waterbury clock took their fancy. I think a nautical peddler loaded with a stock of similar articles could drive a trade at a 100 per cent., cruising from place to place on these Southern sounds after the fishermen have lined their pockets with the proceeds of the spring catch, or the farmers have marketed their crops in fall. If he happens to be something of a photographer or a medicus in addition he will speedily win his way into the good graces and pockets of the inhabitants.

After buying some canned goods from the stores at exorbitant prices, and a delicious ham cured by a farmer for private consumption, the Coot cleared out of Middle River and beat down the coast to Wyesocking, across that bay and by Hog Island round into East Bluff Bay for an anchorage. This was found in a creek at the head of the harbor, where the hook was let go in 4ft. soft bottom. The bay is the last place usually made by small craft bound south for Core Sound and Beaufort, but I preferred skirting the shore, sailing up Neuse River and trying the 6-mile canal into Newport River. This would give a better chance to view the country, and beating across Pamlico against the prevailing southerly winds and sea was not exactly the Coot's forte.

A new icehouse had been erected in East Bluff, and a most excellent landmark it makes when steering for the Bluff coming north across the sound, as I found out on the return voyage. Long before anything like a harbor can be discerned in the unbroken wall of trees the house can be seen over the marshes, standing out in relief against the sombre background as a splendid mark of identification. Two fishermen were busy preparing the house for the reception of a load of ice anxiously awaited by schooner from New Berne. When the Coot rounded to they felt justified in quitting and coming off to investigate such a queer apparition, having got the good fellows in the proper frame of mind by an offer of that never-failing attraction, Seal of North Carolina—they refused rum out right—they were interviewed with the following success.

There is no shad fishing about the Bluff, as the water is too fresh, and few herring are caught, because the water is not fresh enough. The herring keep on up the rivers. Pound nets are set in about 10ft. of water and the "leaders" run into the shore. The season lasts from June to the time when first ice makes. This year the catch had been unusually good. One pound net will supply ten boxes of fish per week. Once as high as three boxes were caught in a single day. Boxes are 50in. long, cost 26 cents and are nailed up on the ground, the material being got out to shape at mills which make it a business. A great variety of fish are taken in the nets. Gray and speckled sea trout, sheepshead, porgies, 500 to 600 mackerel a day, drumfish, croakers, 300 to 400 sea cattish, spots, likewise turtles; 700 mackerel in one day broke the record this season. Mullet are taken in haul nets, but will not find their way into the pounds. All the catch is kept in artificial inclosures, called ponds, awaiting shipment, excepting the mackerel. The latter die in ponds and have to be handled and expedited at once. Fish and pulverized ice are packed in layers in the boxes, sent by schooner to Elizabeth City, and thence by rail to market. An icehouse is built with double walls, 13in. apart, the space being filled in with sawdust and the floor covered 2ft. deep. A house 18ft. square will hold 30 tons with very little loss during summer. My informants composed a regular business firm and expected to clear a thousand dollars. They said there was a great deal of money in the ground fisheries with a little capital and steady thrift. It is the latter which is lacking along in the sounds. The "shadders," for example, pursue the run from about Feb. 10 to April 1 and they lay on their oars the rest of the year instead of following up their seine catch of spring with the pound net all summer, as a Northern man with an eye to getting ahead in the world would certainly do. Some of the city men from New Berne and Washington, however, who have saved their earnings instead of spending them for gin, are coming forward with the funds, while the expert fishermen put in their labor and knowledge as an offset. The two pull together and make a good thing out of it, while the socialists in the North are trying to force a free dividend out of the industry and foresight of the successful portion of the community.

From the Bluff round to the mouth of Pamlico River the shore is much the same thing. Outlying "washes" with many arms and indentations form a series of harbors offering refuge to evading craft. Back of the marshes there is a belt of wooded land which hides the agricultural region of the interior. The bottom of the sound is rather uneven inshore, with sudden shoaling from 15 to 2ft., where sand spits and lumps have formed. With a chart there is no difficulty in clearing these hidden dangers, but without one a stranger would be apt to come to grief unless he gives the land a fair berth. The season was advancing and the Coot met only moderate winds while she coasted round, crossed Pamlico and got over Brant Island shoal through an inshore slew with 2½ft. of water, the rest of the long tongue having less than 2ft. clear out to the Brant Light, fifteen miles off shore. The slew is half way between Terrapin Island and the mainland. I found just enough depth to get over after bumping several times. When the wind is from the N.W., even the light draft Coot would have been compelled to round the Brant screwpile light. The only incident worth recording was the neat way in which the Coot took a dying air into Jones River and got her sail stowed at the moment that a furious thunderstorm burst and changed the peaceable scene to one of boisterous turmoil with a fearful downpour. In spring Pamlico Sound is noted for its thunderstorms and squalls. They threaten all day and break in the afternoon with a violence that bodes evil to any small craft caught out, as the sea makes up in an instant. Black and forbidding "thunderheads" hang around the horizon in the morning, and later in the day rise and overspread the heavens with incredible rapidity. They gather from all quarters and until the squall breaks you cannot foretell its direction. My plan was to lower away and await the onslaught, tying down a close reef in the meantime and scud for shelter. The regular wind always dies away before the advent of the squall, which leaves you at its mercy.

On a fine morning with a stiff breeze from S. W., the Coot began the beat up Neuse River, and after a fine day's work, anchored behind a small marshy island near the mouth of Clubfoot Creek. There is shoal water about the island and it required some careful navigation to get into shelter without grounding. The usual squall was in sight and came down with a vengeance, but from a safe anchorage squalls become objects of interest instead of terror. Wherever I put in from Stumpy Point to Clubfoot, the constant whistling of Bob Whites was heard, from which it may be concluded that quail are plentiful. Neuse River is quite picturesque and a noble sheet of water. The banks are bold and rolling, partly wooded and partly cultivated. Sawmills are located on all the tributary creeks and the local world lives and moves largely in small craft of all sorts. The thriving and busy city of New Berne, forty miles from the mouth, sends down three-masted schooners bound to sea through Hatteras Inlet, and local steamers ply to other towns on the sounds and to Norfolk. Flat bottom specimens of naval architecture stood back and forth in shoal water traveling for terrapin. Two of them caught sight of the Coot and drew jibs for a turn to windward with the cat, but they were hopelessly beaten at that game, and ran back to their hunting grounds.

The following day the yacht was turned up Clubfoot Creek, a nice little river with the banks well settled and hosts of naked little Africans frolicking about in the water. Five miles up the creek narrows and shoals to 3ft. I had been told in Norfolk that 5ft. could be carried through the so-called New Berne and Beaufort Canal, but found that waterway in a state of neglect and ruin. It took 3 days to pass through this 6-mile ditch. The Coot grounded a dozen times, and after an endless amount of labor, depositing ballast and stores upon the soft muddy banks, using a fence rail for bridge, the boat was got through, only to land herself on the intricate maze of flats and oyster reefs at the junction with Newport River. In the canal I had to wait for a certain state of the tide and a northwest wind to back up the water, otherwise it would have been impossible to pass through at all. Two other boats kept me company and were in like trouble, so we formed a little colony of coastaways, helping one another in turn and making the most of the ludicrous side of the situation. The canal leads into a despicable little tortuous stream through 3 miles of meadows, but with 6ft. of water, sprinkled with an assortments of stumps, on which you fetch up without warning. Here you meet the ocean tides from Beaufort Inlet, which had the advantage that as often as the Coot grounded, she would be helped off sooner or later. After 5 days of unromantic hardship, salt water was encountered once more, and picking up a genius who was at the same time town barber, photographer, chemist and philosopher, the Coot was piloted into a berth among the many islands and oyster reefs back of the good city of Beaufort.

With the drop of the hook, the cruise of the Coot southward had come to an end.

The return voyage and plans of the Coot will finish up this log in another chapter. C. P. K.

PRISCILLA FOR SALE.—The attention of all racing yachtsmen just now is directed to the Clyde and a good many would like to find a convenient knothole in the high board fence behind which, it is reported, Mr. Watson will have the Thistle's keel laid. The prospects are for a boat but little over the second class limit, 70ft. and the interest for next season promises to center in this size rather than in the large yachts. This being the case it will be no surprise to know that Mr. Canfield has decided to sell the Priscilla, or that he has now ready two models, one of a smaller yacht and both of his own design. Priscilla's record for the last two seasons puts her no better than third on the list, but opinions still differ as to her rating compared with the Boston boats, and many still believe that she is capable of a greater speed than she has yet developed, and that the best has by no means been reached. Just now it is little likely that any one will buy a boat of this size for a racer, but Priscilla has a value in another way, as she was built with the idea of a conversion to other uses, and could be turned into a schooner at a comparatively small expense, while in build and accommodations she surpasses anything of her class. The hull being entirely of iron the internal space is much greater than in a wooden boat, while she possesses an immunity from leakage which the former cannot claim. Her build and equipment are such as to give her a value independent of her place on the record, but it is to be hoped that she will fall into hands that will keep her in the front and will succeed in realizing the brilliant promises of speed which she has given on several occasions.

THE NEW YACHTS.—No news as to the dimensions of the Thistle have yet been received in America, but rumor is still active with new boats. Mr. Burgess has a model ready, made from his design by Mr. Geo. Lawley; and Com. Canfield has a handsome design of his own now in the wood, but nothing has been done yet toward building. No further particulars are known concerning Thistle except that D. & W. Henderson, of Glasgow, will build her. According to the daily papers Mr. Burgess has received a letter in reply to his telegram asking for the waterline length, in which Mr. Watson offers to give the latter only on condition that Mr. Burgess agrees to build a yacht of that length and no other, which condition the latter declines to accept.

BOSTON NOTES.—Lawley & Son have planked up Mr. J. B. Meer's sloop and have nearly finished Mr. Whitney's steam launch. They will now begin another launch 55ft. over all, 48ft. L. W. L., for Mr. Edward Mowry, of Boston. The catboat for Mr. Chas. Welch is now partly planked. The cutter Pilgrim has been sold to New York yachtsmen. At East Boston, Mr. Martin is at work on a small cutter, while Mr. Burgess has designed a small sloop for Mr. B. E. Cunningham. At Monument Beach Hanley is building a 26ft. catboat, and Dunn has a 23ft. catboat with orders for two 22ft. boats. Wilson is making new sails for Gitana and will fit out Rebecca later on. Violetta, the keel sloop owned by Dr. E. B. Hitchcock, of Newton, has been sold to Messrs. Cross, Gill & Porter of Boston.

THE FRENCH YACHT LIST.—Messrs. B. Clerc, of *Le Yacht*, and R. Vuillame have compiled the fifth annual "Liste des Yachts Français, Belges, Espagnols, Italiens, Portugais, etc.," for 1886-87, and it has been published in a neat volume of pocket size. The list of French yachts contains the names of over 1,000 yachts, 800 of them being above 5 tons, with a gross tonnage of 17,540 tons. The matter is very well arranged, and the book should be very useful to foreign yachtsmen. A special list of yachts built in France since August, 1884, shows a total of 75 vessels, a very creditable fleet, and promising well for French yachting, as heretofore the yachts were mostly of English or even American build.

A YACHT ON THE LUNDBERG MODEL.—It is reported that Senator Leland Stanford, of California, has decided to build a steam yacht after the peculiar model of Capt. Lundberg, which we have previously described. Her dimensions are not given, but her cost is placed at $600,000.

THE RADHA LAWSUIT.—The suit of Mr. Seymour against Mr. Lorillard for damages arising from the sale of the Radha was continued this week, Mr. Lorillard testifying in his own behalf. After much contradictory testimony the jury were instructed to bring in a sealed verdict.

Answers to Correspondents.

☞ No Notice Taken of Anonymous Correspondents.

TEN-BORE.—The oil will not injure the gun.

R. M. E.—Will you please inform me through your paper which is the best book on dogs, their food, diseases, etc. Ans. Ashmont's, noted in our book list elsewhere.

E. M. N., Huntingdon, Tenn.—The several varieties of decoys are kept in stock by most of the dealers in sportsmen's supplies. Send to the nearest house advertised in our columns.

N. L. G., Illinois.—Geese are in season in California from November through the winter months. There is good shooting in the vicinity of San Diego, as well as in the waters in more northern parts of the State.

T. J. H.—You may overcome the gun-shyness of the dog by adopting the plan detailed in Hammond's book "Training vs. Breaking." The method, which has proved successful, consists in gradually accustoming the dog to the sound.

J. S.—Florida has no game law. The laws allow quail shooting in Georgia to April 1, Alabama and South Carolina to March 15, Texas March 1, Louisiana April 1. You can shoot deer in January in the Carolinas, Georgia, Louisiana, Alabama and Arkansas.

S. H. E.—1. The period of gestation is nine weeks. 2. The relationship would probably have nothing to do with number of whelps in a litter. 3. Temptation (A.K.R. 1590) is by Fogg's Don (Pete—Queen) out of Alden's Maud S. (Pete, Jr. [by champion Pete]—imported Kate).

SUBSCRIBER, Brooklyn, N. Y.—1. Kindly let me know how and what to feed goldfish in aquarium so as to keep them alive. 2. Also a receipt for making mocking bird food that will not sour. Ans. 1. You can buy the fish wafer at the bird stores, or can feed a little cracker or an occasional worm. Be careful not to feed more than they eat or it will foul the water. 2. Prepared mocking bird food is sold at the bird stores.

M., Ottawa.—1. Please let me know if any arrangements have to be made with the Customs authorities when exporting or importing dogs between Canada and the United States. There is, I believe, no duty. 2. Please also tell me if it is possible to have a gun that "dribbles" or "drops" rectified? I have a very fine English gun, which, when shooting on the water, drops some of the charge before striking the object aimed at. It strikes very hard, however, and patterns well over 200 at forty paces. Ans. 1. Animals imported into the United States for breeding purposes are admitted free. You will have to make declaration as to purpose of importation; this we presume can be arranged by addressing the Customs officer at the port of entry. 2. You can vary charge of powder and shot; but no gun will send all the shot uniform distance; a gun, of course, shoots the same over water and land.

PUBLISHERS' DEPARTMENT.

OFFICE OF L. W. FERDINAND & CO., Boston, Mass., Dec. 18.—*Forest and Stream Publishing Company:* We are pleased to renew our contract with your company for another year, for we consider the paper one of the best of advertising mediums. Will send new matter for same in a few days.—L. W. FERDINAND & CO.

THOSE WHO preach, lecture, declaim or sing, will and *do* find Hale's Honey of Horehound and Tar the speediest restorative of the voice in cases of hoarseness. It cures coughs and sore throats rapidly and completely. Sold by all druggists. PIKE'S TOOTHACHE DROPS cure in one minute.—*Adv.*

SMALL YACHTS.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice.

By C. P. KUNHARDT.

THE FOREST AND STREAM PUBLISHING COMPANY takes pleasure in announcing the publication of a magnificent quarto volume, bearing the above title. This book covers the eld of Small Yachts, with special regard to their design, construction, equipment and keep. The opening chapters are devoted to a consideration of the model and the draft, their elations to one another, and the purposes which they subserve. Full directions are given for producing the plans of a yacht with reference to the chief points in design, and the method of taking off the lines of a boat already built is likewise described in detail.

All elements entering into design, such as Resistance, Stability, Balance of Rig, Handiness, Displacement, etc., are dealt with in separate chapters. The rules necessary for the mathematical computations, and a review of theory and practice close the first division of the book.

The second portion comprises the description of the Plates, covering the whole range of type in small yachts, from the shoal catboat and American centerboard sloop to examples of the narrowest and deepest British cutter yet built. These yachts have their lines, build and fittings depicted in the Plates, which are drawn to scale. With their aid and the specifications presented, the reader is placed in possession of accurate information concerning the mould, accommodations, rig and characteristics of all styles of yachts which have received favorable recognition. Sporting boats, combination row and sailboats, and various examples of special form are introduced.

The third division offers a comprehensive review of single-hand sailing, to which small yachts are especially adapted. Directions are given as a guide in selection of type and sail plan, and subsequent equipment and proper management.

The iron work of yachts, their gear, yawls, stearing apparatus, boat building and much other closely related matter is entered upon. The new International Rules of the Road, Signal Service, and a Bibliography appear in the Appendix.

The work is profusely and handsomely illustrated with 150 illustrations inserted in the text, besides the sixty-three plates.

A folio (size of page 14½x12½ inches), printed on paper specially manufactured for it, and with great beauty of execution and finish in every detail, making a volume vastly superior to any other work of the kind ever published. Pages 370, with 136 plate pages additional, or a total of more than 500. Price, postpaid, $7.00.

LIST OF PLATES.

I. The Sloop Yacht Schemer.
II. The Nuckel.

CHRISTMAS PRESENTS.

Buy Them Early.

NO present gives so much pleasure or is so lasting as a good book, and none is so thoroughly appreciated by the average man, woman or child. A good book does not get broken or wear out, but remains always a source of pleasure and instruction.

Nothing is more annoying or inconvenient than to postpone the purchase of Christmas gifts to the last moment, and appreciating this fact we call attention to the following list of standard works suitable for Christmas. These vary in price so as to fit every pocket, and among them all something will be found to appeal to every taste. Any of these books will be sent by mail, postpaid, on receipt of price.

Sport with Gun and Rod.

This superb volume contains a vast amount of matter of the highest interest to the sportsman. Almost all kinds of American game birds, mammals and fishes are treated in its pages, and it is profusely illustrated by some of the best American artists; 886 pp. Three styles are published: Embossed leather, $15; cloth, $10; cloth, on cheaper paper, $5.

Antelope and Deer of America.

By HON. J. D. CATON, LL. D. This volume is equally a necessity to the sportsman and the naturalist. It tells of the haunts and habits of our antelope and deer, where to find them, how to hunt them, of their life in the woods and under domestication. The best book on the subject ever written. A second edition. Price reduced to $2 50.

Rod and Gun in California.

By T. S. VAN DYKE. A story of outdoor life in semi-tropical land. Through the charmingly told narrative runs the tender thread of a love story. Price $1.50.

The Canoe Aurora.

By DR. C. A. NEIDE. The well told story of the author's cruise in a tiny canoe from an Adirondack lake to the Gulf of Mexico. Price $1.00.

Canoe Handling.

By C. BOWYER VAUX ("Dot"). The author of this pleasantly written volume is acknowledged to be the first of American, and so of living, canoeists. In this book he tells all about how to sail and handle a canoe, and how to care for it, either when in use or laid up for winter. Price $1.00.

Small Yachts,

THEIR DESIGN AND CONSTRUCTION, by C. P. KUNHARDT. This sumptuous quarto volume covers the whole range of yacht designing and care, and is the only work of the kind yet issued in America. The text occupies 325 pages, illustrated with many engravings, and besides there are 70 full page plates, showing the characteristics of the best modern yachts. Price $7.00.

The Forest Waters the Farm,

OR, THE VALUE OF WOODLANDS AS RESERVOIRS. By ANTONIN ROUSSET, translated by REV. S. W. POWELL. This famous French book has never before been put into English. Every farmer ought to have it, for the questions so intelligently discussed in it are of national importance; 109 pp. Price, paper, 50 cents; cloth, 75 cents.

Canoe and Boat Building

FOR AMATEURS. By W. P. STEPHENS. A manual of boat building by the canoeing editor of FOREST AND STREAM. Besides the 189 pages of descriptive text, there are 29 plates, working drawings, which enable even the novice to build his own canoe and build it well. Price $1.50.

Hunting Trips of a Ranchman.

By THEODORE ROOSEVELT. A delightful book of hunting adventure in Dakota and Montana. Price $3.50.

Training vs. Breaking.

By S. T. HAMMOND, kennel editor of FOREST AND STREAM. Nearly forty years experience in training and handling dogs has taught the author that these intelligent animals are more easily controlled by kindness than by severity. He tells how to accomplish by this kindness what you cannot with the whip. There is a chapter on training pet and house dogs. Price $1.00.

Canoe and Camp Cookery.

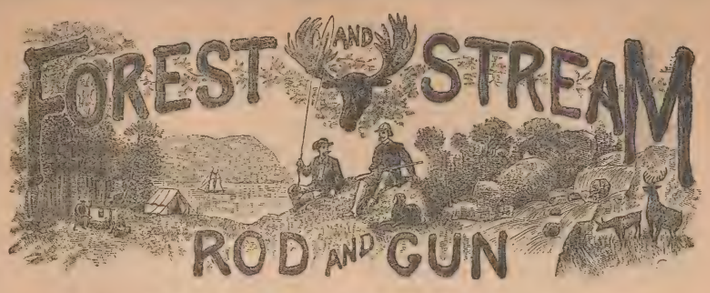
By "SENECA." A little book full of receipts and hints for the camp cook, by a practical man who has tried them. Indispensable to the camper. Price $1.00.

Fyshhe and Fysshynge.

By DAME JULIANA BERNERS. An elegant fac-simile reprint of a quaint old book written in the Fifteenth century. It is edited by an ardent angler and should find a place in every sportsman's library. Price $1.00.

Our New Alaska.

By CHAS. HALLOCK. In this handsome illustrated volume, Mr. Hallock gives the result of his travels in our northernmost possessions. He found Alaska a great country of almost boundless resources, and tells about it in his own happy style. Price $1.50.



Woodcraft.

By "NESSMUK." "Nessmuk" is a Nestor among America's sportsmen. In "Woodcraft" he imparts the knowledge of the woods that he has been fifty years in acquiring. No man, however much he has camped out, can read this book without learning something. Price $1.00.

The History of the Mastiff.

By M. B. WYNN, who is acknowledged on all hands to be one of the first authorities in the world on this splendid breed of dogs. The history of the guard dog is traced from prehistoric down to present time, and the tale is told with the enthusiasm of a true lover of man's best friend. Price $2.50.

Forest and Stream Publishing Co., 39 Park Row, N.Y.

A WORD IN SEASON.

Readers old and new of the FOREST AND STREAM may be pleased to know that the paper is now at the close of 1886 enjoying the support of a wider circle of friends than at any former period in its history. This is an interesting fact, for it proves, with the best possible demonstration of success, the sound sense of the theory long ago adopted by editors and publishers, and steadfastly adhered to, that there is room in this country for a journal treating the subjects embraced by our departments, and depending for its support wholly upon what have been accepted by the conductors of the FOREST AND STREAM as legitimate journalistic methods. In other words, we have kept faith with subscribers by devoting our reading columns exclusively to honest reading matter, and have not given up our pages to extended paid puffs of railroad routes clumsily disguised as accounts of sportsmen's travel, nor alluring descriptions of wonderful agricultural regions, all paid by the column. The conviction that a sportsman's journal for sportsmen could be conducted without resorting to such questionable makeshift expedients have proved quite correct.

The tone and high character of the journal, as one fit for sportsmen to receive into their homes, will be jealously maintained. As there is nothing in the recreations of field and stream inconsistent with the highest type of manhood, so, the editors are convinced, there should be in a journal like the FOREST AND STREAM nothing to offend good taste.

The FOREST AND STREAM will be, in the future as in the past, thoroughly representative of the best field sportsmanship of America. It will maintain its position as the chosen exponent of those who seek recreation with gun or rod, rifle, canoe or yacht. Its character will be scrupulously preserved, and readers in 1887 may expect a rich fund of sporting sketches and stories, suggestions, bright sayings, prompt, reliable news, and interesting discussions. Angler, shooter, dog breeder, canoeist and yachtsman, may be assured that whatever is of interest in these respective fields in 1887 will find its way into the columns of the FOREST AND STREAM.

The Sportsman Tourist

columns are filled with bright sketches of travel, camp life and adventure, the reflected experience of a host of outers.

Natural History.

Papers descriptive of bird life, chapters of animal biography, notes on the ways of field, forest and water creatures as observed by sportmen, anglers and naturalists, make up these pages. The special work of the past year has been the establishment of the Audubon Society for the Protection of Birds, begun in February, and having now a membership approaching 20,000.

Angling and Shooting.

Time was when a single journal sufficed in this country for adequate discussion of all the heterogenous pastimes and practices dubbed sport. That time has long since passed away. Some of the sports have been outgrown or put under a ban, others have developed to such a degree that each class requires a special organ. The particular fields chosen by the FOREST AND STREAM are those of angling and shooting. The pages given up to these topics are rich with the freshest, brightest, most wholesome, entertaining and valuable open air literature of the day. They have the sunlight and woodsy odor of the haunts of game and fish; they picture nature as seen by sportsman and angler. One has not long to read the FOREST AND STREAM before learning its attitude with respect to game and fish protection. The editors believe in conserving, by all legitimate methods, the game of fields and woods, and the fish of brook, river and lake, not for the exclusive benefit of any class or classes, but for the public. They are earnest, consistent and determined advocates of strict protection in the legal close season, and in restricting the taking of game both as to season and methods, so that the benefits of these natural resources may be evenly distributed.

The Kennel.

This department has kept even pace with the growth of the interest of breeding field and pet dogs. Reports of trials and shows are usually given in the FOREST AND STREAM in advance of other publications, and being prepared by competent writers their intelligent criticisms are of practical utility. This journal is not hampered by personal animosities. It has no judges to "kill." It does not decide a dog's merit by asking who the owner is. It treats all kennel subjects without fear, favor or ulterior motives, and in consequence enjoys a degree of public confidence and esteem denied to such as stagger beneath the incubus of malice and flounder in the bogs of ignorance.

Rifle and Trap Shooting

records scores of meetings and matches, discussions of topics pertaining to the butt, gallery and trap. Secretaries of gun and rifle clubs are invited to send their scores for publication.

Canoeing.

This country is a land of magnificent water courses, and Americans are just beginning to appreciate the canoe as a means of enjoying the delectable charms of river and lake, and bay and canal. The men who are making fortunes by making canoes know best how rapidly the ranks of canoeists are multiplying. Novices and old hands will find in the FOREST AND STREAM canoeing columns, in charge of a practical canoeist, accounts of cruises, lines of new craft, and hints and helps and suggestions without number. Closely allied is

Yachting,

in which the FOREST AND STREAM is the only competent, all-the-year-round, intelligent exponent. Our reports of races are full, prompt and accurate. The numerous illustrations of lines of new yachts make an invaluable record of the development of yacht building.

Weekly, $4 per year; $2 for six months.

Forest and Stream Pub. Co., 39 Park Row.

GOLD MEDAL, PARIS, 1878.

BAKER'S

Breakfast Cocoa.

Warranted *absolutely pure Cocoa,* from which the excess of Oil has been removed. St. Bernards.

Rough and smooth-coated of the finest strains On Sale—Imported stock; also two splendid litters, one by Hector ex Belline II. (A.K.R. 3053), the other by Otho ex Swiss Rhona (A.K.R. 3030). Unequalled facilities for the importation of stock from Switzerland. Address Arlington, N. J.

A RARE CHANCE.—BROTHER OF NED Obo for sale (A.K.R. 1476), black, white frill on breast, whelped April 29, 1884, is in perfect health, has had distemper and is offered for no fault; a fine hunter, perfect retriever from land or water, will not mouth his birds. Reason for selling—I have two setters and cannot keep three dogs. This dog is very tractable, can be taught almost anything and now does some thirteen tricks. Address DR. E. S. GAYLORD, New Haven, Conn. dec29,2t

FOR SALE.—MASTIFF DOG BRUNO, PUG dog Ruby and beagle dog King William. S. C. GRAFF, 4,712 Laurel ave., Pittsburgh, Pa. 1t

K 9 Breaking Kennels.

Pointers and setters thoroughly broken for field trials or private use. Reference given. W. G. SMITH, Marydel, Md.

AT THE LONDON FISHERIES EXHIBITION

THE NICHOLS

Hexagonal Split Bamboo Fishing Rods

Were awarded **Three Silver Medals** and the highest special prize—**10 Sovereigns.** Noted for excellence more than numbers. This is the highest prize awarded to any American for Split Bamboo Rods.

Manufactured by B. F. NICHOLS, 153 Milk Street, Boston, Mass.

Send for list with Massachusetts Fish and Game Laws.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, DECEMBER 30, 1886.

VOL. XXVII.—No. 23. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain. Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price. $5 per year; $2.50 for six months.

Address all communications,

ANSWERS TO CORRESPONDENTS.

A REPORT ON THE YELLOWSTONE PARK.

THE report to the Secretary of the Interior of Captain Harris, of the First Cavalry, Acting Superintendent of the National Park, has recently been published, and will be found in another column.

It is an admirable document and should be carefully read by every one interested in our great national pleasure ground. As we have had occasion before to remark, Captain Harris is deeply interested in the Park, and takes the same intelligent view of its needs that is held by all those who are most familiar with and best qualified to speak of it. He understands the importance of having trained mountain men in the Government employ to watch the trained mountain men and others who are not in the Government employ and who are trying to rob the Park of some of its most attractive features. He is a strict disciplinarian, and we may be sure that he will do everything in his power to guard the Park from injury so long as he remains in charge. But he understands fully the absolute necessity of a civil government in the Park, and appreciates, as every one else except Congress seems to, the utter absurdity of having a lot of rules and regulations which there is no machinery nor power to enforce.

The rules and regulations established by Captain Harris and appended to his report show very clearly how accurate and intelligent an understanding he has of what is needed in the guardianship of the Park. And it is most unfortunate that, comprehending so well what is required, he should lack the tools to carry out his recommendations. These regulations have not been adopted by the Interior Department, but they are very much needed and should be made the law of the reservation.

It is hoped that Congress may pass the Vest bill (S. 2,436) during the present session. The action of the House on the iniquitous railroad bill was such as to afford the greatest encouragement to those who watch the course of legislation with regard to the National Park. There will be difficulties in the way, of course. The railroad lobby, smarting under their recent defeat, may fight any effort for protection of the Park, either out of pure malice, or in the hope of making some compromise through which they can grasp with their iron tentacles—tentacles that never loosen their hold—some portion of this Park which has been dedicated and set aside as a public pleasure ground for the American people. No such compromise must be permitted. None is necessary. Sooner or later the public will insist that this Park shall be protected, shall be governed, shall be improved. Sooner or later Congress will be made to understand that this Park is for the benefit of the whole people—not for the rich or for the poor, not for the mine owners or the railroad owners; not for the people of the East or the people of the West, but for all alike.

Captain Harris's report is one of the most important documents published about the Park for a long time. He looks at the reservation from the standpoint of an old army man, and yet he comes to the same conclusion which has been reached by every intelligent civilian, whether a scientific, professional or business man, who is acquainted with the Park and has given the subject any thought. We believe that his report will have no little influence for good in Congress.

THIS WON'T DO.

THE unfortunate occurrences at Grand Junction during the last meeting of the National American Field Trials Club, call for somewhat more extended comment than can be given them in our news columns.

Nothing that has been done of late years, we venture to say, has been so bad or has had so great a tendency to bring field trials into disrepute as the Ben Hill–Lillian heat, and we may feel sure that if such occurrences are passed over or excused, the interest taken in field trials will cease. We have had occasion more than once in the past to express our opinion of jockeying at field trials, and to point out that these competitions are between dogs honestly run, as in an ordinary day's shooting. If the sharp practices, almost inevitable in trials of skill where money is involved, are allowed to creep into the contest, or if the prejudices or feelings of handlers are to be permitted to interfere with the legitimate struggle for victory between the dogs, we had better at once abandon field trials, for when this takes place decent people will at once cut loose from them, and they will sink to the lowest level of gambling.

In the case at Grand Junction the facts are as follows: The setter dog Ben Hill, owned by Stephenson and handled by Bevan, was drawn to run against the setter bitch Lillian, owned by P. H. Bryson, and handled by Stephenson. Stephenson claimed that the dogs ought not to be run together under the rule which provides that two dogs owned or handled by one person shall not be run together if it can be avoided. This claim was at first allowed by the judges and Don's Dot and Ben Hill were put down and run for a few minutes, but Mr. Rose, the owner of Daisy F., who was drawn to run against Don's Dot, protested against the change, alleging that Ben Hill and Lillian were not owned or handled by the same person. Mr. Rose's protest was sustained by the executive committee. The brace then down was ordered up, and that evening it was decided that Ben Hill and Lillian must run together.

When the dogs went down, Bevan, who was Stephenson's handler, by the latter's order, took Ben Hill away where there were no birds, and so handled him that it was impossible for him to win.

Naturally enough this action on the part of the handlers caused a good deal of talk, but nothing was done about the matter until the meeting of the National Handlers' Association, held Dec. 18 at Grand Junction. At this meeting charges were preferred against Stephenson and Bevan for conspiracy to defeat Ben Hill in his heat against Lillian.

In his defense Stephenson made a perfectly frank statement; saying that he tried to withdraw Ben Hill from the race, but that the judges would not permit this; that from motives of friendship for Mr. Bryson he tried to defeat his own dog, and that he believed Lillian the better of the two animals. He entirely exonerated Bevan, who, he said, was acting under orders from himself, and stated that at the time he did not think that he was doing wrong. The association declined to inflict a penalty.

Up to the time when Ben Hill and Lillian were put down Stephenson had acted a straightforward and honorable part. He tried to withdraw his dog, and should have been allowed to do so, but the judges would not permit it. That he acted in good faith is evident, for if he had not done so he could easily have "lost" Ben Hill, and then Lillian would have won the heat by default. Failing to obtain permission to draw his dog, he took the course above detailed and thus exposed himself to the severest censure, as well as to any penalties the club may choose to inflict.

Charges were preferred to the National Field Trials Club against the "pulling of Ben Hill" in his heat with Lillian, and these charges were at once laid before the executive committee for their action.

This is so plain a case on the above statement that it scarcely seems necessary to characterize it. The pulling of a horse in a race under similar circumstances would, bring upon the jockey or driver guilty of the act the severest penalty which could be inflicted. It seems that the motives which actuated Stephenson in his action were generous rather than base, but in a matter of this kind we have to deal with results, not motives. If a handler be permitted to jockey from good motives, it will be impossible to prevent the same thing being done from bad ones, and our field trials must be kept clear of all taint of fraud if they are to amount to anything in the future.

We have great confidence that this matter will be properly handled by the National Field Trials Club. General Shattuc we know to be an honorable man and one who would never lend his name to anything that was open to suspicion. We look to him to bring the N. F. T. Club out of this unpleasant position with a clean record.

It is noteworthy that this jockeying was practiced openly. There was no attempt at concealment; the men did not seem to realize that there was anything wrong about it. Singularly enough the judges permitted it, apparently without a word of remonstrance. They did not at once order up the dogs and throw them both out of the race, as they ought to have done. They seemed to think it was part of the game. This argues on the part of the judges, if they were aware of what was taking place before their eyes, either a strange moral obliquity or else an ignorance of all the rules of justice and fair play. In either case they were unfit to be judges.

More than this, there were some strange judgments rendered on the work toward the last of the meeting; judgments which were thought by some to have been favoritism, but which it is charitable to suppose were made by men who did not see the work on which they were deciding. Hasty, snap decisions, and short heats in which only one dog had an opportunity to do a bit of work, seem to have been the rule at the end of the meeting. It is hardly neccessary to say that this is all wrong.

We need for judges at field trials younger men—men who can get around more actively, and see all the work done as it is done. Had we had such men at the last trials at Grand Junction, and at the same time men of sufficient experience to have rated the work done at its proper value, many of the heats would have been decided differently, and different dogs might have won.

SNAP SHOTS.

THE deep-sea fishermen frequently complain that their favorite pastime does not receive due attention at the hands of writers for the FOREST AND STREAM. Whose fault is it?

Ohio sportsmen are to meet in convention at Columbus Jan. 12, to take measures for securing better game and fish laws and better means of enforcing the statutes. In one respect the Ohio law is admirable—it is brief and comprehensible. The most ignorant market-hunter who pots bunched quail in the snow can read it or at least understand it when read to him. Whatever changes are made in the law, let this simplicity and directness of phraseology be preserved.

The *Evening Post* surmises that Mr. Husted is making a still-hunt for the speakership of the New York Assembly. This must be distressing news to that gentleman's Adirondack deer-hunting friends. If the Bald Eagle of Westchester cares to keep his standing in the craft he should give over the abhorrent tactics of the still-hunter, and whoop it up as with a pack of mongrel hounds and a club.

The Essex Club, of Gloucester, Mass., whose side-hunt of snow buntings was noticed last week, have appointed a committee to determine whether buntings are lawful game or not. The law is so plain that it ought to be comprehended by any one man all alone by himself without the aid of a committee.

SHEPHERD F. KNAPP.

DIED DEC. 25, 1886.

"Multis ille flebilis occidit!"

AS the early worshippers from the Heights of Fort Washington were wending their way yester-Christmas Day to the village church, expectant again, ere the rising of the sun, of the angelic anthem which, on the earliest Christmas morning, those who "were keeping watch over their flocks in the field" were first of men to hear, "*Gloria in Excelsis Deo*," there passed them a silent and unseen spirit on its return to the God who gave it. Peace had come to a man "of good will." Shepherd F. Knapp, just before the opening of this day, had given up the ghost.

As the mournful tidings floated on the air and filled the village in which he had long resided, solemn and sad were the greetings between neighbors among whom he had lived for two score years and more, honored for his public spirit, admired for his generous hospitality, and beloved for his goodness and his charity. The usual greeting of this, the first of all the Christian holidays, was not heard, but instead were bowed heads, deep sighs and low-spoken regrets for the friend who had just passed away from them.

Mr. Knapp was born in Beekman street, New York, in the year 1832. At that time the stores and residences of business men were in close proximity. The house of Mr. Knapp's birth adjoined in the rear the store where the firm of Lee & Knapp carried on the leather business—then, as now, "the Swamp," and Gideon Lee—erst mayor of New York—was the senior, and Shepherd Knapp, the father of the subject of our sketch, the junior partner.

At the beginning of the year of the birth of young Knapp, the population of the city was about 220,000, but this number had been reduced during the summer in which he was born by some 20,000 victims of the cholera, which, in that year, for the first time invaded and swept through the town.

Then Greenwich Village, the southerly line of which was Christopher street and the easterly boundary Greenwich lane, now Greenwich avenue, was more distant in space and more than trebly distant in time from "the city" than are now the Heights of Fort Washington from its extended limit of dense population.

Mr. Knapp saw and was part, as it were, of the great growth of the metropolis; but he grew up with the older ideas, customs and habits, now less often seen; respect for elders and superiors, equality among his fellows, tempered with manly self-respect and the observances of the olden times. These admirable qualities—part of his nature—never deserted him, but were distinguishing features of his entire life, and won and secured to him the almost unexampled popularity which, always and in every sphere, like a halo surrounded him. His splendid physique, his strength, his health, and his consequent great animal spirits, early developed in him a pervading love of the sports of the field and the water.

When a mere youth he removed with his father to the latter's new residence at Washington Heights; the farm extending from the Kingsbridge road to the Hudson. In those days that teeming river was the home of the weakfish and the striped bass, and along its banks, from Spuyten Duyvil Creek to Manhattan Cove, young "Shep" was known and admired as a devoted and skillful fisherman. He was also early attracted to the south side of Long Island, and with the companions of his boyhood, Horace Waldo, Charles Banks and George Wilmerding, formed a sportsman's club, the shooting and fishing area of which extended from Babylon to the grounds and waters now of the South Side Sportsmen's Club. There then stood the hostelry of that good and genial sportsman, honored and beloved of the brotherhood of the rod and gun, Obe Snedecor. Out of this small beginning came the present numerous-membered South Side Sportsmen's Club, of which Mr. Knapp was one of the founders. The next will be the first opening day for thirty successive years that Mr. Knapp has not been the earliest among the early to cast his fly and "kill" his complement of trout, the weight of his capture usually standing as the head of the scale.

With the gun Mr. Knapp was equally facile as with the rod and fly, and deer, duck and many a Bob White have been the reward of his skill. Only last month he was afield behind his well-trained dogs on his place near Babylon, where the quail had been numerous, as usual on Long Island, up to the opening day.

The Wawayanda Club, with its commodious club house, on "Captree" Island, "Whig Inlet," within sight and sound of the "many-voiced ocean," owned him as a founder and president. Many a summer morning in the years gone by was he there embarking on one of the club yachts for the fishing grounds in "the old South Bay," where the bluefish school at times and the sea bass and blackfish afford enlivening sport and the wary sheepshead rewards the patient angler who knows the grounds, the wrecks, the sunken logs or the mussel beds where this noble fish finds its food and crushes the black and serried masses of crustacea.

Other times, ere the "morn in russet mantle clad" appeared, Mr. Knapp would be upon the sands of "Point Democrat" or on the shallows or beach of "Oak Island"—"stool" out for snipe—and returning with abundant reward for loss of sleep and solaced for the cramps incident to the "Down, boys—mark" as a flock of yellowlegs or other big bay birds came sailing against the wind, whirling and hovering amid the *simulacra*, until scattered and away with many a frightened yelp and cry before his gun, which had played sad havoc among them. Amid such scenes was his glory in his leisure hours, and no sportsman ever more keenly enjoyed these sports than this prince among them.

He, however, never permitted these outdoor attractions to interfere with the more serious duties of life. He was a man of affairs, to which he gave full attention. These sports afforded him recreation and strengthened him for more important matters, and promised a long lease of life, cut short, alas! too rudely in its prime. "What shadows we are and what shadows we pursue!"

This sketch is confined to that portion of Mr. Knapp's life appropriate to a sportsman's journal. Other pens will give testimony of his business life, and other writers depict him as a patron—with the Bonners, the Worths and the Vanderbilts—of the turf, and tell of his love for man's noblest friend, the horse.

This narrative presents Mr. Knapp only to that brotherhood who love the pastimes of the open air, the green fields, the placid lakes, the flowing brooks, the pursuit of deer, the shooting of fowl and birds, and the killing of fish. In all these—in inspiration, in enthusiasm and success—he ranked *primus inter pares*.

How his stalwart form, his pleasant smile, and his cheery voice will be missed along the South Side, over among the islands, on the waters of the bay, by the moaning sea that breaks on Fire Island's sandy shore, at the club, on the river and up the favored brook

> "Which winds about, and in and out,
> With here a blossom sailing,
> And here and there a lusty trout,"

as it goes on forever to meet "the brimming river." But most of all by you, dear friends, companions from his early days, who knew him to the very depths of his noble nature and loved him; the least among whom am I who lay this humble tribute of friendship and affection upon his tomb and pray that his soul may have rest.

MANHATTANVILLE, Dec. 26. J. E. D.

THE PHANTOM BUCK OF BAXTER PEAK.

BY E. HOUGH.

CLEAR-shining, yet soft and gentle, always was the sun over the Enchanted Valley. In the spring liquid amber of light and warmth; in the summer mellow melted gold; in the fall a streaming glory of color and content; in the winter sweet reproach to any who might fear a breath of cold.

I say the Enchanted Valley, I do not know how to name it better. It is only a few years since I left New Mexico, but the life there, the land itself, the old surroundings, all have faded and lapsed and merged into a dream whose edge I cannot unlap from that of reality. The little valley at the foot of Baxter Peak is the valley of a vision—a brimming cup in the mountain's hand, shaken full and trembling over with golden days and golden dreams. Those were boys' days that were lived there; those were boys' dreams that were dreamed there. I was a boy then. And since I feel at least a hundred and seventy-five years old to-day, I claim that I had a right to be a boy then, and that I have a right now to say that I lived in an enchanted valley .I only wish I were the same boy and in the same valley to-day.

There was something strange about that little valley and its inhabitants. I can shut my eyes and bring it all before me in a gray panorama. Let me do that now.

As I remember it, there never was a jollier, more reckless, happy-go-luckier lot of fellows than we who peopled the valley there by Baxter Peak. No one was ever sick. No one ever died. No one ever grew discouraged or discontented, or "blue" or unhappy in any way. No one was ever disappointed in love, because there wasn't anybody to love but just the boys; and that's different. Still, the boys got along pretty well together, barring an occasional little bit of friendly shooting over a game of poker or something of that sort. Poor? Why, bless you! we didn't any of us know where the next box of cartridges was to come from. Yet we were rich. Rich in hope; rich in youth and health and inexperience; rich in ignorance of life; rich in cloth-of-gold and high-walled castles, and beautiful dreams of beautiful things. Richer, that is sure, than any of us will ever be again until we get to the City whose streets are paved with gold—where, I do believe, some of those boys will go. Happy? Say, now—talk about happiness!

We were all miners down there. It was our business to wrest the ruddy gold from the rude earth. At least, the *Baxter Bugle* said it was, and we all thought so. But we didn't wrest so very much ruddy gold. We rested ourselves a good deal more. We all had claims. We had the whole country staked out, safe against foreign invasion, and there wasn't a decent-sized piñon tree on the whole mountain that didn't have half a dozen location notices tacked on it. We knew all about fissure veins, dips, spurs and angles, pay dirt, grass roots, two hundred ounces to the ton, and all the rest of that. We all knew that the country was full of ruddy gold, bubbling over with it, and that all that was necessary to make us all rich and send us back to that distant and wondrous land known as the "States," was the advent of a little outside capital to develop the camp. We didn't have quite capital enough. I don't suppose our joint funds would have bought more than about two kegs of blasting powder, and you can't develop much with two kegs. But we used to get up in the morning, or afternoon—it didn't matter which—and go up on the hill with our picks and shovels, and knock around a little, easy like, so as not to disturb the ruddy gold too much, and tell each other how disgustingly rich we all would be if we could only interest a little outside capital. And then we would sit down in the sun, and talk half Spanish, half English, and smoke cigarritos, and lie, and tell hunting stories.

It was up there on the hill, looking down on the Enchanted Valley, that I first heard of the phantom buck of Baxter Peak. That isn't a lie. It's only a hunting story; and it isn't any slouch of a story, either, if a fellow could only tell it so as to make it seem as real as it was, although when one comes to talking of phantoms and enchanted valleys and that sort of thing, there will, of course, be some folks who will remark slightingly about "enchanted fiddlesticks," and who will pooh-pooh at the story as "stuff and nonsense," and say that the whole thing was an actual dream or an actual lie. Those are the kind of people who wanted to know if the Count in Hawthorne's "Marble Faun" actually had hair on his ears. I don't want any of them to read this, anyhow.

In plain English, there was a buck up on Baxter Peak that had a foot about as big as a flat-iron; and nobody could kill him. More than that, nobody could get a shot at him. More than that, nobody could even get to see him.

How did we know he was there? Why, he walked or ran and stamped and jumped all over that entire country. He came down to the edge of town, chasser-ed over the foothills, climbed up on all the peaks, and filled the top of Baxter Peak—which was his favorite haunt—as full of tracks as an egg is of meat. How did we know it was the same buck? He had a chunk broken off his left hind foot, and as was remarked the rest of his feet were big as sadirons. Anybody could have told him. A man from New York could have told him. An Englishman could have told him.

In that little mining community which populated the Enchanted Valley there were a dozen men of lifelong experience on the frontier, men who were skillful hunters in every sense of the word and who could shoot a button off your coat across the street with a pistol, to say nothing of a rifle. But what was the use? Not one of these men had ever seen a hair of the phantom buck. They could only find his tracks. It became a point of honor among all the deer hunters of the camp to kill that buck. There wasn't a hunter there who hadn't been out after him and came back without him. At first the "big Injuns" among the boys used to brag about how they would go out some day and bring that buck in; but one by one they tried it and became quiet. Big Hungry couldn't get him, and even Old Man Hightower, who never had come back without meat, had nothing whatever to say about it, except that he "b'lieved the d—n thing wuz a shadder." Perhaps that was where the idea first originated. Certain it is that after Old Man Hightower's failure the buck gradually began to be known as the "shadder buck of Baxter," and began also to be described with a sort of pride, and with much picturesque profanity, to newcomers at the camp, as being the blankest and so forth critter in the range. This state of affairs continued throughout two seasons, during all of which time the old strategist preserved a strict *incognito*, so to speak; and such was the pique excited over him that he became the best advertised feature of the region, it being even boasted that, although Bonito City and Copperville had each a gold mill, neither of them could boast of a shadow buck.

In this condition of affairs it became apparent to every tenderfoot and half-fledged hunter in the camp that all that was necessary to achieve sudden and permanent greatness in that locality was to kill the Phantom Buck. Many were the secret, dark and midnight interviews whereat plans for his destruction were discussed. Many were the stealthy expeditions out into the hills, undertaken in the forlorn hope of outwitting him or catching him unawares. Of no avail. Dirt, fresh spurred by the ragged hoof, a whisk of closing piñon branches, a loud whistling note of defiance or derision—such were the rewards of the pursuers of the Phantom Buck.

It never snowed in the lower altitudes in that gentle country, but sometimes in midwinter a light skurry of snow would lie for a day or so on the top of Baxter Peak; and occasionally a light fog, perhaps more properly the wing-sweep of the mountain clouds, would hang over the upper hills and moisten the bushes and soften up the ground to a little extent.

On the 14th day of January, 188–, an unusually heavy snow fell. It could be seen whitening the foothills almost down to the camp, and the tops of the brown old sentinels of our little valley had turned white in a single night, in fright at the unusual onset of the frigid north wind. On the morning of the following day the sun rose clear and bright. It was peeping through the notch between the Patos and Carizo mountains as a solitary footman, accompanied by an old hammerless Martini-Henry military rifle (with a barrel about six feet long, and a caliber big enough for a cat to crawl down), might have been seen wending his way up through the first foothills of Baxter Peak, resolved on glory or an all-day walk. The footman was myself; the rifle was an arm left at Uncle John Brother's hotel by some poor fellow who was dead broke and had to eat. I boarded at Uncle John's myself. He was taking care of my Winchester about then. I didn't like to borrow my own gun. It wouldn't have been etiquette, anyhow. There will be some readers who will appreciate this delicacy; and then again there will be some who won't. The latter have never been dead broke in New Mexico. For all such I will say that Uncle John usually had almost all our guns, and it wasn't considered polite for a fellow to ask him for his own gun, as that would have been a practical vitiation of the pledge. We borrowed each other's guns—of Uncle John. This system arose from the fact that we were all "developing" claims and waiting for outside capital.

Well, the gun and I struggled on up through the foothills, and the sun struggled on up over the opposite mountains. The snow grew deeper as the upper altitudes were approached.

But now, down below in the valley, great white rolls and scrolls and sheets of clouds whirled in fantastic tumult, blotting out the cabins and the one long smooth street. The mists rose up the mountain side. Wraith-like white whisps of vapor swam, glided, skurried across Lone Mountain, across the Apache Cañon, and came over on the green sides of Baxter Peak. Strange white forms slipped and glided and hung behind the piñons. The air filled up with snowflakes. The landscape went delirious in gray and white. Confusing, bewildering, uncanny; everything set to whirling, changing and shifting. Fit scene, fit elements, fit reception for him who would hunt a phantom!

Through it all a whistle! Over it all a thump, thump! A second whistle; then regular recurrence of receding footfalls!

In a moment I was beside the shaking piñon. The trail was plain. In the moist snow lay the photograph. Left hindfoot, inside half of hoof gone. Foot large. Stride magnificent. Item: at every stride a drop of blood size of a pea. Could a phantom bleed? I know not. Had he been shot? I am certain not. The drop of blood was too tiny and regular; three inches each time behind the imprint of the broken hoof. Probably the thrust of a Spanish bayonet, gotten in the fog.

I had retained enough idea of the country to know that the buck had started to the left, bound toward the top of Baxter Peak; and I knew just enough of this particular phantom to be sure that he would circle to the right, around the top of the peak. Follow him? No. I would go to the right and meet him. Beshrew me, Sir Phantom, thought I, thy days are numbered.

Well, perhaps they were numbered; but if so, I hadn't got the combination. My plan betokened great intellectual acumen on my part; but like many such plans, it didn't work. Indeed, what plan could work against subtlety preternatural, against cunning beyond the reach of man? With silent footfall, with gun-stock guarded from cartridge belt, with clothing carefully held back from any rattling twig, I crawled along, a shadow myself among the shadows, in pursuit of a shadow, and using every art which teaching or experience had given me.

An hour passed. My hope ran high. It was near time for the meeting and I had the wind. Useless! By some unsounded prescience my presence became known. Again the whistle of derision! Again the vanishing, not of a form, but of the indications of the form.

I followed the buck now. The fog made him reckless. I started him half a dozen times, but I never saw him. His trail could not be mistaken, for at every fresh start the tiny drop of blood broke out afresh. Again the mysterious creature earned his title. He was above me, below me, behind me, all around me. He was everywhere. But he clung with pertinacity to the top of the peak, and every forty minutes, Puck-like, he laid a girdle about it and interlaced it with broken hoof marks and tiny drops of blood. I could see where he stood and stamped and listened; I could see where he took alarm and took leave; I could see his long bounds, his diminishing strides, his crooked contented wanderings, but I could not see him. Was he indeed invisible? The idea grew upon me.

Past mid-day the mists began to rise. It had been a Highland morning. The scene was worthy of Black or somebody better, as the fog rolled off and left Lone Mountain truncated, Carizo bare and the Patos just showing black. The sun peeped out and shone, "new lighted on a heaven-kissing hill," away off to the left. But around stern Baxter the clouds still rolled, forbiddingly shrouding the mystery of a phantom denizen and shrouding a hunter hungry, tired and—lost.

In the heedless wanderings of the morning I had lost all idea of directions, as indeed it was impossible not to do, so dense was the fog. I had not the slightest conception of the way in which the valley lay. I did not even know whether or not I was at the top of the mountain, though I knew I could not be very far from it. I sat down upon a rock, tried my instinct and determined what was north; tried my compass and found that was south; tried my cold beef and bread, and found that was good. No fault about instinct there, said reason. And there I sat and whittled a toothpick out of the tough and yellow *Palo a Maria* (which any New Mexican will tell you makes the best toothpicks in the world) and looked about me. And this is what I saw.

The sun cut streaks of yellow out of the gray mist. Long avenues opened up heavenward, showing the blue sky very serene. The hills got brown. The fogs went rolling, rolling, rolling down the hill out of the way. On the south side of the mountain the wind gathered the clouds up in its fist, whipped them, twirled them, twisted them, and threw them up and around in a thousand fine filaments of hurrying white. Up curtain! said the wind, and presto! below me lay the Enchanted Valley.

There was magic and witchcraft in the scene, the more especially, you will perceive, in that the Enchanted Valley was on the wrong side of Baxter Peak. North, said my instinct. South, said the compass. Go hang, said my legs, we're tired.

But now, the buck! said the hunter-heart. The buck go hang, again said my legs; we're tired. Whereat, in revenge at the irreverence to its guarded and favored creature, the wind turned, and whipped a featherbedful of clouds around the top of Baxter Peak, and the Phantom Buck, and the hunter, tired, stubborn and irreverent.

And there I sat in post-prandial stiffness and post-prandial content withal, and spite of the situation, and spite of the sprite-ridden weather, and spite of the demon buck, I fell of a reverie. Now, of such dreams as were dreamed therein, and of such hopes as were hoped, and all that nonsense, no one shall hear a word. I have said that we lived in the Enchanted Valley, down there. And I have said I was not then one hundred and seventy-five years old. All I shall add is, that I wasn't thinking of any phantoms of the family *Cervidæ*. Mooning thus, and wasting my nooning thus, my eyes were fixed upon a certain spot in the fog curtain, unseeing, unthinking. "Your young men shall dream dreams and your old men shall see visions," said the prophet. I say again, with asperity, that I was a young man then. But I saw a vision. And this is what I saw.

The mist dissolved a little, and through it, by a little piñon tree, blending into it, but rising grand, tall, straight-limbed, tree-headed, colossal—instinct with grace, strength, power, life, yet gazing calm, fearless, solemn—therestood the Phantom Buck of Baxter Peak.

Forty yards!

"Pity thee? So I do," ran back my mind to youth and the Fifth Reader and N. P. Willis. In the lightning flash of a man's mind when he is going to drown, or going to shoot a deer, I remembered they used to tell me that N. P. Willis always used to write in white kid gloves. "Pity thee? So I do," ran on my mind, "but does the robed priest for his pity falter?" In short, Sir Phantom, said I, I will slay thee forthwith. Whereupon I dropped Prometheus and took up Martini-Henry, wheredown a cat might crawl.

Forty yards. Expanding, wavering, towering, always there stood the buck, solemn-eyed.

Against that noble point, dim-seen in the mountain mist, I directed, with a hand tolerably steady, the long barrel, retaining enough coolness to hold somewhat lower than where I wished to strike—the Martini-Henry shot a picturesque curve, I knew. I felt the stock firm at my shoulder, felt my left hand firm on the barrel, felt my eye firm and well down in the sights, then I asked if everybody was ready, said pull, and pulled.

Now a Martini-Henry has no hammer outside; what it has inside the Lord only knows. It has a little iron fixing on the side of the lock plate, and if you push that forward—or backward, I forget which—you couldn't pull that gun off without a yoke of oxen. It is, so to speak, the staunchest gun made. That's the kind of automatic safety-bolt she is. A child can operate it till that iron fixing is shoved over; then, as I remarked, a yoke of oxen couldn't.

I had neglected to pull the iron fixing over.

At the word "Pull" I pulled. Nothing happened, and I pulled harder. The gun gave a little squeak, but nothing came loose, and I pulled harder yet—with all my might. If the gun had not been well made I should certainly have pulled off the trigger-guard and fore-end. As it was, nothing broke. Then, slowly, I bethought me of the neglect of a certain necessary preliminary.

Thereat I groaned.

Thereat the buck stamped.

Thereat, all at once, I went nervous and shook. Turned down the barrel to get at the locking contrivance. Struck a rock with the barrel.

Whisk! A rustle of the boughs. A start—a whistle. Then, thump; thumpity thump!

"Thump, thump," said my heart in accompaniment. Oh, fool! fool! said I, wretch! fool! dupe! There goes thine opportunity, bounding down the mountain side. There goes the Phantom Buck.

Aye; and he goes still. To-day I doubt not he still circles bold-topped Baxter Peak, free as the wind, and as fleet—part of the wind and the mist for aught I know. For none have ever come nearer to solving the mystery of the Phantom Buck than I. And as maturer judgment supervenes, as spite fails, and regret becomes more dim, I can see that the incident of the safety-catch was only a safety-catch devised for the phantom deer by the spirits which dwell in that wild spot, by the mystic influences which saw fit to give a charmed life to one certain creature.

Do I honestly believe the buck was a phantom? Dear friend—about the faun's ears, how say you?

CHICAGO, Ill.

WHITE GOATS AND BULL TROUT.

LITTLE did I think that my inefficient pen would record the events of our autumn hunt. I had expected that "Yo" would, as usual, be the scribe, and in his bright and entertaining way, relate our adventures on lake and mountain, and faithfully portray the beauties of the Upper Lake. Business matters, however, prevented him joining our party. I shall not give a record of each day's events, for we were at the Lakes over a month; and some days had no events, while an account of those that did would fill a volume of no mean proportions. My main object is to tell you something about the white goat and the "bull trout."

There were in our party three gentlemen from England—the Colonel and the Governor, aged 51 and 49 years, and Cecil, a young man of four and twenty. Then there was Jack, from the Yellowstone, Joe, with a cook, a herder, and the writer, eight persons all told. Our outfit comprised a four-horse team and wagon, a number of saddle horses, tents, stove, and all the grub and duffle necessary for such a trip.

The 9th of September we arrived at the foot of the Lower Lake. The Colonel and the Governor had their fly-rods jointed in no time, and while we were putting up the tents and getting things in order they went to the outlet and caught a string of trout for supper, all red-throated trout (*Salmo purpuratus*) and none over 2½lbs. weight. After supper a council of war was held, and it was decided that the first trip should be made up Swift Current.

By noon of the next day we had the horses packed and were on the way, leaving the cook behind to watch the main camp and take care of the spare horses. It was a windy day, and dark clouds enveloped the mountain tops. But then such was to be expected. I never yet went up Swift Current without having to face a driving wind, accompanied by rain or snow. "Yo," in his "Walled-In Lakes" papers last year fully described the grand and rugged scenery along this valley. We saw lots of bear and some elk sign along the trail, and Cecil shot a couple of dusky grouse. When we were within a half mile of the camping ground it began to snow, and right glad we were to reach the shelter of the pines. The tent was soon up, and in spite of the storm the Governor caught a number of trout, none very large, but all as fat and firm fleshed as fish could be. As night drew on how cheering was the warm, dry tent. Having partaken of a generous supper, we lay back on our beds and smoked, and were at peace. Without the wind soughed through the pines and shrieked past the crags above, the hail rattled down on the roof, and the roar of the waterfall near by joined in, making withal a combination of sound pleasant to the ear, and so soothing that some of us fell asleep ere the pipes were half burned out.

The next morning the first thing that met my eyes as I stepped out was a band of goats near the top of the wall-faced mountain, just where "Yo" and I saw some last year. "Goats in sight," I cried out, and such a flinging of blankets and hurried scrambling from fur bags you never saw. No need for any one to ask where, for we were camped almost at the base of the mountain, and one looking up the sheer wall couldn't help seeing the white animals so sharply outlined against the black slate rock. They were probably 1,500yds. above us. Glasses were brought out, and every one took a long look at them. In a short time breakfast was ready, and during the meal it was decided that Jack should go behind the mountain and then climb to the top. We could see with the glasses that the mountain was quite broken at the top and from the point where the goats were sloped back a little, and we hoped that Jack would be able to get down to them. That he could not see the animals until right on them we well knew, so a system of signals was arranged to guide him in his movements. After Jack had gone the Colonel and Governor got out their fly-rods and fished below the falls for an hour or more, but didn't get a single bite, although they tried several kinds of flies. The rest loitered around camp and watched the goats. They didn't move about much, and after a while some of them lay down, at least we thought they did, for they suddenly disappeared.

After a long time Jack came in sight on top of the mountain, and to the left of the goats. We signaled him to move down and to his left. We soon saw that it was dangerous work, for he moved very slowly and often went up back and tried another place. After an hour or more, aided by our signals, he succeeded in getting directly over the goats, and apparently not over 75yds. above them. Soon we saw the smoke of his gun and then heard the report. Not a goat moved. Again and again he fired. Yet the animals heeded not. We concluded that he was shooting at a goat we could not see. After a while we saw him turn and ascend, sometimes crawling, and again going up hand over hand, and we watched him until he had reached the top and disappeared from view.

As we were sitting down to the evening meal, the hunter appeared and told us the result of his climb. Guided by our signals he had got down to where we saw him shoot, but further he could not go without a pair of wings. He had seen no goats, but fired, hoping to scare them out where he could see them. Having thus briefly described his adventures, he fell to, and ate such a supper as only a man can after climbing mountains all day.

During the night the wind again came roaring down the valley, and the morning broke dark and chilly. Away down on the St. Mary's we could see clear sky and the sun shining brightly on the hills beyond the lake. So we decided to leave this gloomy and unlucky place for easier hunting grounds and a more congenial climate. The goats were still in sight, near where we had seen them the previous day, and after breakfast the rifles were got out and we tried to scare them away. The English gentlemen had 110-grain express rifles, double-barrel, and the rest of us were armed with big Winchesters, except Joe, who had a "'73 model" carbine, a relic of buffalo-running days. For some time we kept up a lively fusillade, at all elevations, but we couldn't see the bullets strike and the goats never moved. The herder, who was watching them through the glasses, said they never even stopped feeding. We soon packed up and left the place in disgust, yet had we stayed a day or two longer we would have got game, for there are other mountains beyond, and on the opposite side of the valley apparently easy to climb, and that there are plenty of goats is beyond a doubt. I made up my mind to try it again some time and explore the upper part of the valley, which I am sure has never been visited by a white man, and seldom if ever by a redskin.

With a feeling of relief we left the gloomy valley and emerged into the sunshine at St. Mary's. After supper the Colonel and Governor once more tried the fishing, and with good success, for during the few moments they had before dark they caught more than enough for breakfast. Again the council was called, and it was decided that we move camp to the foot of the Upper Lake, and the boats begot in readiness for an exploration of the unknown country beyond. The "Yo" boat was already there. We had a canvas affair in the wagon, brought all the way from London, and the old scow was at the head of the Lower Lake. Early the next morning all the duffle was stowed on the wagon, the horses hitched up, and we started. The distance was only nine or ten miles, and in a few hours we were comfortably settled in camp at the foot of the lake close by the outlet. As the creek leaves the lake it flows very swiftly for about twenty-five yards, and then forms a deep, wide pool. Here, after dinner, rods were jointed and we proceeded to fish. The first trout was taken by the Governor. It was a *Salmo purpuratus* and weighed 3½lbs. Quite a number of these fish were taken. Down deep in the water I could see quite a number of large fish. Some, I knew, were lake trout, and others I surmised were "bull trout." The flies we had were very small, so I rigged a large hook for the Governor and baited it with a generous slice from a trout's belly. This he used exactly as one would a fly. At the second cast there was a tremendous splurge. A large fish rose clear from the water and took the hook with him as he went down. The Governor struck at the proper time, and now the fun began. You all know how it is: "merry whirr of the reel," "line hissing through the water," "rod bent nearly double," etc. The fish made a gallant fight and in due time was brought to the landing net. It proved to be, as I thought, a "bull trout," and weighed 7½lbs. In shape these fish are long and slender, the head is long and pointed and the mouth large. The color on the back is like that of *Salmo fontinalis*. The belly is generally a golden yellow, sometimes yellowish white, and the sides are dotted with faint red and yellow spots. It is, I suppose, an Arctic trout, but whether it has been identified I know not. After this we caught here as many of these trout as of the red-throated ones, and once in a while a laker was taken, just for a change. They average about 5lbs. in weight, but I have seen several which I dare say would weigh more than 15lbs. I have never seen one which weighed less than 3lbs. As a game fish they cannot be excelled by any other trout I have ever seen, nor by the bass. They are desperate fighters, and like the salmon, break water many times before they are enveloped in the landing net. I have never caught them except in the fall, and have never found any eggs or milt in them. I conclude, therefore, that they are spring spawners. Seldom, too, have I found anything in their stomachs, though the fish were always in good condition. What a puzzling study is the distribution of fish. Here in these lakes the tribe is represented by species from the Mississippi water shed, from the Great Lakes and from the Arctic, as follows:

Mississippi waters: The cusk (*Lota maculosa*) and the red-throated trout (*Salmo purpuratus*). Great Lakes: The maskinonje (*Esox nobilior*), lake trout (*Salmo namaycush*), and whitefish (*Coregonus wilsonii*). Arctic waters: Bull trout (*Salvelinus malma*). The maskinonje, however, are very rare. In all my fishing here, I never caught but two, which weighed respectively 12 and 16lbs. I think the water is too cold for them to thrive. Whitefish are also found in many lakes and rivers of the Arctic watershed.

MONTANA. J. W. SCHULTZ.

AN EAST FLORIDA RESORT.

I WOULD like to suggest to those of your readers who contemplate a trip to Florida this winter, that Lake Worth, on the east coast of Indian River, be placed on their list as one of the places to be visited. I spent three months there last winter and was delighted with it. To me it is the gem of Florida. There can be seen grass lawns running to the water's edge, cocoanut groves with acres of trees in bearing, large pineapple and banana plantations, oranges, lemons, limes, coffee plants, castor oil beans, pomegranates and everything that grows in a tropical country, besides many things that we do not expect to see, as our common potatoe and tomato, the latter of which we had on the table in a raw state all winter. This, with an air that is superb, safe rowing and sailing, fine bluefishing in quiet waters, church privileges and intelligent neighbors, make Lake Worth a place hard to be excelled as a winter resort. It is a paradise for ladies and children. Lake Worth is a sheet of salt water, 25 miles in length, and from one-half to a mile in width, and is fed by an inlet from the ocean a few miles north of the settlement. The town, which takes its name from the lake, lies between the lake on its west side and the ocean on its east, distance between the two being from one-half to three-fourths of a mile, with good roads between. The settlement is located on the lake side, the borders of which in many places are fringed with cocoanut trees and flowers in constant bearing. The residents are composed of about 100 families from all parts of the Union, and they are noted for their push and intelligence. Land is rapidly rising in value and the day is not far distant, judging by the class that are taking possession, that desirable places cannot be had at any price. One of the advantages claimed for Lake Worth is that the Gulf Stream here approaches the coast nearer than at any other point on the coast, and it is claimed that the delightful winter climate is due to this. Board is $10 per week, less by the month, at the house of E. N. Dimick. To reach Lake Worth take cars from Jacksonville to Titusville at the head of Indian River, and there take a sharpie (anything else will prove a delusion and a snare) for Jupiter, where a stage will meet you that will take you to Lake Worth. Should the inlet at Jupiter be open a short run of ten miles on the ocean will bring you to Lake Worth, otherwise, the nine mile stage ride will be necessary. The sharpies Illinois and Ruby Dye are both owned at Lake Worth, and are running constantly between Titusville and other points on the river to Jupiter, where good accommodation can be had if necessary. For ladies not desiring to remain over night on the water, half-way between Titusville and Jupiter is Indian River Narrows where accommodation can be had with a very intelligent family from Illinois, Mr. Dorson, the postmaster at Indian River Narrows, whose island home will prove a desirable stopping place,

Titusville, on the Indian River, has nothing so far as I could judge worth visiting, but Rock Ledge, a place some ten miles distant, is well worth a visit, *i. e.*, that part that borders the river, its orange groves extend for several miles and it has one of the best hotels in southern Florida, terms $5 per day and $28 per week and upward; another hotel there charges $15 per week. As a permanent stopping place Rock Ledge does not compare with Lake Worth, but it is well worth a visit. I have seen ice 2in. thick at Rock Ledge, but none at Lake Worth. D. F. EASTON.

NEW YORK.

THAT BROWN PUP.

I GRANT that the thrilling whir-r-r of a pheasant's wing in an English copse is music to the ear of a sportsman; that right pleasant it is to pop over the red-legged grouse on the gorse-clad moors of Yorkshire, and that gallant fowling may be had crouched behind a tiny iceberg on a Michigan river, when the canvasbacks are fat from long debaucheries in the wild rice crops, but I maintain that the *crême de la crême* of shooting is to be found on the brown prairies of the West, when the "chickens" are not too wild nor your dogs too eager.

One glorious morning of last September three carriage loads of us started from C., a border town in northwestern Iowa, bent on a long day's sport. Far we sped over the prairie till not a tree, house, nor even the thread of a path was to be seen far as the eye could reach; then when the virgin wilderness lay before us our leader dropped a dog from his buggy to "try the country." The game was plentiful, and we all leaped down to get our share of it, the intelligent driverless horses keeping at a discreet distance behind us, pausing when we stopped, following when we proceeded.

The lion of our party was a man of Scottish descent named William McLaren, a mighty hunter, whose feats of gunning were the talk of the whole country round. He was a thickset handsome fellow, about thirty-five years of age, with a frank face and such a clear skin as men have who live in the bracing air of the plains.

But to me, a stranger, he was that day an unmitigated nuisance; yet, not he, but a decrepit, worn out, half blind, stone deaf, brown Gordon setter which accompanied him, for his conduct toward that old dog which, for sheer humanity's sake, ought long ago to have been deprived of his miserable existence, was aggravating in the extreme. No fine lady could have exhibited more fantastic whims over a pet poodle. First, I noticed that "Curly" shared with his master the entire front seat of the carriage, while three big men were "scrooged" into the hind one; then, whenever he raised his grizzled muzzle and whimpered, he must be lifted tenderly to the ground and be allowed to "nose along," as though he had not lost years ago the sense of smell, thus running over our birds and spoiling sport generally. When fatigue checked his blundering career, he would coolly sit down and pant, and his master would carry him carefully back to the buggy again. It was exasperating, yet my companions, all true sportsmen, never murmured, and of course I was compelled to hold my tongue, though I would not like to confess how often I was tempted to accidentally end the poor old cripple's eccentricities with a charitable charge of shot.

After a week's reveling in the delights of chicken shooting my visit came to an end, and I rode over to Mr. McLaren's house to pay my adieus. He was out, but his wife, a charming lady, who looked almost young enough to be her own daughter, graciously received me.

On a soft bearskin rug before the fire, monopolizing all the heat, lay the irrepressible brown dog, looking, if possible, more blear-eyed and ready for dissolution than when out on the prairie.

"Poor old Curly," said the lady, patting his raised head, "he loves the fire these chilly mornings."

It was evident that madam was as mad as her husband.

"Isn't he rather a nuisance?" I asked spitefully, for visions of fat chickens flying away and laughing at me floated before my imagination.

"Curly a nuisance!" How her round eyes opened with wonder. "Oh, no, indeed; in this house Curly is king, for had it not been for him we might not have had its roof for a shelter."

This declaration, of course, led to the recital of the story of the dog's heroism, which I give in the lady's own words:

Fifteen years ago Will and I came out from the East and preëmpted land on the prairie here, having little beyond willing hands and courageous hearts to start with, perhaps being, too, a little behind our neighbors in the race, as we were city bred and not accustomed to rough it. But God prospered us, and in three years we had got on so well that my husband was elected County Treasurer, an office in those days with rather more honor than emolument attached to it. It was more of a compliment to us, however, as the previous incumbent had levanted with a considerable sum of money, and, as his bondsmen were irresponsible, the loss had fallen on the county. I had my misgivings about the advisability of his accepting the position, but, like a dutiful wife, yielded to his judgment. All went well for a time. One September morning, however, Will came into the sitting room and said, "Nellie, I must drive into C. this morning and bank this."

As he spoke he displayed a roll of bills, and like two babies with a toy, we sat down and counted the sum, pleased to handle the money even if we held it only in trust.

"Oh, Will," I said, "Just think; there's six hundred and thirty dollars. My! if it were only ours."

"Which it is not, little woman," he replied, "So go fetch me my large pocketbook, and let us put it out of sight and you out of the temptation of breaking the Tenth Commandment."

To see Will handle such a sum with indifference excited my admiration, and when he indignantly refused to allow me to pin up the mouth of his jacket pocket where the treasure reposed, I felt that nature had intended him to be a millionaire. As for me, if I had had to carry such a precious parcel ten miles over the prairie, I should have wanted it sewn in a leather belt and never would have dared to take my hands off it all the way; but men are so different.

Just before he started he said, "I'll take the brown pup with me, for the run will do him good and we may by chance get a bird or two on our way back."

"So I would, dear," I said, "But whatever you do, do not stop for anything till you reach the bank and deposit the money."

"All right, Mrs. Timidity," he laughed, and was gone.

Seven hours afterward I was up-stairs sewing and heard something moving in the room below. I hurried down, fearful of tramps, and there at that table sat my husband, with his forehead buried in his hands, sobbing as though his heart would break. In a moment I was beside him.

"What is it, Will?" I cried, "Oh, whatever has happened?"

I shall never forget the ashen hue of the face he raised toward me.

"Oh, Nellie," he gasped, "I am a fool, a madman. I have lost the money—lost it on the prairie!"

This was all I could get from him for a time, for he was as one distracted, but at last the whole sad story came to light. He had driven toward C. with Curly running beside the buggy; but they had not gone far before the dog started some chickens and scattered them in all directions, which was too much for Will's patience, who, forgetting for a time his great trust, leaped down from the carriage and gave him a good hour's drill in pointing. Suddenly he remembered the gravity of his errand, and drove off to C. at full speed. He reached the bank all right, but, when he put his hand in his pocket, a cold chill ran down his back, for the money was gone. Gone! and, though he had retraced his steps as well as he could, there was no sign of it to be found.

I shall never forget the rest of that miserable day, nor the night which followed it. Of course we were irretrievably ruined, for we had no means of replacing such a sum, and who, after what had occurred, would believe Will's story? And, what was worse, we dragged down in our fall our kind old neighbor, Adam Clark, who had signed my husband's bond. I believe the thought of this misfortune broke us down even more than our own great trouble.

Early next morning Will set out with a sore heart to announce the loss to the good old man.

Now, during the long, restless hours of the night I had been maturing a plan which let in a little ray of hope, though the chances were many against me. As soon as my husband's back was turned I began a game of hide-and-seek with Curly, who was as proficient at such sport as he was stupid at pointing chickens, and the object we used at our play was an old leather purse something like the one Will had lost. For a full hour I kept hiding it and he kept bringing it to me, getting rewarded with caresses and a slice of meat every time he succeeded in his search. When I thought he was prepared for the experiment, I started across the prairie with him, though I dared not go so far as to lose sight of our corn patch, the last landmark which would guide my wandering feet home again. Then I sent the dog out to hunt, but all in vain. Once he set my heart beating by bringing in a piece of dry root and laying it at my feet. I was in despair, but I made one last appeal to the dog's intelligence. I took his beautiful face in my hands and spoke to him as woman never spoke to dog before. I believed he understood my pleading voice and streaming tears, and I let him go; but my hopes were dashed to the earth by seeing him scamper over a hill out of sight, and I knew that the faithless creature had scented my husband's track and left me to my fate. But when I reached the house, to my surprise, Will had returned.

"Have you seen Mr. Clark?" I asked, tearfully.

"Yes, I have seen him," he replied, with a groan.

"And what did he say?"

"Oh, Nellie, if he had only abused me for my wretched carelessness I could have stood it better, but the old man just turned as white as a sheet and said: 'God's will be done.' That was all."

Then we sat silent for a long time, for neither of us had any comfort to offer.

Presently there came a scratching at the front door, of which we, for a time, took no notice; but at last, nervous at its repetition, I opened it.

Could I believe my senses? Had trouble turned my brain? There stood Curly with head erect and brown eyes beaming with pride, holding in his mouth the lost pocketbook!

I believe I fainted, for the last thing I can remember was seeing Will fling himself on his knees beside the brown pup and hug him and kiss him with passionate emotion. Fortune has smiled on us since that time, and it would not make our hearts ache to lose as many thousands as we did hundreds then; but neither Will nor I shall ever forget those two terrible days nor the debt we owe this dear old doggie.

Such was the story: and I am sure the superannuated old setter knew the import of his mistress's words, for, as she finished, he gave a confirmatory wag of his tail and glanced with a defiant gaze at me, as much as to say, "What do you think of that, eh? Not quite such a fool as I look, am I, sir?" B. B.

Camp-Fire Flickerings.

"That reminds me."

201.

ABOUT three years ago I went to the southwest part of Georgia hunting and fishing. The land there is composed entirely of sand and requires fertilizers spread over the ground in order to make crops of any kind remunerative. I was stopping in a town on a well-known stream in that part of the country. One day while sitting in chairs in front of the hotel a party of us were talking over the prospects of hunting and fishing in the vicinity, when a man came by with a catfish weighing about 5lbs. The size of the fish was commented on so much that I concluded to say something and remarked that a catfish of that size was nothing to speak of, I had seen a catfish caught out of the Mississippi River that weighed 150lbs. and after hearing the expressions of doubt, I thought "to mend on it" a little and said he not only weighed that, but when opened he had a ham bone, two half bricks and a gunny sack inside of him. A man of about fifty years of age who had been sitting near for some time—whose dress gave every indication of his being from the country, homespun clothing, pantaloons too short, straw hat with part of the rim gone—squirted a mouthful of tobacco juice against a China tree and said, "Say, Mister, what is a gunny sack?" I replied that it was a sack similar to those in which guano was shipped to that section of the country. "Well, all I've got to say is that gunny sack must have fertilized that fish powerful." The laugh was on me and I "set 'em up." ISSAQUENA.

CONFIDING CHIPMUNKS.

A WRITER in a recent number of FOREST AND STREAM gives his idea of the way the chipmunk builds his nest or constructs his burrow, so as to leave no mound of fresh earth near the entrance. His explanation is a very ingenious one, but I fear is not bound out by the facts. Possibly he has made the acquaintance of one of the family possessed of more cunning than most of his tribe; or perhaps the chipmunk he describes, having been frequently disturbed, has had to take peculiar caution to hide his nest. I have never yet found the burrow of the chipmunk without two entrances, a front and back door, and Chas. C. Abbott, in his "Rambles of a Naturalist," states the same fact.

I have always been much interested in watching the cheerful little fellows, and have had abundant opportunities to do so. Our summer house is situated on the very edge of the forest primeval, and when we come to it in June we always find a number of chipmunks that are making themselves very free about the woodhouse and door yard. At first they seem much disturbed at sight of the family and scamper away with the appearance of having guilty consciences. But in a very few days they learn that I am not an enemy. By avoiding any quick motions, and by dropping corn where it can be seen by them, I win them so that they very soon become quite tame. Our maid-of-all-work was at first quite horrified that I did not wish to kill them, but when I assured her that we could spare the little they would eat, and she saw that they recognized me and ran to meet me as soon as I stepped out of doors, even she began to think it pleasant to have the little fellows show confidence in mankind.

During the past season there has been one of them that very soon knew the pocket in which I carried a supply of corn or nuts, and would hop upon me when I was walking past him and dive down into my pocket. In an instant his head would pop out, and he would take an observation to satisfy himself that there were no enemies near; then he would return and fill his pouches, till he looked like a very bad case of the mumps. He soon knew the hammock where my wife used to lie in a shady corner of the piazza, and if he did not see me around, he would hop into the hammock. I do not think he was ever quite able to master the mysteries of a woman's pocket. (There is now and then such a thing.) But he usually found something to reward him. There was one other chipmunk that became nearly as tame; but Chippy No. 1, as we called him, was very jealous of any rivals, and if he chanced to raise his head from my pocket and see No. 2 at my feet, he would make one spring for him, chase him into the woods, and then return to the pocket.

I believe there is as much difference in the dispositions of the little animals and birds about us as there is in men. Chippy No. 1 always came with an air that seemed to say, "Come, hurry up. I've got to get in my provisions for the winter and must be about it." He was never satisfied with a few grains of corn, but wanted the last one his cheeks would hold, often having to stuff them in with his paws. On the contrary No. 2 would stand upon his hind feet with a very pleading look, take one kernel and stand very patiently for another. No. 1 must have carried to his nest nearly half a bushel of corn. The first cold days in September he was missing, and we feared he had fallen the prey of some dog or boy; but he was soon about again as lively as ever. He retired for several days a number of times, the last about Oct. 10. No. 2 remained until the 20th, and a few of the more wild ones were out some days later, even with snow on the ground, showing that the time of their retreat depends somewhat on the state of their storehouses.

The burrow of No. 1 was on a wooded bank north of the house. The two holes were about five feet apart, the lower one showing quite a mound of fresh earth. I did not intend spinning out so long a letter when I began, but the funny doings of Chippy would easily fill a volume. We hope he will remember us when we return in the summer, though he will have been out many weeks, if no weasel or other enemy discovers him. He will, doubtless, be surprised when he wakes from his long nap to find the house closed and empty.

One other fact in natural history I've been interested in this season. It is very likely known to others, but was new to me, that the humming birds were attracted by color. They would come daily to the bright-colored cushions we kept in the hammocks, and seemed much surprised that there was no honey. Perhaps, though, they had the "balsam craze," and it was that, not the color, that called them. X. X.

THE ADIRONDACKS.

HARES FOR RESTOCKING.—*Editor Forest and Stream:* In your issue of Dec. 16, under the heading of "Belgian Hares for Maine," your correspondent "A. C. H." says: "The large white hare (*Lepus americanus*) has disappeared from the sea coast of the State (of New Hampshire), and all attempts at rebreeding have been failures." I have furnished live white hares—alluded to above—for parties in different States for the past three years, and they have successfully bred in different parts of Massachusetts, Connecticut, New York and many inland States, as well as on islands of the Atlantic sea coast. Large orders were sent to Mr. Chas. B. Corey, of Boston, who stocked islands near Cape Cod with good results; also to Messrs. Gildersleeve, of Gildersleeve, Conn., who are well pleased with the results, and many others with like good success. I cannot see why the same success might not attend planting the same animal in New Hampshire as has been done in many other States, especially as this hare is indigenous to the Canadas and Maine, and other border States. If "A. C. H." wishes to try the experiment, I will send him by express any number he may desire, with the full belief of satisfactory results.—J. G. RICH (Bethel, Maine).

Senate Bill 2,436, providing for preservation and government of the National Park, ought to go through the Senate and House by an overwhelming majority.

Game Bag and Gun.

SOME UNSUCCESSFUL HUNTS.

IT is not all of hunting to get game; and when I return from an unsuccessful quest and my friends laugh at me, I do not mind, for I feel a satisfaction in my outing they cannot understand.

Our house is situated about 100yds. from a small creek which runs through a swamp, the abode of numerous coons, possums and otter, with an occasional wildcat just to keep things in motion. The household has a few fowls, the price of whose safety is eternal vigilance. We also have a setter, who, on account of having demolished a varmint under our porch one night, has adopted the place as his permanent quarters, and as he made war on all nocturnal prowlers we became the other party to the bargain and Paul was left in charge nights.

Bury and I returned home late one night from an entertainment and shortly afterward retired. I had scarcely settled myself when I heard Paul yelping down by the barn, which stood at the edge of the swamp. I knew at once there was fun on hand, and I hastily donned the first garments that came to hand, which, of course, were those I had just worn at the entertainment. I lighted a lantern and rushed into the front room for a gun, when I heard Bury, who slept up stairs, yell, "Hold on, I'm coming;" and down he came in his best trowsers, and we made quick time for the barn. We ran past it and down to the edge of the swamp, and listening, heard Paul splashing among the bushes, and shortly he plunged into the creek and swam across. A short distance below there was a foot bridge, to which we hurried and across, and then down through the orange grove to the edge of the woods. We jumped over a fallen tree and discovered the other side was about four feet lower than the side we jumped from, and we alighted in about a foot of mud and water. We stopped to turn up our best trowsers and then forced our way as fast as possible through saw palmettoes as high as our heads. Meanwhile Paul had evidently treed something, for his yelps and howls were frantic. "These confounded palmettoes are rasping my legs like blazes," growled Bury. I was ahead with the lantern and announced my intention of turning down my trowsers, mud or no mud, which I did, for the palmettoes were terribly sharp. We found Paul on the bank of the creek, at the foot of a tall sapling, and he was evidently overjoyed to see aid at hand. "Shine his eyes," said Bury, and I struggled through the tangle to obtain a position to do so. I held the lantern up, and directly I caught sight of two red spots and called to Bury to come around on my side of the tree. When he had forced his way to me I pointed out the eyes, about 25ft. up. He fired, and crashing through the branches to the ground came a possum, on which Paul immediately pounced and shook it until all life was gone.

Not until then had we appreciated our ludicrous plight. Only partly dressed, our clothing wet and muddy and our legs scratched by the palmettoes, we laughed heartily at each other's appearance as we slowly worked our way out to dry land. I vaguely wondered, as I surveyed my torn and bedraggled trowsers, what my mother would say if she could see them, for my destruction of clothing as a boy had been a sore subject.

High out of Paul's leaps I held the possum until we reached the house, and ere we turned in for good we voted the adventure the best twenty minutes sport of the season.

This little excursion made us keen for a regular coon hunt, and one evening not long afterward Bury, Joe, Dizzy and I met at our quarters, the usual rendezvous, and with Paul set out for the Bridge swamp. We crossed the footbridge and started the hunt up the right bank of the creek. We had scarcely gone 200yds. when Paul opened and away we went through brush and palmettoes at our best speed. Suddenly I caught a dim glimpse from the light of Bury's lantern who was just behind me, of a pool right in my path. There was no time to stop, so I made my best jump and just failed to reach the opposite bank and slid backward in to my waist. I crawled out just as Bury came with a rush and deposited his 200lbs. with a splash exactly in the middle of that mudhole and on top of the lantern he was carrying. We left the lantern right there; its usefulness had departed. We found Paul at the foot of a tree, but although we searched carefully and even climbed the tree we could find no coon. The tree was a live oak and the Spanish moss so completely covered it that it was quite possible for an animal to be there and we unable to discover it.

Calling Paul we made our way across the road and down into the densest portion of the swamp, where we found mud and water galore. Paul struck some sort of a trail and the chase he led us will certainly never be forgotten by any of the party. Deeper and deeper into the swamp we went, and still Paul's yelps were ahead of us. The going was something awful, but once into the spirit of the chase we hesitated at nothing. I saw Joe, who was the shortest one of the party, in above his waist once, and then he smashed a lantern and we had only one left. We eventually passed entirely across the swamp and emerged on dry ground near the church. There Paul finally ran something to earth, and we set to work to dig it out with only an ancient "G. W." hatchet and some sharpened sticks to work with. We were thoroughly drenched and covered with mud, but the night was warm and our run had heated us, so we felt no discomfort in our condition. We worked at digging out the hole for about half an hour, all four huddled close together eagerly encouraging the dog, and our zeal was finally rewarded by Paul jerking a skunk out in the midst of us. We left at once. Dizzy was a trifle slow—only a trifle, but he suffered for it. Paul accompanied us home and kept the memory of that night green for a week or more. Dizzy's absence from church the next day was compulsory, and his callers, who came to condole, smoked vigorously.

I went on a turkey hunt one day with Dizzy and Sam. Sam took his dogs and we loaded ourselves into a dugout and paddled up the creek about a mile and went ashore at Maple Landing, in the forks. We put out the dogs, but for the first three miles or so started nothing. At last the dogs opened on the black-jack ridge, and Dizzy, who was nearest to them, saw several turkeys run into a patch of low palmetto. We hunted through it some time before we found anything, and then a turkey rose directly in front of Dizzy and Sam. Sam had only one barrel cocked and frantically pulled on the wrong trigger, and Dizzy, who is big enough to do better, missed him fair and square. There wasn't much said as the turkey sailed away down through the swamp, but that was because we could not do justice to the occasion. We could find no more and continued on up the ridge about a mile further, when Sam exclaimed "Look, look!" and we saw a flock of about a dozen or fifteen turkeys that we had startled, flying down across the creek into the swamp. We marked them down near a big cypress and cautiously worked our way toward the place. We crossed the creek on a fallen tree and then our troubles commenced. I never saw mosquitoes worse. They bit through our clothing and swarmed about us so we could do nothing. We tried to quietly brush them away with our handkerchiefs but at last had to leave the swamp in self-defense. Sam was the only one who saw a turkey after entering the swamp, and he failed to get close enough for a shot.

For some time Sam had been urging me to cross the creek into St. Johns county, and try a drive for deer, and at last we set a day to go. Sam lived about five miles away, and I drove out. I had a village cart which was rather narrow, and on the way some one hailed me. Without checking the horse, I turned my head to see who it was, and the next instant I was lying by the roadside together with my gun and other dunnage. The cart had struck a stump. I hung on to the reins and stopped the horse; no damage done and I was soon under way again.

I put the horse up at Sam's, and we were soon across the creek and wading through the low lands adjacent. The fall had been very wet and everything was afloat. We had a hard time of it, and tramped for ten miles before we saw anything. While we were lying at the foot of a big pine resting, we caught sight of a doe and yearling slowly ambling along by the edge of the woods opposite, and distant may be 200yds. We hastily ran to head them, keeping concealed as much as possible, but when about 100yds. from them the doe saw us and stopped and stood looking at us over a bunch of palmetto. "Shoot! shoot!" whispered Sam, but having only buckshot and so small a mark as a deer's head, I knew the chances were too small. Sam, however, could not wait, and let drive a load of blue whistlers that made havoc with the palmetto but never touched the doe, and away the deer went and were out of sight in a jiffy. The dogs were on the track of them, and at the report of the gun they opened and soon after came up and continued the chase, despite our efforts to prevent them. We saw nothing else that day except a heavy shower on our way home that drenched us through and through.

It's all in a lifetime, and I hope I shall have many more hunts in the brave State of Florida ere I resign, and whether successful or not in obtaining game, I shall count the time well spent. CALUMET.

CINCINNATI, O., Dec. 1.

NOTE BOOK OF A HUNTING PARSON.

I.

I HAVE always loved to hunt. My first recollection of literature is "The Life of Daniel Boone" and "Cooper's Stories of the Frontier." When scarcely ten years old how often I stole my father's heavy rifle, making a tripod out of three laths to rest it on, for it was too heavy for me to hold up, and many a gray squirrel did I interrupt in hulling the nuts among the branches of the old hickory and chestnut trees of the woods of Pennsylvania. Oh! the delights of those boyhood days.

I was not well nor strong through my earlier life, and if there were corn to plant or potatoes to drop, my back was sure to ache, but it always rested me to drag out that heavy rifle. Father said it was the gun that kept me ailing, but of course he was wrong, for what father is not? Since boyhood my vacations and other spare time have been passed in camp, rolled in my blankets at night under the trees and stars, and roaming with no other companions but my dogs; and I have traversed the wilds from Lake Itasca on the north to the other side of the equator on the south. By the camp-fire at night I have filled many a leaf in the note book that now for the first time comes to light.

On some of these I find the record of a week's rare sport.

Being on one occasion worn out with excessive labors, my parishioners united in saying, "You must have some recreation." So I picked up my rifle, a handsome one, presented by the young men of my congregation, and in a few days I was in the heart of the Sierras, near the base of Mount Whitney, the highest of the range. On my way I called on my friend, a bank official in the town of M. and told him of my projected trip. He said: "I know a little valley where I used to keep cattle when I first came to California for my health. Now (October) it is just below the snow line and deer will be plentiful there, and if we can get over the high ridges without encountering too much snow we can have rare sport there for a season." My friend was an old and enthusiastic hunter and quickly added, "I'll be glad to be off with you for a few days." A pair of mules, a brace of dogs, a light spring wagon, our camp fixtures, a day's climbing toward the sun and we were near the giant Sequoias on the line between the counties of Fresno and Tulare in California. Nearly a mile perpendicularly beneath us stretched a beautiful valley, about three miles long, green with groves of poplars and luxuriant grass. It looked indeed like a hunter's paradise. We were soon in it, throwing up logs to break the cold winds, and camp was quickly established. Bacon and slapjacks were the first meal; and a sound sleep found us at daylight ready for action. My friend took one direction and I another.

If I had not started out to follow my note book jottings, I would not chronicle the following, but here goes: After crossing a little ravine, I stood in the midst of a flat covered with short shrubs and long grass. It was only half light; I thought I heard soft footfalls on the leaves, and I listened more eagerly. In an instant a snort, a bound, a rushing and springing. All around me were bucks with branching antlers, does and fawns. I stood in the very center of a vast herd of them. I flung my rifle to my shoulder. Within ten yards of me there was a tremendous buck. Bang!—sure he's down. Another, and another; I whirled round that center and soon emptied my magazine. Waiting a moment for the smoke of the carnage to clear away, I proceeded to count the spoils. How many do you suppose were slain? Not one. I could not believe it. I hunted the brush over and over. Not even a sign of blood. It was a desperate case of buck fever. After years of hunting, for the first time in my life I believe I had been banging away without ever seeing the sights of my rifle.

But "a bad beginning makes a good ending." I sat down on an ancient log and wiped the beads of perspiration from my dizzy brow and refilled my magazine. I took my bearings and thought my head level enough for another trial. I walked down the ravine, then crossed to the other side—what's that? Flashing in the rays of the morning sun there were the antlers of a noble buck. His nostrils were wide distended. He seemed to be smelling the "battle afar off." A monarch of the forest! Does it not make one's pulse thrill? But no nervousness now. I raised my rifle carefully, up the foreleg, now a little behind the shoulder, and touched the hair trigger. A wild bound in mid-air. Well, we'll have meat in camp for a day or two anyhow.

Half a mile down the valley another fine buck springs out from the cover of a grove of cottonwoods and plunges down into a gulch. He has caught wind of me, but as his horns and neck appear on the opposite bank he stops. Ah, a fine shot, though a long one. At the crack of the rifle he disappears. I hurry to the spot. There he lies hardly moved from his tracks. True to the aim the ball broke his neck.

But what's that rushing through the brush? Our friend S., attracted by the fusilade, is coming down the mountain. As he reaches me, almost breathless and panting, he cried exultingly, "Well, I declare, I hardly expected to get him; it was a long shot." "You," I replied, "you never shot him; I killed him myself." He laughed and threw out his empty shell. I did the same. Well, here was a problem and how was it to be solved? He suggested that we draw cuts. "No, sir," said I, "you're an old hunter, and although our guns are both of the same caliber, you know where the ball goes in it covers its track, and where it comes out it makes a ragged edge." We examined from all sides on this basis, and "Sure enough," said he, "it was your ball." We had fired simultaneously and neither had heard the report of the other's rifle. While dressing him my friend laughed again, and said, "Look here," and he showed me half the breadth of the bullet cut out of the right ear by his bullet.

Turning a leaf in my book I find: Quite a ludicrous incident occurred yesterday. We found bear sign down the valley. We had stopped in a beautiful, sunny cove to eat our midday meal. Down below us was a deep gulch. Friend S. went down to explore for water to wash down the cold fried venison and flapjacks. Finding it dry he laid himself down on the long bunch grass that matted its banks, placed his hat over his eyes to shield them from the rays of the sun, and was enjoying a well-earned rest. I was about to follow suit on hearing his report on the water question, when I noticed that old Rough, one of our dogs, was very uneasy. With raised bristles he walked round and round, snuffing the air. I threw him a piece of meat to which he paid no heed. At last I made him lie down beside me, and was just in the first stage of a sweet doze when: What on earth! What a noise! A snort like a bursting steam valve brought me to a perpendicular position instantly. I looked toward the place lately occupied by S. and saw him illustrating the Dutchman's flying leap. The distance described would have done credit to the propelling power of dynamite. Out of the gulch from the very place where he had been resting there rushed a huge black bear. It climbed the opposite bank and tore down the gulch, making the tamarack thicket rattle as if swept by a Colorado cyclone. I fired a parting salute as it disappeared and the dogs fairly roared, but the cañon was rough and almost impassable and we called back the dog, while I rolled on the grass and laughed till my sides ached.

At night by the camp-fire as we laughed again over our adventure of the day, my friend told me of an adventure he had with bruin, when he, in '51-2, kept cattle in this little valley. "I came," said he, "to get cured of the asthma and in this succeeded. Nothing in the world is like this free air and mountain life. Thousands of people die in our cities because they are too lazy or too ignorant of the mountains to get well. My wife and I came in here and built a little cabin down where I showed you the pretty site. We made butter through the summer. The dairy was some distance from the house among a clump of pines. Bears were plentiful here then. We had grizzlies, black, cinnamon and brown, and no little trouble to keep them from the calves and the milk. Sometimes they would take out a log or lift off the roof and in the morning there was not a drop of milk in the troughs; for as for pans we had none of them. One night I heard a great rattling around the milk house, and more asleep than awake I got up, and without waiting to dress, walked out the path. I listened and heard nothing. I went a little further than further, till I reached the milk house. I started back, and half way to the cabin there stood in the path between me and my bed and clothes and trusty rifle, an old grizzly with his eye balls glaring. He uttered two or three low, significant growls which I interpreted to mean "Get up one of those pine trees as quick as you can shin it." Like a cat I reached a limb about 20ft. from the ground. I got astride and soon found out that the bark had never been sandpapered. It was not a soft seat, and without ulster or any approach to it, in fact with little more than Adam wore before the fall, the night being exceedingly chilly, my situation soon became, to say the least, a little monotonous. My teeth chattered. I changed from side to side. My hands were cramped and numb, and I was tormented with the fear of falling off. Meanwhile old bruin was pawing the ground faithfully or else walking round and round the tree, keeping constant guard. My wife had gone out to the town to make some purchases and there was no one in the house to give me help. All night long I held on to that limb, and all night long that old bear kept his faithful watch. Oh! the horror of those hours, for not till broad daylight did he say "Good bye," each of us thinking concerning the other, "I'll see you later; ta, ta." PACIFIC.

STOCKTON, Cal.

HOQUIAM, Washington Territory, Dec. 8.—There is plenty of game here of all kinds, but I have very little time to try my luck. Perhaps that is the condition of affairs in some other good game regions.—L. H.

THE TRAVELERS paid 17,850 accident claims in 1884, amounting to nearly $950,000.—*Adv.*

QUAIL.

Editor Forest and Stream:

In the winter of 1868 I was in North Carolina, and daily while shooting would see many persons with nets, who were engaged in capturing quail and shipping them to the Philadelphia market. As an experiment I purchased 340 live birds, put them in coops covered with canvas, and took them to my old home in New Hampshire. There I utilized an old sheep pen, 20ft. square and 12ft. high, for their home. There was a lot adjoining, inclosed with a high board fence. I covered this with pigeon nets; the quail had free ingress and egress. I lost thirteen birds in transit. I fed them buckwheat, cabbage and apples and they thrived finely. Having procured them from High Point, N. C., I found that the climate did not disagree with them. I kept them from January to March, when I distributed them in half dozens over a radius of five miles. Only lost seven birds during their captivity. The third year after this they were found as far east as Lowell, Mass., and as far north as Dumbarton in the extreme north.

The people of New England can well afford to turn their attention to quail culture, as the country is so well adapted to their propagation, and if sportsmen and hunters will put straw stacks in their thickets and track the way over the fields by scattering straw, they will always find in deep snow time. and bad weather the noble little bird the quail. My belief is that if farmers and others would cover their brush heaps with straw in the fall, the quail would make these places their winter home.

In 1874 I placed 34 quail eggs under a bantam hen. She hatched and reared 30 of them until they were full-grown birds.

Our Ohio fish and game law is deficient in several respects. I went before the committee on fish and game at the last session of the Legislature, and urged with all my powers to induce them to shorten the season for quail shooting, and not to allow shooting after Dec. 1; our season extends to Jan. 1. My opinion is that the birds have a hard time, even if unmolested, to get through the winter when snow is on the ground.

Within the last three days more quail have been slaughtered by fellows who bunch them in the snow than were taken during the entire season. Pot and market-hunters, who could not bag a half dozen quail in a day's shooting as sportsmen shoot, now bring in from three to four dozen daily, captured by potting them in the snow. At the little town of Roundhead, nine miles distant, three hunters in two days potted and packed a flour barrel full of quail and shipped them to market. If this state of affairs continues until Jan. 1 there will scarcely be a bird left to tell the tale. At the coming session of the Legislature we will try and have the law so amended as to shorten the season for shooting and to give more protection to the birds, and do away with spring and summer shooting. We will try for a non-exportation law also. H. P. I.

Huntsville, Ohio.

Editor Forest and Stream:

Quail are very plenty hereabouts. I flushed ten fine coveys to-day and bagged thirty-eight. Little if any shooting is done here, and pot-hunting is not allowed. Within a few miles of here wild turkey and deer are fairly plenty. You can recommend this place and the Egerton Hotel to any one, and no gentleman could ever wish for more comfortable quarters or more cordial attention. I regret to learn that during the recent and extraordinary heavy snow some of the colored people trapped alive a great many quail, and sold them in the village to some gentlemen who shot them out of a pigeon trap in a sweepstake. J. T. W.

Macon, North Carolina.

Editor Forest and Stream:

A correspondent, "H. M. W.," Baltimore, says he finds too much wheat is too heating for quail in confinement, and asks what is the "right food." I have found cracked Indian corn an excellent food for cold weather and more easily digested than wheat, although it is more heating than the latter. But I am inclined to the opinion that what game birds need when in confinement in the winter and deprived of exercise is occasional feeding with some laxative food to prevent indigestion and constipation. Cabbage chopped fine, pieces of apple, lettuce or spinach leaves, celery tops, or similar articles are good. In the article on "Hybrid Grouse," issue of Dec. 16, "Tappan Oak Ferry," read Tappan, Dak(ota) Territory.

Toledo, O. Jay Bebe.

Those Massachusetts Snow Buntings.—Essex, Mass., Dec. 26.—*Editor Forest and Stream:* I was surprised last night upon opening my favorite paper, the Forest and Stream, to find my name in full in connection with a scathing denunciation of the Essex Gun Club, which I believe in view of the facts to be uncalled for. The birds shot as snow buntings (which may not be the right name) were put upon the list after consulting the game laws of 1886; and the assertion was made that they were on sale in the Boston markets. (A man has told me to-day that a year or two ago he sent to Boston by express to be sold in open market, a dozen, for which he received 50 cents.) There seems to be a mistake somewhere. A committee has been appointed to ascertain the true name and standing of the bird in question. The hunt was gotten up to awaken interest enough to start a gun club. The organization has been perfected, and we had our first shoot at bluerock pigeons to-day. In the side-hunt values were affixed to direct effort to the most desired game. Quail and partridge were placed at 50 points, rabbits at 25. Crows were set at 15, till some said they should hunt crows, when they were scaled down to 5 points to discourage any one going out of their way to bag them. I hope at some future day to see something in your columns more creditable to the Essex Gun Club than your last editorial.—C. W. Chipman.

The Winchester Calendar, published by the Winchester Arms Co., is a large card on which are emblazoned typical hunting scenes with the rifle. Among the flood of calendars this one will be likely to prove a favorite with sportsmen, because a constant reminder of the field days that have been, or better, are to come.

Those who preach, lecture, declaim or sing, will and *do* find Hale's Honey of Horehound and Tar the speediest restorative of the voice in cases of hoarseness. It cures coughs and sore throats rapidly and completely. Sold by all druggists. Pike's Toothache Drops cure in one minute.—*Adv.*

YELLOWSTONE NATIONAL PARK.

Report of Capt. Moses Harris, First Cavalry, Acting Superintendent.

Yellowstone National Park,
Office of Superintendent,
Mammoth Hot Springs, Wyo., Oct. 4, 1886.

Sir: In compliance with your telegram of the 31st ultimo, I have the honor to submit the following report:

In obedience to the orders of my military superiors I arrived with my command, Troop M, First United States Cavalry, at the Mammoth Hot Springs, Yellowstone National Park, late in the evening, Aug. 17, 1885, and at once reported by telegraph to the honorable Secretary of the Interior. Having, in response to my telegram, been informed that it was desired that I should assume the duties previously performed by the superintendent of the Park, I assumed those duties, relieving Col. D. W. Wear, the late superintendent, Aug. 20, 1886. Col. Wear accompanied me through the Park, and I stationed detachments from my command at the following points, viz: The Norris Geyser Basin; the Fire Hole, or Lower Geyser Basin; the Upper Geyser Basin; the Grand Cañon, or Falls of the Yellowstone; Riverside, on the Madison River; and Soda Butte, on the road to Cook City. These stations have been continued to the present time, and from frequent inspections made by myself and the officers of my command I am assured that the private soldiers and non-commissioned officers in charge have performed their duties faithfully, and that the Park has received all of the protection possible under the circumstances. A copy of the order published for the guidance of these several detachments in the discharge of their duties is forwarded with this report and marked A. It is proper to here state that much efficient assistance has been tendered by the following-named gentlemen, who were formerly employed as assistant superintendents, viz: Mr. C. J. Baronett, William McClellan, and Ed. Wilson. The first named has been employed as a scout and guide under authority received from the War Department, and, owing to his long experience and perfect familiarity with the mountain trails, his services are invaluable. It is to be regretted that it has been found inexpedient to authorize the employment of more than one of these experienced scouts.

Upon assuming my present duties I found two persons, Mr. Metcalf and a Mrs. Crary, residing at the Mammoth Hot Springs in violation of the Park regulations, and I at once served each of them with the requisite thirty days' notice to vacate. The order was promptly obeyed in both instances, and the buildings improperly occupied will soon be demolished and removed. I have also found it necessary, for the preservation of good order and property, to expel a number of disreputable characters from the Park. This is at present the only authorized method for the enforcement of good order in the Park, and although the exercise of this authority may at times appear harsh and arbitrary, it is indispensable to the proper protection of life and property. I have also found it necessary to forbid the turning loose of stock to graze in the vicinity of the Hot Springs and Geyser formations. This practice was not only a source of annoyance to visitors, but of much injury to the formations.

FOREST FIRES.

I regret to have to report that destructive forest fires have been raging in the Park during the greater portion of the present season. The most destructive one, which was burning when I arrived in the Park, originated on the 14th of August last, near the East Fork of Gardiner River, in full view from the Mammoth Hot Springs Hotel and about seven miles distant. This fire is still burning, and has extended over a tract of country some ten or twelve miles in length by three to five in width.

It was the opinion of my predecessor, Colonel Wear, that this fire was started maliciously by some of his personal enemies; but nothing is positively known as to its origin. Another fire, of less magnitude, originated on Tower Creek about the 10th of September. It was confined principally to the timber along the creek. Several other fires have originated, and after burning a short time have either been extinguished by the efforts of the men of my command, or have failed to spread destructively from the absence of suitable material. A large number of fires have been extinguished by men of my detachments stationed through the Park, many of them under circumstances which led to the belief that they had been set maliciously. The most of these fires originated on the eastern side of the Park, near the road from Gardiner to Cooke City, and while some of them may have been started maliciously, the most of them were probably caused by the carelessness of camping parties. Those fires which have been started intentionally may be attributed to unscrupulous hunters, who, being prevented from hunting in the Park, resort to this method of driving the game beyond the Park limits. The Park is surrounded by a class of old frontiermen, hunters and trappers and squaw-men, who, as the game diminishes outside the Park, increase their efforts and resort to all sorts of expedients to get possession of that which receives the protection of law. The facility with which forest fires can be started, and the impossibility of extinguishing them, when once under way, by any available method, renders it extremely difficult in this high, wind-swept region to guard against them. The only provision against them which can be proposed is that which is also required for the protection of the Park, in other respects "a stringent law vigorously enforced." Two fires were started on the west border of the Park some two weeks ago; and the presence of a small band of Bannock Indians from the Lemhi Reservation, who left as soon as the fires were seen well under way, was to me a sufficient explanation of their origin. Fortunately they were extinguished by an opportune snow storm before much damage had resulted. A considerable band of these Indians approached the western border of the Park, along the Beaver Cañon road, in the latter part of August last; but upon my reporting the fact by telegraph to the Department, they were promptly recalled by their agent. These Indians are, however, allowed entirely too much liberty and are a constant source of annoyance. They visit the Madison Valley, on the western border of the Park, and in their hunting excursions are not particular whether they cross the line of the Park or not. It is reported to me that they are incited to hunt in the Park by unscrupulous white men, who also furnish them whisky.

GAME AND ITS PROTECTION.

From the reports of reliable scouts familiar with the ranges of the elk, the deer and the buffalo, there can be but little doubt that there is an abundance of game in the Park. Detachments from my command on the eastern and western sides of the Park have constantly scouted the portions of the Park not frequented by ordinary tourists, and the scout Barronett has also been constantly on the go, watching suspected parties. I am confident that up to the present date there have been no depredations of any magnitude, and that the game has been well protected.

THE GEYSERS.

It is apparent from the most casual observation that the means heretofore employed for the preservation of the natural objects of wonder and beauty in the Park have been entirely inadequate. It may be said without exaggeration that not one of the notable geyser formations in the Park has escaped mutilation or defacement in some form. Those that have been most fortunate are covered with lead-pencil inscriptions recording the names of those shallow-minded visitors to whom such a distinction is a pleasure. A lead-pencil mark seems to be a very harmless defacement, but names bearing date of 1880 are still discoverable through the thin deposit of silica, and if this marking should go on unchecked, in a very few years these once beautiful formations will have become unsightly and unattractive objects. At the Upper Geyser Basin names with date of June, 1886, have been chiseled into the solid geyserite so deep that, in the slow process of nature, many years must elapse before this mutilation will be obliterated. Not content with the defacement of the formations, efforts are constantly being made to destroy the geysers themselves by throwing into them sticks, logs of wood, and all sorts of obstructions. The eruptive force of several of the geysers has been totally destroyed by vandalism of this character. The footsteps of the throngs of visitors are wearing away the delicate and lace-like tracery of the silicious deposits, and in a few years the formations surrounding the geysers will present the appearance of the worn pavements of a city street. The willful defacement of these beautiful objects can only be prevented by watchful supervision, supported by the rigid enforcement of lawful penalties. A certain amount of wear and deterioration, incident to the multitude of visitors, is probably unavoidable.

ROADS.

Capt. Dan C. Kingman, Corps of Engineers, United States Army, the officer in charge of the construction and improvement of the roads of the Park, will doubtless submit, through the chief of his corps, a detailed report of the work performed under his supervision.

The small appropriation for the construction of roads and bridges in the Park for the present fiscal year was not made available until toward the last of August, and it was not until the first part of September that work was finally commenced; but by the vigorous efforts of Captain Kingman much good work has already been accomplished, and before the end of the season it is expected that the new road from the Norris Geyser Basin to the Grand Cañon and falls of the Yellowstone will be completed, and a bad piece of road along the Obsidian Cliff, where construction is extremely difficult, thoroughly improved.

After consultation with Captain Kingman, I have, in my estimate of appropriation required for the fiscal year ending June 30, 1888, placed the amount which can be judiciously and economically expended in the construction and improvement of roads of the Park at $150,000.

The appropriation by Congress of this amount will render it practicable to construct a good road from the Upper Geyser Basin, the terminus of the present road, to the Shoshone Geyser Basin; thence around the southern shore of Shoshone Lake and across the continental divide to the west arm of the Yellowstone Lake; thence along the western shore of Yellowstone Lake to the outlet, and along the Yellowstone to the Falls and Grand Cañon. From the falls the road will be continued down the Yellowstone to a junction with the present road to Cook City, which will be improved from the point of junction to the Mammoth Hot Springs. It is also in contemplation to improve the present road from Mammoth Hot Springs to the Upper Geyser Basin throughout its length. And also the Beaver Cañon road from the Fire Hole to the western boundary of the Park. Although this scheme does not embrace all of the roads necessary or desirable in the Park, it will, when carried into effect, enable tourists to visit the principal objects of interest without discomfort, and without passing twice over the same road.

Owing to the shortness of the season in which labor can be profitably expended upon roads in this region, it is of the utmost importance that any appropriation made by Congress should be made available at the earliest possible date.

HOTEL ACCOMMODATIONS.

The hotel accommodations in the Park have in general been excellent. During the rush of visitors in the month of August the hotel managers at two or three points in the Park found some difficulty in providing for their numerous guests, but although some inconvenience by visitors may have been experienced, there was but little actual discomfort. A fine new hotel has been completed at the Norris Geyser Basin, and I am informed that before the next season it is the intention of the Yellowstone Park Association to erect one equally as spacious at the Grand Cañon.

It is to be hoped also, that the structures at the Lower and Upper Geyser Basins may soon be replaced by others more suitable for the accommodation of the increasing number of annual visitors.

TRANSPORTATION.

The transportation facilities have been adequate to the demands of travel. No serious accidents have occurred, and no complaints of incivility on the part of drivers, or of extortion by the proprietors have been made. There have been during the season a large number of irresponsible persons doing business in the Park with saddle animals and pack outfits. These parties do not reside permanently in the Park, but come in for the season.

In my opinion no person should be allowed to do business of this character in the Park without first obtaining permission from the superintendent, and registering their names in his office.

A person so authorized to do business, or act as guide, should be furnished with a certificate to that effect, and

the visiting public should be cautioned to do business with those parties only who are thus duly authorized.

The tariff of charges for transportation for all persons doing business in the Park should be uniform, and should include the charge per day for saddle and pack animals, and for all kinds of carriages in use.

LEASES.

As far as I am informed by the records of this office the following described leases are the only ones now operative in the Park, viz., John F. Yancy, 10 acres upon the mail route from Mammoth Hot Springs to Cook City, to be measured from the building now occupied by said Yancy as a central point. Helen S. Henderson and Walter J. Henderson, 10 acres of land at Mammoth Hot Springs. James A. Clark 4 acres of land at Mammoth Hot Springs. F. Jay Haynes 4 acres of land at Mammoth Hot Springs, and 4 acres at Upper Geyser Basin. Charles Gibson four different sites in the Yellowstone National Park, containing 7 acres in all. No. 1 at Mammoth Hot Springs, No. 2 at Norris Geyser Basin, No. 3 at the Grand Cañon of the Yellowstone, No. 4 at the Yellowstone Lake. All of the rights and privileges conferred by Mr. Gibson's lease appear to be exercised by a stock company known as the Yellowstone Park Association. Mr. Gibson has executed an instrument transferring the lease to this company, and the paper was forwarded for the approval of the honorable Secretary of the Interior through this office, Sept. 15, 1886. The Park Association has carried on the business of hotel keeping during the past season at the following points in the Park, viz., Mammoth Hot Springs, Norris Geyser Basin, Grand Cañon of the Yellowstone, Fire Hole, or Lower Geyser Basin and Upper Geyser Basin.

At none of these points are the buildings occupied by the Park Association located upon land described in the leases. It appears that permission was granted by the Department, by telegraph, June 10, 1886, to change the original location at Norris Geyser Basin subject to the approval of the Department, upon formal application by the lessee, with description of site selected. I am not informed whether or not this application has been made and approved. A good hotel has been erected upon the new site, and it appears to be well located.

It appears by a letter from the Department, on file in this office, dated May 27, 1886, that permission was granted Mr. Gibson to erect a temporary building to be used for hotel purposes at the Grand Cañon of the Yellowstone, with the understanding that it should be removed on or before the 1st day of August, 1886. This building has not yet been removed, nor has the erection of the permanent building at that point been commenced.

At the Fire Hole, or Lower Geyser Basin, there are three buildings occupied by the Park Association, and two cottages connected with it. A piece of ground at this place, four acres in extent, was leased to G. W. Marshall in January, 1884. A half interest was subsequently transferred to one Henderson, and I believe several sales and transfers of this lease have since been made without the authority of the Department. It is presumed that the Park Association are occupying the buildings at this point under the color of this lease.

The company is also occupying a hotel building at the Upper Geyser Basin, which, I believe, was originally erected by the Park Improvement Company. This building is less than one-fourth of a mile from the Old Faithful Geyser, contrary to the provisions of the act of March 3, 1883. The hotels of the Park Association at these points have been of unmixed benefit to the public, and the accommodations they have afforded have enabled many visitors to enjoy the wonderful objects in their vicinity who would otherwise have been unable to do so; but it is recommended that if this company is to continue to occupy these sites that it be required to have them accurately surveyed, and that leases be applied for and taken out in proper form. The remaining lease holders in the Park have, so far as I am informed, complied with the requirements of their leases.

RULES AND REGULATIONS.

The only rules and regulations of the Park which have received the approval of the Department are those bearing date of May 4, 1881, as amended by Secretary Teller Jan. 15, 1883.

These regulations are no longer applicable under the changed conditions of the Park. Probably for this reason they have not been posted in the Park or generally published. Various rules have been from time to time established by the Superintendent, but they have not been so published or posted as to be generally known and their enforcement has consequently been difficult. I have prepared certain rules and regulations which appear to me proper and necessary and submit them herewith (paper inclosed and marked B) for the consideration of the Department. If approved, I recommend that 1,000 copies be printed on muslin and forwarded in time to be posted throughout the Park before the next season for visitors opens. The enforcement of these rules and regulations will be difficult until some more effective penalty for their infringement is provided than expulsion from the Park.

The necessity of a form of government for the National Park is becoming, year by year, more urgent, as the number of visitors to the Park increases. All sorts of worthless and disreputable characters are attracted here by the immunity afforded by the absence of law and courts of justice. Evanston, the county seat of Uinta county, Wyoming, more than 250 miles distant, with a rugged and mountainous region intervening, is the nearest point at which even a justice of the peace with the necessary jurisdiction can be found.

This subject has been so frequently brought to the attention of the Department, and of Congress, that any recommendation from me would seem superfluous.

In the preparation of the estimate of appropriations required for the Yellowstone National Park for the fiscal year ending June 30, 1888, I have assumed that the civil administration of the affairs of the Park would be continued, and have estimated for the pay of a superintendent and a sufficient number of assistants to insure some effective protection to the Park. The amount included in these items may, in view of previous appropriations for this purpose, appear excessive, but after giving the subject careful consideration, I am of the opinion that a less amount would be inadequate to the end in view.

I have also included in this estimate the necessary amount for a suitable residence and office for the superintendent, and for the purchase and keeping of such animals as will be necessary to replace those which have been ordered sold because no fund is available from which they can be subsisted.

I am, sir, very respectfully, your obedient servant,

MOSES HARRIS, Capt. First Cav., Actg. Supt.

The SECRETARY OF THE INTERIOR.

A.

[Orders No. 5.]

CAMP SHERIDAN, MAMMOTH HOT SPRINGS, WYO., August 21, 1886.

I. The following Park Regulations will be enforced by the soldiers of this command stationed at the various points of interest for the protection of the National Park.

(1) The cutting of green timber, or the removal or displacement of any mineral deposits or natural curiosities, is forbidden.

(2) Hunting and trapping and the discharge of firearms within the limits of the Park is prohibited. Fishing is forbidden except with hook and line, and the sale of fish so taken is also disallowed.

(3) Wagon tires on all wagons used for freighting purposes on the roads constructed by the Government are required to be at least four inches in width.

(4) Camping parties will only build fires when actually necessary, and must carefully extinguish them when no longer required.

(5) The sale of intoxicating liquors, except by hotel proprietors to their guests, for their own use, is strictly prohibited.

(6) Trespassers within the Park for illicit purposes or persons wantonly violating the foregoing rules, will be summarily removed from the Park.

(7) No stock will be allowed to run loose in the vicinity of the various points of interest within the Park frequented by visitors.

(8) No rocks, sticks or other obstructions must be thrown into any of the springs or geysers within the Park.

It is enjoined upon all soldiers, when on duty at points frequented by tourists, to be vigilant and attentive in the enforcement of the foregoing regulations, and also to see that the stage drivers and other employees of the hotels do not use abusive language to, or otherwise maltreat, the visitors to the Park. They will also at all times exert themselves to preserve peace and order at the points where they are stationed.

They will in the enforcement of their orders conduct themselves in a courteous and polite, but firm and decided manner. They will not hesitate to make arrests when necessary, reporting at once by telephone to the commanding officer.

II. All loose stock found in the vicinity of this camp or the formation of the hot springs, will be driven into the corral near the office of the Park superintendent, and there held until a proper guaranty is given that they will not again be turned loose.

By order of Captain Harris.

H. E. TUTHERLY,
First Lieutenant, First Cavalry, Adjutant.

MOSES HARRIS.

B.

RULES AND REGULATIONS PROPOSED FOR THE PROTECTION OF THE YELLOWSTONE NATIONAL PARK.

(1) The cutting or spoliation of timber within the Park is strictly forbidden by law; also the removing of mineral deposits, natural curiosities or wonders, or the displacement of the same from their natural condition.

(2) Permission to use the necessary dry or fallen timber, or to cut hay within the Park, must be obtained from the superintendent, and be subject at all times to his supervision and control.

(3) Fires shall only be kindled when actually necessary, and shall be immediately extinguished when no longer required. Under no circumstances must they be left burning when the place where they have been kindled shall be vacated by the party requiring their use.

(4) The shooting at, wounding, capturing, or killing of any animal or bird within the Park is hereby prohibited. Fishing, except with hook and line, is also prohibited. The outfits of any person found hunting, or having in their possession game killed within the Park, shall be subject to seizure and confiscation.

(5) No person will be permitted to reside permanently within the Park without permission from the Department of the Interior.

(6) The sale of intoxicating liquors is prohibited, except to hotel guests for table use. No bar-room or saloon shall be maintained within the Park.

(7) No advertisements shall be posted or displayed within the Park, except such as may be necessary on buildings situated on leased ground.

(8) No person shall do business of any kind in the Park, or act as guide, without a license from the superintendent, who shall have power to revoke such license in his discretion.

(9) The defacement of any of the geyser or hot spring formations, by written inscription or otherwise, is strictly forbidden, as is also the throwing of any substance into the geyser vents.

(10) Riding or driving upon any of the geyser or hot spring formations, except upon regularly established driveways, or the turning loose of stock to graze in their vicinity, is prohibited.

(11) All persons who shall conduct themselves obnoxious by bad behavior, or who shall violate any of the foregoing rules, shall be summarily removed from the Park under the authority of Section 2475, Revised Statutes of the United States, which provides that the National Park "shall be under the exclusive control of the Secretary of the Interior, whose duty it shall be to make and publish such rules and regulations as he shall deem necessary or proper," and who, "generally shall be authorized to take all such measures as shall be necessary or proper to fully carry out the object and purposes of this act."

MOSES HARRIS, Capt., First Cav., Actg. Supt.

RIFLES AND RIFLE SHOOTING.

Editor Forest and Stream:

In FOREST AND STREAM of Dec. 16, I note a communication signed "Wells," containing some remarks in regard to rechambering rifles and the use of ammunition different from that for which the arm was originally intended. Your correspondent mentions a .40cal. single Winchester rifle the shooting of which is impaired by using a .40-65-310 Remington cartridge, the requisite alteration having been made in the chamber, and he seems to be at a loss to account for the fact that "it does not shoot as well as before."

It strikes me that such an operation could hardly be expected to result otherwise than in spoiling the gun, as to accuracy at least. In the first place that form of the Winchester rifle, and its proper ammunition, are the outcome of exhaustive and intelligent experiment on the part of the makers, and taken as a whole the arm combines, properly and completely, all the conditions essential to the successful working of the rifle as a type of its class—made with a slow spiral (one turn in 40in.)—and shallow groving (.003in. deep) it is altogether admirably adapted to the short hard bullet and comparatively heavy powder charge for which it was intended.

Now comparing the .40-62-210 Winchester cartridge with the .40-65-310 Remington ammunition mentioned by your correspondent, we find that in making the change from one to the other but 3 grains of powder are added while the weight of the bullet is increased 100 grains, which in itself alters the proportions to an extent quite sufficient to disturb the relative conditions upon which accuracy and effectiveness were originally dependent.

One consequence of such an experiment, and a most probable one, is that the longer bullet will turn over and over in its flight, because of its lower initial velocity and the slow twist of the rifling. This tumbling over and "key-holing" is an accident from which the shorter bullet is entirely exempt, as its high starting speed and consequent rapid rotation on its axis will keep its point foremost until its force is spent. There are, of course, other possible causes which may work injury to the shooting powers of a rifle when radical changes are made in the ammunition, for example: Careful measurement will show that bullets of the same calibre or diameter nominally are not always so really, and, for obvious reasons, good shooting cannot fairly be expected from bad-fitting bullets, whether too large or too small. On the whole, I am of opinion that altering or "tinkering" at a gun is much more likely to work harm than good. W. D. Z.

NORRISTOWN, Pa.

MISSISSIPPI.—Aberdeen, Dec. 19.—Birds have been found in satisfying numbers during the present season, and some large bags have been made. Two medium shots came in the other day with a bag of sixty quails and several hares; while one of our keenest sportsmen brought in a bag of thirty, the result of some three hours' work of an afternoon. Business has allowed my getting out but twice and for only an hour or two each time. My bag on either occasion was but small, numbering only ten birds; but I have reached the point where my day's sport does not depend upon the weight of the bag, and a dozen birds afford me more enjoyment than formerly was to be had after a long day of hard work yielding a bag of forty or fifty.—WILL.

Sea and River Fishing.

AMERICAN SILKWORM GUT.

I READ with considerable interest an article in a recent issue of FOREST AND STREAM on an attempt to make silkworm gut out of an American silkworm. As Paterson is the center of the silk industry of this country, I concluded to make an investigation into the matter at my earliest opportunity. To-day I had the pleasure of meeting Mr. John Ryle, the man who nearly half a century ago introduced the silk industry into this country, and who is generally called the Father of the American Silk Industry. Mr. Ryle has spent a busy life in the silk business, and is thoroughly acquainted with it in every respect. He told me about the multicaulis craze of 1853, when people in this country raised mulberry trees for the purpose of raising cocoons and spinning silk. There are in Paterson at this date still a number of mulberry trees whose origin dates back to the year of the craze. The latter died out when it was found that Americans could not compete with the pauper labor of Italy and China in reeling silk from the cocoons, this being a very tedious and poorly paid operation. Recently, the Women's Silk Culture Association, of Philadelphia, has revived the fever, and cocoons are again being grown in this country. I explained to Mr. Ryle the purport of the article in FOREST AND STREAM, and asked him for his ideas on the matter. He says that there is no native silkworm; the silkworm grown here comes from Italy, but there is little trouble in growing the cocoons. Mr. Ryle saw no reason why American anglers and physicians should depend on Spain for silkworm gut, but was inclined to think that there must be some secret in the manipulation of the gut in Spain, otherwise it would have been long ago introduced into this country. The silk industry is one which some years ago was full of secrets, and perhaps the light of the present age has not penetrated as far as the worm before he envelops himself in the cocoon. That the climate or mulberry leaves in this country have no effect on the silkworm is shown by the fact that Italian silkworms in this country produce splendid silk—in fact the silk is superior to the Italian product. Then why should not the gut be as good? Mr. Ryle may be correct in his presumption that the people of Spain have some secret in the manipulation of the gut; but Yankee ingenuity ought to blush if it cannot guess this secret or get at it in some way. With the present price of gut leaders, and the ease with which silkworms are reared, I should think that there would be a fortune in this business for the right man. If some of your readers with more time than I have should desire an experiment, I will gladly assist them in getting some cocoons, and then they can produce any quantity of butterflies and :'wums." I can get a limited number of cocoons gratis, and the trouble of trying the experiment would not be much. C. A. SHRINER.

PATERSON, N. J.

NUMBERING FISH HOOKS.

THIS subject, to which we have referred before, has raised a storm on the other side of the water, and has invoked personal remarks which have engendered bad feeling. We have received copious extracts from the Redditch *Indicator* of Nov. 27 and Dec. 4. The first of these gives an account of the annual supper of the Redditch Angling Club, in which the chairman, in his opening address, called upon the meeting to express some opinion upon some letters which had appeared in the *Fishing Gazette*, with regard to the re-numbering of fish hooks, and Mr. Pennell's remarks in that journal were characterized as "ungentlemanly and uncalled for [applause]." The chairman thought the project suggested by Mr. Pennell was calculated to cause an immense amount of trouble and confusion to the manufacturers and workmen. It seems that in the course of his remarks on this subject Mr. Pennell had spoken of the leading manufacturers of fish hooks as "ignorant and pig-headed in their own business to an almost incredible degree."

Discussions followed in which the *Fishing Gazette* came in for some uncomplimentry notices, and its editor, Mr. Marston, and Mr. Pennell were classed as "literary fishermen." The chairman put the following resolution to the meeting which was carried unanimously: "That this meeting fully approves of the remarks of our president, Mr. Allcock, and other speakers in reference to hook numbering, and also considers that the town, its trade and interests, have been unfairly treated in the columns of the *Fishing Gazette*."

In the second lot of extracts there is more of this personal matter which is foreign to the subject. All this is to be regretted, as no possible good can come of it. That there should be some uniform system of numbering hooks so that the No. 4 of one maker is not the No. 12 of another, we think most men will agree. Mr. Allcock agrees to this also, but claims that he is the largest manufacturer in the world, and that others should take his system, and bases his claim to this upon the fact that it would not only be inconvenient, but very expensive for him to change his methods of numbering. This we can easily understand, but it does not alter the fact that a reform is sadly needed; but this reform will never be brought about by resorting to abusive epithets. Mr. Pennell seems to be the first one to offend in this matter, and the members of the Redditch Angling Club allowed themselves to lose their tempers and try their hand at slinging mud, and all of this appears to us like an enormous tempest in a very small teapot.

LANDLOCKED SALMON FLY-FISHING.—Strathroy, Ont.—*Editor Forest and Stream:* Can any of your readers inform me whether the landlocked salmon will take the fly? This magnificent fish differs so much from the lake, or salmon, trout, and on the table is so superior to it, that I should very much like to hear whether any of your readers have ever taken it with the fly, and what sport it affords to the angler. While on a fishing trip last summer on the shores of Lake Superior, I was told that this grand fish will take the fly, but could not find any one who had so taken it.—L. H. SMITH. [The landlocked salmon takes the fly well and affords good sport, but it does not exist in Lake Superior. The guides mix up names, and from the habit of calling the lake trout a "salmon trout" and then dropping the last part of the name they find what they are pleased to call "salmon" in most lakes. It would be a blessing if the term "salmon trout" could be dropped entirely. The landlocked salmon is a native of Maine, and only exists outside that State where planted.]

RISING TO A FLY IN ALASKA.

Editor Forest and Stream:

I have often seen it questioned in your paper whether certain trout will rise to a fly. If not, why not? Will a duck swim? Will the Hon. Chauncey M. Depew rise to a toast? Will a Congressman rise to a point of order? As Pat says, "What's to hinder?

It is asserted and contradicted that the trout of Alaska will not rise to a fly, and my name has been referred to as authority for the statement that they do. I take occasion, therefore, in view of the general interest involved and manifested, to depose that I have caught Alaskan trout—four of them—"on a fly." I took them with a small blue-professor in a pretty stream, which was the outlet of a fresh-water lake lying a half mile back from the sea. Moreover, three other gentlemen, who were voyagers with me, took several specimens of two varieties, black-spotted and red-spotted, from a lake on Calvert Island—all with a fly. My object in writing, however, is not so much to substantiate testimony as to explain why the question should be raised at all. The absence of such a distinguishing trait of the *Salmo* family would indeed be peculiar. The trout of the streams which empty into Puget Sound rise to a fly, for I have taken them there myself in that way; and why not in Alaska? They take a fly in the streams of British Columbia and why not also in Alaska? Some of the varieties are common to these several localities. There must be some extraneous cause operating upon what is known to be an inherent trait of the entire family, namely, the disposition to rise to objects moving on the surface.

It may be pertinent for me to say here that I learned the art of fly-fishing in 1847 and I have used a fly ever since, from preference, whenever the character of the water and its surroundings would permit. I commenced on trout and I have extended the practice to a great many other kinds of fish, fluvial and marine, until the list will possibly reach some thirty in number, including whitefish, codfish and pollock. There are no less than thirteen varieties of fish known to take the artificial fly on the Gulf coast of Florida. Why should these rise to the fly and not the trout of Alaska? This disposition of all fishes, other than strictly bottom feeders, to seize objects moving on the surface, is surely sufficiently well proven. Some do it habitually and others on occasion. Much depends upon circumstances, often purely accidental. Even with trout and salmon, which are the most habitual surface feeders, circumstances govern to such a degree as to afford rules of guidance in angling. Experienced fishermen have learned this. From first to last I have never thought to question whether any of the salmon family would rise to the fly. I take it for granted that they will. It is their conspicuous trait. I never heard the question raised until the Pacific salmon came under the notice of anglers, some fifteen years ago. If I do not succeed in taking them at the first trial I attempt it again and again until I do succeed. I offer my lure with equal confidence to bass, grayling, pike and the like, while with other less ambitious varieties of fish it is always an interesting experiment to discover whether they will rise or not. I have taken trout while fishing for salmon in Canadian rivers and I have taken a salmon while fishing for trout. As a rule, however, trout will not take a fly when salmon are in a river. No doubt they are disconcerted by the movements of the salmon. The salmon themselves will not at all times take a fly when they are running, and the barren days in the course of a season are many.

On the Pacific coast the movements of salmon are vastly more intricate and their caprices much more inexplicable. The fish are there in remarkable variety as well as incalculable numbers. The seasons vary. There is a different run for nearly every month of the year. At times the estuaries and fiords are so packed that the fish can scarcely move. At such times it would be as reasonable to expect a salmon to take a fly as bees swarming to sip the flowers or cattle on a stampede to salt lick; and as for any small fish mixed up in the melee—well, they have something to think of besides subsistence.

It may be suggested in refutation of this view, that salmon take a spoon in the Bay of San Francisco, and at the mouth of the Columbia River, which is very true, but there they have ample sea room. And if it be asked why they also do not take a fly, it may pertinently be asked if Atlantic salmon were ever known to take a fly in the salt water of the East coast? I suppose that if salmon swarmed into the rivers of Canada and Maine in such enormous multitudes as they do on the Pacific, fly-fishing would be impossible and unknown. But on the coast of southeastern Alaska, where observations have been made only, there are but two rivers, the Stickeen and Taku, so that the fishing there is not fluvial fishing at all, but is confined to the salt water. I suppose if experiments were made in the upper waters of the rivers named, or in those of the Yukon, they would be as successful, at proper times, as they are in the Atlantic rivers.

It will be presently perceived that what I am saying about the salmon is not at all irrelevant to the main question at issue as to whether trout will take a fly, but it is intimately related to it. The salmon of Alaska are practically our estuary fish, and so are the trout. I mean those trout which we have under consideration. I do not understand that the trout of the interior are to be regarded at all, for observations have necessarily been limited to the tide-water aspects of the archipelago of the southeastern coast. All the little trout streams are peculiarly insular. The streams of the mountainous and abrupt mainland are uniformly glacial outflows in which no trout live. The insular streams are very short, often heading in small lakes. Very few of these have been ascended to a point much above tide water, so that unless a person has tried the upper waters he is not competent to decide the question whether the trout will take a fly or not, for in the lower streams, in which the tide rises eighteen feet, are either jammed with salmon or glutted with spawn at the very time when angling is attempted. In the absence of spawn I have no doubt the trout will take a fly, and I am equally confident that there are certain periods of the year when fly-fishing can be successfully prosecuted in Alaskan streams. The proof of my confidence is that they do sometimes take the fly under conditions which are most unfavorable.

I wish to say here that I have observed the same peculiarities as to the indifference of trout to artificial flies on the coast of Labrador, where codfish stages are established. Stages are rooms built on scaffolds over the water along shore, where codfish are dressed and cleaned. The offal, which is dumped by the ton into the water underneath, affords a luxurious feeding ground for sculpins and shore fish; and whenever these stages are located near the mouths of streams, they are invariably resorted to by trout, which run down from above and gorge themselves. I have fished several of these streams at such times and found them quite depopulated. At least I found no evidences of trout there, neither bait nor fly inducing any results.

My conclusions are, that at proper seasons the upper streams of Alaska will yield as good sport to the fly-fisher as trout streams in any other regions do; but I would not advise anglers to go there in berry time, when bears are abundant.

CHARLES HALLOCK.

Editor Forest and Stream:

Once more a few lines on the subject of the Alaskan trout and I think that the wide differences that at first existed between the views of Dr. Streets and my own will be reduced to a minimum, the only question now at issue seeming to be the correct nomenclature of a trout which he calls and I call *clarkii*, purp. As I obtained my information from Dr. Bean, who, sitting at my table in Sitka, overhauled and classified my many jars of collected fish, and wrote labels, which I pasted on to the bottles. I felt quite sure that I was correct, barring one source of possible error, I might have misplaced a label. So on reading Dr. Streets' letter in your issue of 16th inst., I at once wrote to Dr. Bean, who has very kindly complied with my request, and written me as follows:

UNITED STATES NATIONAL MUSEUM.—Under direction of the Smithsonian Institution.—Washington, Dec. 20.—*Dear Commander:* Your note of the 17th came to-day and I will at once reply to it. The black-spotted, purple-banded trout which inhabits Pisco Lake, Alaska, and adjacent waters is *Salmo purpuratus*, for which *Salmo clarkii* is a later name. *Purpuratus* and *clarkii* are therefore synonyms. There is another black-spotted trout in Alaska, known as Gairdner's trout, *Salmo gairdneri*, and the rainbow trout of California is not specifically distinct from this although it has been carried along in the books until recently as a full species under the name *Salmo irideus*. The red-spotted trout of Alaska and of the rest of the Pacific slope was once called *spectabilis*, but is now down in the books as *Salvelinus malma*. If any one has seen a red-spotted trout which is different from *malma*, he has seen a species which is not to be found in any collection of west coast fishes; this you may be sure of. The "cut-throat" trout, described by Dr. Streets in FOREST AND STREAM, July 8, is *Salmo purpuratus*, the crimson or scarlet color on the chin is perfectly characteristic of *purpuratus* and is absent in other black-spotted species.—Cordially, T. H. BEAN.

As I thought likely, the letter shows that neither Dr. Streets nor I were wrong, and it turns out as I prophesied that "he was right and I was right," and now we are all right, and all of us (except Dr. Bean) know more about Alaska trout than we did in the beginning. I am glad that the doctor has made so strong a defense of our mutual friend and has carried his case, for "low down" as I thought their habits, the trout there were my friends and furnished me with lots of pleasure. In Alaska one learns not to be too particular, and I do know but one man among my angling friends who will steadfastly, under all circumstances, even when fishing for cunners, stick to the fly. Fred Mather will know who I mean.

PISCEO.

LITTLE FALLS, N. Y., Dec. 22, 1886.

SOME FLORIDA SEA FISHING.

LAST winter I was advised to stop work for at least three weeks. This prescription could not be strictly followed in my office, and besides, it involved too much explanation with clients and others, and the dullness and ennui of a loafer in a small town is maddening, as well as inexpressible.

So when a request came from an invalid relative to escort her to Florida for the sake of change of air and for recreation, I gladly welcomed it, as giving me cessation from the forbidden employment, an escape from the untold nastiness of late winter and early spring in South Jersey (the only season which reduces the average of this center of the horizon to near that of other climates), and a grand opportunity of testing that wonderful fishing and shooting of Florida which has been borne in upon me mainly (I think) by the wildcat prospectuses of Edens there, which litter my office, but partly by the charming sketches (too rarely appearing) in FOREST AND STREAM.

The bitter weather of the past two weeks has, by contrast, called up those halcyon days which extended from Feb. 22 until a like date in March, and which, saving one night of mosquitoes on the Indian River, were unalloyed comfort and enjoyment.

So, on Washington's Birthday of this year, our party left Broad and Walnut streets, Philadelphia, via Pennsylvania Railroad and Atlantic Coast Line for Florida. My intention was to see as much as possible of the State in a sojourn of a month or less and at the same time to catch some fish, both black bass and sea fish, success in taking which was, by your journal and others, assured to me. I took with me a gun and ammunition, but my trophies from their use were limited to a couple of pelicans, a cormorant and a half-dozen smaller birds, so the chronicle of the gun may be dismissed.

I had no tackle suitable for my purposes when I started, so I purchased in Philadelphia a cheap stout rod, and trusted to supply myself further down. At Jacksonville, availing myself of the assurance contained in some back number of FOREST AND STREAM, I called on Dr. Kenworthy (the charming "Al Fresco" who used to write so well, and now not at all, in your journal), and after he was satisfied that I was really a seeker after the truth, and had unloosed his protective austerity, received from him full advice and kind instruction as to how and where, in a time necessarily limited, to take the most and best fish. He showed me three beautiful rods made by B. F. Nichols, of Boston, recommended by him as perfect for Florida fishing. I have during the past summer profited by his advice, and now own two of that make. He also took me to the stores upon the sandy main channel of the town, and I was there equipped with a 900ft. Abbey & Imbrie tarpon line, some stout hand lines, a large and cheap Abbey & Imbrie reel, and some big knobbed O'Shaughnessy hooks. Sheepshead hooks I was already provided with. The Doctor strongly advised Punta Rassa, saying that the Indian River on the east coast, and all of the Gulf shore north of the point he named, were bare of fish, on account of the extreme and unusual cold of the earlier part of the season.

At the Plant House, Tampa, we found Colonel Kew, of Pennsylvania, with his usual attendant from Atlantic City, *en route* for the same destination with ourselves. I had known the Colonel by reputation only as, like myself, an enthusiastic, persistent and successful pursuer and captor of large, strong-pulling and powerful salt-water fish and a contemner of the rye straw and patent thread pursuit of minnows in puddles and brooklets, which fills the colums of sportsmen's journals to the exclusion of more strenuous recitals. The landlord of the Plant House who said he had fished off the wharf at Tampa the previous summer sixty consecutive days (Sundays and holidays excepted) and so had earned the right as a fisherman to consideration, was a very pessimist as to our proposed expedition to Punta Rassa on account of the previous cold weather, and advised us to take the first train back. Col. Kew being appealed to did not agree with him, however, and said that if we could be content with sheepshead he had no doubt we would find plenty. The Colonel said he, with the assistance of his man to bait and take off fish, had, in a former year, in one hour, taken at Summerlin's wharf at Punta Rassa, sixty-four sheepshead. He didn't think the residue had disappeared. As a catch of two a day of those handsome and vigorous fish is considered excellent success with us at home, I concluded not to be turned back.

After a delightful night's sail over the waters of the Gulf we entered Charlotte Harbor after sunrise, and by noon were safely established at the boarding house of Mrs. Ziphrer, at Summerlin's wharf, Punta Rassa. I was somewhat surprised to find that village consist of only two houses, both given up to the accommodation of guests. A large hotel was being constructed at Pine Island, across the bay, and I suppose it is now filled with guests, as it should be, from its location. The new (paper) settlement surrounding it is called, I understand, St. James City.

After dinner Hereford (my companion) and I chartered a man and boat and sailed over toward Pine Island to fish for redfish (channel bass), but all we secured before night were two or three large spotted trout and some wretched dog sharks. When we returned to our wharf we found that the ladies had not been idle, but had taken there about a dozen sheepshead.

If was not fairly light the next morning before Hereford and I were out in our shirt sleeves peering along the shore before the house to get fiddler crabs for bait. These fiddlers are what we call in New Jersey "pink," or "china," or "beach" fiddlers, and we found we could gather a hundred within fifty yards of our fishing place in five minutes, at any time, and at some times of the tide we could get a bushel in as short a time, by pressing the children of the boarding house into service. So the bait question, so far as sheepshead were concerned, was solved.

The two houses at Punta Rassa are very odd old barns, raised on stilts or pilings ten or fifteen feet above ground. They are partitioned off inside into all sorts of rooms, nooks, corners and hide-and-seek places, and are both most comfortable, as well as picturesque. Mr. Schultz and his wife (from Newark, New Jersey) have the lower house, in which is the telegraph station, and in front of which is his private wharf, with a number of good sailboats anchored about it; and Mrs. Ziphrer, a native, keeps the upper house at Summerlin's cattle wharf. Mr. Schultz had no room for us, so we called on Mrs. Ziphrer, who made us very comfortable. The only other boarder was Mr. W. H. Wood, who was having his annual quest for tarpon. He had been at it for two weeks, and had had three bites from that fish during that time, and exhibited some badly twisted and mashed chains in evidence. He had found some consolation, however, in big sharks, two or three of which he killed daily, and, true angler that he is, he had discovered that the sharks in a particular channel where he fished were much more vigorous and savage than anywhere else, and he was getting some compensation out of them for the scarcity of tarpon. He reported them as the only shark of his acquaintance which would leap clear of the water. By a published account, a copy of which he sent me, I learned later that he captured his first tarpon (I think I recollect aright) on March 22, and he took altogether 6, the largest 6½ft. long, weighing 150lbs.

I examined his tackle with interest, and from what I saw of that and the fish itself, and what I have read and heard, I make this summary and appraisement of tarpon fishing. The fish himself is a wonder of strength, beauty and activity. He has no equal combining these three qualities. He is the embodiment of grace, power and speed. His jaws would coin tenpenny nails—put the proper grooves in them. At a leap he could clear any sailboat that navigates his waters, or by his powerful impetus crush its occupant. The "spring of the rod" cuts no figure with him. Mr. Wood had a short, stiff rod, not above five feet in length, as I recollect, being only a long reel seat, and there was no play or elasticity to it. He simply hooked his fish and allowed the latter to tow the boat about, until, after the lapse of many minutes, or a few hours, the splendid vitality succumbed. A handline would produce precisely the same result, and, without the "spring," wherein is the rod superior to the line alone? A tarpon amused himself at my expense, but was kind enough to leave me my line intact. From my momentary experience I am satisfied that the towing boat and not the rod is the death of the "Silver King." I do not believe that any one can stand on the shore, or on an oyster reef, and with a rod and reel, handline, or anything else (dynamite excepted), kill a tarpon. They are chain lightning, and they don't stay in a ten acre lot either.

After our fiddlers were collected we adjourned to the end of Summerlin's wharf, and from the cattle schooner anchored there, cast our first line for sheepshead. The sun was just showing himself above the horizon as I felt the first "draw," and hooked and landed the first sheepshead. At breakfast time we had about a dozen, and after our meal we gave the rest of the day to conscientious and careful taking of my old wary adversaries of Atlantic City and the Jersey coast below. I wanted to get a surfeit of sheepshead and I got it. The rod played a part for a while, but was not quick enough, and the hand line succeeded. My friend and I caught nearly two hundred in two days.

At the high water we would go out to an oyster reef near by and fish for channel bass. Hereford took some fine large fish there, but although I hooked a half dozen, I saved none.

That evening Col. Kew invited me to go with him next morning to kill a devilfish in the large inlet between Sanibel and Estero. I declined, partly because I thought the expedition would be a failure, and mainly because I wanted to visit the Government wharf at Sanibel Key, where sheepsheads were said to be more plentiful than

anywhere else. When our party arrived at Sanibel next morning, the Colonel could be seen in the inlet busily shooting into the water, and we found at night that he had harpooned and captured a devilfish—a little fellow—15ft wide.

When we landed at Sanibel the stairs at the wharf were found to be near the shore, and so, after taking one bucket of fiddlers, we walked out to the outer end. There was a sight such as I never imagined. Clustered about the piling, and near the surface of the water, were at least a thousand sheepshead, in plain sight, all lying motionless. I sat down on the wharf and bent on my line two more snoods and hooks, making four in all. I had heard of three sheepshead being taken at one time in these waters, and I naturally wanted to get four. When we dropped our baits over the wharf the fish simultaneously disappeared from view, but the biting was vigorous and constant. I hooked my four fish several times, but succeeded in getting but two at a time on the wharf. Hereford, my companion, once landed three. One of the ladies caught twenty-seven fish in a very short time, and then the ladies went over to the Gulf and gathered the beautiful shells which line the beach. We soon tired of the slaughter, and the tide nearly reaching high water, we took our rowboat and started up the inside of the key for channel bass.

We arrived at the oyster reef, which was our destination, just at high water. We found the reef about 40yds. long by 1yd. wide and surrounded by 2 or 3ft. depth of water over sandy bottom for 100ft. in width. This bottom was covered with shoals of sheepshead and spotted trout and occasionally a channel bass could be seen. I took several trout and Hereford caught some trout and two or three bass of good size. Just outside the flat, in the deep water, we could see the whirls of a large fish and after an extra effort I managed to get my bait out there and awaited developments. Soon I saw my line running out and when I struck the reel spun out 100yds. in an instant, the friction burning my thumbs which were pressed on the leather guard of the spool. Then from the channel rose a mass of silver, the grandest of fish, and with a terrier-like shake, my bait and sinker, intact, were thrown contemptuously into the air. That was a tarpon.

From the Gulf I went to Indian River and spent about ten days there near Indian River Inlet, going as far south as Eden. Sheepshead were abundant in the Inlet, though not so plentiful as on the west coast. There were no tarpon nor channel bass. One twenty-pound sergeant fish, one pompano, one grouper, and one cavallé were the only fish besides sheepshead taken by me, excepting sharks. I killed five big fellows in the Inlet one morning while fishing for bass. I very much preferred Charlotte Harbor to Indian River, not only on account of the greater abundance of fish, but because of the accessibility of the fishing grounds, More than that, sand flies were dreadful on Indian River, and one night the mosquitoes double discounted my native Jersey, which, until then, I thought had a bad preëminence as a habitat for the little villains. The boarding house at Eden (Captain Richard's) was better than any I saw on the west coast, and that at St. Lucie quite equal to Shultz's at Punta Rassa. But good living does not atone for inferior fishing, else would we leave home?

I had two days of black bass fishing, and had enough of it. I am not an admirer of fresh-water fish. There is but one fresh-water fish of superior excellence for the table—the whitefish of the lakes—and that does not take fly or bait, I believe. The Florida bass are taken from black, horrible looking pools, and the fish are slimy and repulsive to the eye and touch. Fishing for them is like angling in a stable yard or cesspool. I took sixty pounds of them in Lake Monroe in about two hours, and some very large bass, with a few black pickerel and mud fish, in the Savannah back of Eden. They make a powerful but exceedingly brief fight, and come to the boat with their mouths opened to a greater extent than their bodies, spent and repulsive. In my judgment they are not to be compared with the beautiful and gamy fish of the sea.

T. S. J. C.

BASS IN LAKE CHAMPLAIN.—St. Albans Bay, Vt. Dec. 23.—By act of Legislature the open season for fishing in Lake Champlain in Vermont waters commences June 1 with hook and line instead of June 15 as heretofore. June is generally an excellent month for fly-fishing.—H. L. SAMSON.

CONNECTICUT SHELLFISH COMMISSION.

WE have the sixth report of the Shellfish Commissioners of Connecticut, covering a period beginning with July 1, 1885, and ending with Oct. 30, 1886. In the engineer's department much work has been done in completing the surveys of lots as claimed and occupied; in buoying and mapping the occupations, as well as of new applications, and in making surveys necessary to the settlement of disputed boundary lines, etc. It is now probable that in the course of the next year the surveys and mapping will be completed, and that the maps will be filed in the several towns as required by law. The value of these maps to the owners of oyster grounds will be incalculable, as they are made under the authority and supervision of the State, and are in accordance with the record title of every town. Each map will serve through all future time as a starting point for the examination of a title to any lot, and the exact position of the lot can be found by reference to the records.

While the condition of the oysters has been excellent the past season, the spawning has been less abundant than the previous year. This statement is borne out by observations of the New York Fish Commission at Cold Spring Harbor, and of the United States Commission at Wood's Holl. Various reasons are assigned for this in the report, the chief one being that the oysters were poor during the winter and entered the spawning season in a feeble condition. Another cause assigned is the unfavorable state of the weather. A cold rain fell and this was fatal to the floating spat. The rivers were low and there was not the usual supply of fresh water.

The number of acres cultivated in 1885 was 16,201, and in 1886 there was an increase of 4,512 acres. This is indicative of the continued growth of the oyster industry of the State, and the increase of the steam fleet engaged in oystering confirms this. In 1884 there were 40 steamers on the list, in 1885 there were 49; this year there are 60.

The shipment of Connecticut oysters to foreign countries has increased rapidly, and interesting statements on this subject are given by Mr. Hoyt, who spent some time in Europe investigating the oyster industries there, and who describes the methods in England, Ireland, France, Belgium and Holland.

The depredations of the starfish are referred to, and it is considered that their great breeding ground is the natural beds where they are not so much disturbed as on the private beds, and that in this and other neglected places the starfish breeds by millions. The Commissioners say that no means have been devised for the destruction of these pests that are so effectual as the improved dredges, which are so constructed that they pass over the beds without disturbing the oysters. At their approach the starfish rises and before it can get away it is drawn into the net. Capt. Charles W. Hoyt, of Hoyt Brothers Company, has recently invented and patented a dredge which slides upon runners and nets the starfish without disturbing an oyster. Mr. Riley T. Smith, of Smith Bros., has also invented a contrivance which is quite unlike Capt. Hoyt's. In place of the iron tooth bar that usually moves before the net, he has a shaft to which four buckets, on strips of wood, are hinged. They are six inches wide and about four feet long, extending from side to side in front of the mouth of the bag. When the dredge is hauled over the bed the shaft turns, and the under bucket, caught by the water, opens, and as it comes up in the rear lifts and sweeps the starfish into the net. Each of the four buckets in its turn acts in this way at each revolution of the shaft. The oysters are not disturbed, and nothing but starfish are brought up by the net. Mr. Smith says it works well—better than any other dredge he has seen. Both these inventions will prove of inestimable value to the careful grower.

A financial statement and the report of the engineer is given as well as the laws relating to the work of the fisheries.

FISHCULTURE IN ENGLAND.—*Nature* states that commencing on Jan. 1, 1887, a journal is to be published by the National Fishculture Association, comprising not only information regarding its transactions from time to time, but also articles relative to the subjects of fishculture, fish and fisheries. A record will also be given of what takes place in connection with these subjects throughout the whole of the United Kingdom, the colonies and abroad.

FIXTURES.

DOG SHOWS.

January, 1887.—Bench Show of Poultry and Pet Stock Association, at Adams, Mass. W. F. Davis, Secretary.

Jan. 17 to 21, 1887.—Ohio State Poultry, Pigeon and Pet Stock Association Dog Show, Columbus, O. W. F. Kuell, Superintendent, Columbus, O.

Jan. 18 to 21.—Exhibition under auspices of the National Poultry and Bench Show Association, Gate City Guards Armory, Atlanta, Ga. R. J. Fisher, Secretary.

Feb. 8 to 11.—Southern Massachusetts Poultry Association Bench Show, Fall River. A. R. G. Mosher, Secretary.

March 22 to 25, 1887.—Spring Show of the New Jersey Kennel Club, Waverly, N. J. A. C. Wilmerding, Secretary, Bergen Point, N. J.

March 29 to April 1, 1887.—Inaugural Bench Show of Rhode Island Kennel Club, Providence, R. I. N. Seabury, Secretary, Box 1333, Providence.

April 5 to 8, 1887.—Third Annual Show of New England Kennel Club, Boston. F. L. Weston, Secretary, Hotel Boylston, Boston, Mass.

April 12 to 15, 1887.—Thirteenth Annual Dog Show of the Western Pennsylvania Poultry Society, at Pittsburgh, Pa. C. B. Elben, Secretary.

May 3 to 6, 1887.—Eleventh Annual Show of the Westminster Kennel Club, Madison Square Garden, New York. James Mortimer, Superintendent.

FIELD TRIALS.

Feb. 15, 1887.—Inaugural Trials of Tennessee Sportsmen's Association. Entries close Jan. 10. R. M. Dudley, Secretary, No. 84 Broad street, Nashville, Tenn.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **4502.**

THE NATIONAL DERBY.

THE seventh annual Derby of the National Field Trials Club began at Grand Junction, Tenn., on Saturday, Dec. 18, after the finish of the All-Aged Stake. There were sixty-nine nominations, twenty-five of them filling. The average quality of the work was superior to that done in the All-Aged Stake, many of the youngsters displaying a dash and brilliancy that we have rarely seen surpassed. The judges selected were Dr. Rawlings Young, of Corinth, Miss., Major W. H. Key, of Florence, Ala., and Mr. H. W. Fuller, of Louisville, Ky. All of them served on Saturday, but on Monday Major Key and Mr. Fuller were obliged to return home on account of important business, and the running proceeded under two judges, Dr. Young and Col. J. H. Trezevant, of Dallas, Texas. On Tuesday Col. Trezevant was also obliged to leave us, and the stake was finished under Dr. Young and Mr. Paris. A number of the starters also ran at High Point, and in nearly every case they showed up here to better advantage than at the Eastern Trials. This was undoubtedly in a great measure owing to the fact that they were trained on similar ground, where their range was not confined to small fields as was very often the case at High Point. Birds were not very plentiful and some of the heats were decided before the amount of work done was at all sufficient to demonstrate which dog was really the better of the two.

BEN HUR AND LITTLE NELL.

This was the first brace drawn to run. They were put down in sedge at eleven minutes past ten after the finish of the All-Aged Stake. Ben Hur, handled by Short, ran at High Point, showing better there than he did here. Little Nell, handled by Titus, has a fair amount of speed and style, but is not a wide ranger. Working through the sedge to a gully, we turned down through some pines where a bevy flushed wild. The dogs were sent in their direction, and Ben got a point to a single that was flushed by Nell coming toward him down wind and not seeing him. Soon after Ben made another point and Nell backed him. Short went ahead and flushed the bird from the top of a stump. We then crossed the gully and turned back along the bank and Nell mada a nice point to a single that flushed a few seconds later. Turning up the slope and crossing another gully to some sedge, Ben made a nice point that proved to be false, and the heat was ended with Little Nell the winner. Down fifty minutes.

GLADSTONE'S GIRL AND CHANCE.

This brace was, by consent, run out of the regular order to accommodate Captain Henry, who was obliged to return home. Girl was handled by her owner, Captain Pat Henry, and Chance by Avent. Chance ran at High Point. He had the best of it in style, pace and range. They were put down a few minutes past 11 in sedge and worked over into a likely-looking field, from which we were ordered off by the owner. Turning toward some woods Girl scored a false point. Working through the woods Dr. Young saw a large bevy running on the ground, and the dogs were brought round there. Chance made a nice point and Girl came round, refused to back and ran in, but the birds had run away. Both then challenged, and soon after Chance again pointed, when Girl repeated her performance of refusing to back and went ahead. A little further on Girl flushed another one and stopped to wing, and several more got up. Chance then made a point, but nothing was found, and soon after he pinned a single that Avent to order flushed, and two or three more went. Chance then turned along a fence near the judges and made a point to a single that flushed an instant later. Taking a few steps, Chance again pointed and Avent to order put up the bird. Both then challenged, and Girl half pointed at old scent, Chance backing her nicely. We then turned up into some woods, where Girl flushed one and the heat was ended, with Chance the winner. Down one hour and sixteen minutes.

DANTE AND NAT GOODWIN.

Dante, handled by W. E. Ellison, and Nat Goodwin, handled by Avent, were put down in some woods at 12:32. Nat ran at High Point in the first heat, doing some creditable work. He beat Dante in speed, range and style and showed the best nose. They were worked toward the scattered bevy, found by the last brace. Dante made a point, to which nothing was found, Nat refusing to back him. Nat then made a short cast and stopped on a very pretty point to a brace that Avent to order flushed. A short distance further on Dante struck the trail of a running bird that he pointed and then drew on and roaded out his bird in good style and located it nicely. Ellison to order put up the bird and killed it. Major Key, forgetting that retrieving was not required in this stake, ordered Dante to retrieve, and he did so well. Turning back through the woods both challenged, but could not make it out. Nat turned up a slope and flushed one, and soon after Dante ran up a bunch of four that he should have pointed. We then went to lunch, after which John Ellison handled Dante, but did not succeed in landing him a winner, as Nat made a cast to a thicket and pinned a portion of a bevy in fine style, Dante backing him nicely. Avent to order put up the birds and the heat was decided in favor of Nat Goodwin. Down altogether twenty-nine minutes.

KATRINA AND JEAN VAL JEAN.

When this brace was called for it was stated that Katrina was withdrawn, as she was in season. This gave Jean the heat without running, and the absurdity was witnessed of two dogs in one series being awarded heats without doing any work. This decision was correct under the rules, but it was nevertheless unjust to the other dogs.

RUBY D. AND TALLEYRAND.

Ruby D., handled by Rose, and Talleyrand, handled by Short, were put down in some woods at 1:41. In pace, range and style they were nearly equal, Ruby showing the best nose. Shortly after starting they backed each other very prettily. A little further on Talley made an indifferent point to a single. Ruby backing nicely. Short put up the bird to order, both dogs remaining steady to wing and shot. Soon after Ruby flushed one across wind, and some distance further on the dogs backed each other. Working to the edge of the woods Talley stopped on point to a single just as it went, and soon after he flushed one that he should have pointed. Turning back through the woods and across a cornfield to another piece of woods, Ruby got in a good point to a single that Rose flushed to order. Working through the woods and crossing a road, Ruby challenged and roaded a short distance on foot scent of a bevy that flushed wild just beyond her. Following up the birds, Ruby made a false point and Talley backed her. Crossing a ditch into a brier thicket, Talley pinned one that Short, to order, flushed. Turning into some woods he soon had another one fast that was put up by his handler. Ruby then got in a good point that Talley at once honored, Rose, to order, flushing the bird. Talley then swung to one side and made a nice point to a single that was put up by his handler. Working down a slope Talley scored a false point. We then turned back to a brace of birds that had been worked down, and Talley went straight to them, but they were down wind and he flushed them. Ruby made a cast up the hill, and catching the scent, located a bevy in capital style. This ended the heat, with Ruby the winner. Down one hour and seventeen minutes.

WANDA AND HUSTLING HANNAH.

This brace was put down in the woods a few minutes past 3. Wanda was handled by Bevan and Hannah by Short. The latter ran at High Point. She had the best of it in speed, style and nose. Wanda started off with two flushes on singles that she should have pointed. Turning back Hannah made a point to a bird that Short to order flushed, Wanda backing her. Hannah then scored two flushes in succession which should have been points as the wind was in her favor. Soon after Wanda challenged and then drew on and deliberately flushed her bird, and continuing on in same trail she rooted up another one. Hannah then swung down to a a thicket and made a nice point that Wanda backed in good style. The birds flushed wild a few seconds later. They were then ordered up and the heat awarded to Hannah. Down twenty-four minutes.

CASSIO AND GOLDSTONE.

These dogs both ran at High Point with the same handlers. Both showed good speed and range, Cassio having a trifle the best of it in this respect, as well as in style and nose. They were put down in some woods and considerable ground was worked over blank. Finally Cassio challenged and drew to point, with Goldstone backing him. Cassio drew on the trail and made a cast while Goldstone was thrown ahead of him, and locating the bevy he pointed them in grand style. Tucker to order put up the birds, and the dogs were sent into the woods in their direction. Cassio showed his superiority here, outwitting his competitor and getting in four points in rapid succession to none for Goldstone, and with the exception of being unsteady to wing on one occasion behaving admirably. Turning out of the woods in some sedge Cassio got another good point to a bevy that his handler to order flushed, and the heat was ended with Cassio the winner. Down twenty-eight minutes.

KEYSTONE AND ROI B.

These dogs also both ran at High Point. They were run out of the regular order, as the next brace was not on hand. Working through some sedge Roi got the first point, Keystone backing him nicely. Short put up the bird and shot, and both dogs were steady. Key soon after pinned one, and Roi backed him. Tucker put up the bird but did not shoot. Beating through to some woods Roi made a false point and Key backed him. When ordered on Key made an indifferent point to a single that his handler put up to order. The dogs were then sent toward a thicket where some birds had been marked down. Both pointed at very nearly the same time, and birds were flushed in front of each. One of the birds was marked down, and as we we went in that direction Key pointed, but Tucker failed to find a bird. Roi then cast ahead and nailed the bird, and Short to order flushed it. Beating out a cornfield both dogs challenged, and alternately pointed and backed, doing some very pretty work. A little further on Roi roaded out and pointed a bevy very nicely, and Short to order put them up. Following the birds Key got in a good point to a single in the sedge. We then turned back across a branch to a marked bird that Key

pinned in good style, and soon after in sedge he had another one fast, and the heat was ended with Keystone the winner. Down forty-one minutes. This ended the work for the day.

RUBICON AND DAN J.

On Monday the weather was fine and fair progress was made with the work. Rubicon, handled by his owner, Mr. Stephenson, has a fair amount of speed, but is deficient in range and style, running a portion of the time fairly well and then slouching along in a manner that was far from pleasing. Dan, handled by Nesbitt, did not show much speed or style. They were put down on the Bryant farm at 9:18 in a sedge field and worked down among some gullies. Rubicon made a point to a brace of birds in a thicket near a gully, Stephenson flushing them and missing. We then beat out the gully, but failed to find the birds and turned back to a slope, where Rubicon made a point, to which nothing was found. One of the birds was flushed by the spectators, and as we came to where it was Dan flushed it. Some distance further on the dogs were ordered up and the heat was awarded to Ruhicon. Down fifty-nine minutes.

DEE AND BUN ROY.

Dee, handled by John Ellison, is rather a heavy moving dog with only a fair amount of speed. Bun Roy, handled by Nesbitt, moves fairly well, but is not fast and runs with his head down. They were put down in sedge and worked across a gully near some woods, when we turned back after a bevy that had been flushed by the spectators. The dogs failed to find two that settled in a small patch of pines, and they were flushed by the judges. We then turned toward some woods, where Dee flushed one and soon after another one got up wild on bare ground, and as Bun came there he dropped on point to the scent and Dee backed him. A little further on Dee pointed a single that Ellison, to order, flushed. We then turned down to a branch where Bun flushed one. Working through some woods to a road we came to a gully, where Dee half pointed just as a bird rose and pitched down the bank, when he took a few steps forward and flushed several more and dropped on point to the remainder of the bevy that went soon after. Bun Roy was down in the gully and his handler called a point and two or three birds flushed near him, when those in front of Dee went. They were then ordered up and the heat was awarded to Bun Roy. Down forty-five minutes.

ALLIE JAMES AND LUKE ROY.

This brace was put down in the open at 11:15. Allie ran at High Point. She ran much better here, showing up in capital form and doing some very pretty work. Luke, handled by Titus, is a very nice moving dog with a fair amount of speed. Working down a run and around to get the wind we turned back to find the bevy flushed in the last heat. Allie cast down to a branch and found them, making a stylish point, the birds flushing wild a few seconds later. Crossing a ditch, one got up near Allie and she dropped to wing, and further on she dropped on point, but soon went on. Soon after she swung among some deep gullies and challenged, but her handler called her away, and as she turned a bird flushed near her and she dropped to wing. When she went on another one rose and soon after the third one went. Luke then took a hand and flushed one and was unsteady, and as another one went he started for it, but lost sight of it as he crossed a gully and we only scored him an intended chase. Soon after he made a nice point and was held for some time for Allie to back. She finally came round, but refused to back and was dropped to order. Nothing was found to the point, but Luke should not be penalized, as he was held so long that the bird may have run away. We then worked through a cottonfield and some woods and turned up a hill to a cornfield. Allie was suffering from a broken tail and the splints having become displaced a halt was called to readjust them, after which she went as merry as at first and soon had a point and Luke backed her. As the handlers came up Allie moved on and both dogs cast in opposite directions. Allie caught it and again pointed, but this was in the wrong direction, as when we turned back, after failing to find anything to the point, a bevy was flushed just beyond where she had first pointed. Following in their direction Allie made a nice point and a second later Luke also pointed and birds were flushed to each. This ended the heat with Allie the winner. Down forty-eight minutes.

DOLLY AND BOB H.

Dolly, or Texas Dolly as she is called, is rather a well-formed animal above the medium in size, with a fair amount of speed and considerable style when on game. She was handled by Major Ross of Dallas, Tex. Bob, handled by Rose, ran at High Point. They were put down in some tall sedge and worked through to some woods and then down to a branch, where a large bevy flushed almost under the feet of our horse. One of them remained, and craning his neck took a good look at us and appeared to be satisfied that we intended him no harm, but as he caught a glimpse of the faces of some of the others, with a note of dismay he incontinently took wing and was soon lost to sight far over the tops of the tallest trees. Following up the birds across a road, Dolly made a very nice point to a portion of the bevy. Major Ross to order put them up and dropped one before it went ten feet, and Dolly retrieved it well. A little further on Dolly again pointed and Bob backed her, but nothing was found. Turning up the slope a hawk was seen sitting on a tree and the judges requested Rose to shoot it, which he did, and a quail was found in his talons. Soon after Bob pointed and Dolly backed him, but nothing was found. Beating out the woods to the top of the hill we turned back down to the hollow where Dolly pointed and Bob backed her. As Major Ross went ahead Dolly drew on and the bird flushed near her. We then worked down to a gully which we crossed and beat up the opposite slope, where the handlers put up the remainder of the bevy which settled in some cotton and along a run in the sedge. Bob pinned one in the cotton very nicely and Rose flushed it and scored a miss. A few yards further on Bob half pointed just as another one went, and soon after the others flushed wild. The dogs were then sent down in a hollow toward a marked bird which was flushed by Rose. They were then taken up for lunch which was awaiting us near by, and again put down in a cornfield a half hour later and worked to the railroad, which we crossed to a large open field where Bob made a point at the edge of a plum thicket, and as Rose came up Bob moved round, and a second or two later a bird went out of a bush a few feet from the ground. A little further on another one flushed near Bob and his handler. We then crossed a road, and soon after the handlers put up a bevy that settled in some tall sedge, where both dogs pointed at the same time. Rose put up the bird in front of Bob and missed it, and the one in front of Dolly went. Soon after Dolly pinned another one and Bob backed her, Major Ross, to order, flushing the bird. When sent on Dolly ran up one and stopped, and soon after Bob made a nice point to a single that Dolly flushed as she came up. Bob soon had another one fast, that Rose, to order, put up, and the heat was ended with Bob the winner. Down altogether, one hour and thirty-five minutes. Cliff Gladstone having a bye, this ended the first series with the following result:

Summary First Series.

Little Nell beat Ben Hur.
Cassio beat Goldstone.
Nat Goodwin beat Dante.
Jean Val Jean beat Katrina (withdrawn).
Ruby D. beat Talleyrand.
Hustling Hannah beat Wanda.
Chance beat Gladstone's Girl.
Rubicon beat Dan J.
Keystone beat Roi B.
Bun Roy beat Dee.
Allie James beat Luke Roy.
Bob H. beat Dolly.
Cliff Gladstone, a bye.

Second Series.

CLIFF GLADSTONE AND LITTLE NELL.

Cliff Gladstone, handled by Tucker, was entered as Gay Gladstone, but his name was afterward changed to Cliff. He is a nicely-formed dog, with quite a turn of speed and one of the best-moving dogs in the stake; he is very quick in his turns and shows lots of style. He appeared to lack experience, and may, if he goes all right, make it very hot for the best of them next year. They were put down in some tall grass and worked through to a cornfield and then back into some woods, where Cliff made an elegant false point and soon after he pointed near a tree, probably at the scent of a squirrel. Working through the woods to an open field, both dogs challenged near a thicket and a bird flushed wild near them, Cliff making a nice point to the scent. Nell then flushed one and stopped to wing. Turning into a cornfield Cliff made a nice point and Nell backed him very prettily, but nothing was found. A little further on a bevy flushed near Nell that she should have pointed, and they were followed. Cliff made two false points, and was backed by Nell each time. Both then pointed, Cliff half a second first, a bird that flushed as the handlers came up. Cliff soon after got in a stylish point to a single that Tucker put up and killed. A little further on both pointed at the same time a bird that was flushed by the handlers. Cliff then made a false point, and soon after Nell pinned one that Titus, to order, flushed, Cliff backing nicely. A short distance further on Cliff made a gamy point to a single that Tucker, to order, put up, and soon after Cliff made a false point, and then he scored a flush. Taking a long turn without a find, the judges compared notes and awarded the heat to Little Nell. Down one hour and twenty-one minutes.

CASSIO AND RUBY D.

This brace was put down in a cotton field, and a long turn was taken to a branch where Cassio pointed a bevy in a thicket, and a second or two later Ruby came up below and also pointed the same bevy. The birds were flushed and followed, both dogs getting a point that we did not get up in time to see. Cassio then made a nice point and Ruby backed him; the bird was flushed and several more went. Ruby then pointed, probably at the old scent, but a bird was flushed some distance beyond her and her handler claimed the point, but it was at least very doubtful that she was entitled to it. A little further on Cassio made a nice point at the edge of a gully, but nothing was found. Soon after he made a wide cast in some woods and stopped near the judges, who thought that he was looking for his handler, and Avent was told to call him, but Cassio knew what he was about, and instead of obeying the whistle he drew on a few yards and made an elegant point to a bevy. Ruby also pointed the same birds, but her work was not nearly equal in merit to that of Cassio. This ended the heat in favor of Cassio. Down twenty-five minutes.

NAT GOODWIN AND HUSTLING HANNAH.

This brace was put down at the edge of the woods near where the last brace was taken up. Nat had the best of it in speed and style. He had gone but a short distance when he stopped on point to the scent of a bevy, and as he stood there a hare ran just in front of him. This was too tempting and he broke, but stopped to order and then drew on, and locating the bevy, pointed them nicely, the birds flushing as Avent went to his dog. Leaving our horses we followed the birds across a gully among some sprouts where one flushed near Nat and soon after one got up close to Hannah and she pointed at the old scent and Nat backed her. Hannah then got in a good point to a single that Short to order flushed and killed. At nearly the same time Nat also pointed a single that Avent to order put up. A few yards further on Hannah half pointed just as one went. Nat then cast ahead and jumped into an elegant point that Hannah dropped to as quick as if shot. This was very nicely done. They were then ordered up with Nat the winner. Down ten minutes.

JEAN VAL JEAN AND RUBICON.

This brace was put down in some sedge at 4:21, and worked over a knoll down to a gully, where Jean made a point to which nothing was found. Working up the opposite slope we crossed a road, and soon after Rubicon pointed and drew on and worked out a running bevy very nicely, Jean backing him a short time and then running up and pointing behind. Stephenson put up the birds and killed one that Rubicon retrieved. Jean broke in at shot but stopped to order. When sent on Rubicon flushed one and stopped to wing, and Jean backed him, dropping very prettily. A little further on Jean started for a hare, but came back to order. Working on we came to a wide gully, where Jean did a very pretty piece of work. In jumping the gully he winded the birds and stiffened while in the air, and struck the ground on a beautiful point. Avent put up the birds, and Jean was steady to shot and wing. A little further on Rubicon made a point to a bird that was seen to run away. Working along the gully to a thicket, Jean ran into a brace down wind, and as they flushed the remainder of the bevy flushed wild. Following them up Jean made a nice point to a single outlying bird, Rubicon pointing the bevy at nearly the same time. Stephenson put up the bevy, and the bird in front of Jean also went. They were then taken up for the night. Down thirty-five minutes. On Tuesday there was considerable wind, but upon the whole it was a fair hunting day. The dogs were put down at nine o'clock in a cornfield and worked through to some stubble, where Jean challenged and made two or three casts, but was called away and sent in another direction, but he failed to make it out. Turning into some woods Rubicon challenged but was called off, and as he came down wind he flushed a bevy and dropped to wing. Jean coming round, pointed at the place where they rose. The birds were followed but we failed to find them, and a long turn was taken without a find. Working down to a run, Rubicon made a point in some bull grass. Stephenson failed to find anything and claimed that the point was to a hare, but just then a bevy flushed wild some distance up wind and he changed his mind. He was probably correct, as when Rubicon went on, he drew on the trail toward the place where the bevy rose from. Following the birds Rubicon made a false point that Jean refused to back, and stealing in he also pointed. A little further on Rubicon flushed a bird that he should have pointed. We then turned back and Rubicon made a point and Jean backed him nicely. A bird was flushed down wind some distance from the dogs, and Stephenson claimed that it was the bird that his dog was pointing and ordered him on, but this was not the bird, as it was flushed a short time after by Stephenson when he came back. Turning back to some woods the judges compared notes, and after a consultation of ten minutes, the heat was awarded to Rubicon. Down altogether one hour and forty-nine minutes. We cannot indorse this decision, as the work done by Jean was of a much higher order of merit than that done by Rubicon, and he clearly had the best of it in speed and range, and was much the superior in style as well as in hunting sense.

CHANCE AND KEYSTONE.

This brace was at once put down in the woods, and as we started to go on a brace of birds flushed near the judges, and one of them went only a short distance. Chance came round, but the bird was flushed behind him. One then got up near Keystone and he was a trifle unsteady to wing. Several more then went. Chance soon after flushed one and dropped, and Key, coming upon him suddenly, also dropped beside him very prettily. A little further on Chance made a point and Key backed him, but both soon went on and soon after they flushed one. We then crossed a branch, when Key scored a false point, Chance backing him handsomely. Turning into some woods Chance nailed a single that Avent, to order, put up. We then took a turn back to the corner of the woods, when the judges flushed a bevy and the dogs were taken round to get the wind and worked toward them. Chance got there first and made a nice point that Key at once honored. Avent, to order, put up the bird, and several more went. Key then pinned a single that was flushed by his handler. A short distance further on the judges compared notes and awarded the heat to Chance. Down forty-two minutes.

ALLIE JAMES AND BUN ROY.

This brace was put down in an old field at 11 o'clock. Allie had the best of it in speed and style. Working toward a marked bird Allie challenged and drew to a point on a small bird, and soon after she flushed a hare and went for him at her best speed and they both disappeared over a knoll with Alice close up. She lost him, however, and came back just in time to see Bun Roy go for another one. He had a faster hare than Alice and soon gave up the chase in disgust. We then turned along the edge of some woods, where Alice did a very fine piece of work, roading a bevy down wind and dropping on point just as Bun came up and also dropped to the same scent, Avent to order putting up the birds just beyond them. Taking the dogs round for the wind, we turned into the woods and worked toward the birds. Alice got there first and made a beautiful point with her head as high up as she could get it. Avent flushed the bird and as Alice was sent on she took a few steps and stopped on point either just before or just after a bird went, we could not determine which. A little further on she dropped to a single that Avent put up to order. When sent on she flushed one and dropped to wing. Bun then swung back and also scored a flush. Alice then sat down on point very gracefully, and as her handler went ahead she drew on a short distance and lost it. Soon after she roaded out a single and pointed it in beautiful style. Avent put it up and they were ordered up just as a point was claimed for Bun. Nesbitt put up the bird and Bun jumped for it. The heat was then awarded to Alice. Down twenty-six minutes. Bob H. having a bye this ended the second series with the result as follows:

Summary Second Series.

Little Nell beat Cliff Gladstone.
Cassio beat Ruby D.
Nat Goodwin beat Hustling Hannah.
Rubicon beat Jean Val Jean.
Chance beat Keystone.
Allie James beat Bun Roy.
Bob H. a bye.

Third Series.

BOB H. AND CASSIO.

In the regular order of running Bob H. and Little Nell came together, but to avoid the necessity of running two of Avent's dogs together the order was changed and Cassio was run against Bob. They were put down at 11:40 in a cotton field at the edge of some woods. Working down to a gully Cassio challenged and drew to a point, and as Avent went up ahead he drew on and then made a cast, but did not succeed in making it out. We then turned down to a branch and Bob made a point. Cassio came round, and not seeing him, swung in ahead of him and also pointed. Avent went in front of him and flushed part of a bevy, and as Cassio was ordered on he took a few steps and again pointed and Avent put up the remainder of the bevy. Following the birds Bob pinned a single that was accidentally flushed by Avent, who was going toward his dog. Bob soon after flushed one and stopped and several more went. Cassio then pointed twice to the old scent and Bob backed him each time. Some distance further on several birds were flushed by the judges and spectators and we turned into some sedge and worked to a thicket, where a bevy flushed almost under the horses. Both dogs had been near there but failed to find them. The birds were marked down and the dogs were sent in their direction. Cassio was the first to find, but he scored a flush instead of a point and soon after Bob came up and half pointed just as another one got up and then the other went. Turning back along a ravine Bob dropped as if shot on point to a single that Rose saw running away from him, and he went for it and giving it a kick killed it and saved his ammunition. We then turned into some sprouts, where Bob made a nice point to a bevy that Rose, to order, flushed, and as they flew over another bevy they also went. Following them up one flushed near Cassio down wind, and as Bob came up another one got up and then the others went. Taking the dogs round for the wind, Bob flushed one and stopped on point to another that his handler put up to order. A little further on Bob again flushed one and dropped on point to another, and Cassio backed him, Rose flushing the bird. As they went on Bob pointed at the old scent, and soon after Cassio did the same and Bob backed him. We then worked up to the edge of some woods, where Bob made a nice point to a single that flushed as Rose came up. They were then ordered up and we went to lunch. During lunch the judges compared notes and decided the heat in favor of Cassio. Down thirty-four minutes. This was a very close heat. Cassio had the best of it in speed, range and style, but Bob showed the most hunting sense and found the most birds.

LITTLE NELL AND NAT GOODWIN.

After lunch this brace was put down in a cornfield. Both are easy and fast goers, with not much to chose between them. Nell was the more systematic in her range, and was fully as stylish as Nat. After a turn through the cornfield we turned back across a gully to some woods, Nat making a nice point to a small bird. Entering the woods a bird flushed ahead of Nat and he stopped on point. This was out of sight of the judges. Soon after at the corner of a cornfield Nat pinned a single that was flushed by Titus, who was going toward Nell a little beyond. Turning back along the edge of the woods Nat swung in out of sight, and we heard a bird go near him, and a second later his handler called a point. As the judges came up Nat was pointing, but nothing was found. Nat's ears were just a trifle too much cocked for a steady point, and we had an idea that he possibly knew something of the bird that we heard go. This opinion was confirmed when we came up by the manner in which he went on, as he appeared to be expecting another rise. Avent stopped him, and soon after several birds flushed wild near by. Soon after Nat was found on point, and a bird was said to have gone as his handler went toward him, but we did not arrive in time to see it. A little further on one got up near Nat and he stopped to wing. We then turned back through the woods and took a long turn without finding birds. Finally Nat swung across a gully and made a cast up to some woods, and pointed a bevy in capital style, Nell backing him nicely. Avent to order put up the birds and killed one that Nell retrieved. This ended the heat with Nat the winner. Down thirty-five minutes. Just at the finish of the heat, as Col. Merriman was riding under a tree, a dead twig flew back and struck him in the eye, penetrating the membrane covering the eyeball. The stick was as large as a match and half an inch long. Dr. Young with considerable difficulty removed it, and it was thought that the eye was permanently injured, but we were greatly pleased to find upon our return to the hotel that there was every prospect for a speedy recovery, and that no serious injury was anticipated.

RUBICON AND CHANCE.

This brace was put down at 2:08 at the edge of some woods Soon after they started several birds flushed near them and Avent claimed a point for Chance, but he showed no indication of having winded the birds, and had apparently stopped to the whistle at about the time they flushed down wind just beyond him. Working down to a gully Rubicon made a nice point and Chance backed him in fine style, making a very pretty picture. Stephenson spent considerable time trying to find the bird, but finally gave it up and came back to his dog, when it flushed under the bank close to him. A little further on Rubicon made a false point, Chance backing him nicely. Working along the railroad a short distance we turned across a gully, when Rubicon pointed a bevy and Chance backed him very handsomely. Stephenson, to order, put up the birds and killed one that Rubicon retrieved. Following the birds to a thicket Rubicon pinned one that was flushed by Chance as he came up below him. Chance soon after made a cast ahead and pointed a single in elegant style, Avent, to order, flushing it. Soon after another one went, but we could not see how it happened, as it was inside the thicket. We then turned up through some woods to open fields and took a long turn without finding birds. Finally we turned down to a branch where Rubicon challenged and then drew on and pointed part of a bevy, while Chance, some fifty yards away, pointed the other portion. Rubicon's birds went as his handler came up, and Avent, to order, put up those in front of Chance. We then crossed a branch and Rubicon challenged in the tall grass, and after going some distance a bevy was flushed ahead of him and his handler, but the grass was so heavy that we could not see just how it was done. Following up the birds Rubicon made an indifferent point and Chance backed him. As Stephenson went ahead Rubicon drew on and roaded out the birds and pointed them nicely. They were flushed to order and the heat was awarded to Rubicon. Down fifty-nine minutes. Chance had the best of it in speed, range and style. Rubicon had the luck of the birds, and so far as finding and pointing them goes, he was clearly ahead. This heat was very similar in these respects to the one between Cassio and Bob H. and we cannot understand why these two decisions should be so directly opposed to each other. This ended the third series, Allie James having a bye. The result was as follows:

Summary Third Series.

Cassio beat Bob H.
Nat Goodwin beat Little Nell.
Rubicon beat Chance.
Allie James a bye.

Fourth Series.

ALLIE JAMES AND CASSIO.

Three of the four dogs left in were owned by the Memphis & Avent Kennel, and it was therefore impossible to avoid running two of them together in this series, and Allie and Cassio were ordered put down at 3:10 in some sedge on a knoll and worked down the slope. Allie crossed a gully and pointed and then roaded. Cassio came and half pointed at the same trail and both then went on. Cassio cast ahead, and climbing a steep bank made a beautiful point with his head just above the edge of the bank. Avent, to order, put up the bird, and requested the judges to make the heat as short as possible as he was very tired. They consulted a moment and ordered them up, and awarded the heat to Cassio. Down six minutes. This was a snap shot that surprised us. A longer heat would probably have reached the same result. At least the previous work of the dogs led us to believe that this would have been the case, but the rules, as we understand them, expressly forbid any one, excepting a reporter, making any such comparison.

NAT GOODWIN AND RUBICON.

This brace was put down in some sedge and worked along near some woods. Nat made a wide cast across wind into the woods, and catching the scent of a bevy drew on and pointed them in capital style. Avent to order flushed them, and a large portion of the bevy settled just outside the woods in some tall grass and briers, and two of them went in the woods. These last were followed, and Nat pointed at a treetop but went on, while Rubicon came up just below and pointed probably the same bird, which flushed as Stephenson went to his dog. No more were found here and we turned back to some sprouts where Rubicon pointed a single that his handler put up to order. Soon after Rubicon made a false point. We then turned to the place where most of the birds had been marked down. Nat pointed at the edge of a plum thicket and drew on into it, and was joined by Rubicon, and both pointed but drew on and a bird flushed behind them down wind. Turning back to some briers Rubicon was sent in, and he soon got a point to a single that his handler flushed. They were then ordered up and the heat was awarded to Rubicon. Down twenty-four minutes. This was a very unsatisfactory heat. Nat was the better in speed, range and style, and his work on the bevy was far superior to that of Rubicon on the singles, which was partly a matter of luck. More time should have been given to decide between them. This ended the fourth series with the following result:

Summary Fourth Series.

Cassio beat Allie James.
Rubicon beat Nat Goodwin.

Final for First Place.

CASSIO AND RUBICON.

These were the last two left in for first money. They were put down on a side hill in some sedge at 3:58. Rubicon went straight ahead some distance and made a point at a narrow strip of sedge between two cornfields. Stephenson, to order, put up a bird in front of him and a few seconds later another one went. Working down the strip of sedge, Cassio challenged and worked some time an old scent, making one or two casts with good judgment, finally striking it again, and pointing it a short time he drew on and again pointed. Rubicon then came up and swung ahead and also pointed. Both moved on and lost it, when Cassio made a cast back but failed to strike it. We then worked through the cornfield where Rubicon pointed but soon went on. Soon after we crossed a ditch to a cornfield and both dogs cast ahead partly across wind, with Rubicon some 25ft. in the lead. Cassio suddenly stopped on point and Rubicon a second later also pointed the same bevy that flushed as the handlers came up. They were then ordered up and the heat was given to Rubicon and he was declared winner of first prize. Down twenty-seven minutes. This without exception was the worst decision we ever saw at a field trial. Mr. Paris informed us that he did not see the dogs when they stopped, but that he accepted the statement of Dr. Young that the point belonged to Rubicon and that Cassio was backing. We do not believe that Dr. Young saw the work, but formed his opinion from the position of the dogs, as had he actually had his eyes upon them at the instant of pointing he would not have made such a statement. Even had the work been of the character supposed, the decision would still have been a very unjust one and savored too much of favoritism to have decided so important a matter without giving the loser an opportunity to make a point.

Final for Second Place.

CASSIO AND CHANCE.

The judges selected Chance and Nat Goodwin as the best of the dogs beaten by Rubicon, and asked the opinion of Mr. Avent as to which of the two he considered the best. He expressed the opinion that Chance had run the best heat and he was selected to run against Cassio for second place. They were put down in an open field at 3:32 and worked toward the scattered birds of the last bevy. Chance flushed one near a ditch and Cassio a second or two later made a stylish point to two or three more that went soon after. Chance then cast up a slope and made a nice point, but before his handler got up to him he drew on and flushed the bird. They were then ordered up and the heat was awarded to Chance. Down five minutes. This decision was nearly as bad as the one deciding first money, and the judges could not possibly have seen the work as it really was performed. Although both dogs had an opportunity to show on game, they rendered their decision in favor of the dog that most decidedly had the worst of it.

Final for Third Place.

CASSIO AND KEYSTONE.

Keystone was selected as the best dog beaten by Chance and the brace was ordered to run for third place, but when Keystone arrived it was so near dark that the heat was postponed until morning. On Wednesday morning, however, only two judges could be found, and the Champion Stake was declared off, and the handlers of Cassio and Keystone divided the money and honors of third place equally. Following is a complete

SUMMARY.

First Series.

Little Nell beat Ben Hur.
Cassio beat Goldstone.
Nat Goodwin beat Dante.
Jean Val Jean beat Katrina (withdrawn).
Ruby D. beat Talleyrand.
Hustling Hannah beat Wanda.
Chance beat Gladstone's Girl.
Rubicon beat Dan J.
Keystone beat Roi B.
Bun Roy beat Dee.
Allie James beat Luke Roy.
Bob H. beat Dolly.
Cliff Gladstone a bye.

Second Series.

Little Nell beat Cliff Gladstone.
Cassio beat Ruby D.
Nat Goodwin beat Hustling Hannah.
Rubicon beat Jean Val Jean.
Chance beat Keystone.
Allie James beat Bun Roy.
Bob H. a bye.

Third Series.

Cassio beat Bob H.
Nat Goodwin beat Little Nell.
Rubicon beat Chance.
Allie James a bye.

Fourth Series.

Cassio beat Allie James.
Rubicon beat Nat Goodwin.

Tie for First Place.

Rubicon beat Cassio and won first prize.

Tie for Second Place.

Chance beat Cassio and won second prize.

Tie for Third Place.

Cassio and Keystone divided third prize.

THE TEXAS FIELD TRIALS.

[From a Special Correspondent.]

THE Texas Field Trials Club, organized April 24, 1886, and composed of amateur sportsmen residing chiefly in Harrison county, Texas, held its inaugural trials on Dec. 14 and 15, 1886, near Marshall. The officers of the club are: Amory R. Starr, President; Jonathan D. Rudd, First Vice-President; Westley M. Robertson, Second Vice-President; E. Key, Treasurer and W. L. Thomas, Secretary. The trials were run on quail, and the stakes were an All-Aged and a Derby for dogs whelped on or since Jan. 1, 1885. Derby starters were required to retrieve. Both stakes were originally open to members only, but before the running they were made open to any amateur. The judges were: Mr. J. T. Trezevant, Jr., and Col. W. E. Hughes, both of Dallas, and Hon. R. T. Hailey, of Harrison county.

THE DERBY.

The final drawing of dogs for the Derby resulted as follows:

TEXAS JOE (John L. Phillips), liver pointer dog (Orco—Poland's Flash) *against*
REX II. (George Wolz), liver and white pointer dog (Orco—Poland's Flash).

MIKE (Frank Cock), red Irish setter dog (Irish Pat—Gypsey Red) *against*
CAPTAIN CRAIG (A. R. Starr), black, white and tan English setter dog (Gladstone—Lady M.).

RESS (Walter Cock), liver and white pointer bitch (Bruce Ranger—Frank) *against*
NICK (Frank Cock), liver and white pointer dog (Bruce Ranger—Frank).

KATARAX (Thos. Gregory), black and white pointer bitch (Stuart's Ben—Long's Jet) *against*
JOHN SAUNDERS (C. B. Cock), liver and white pointer dog (Meteor—Starr's Flirt).

The morning of Tuesday, Dec. 14, was bright and cold, with a gentle breeze from the west. By 12 o'clock, however, it became quite warm and was so the balance of the day.

REX II. AND TEXAS JOE.

At 11 o'clock Rex II., handled by Geo. Wolz, and Texas Joe, handled by J. L. Phillips, were cast off in a sedge field near Scottsville. The field was drawn blank, and the dogs were worked north into another with similar results. Rex II. showed more speed and range, Joe suffering with very sore feet. No birds were found by this brace, and they were ordered up at 12:30, to be put down again after lunch. A nice lunch was spread by the president and other members of the club, and was indulged in by all with seeming relish. At 1:30 Rex and Joe were put down again, worked until 2:25, when they were ordered up, to be put down again if there should appear any opportunity for them to win. No work done by either. Down, altogether, two hours and thirty minutes.

MIKE AND CAPTAIN CRAIG.

At 2:30 Mike, handled by Mr. Cock, his owner, and Captain Craig, handled by Captain Starr, his owner, were put down where last brace were taken up. The cover was thick and heavy. Moving down a branch the dogs, working close together, pointed a bevy simultaneously. The birds were flushed and not shot at; dogs steady to wing. Working down the draw and over a fence into the woods, Craig made a handsome point on a single in the dry leaves; birds flushed wild; Craig steady, Mike not up to back. Mike pointed a rabbit, showed some inclination to take a race, but was restrained by his handler. Craig then pointed and was held for Mike to be brought up to back, which he refused to do. The bird ran and Craig roaded nicely, but before he established his point again the bird flushed; dogs steady to wing. Several birds were flushed by the judges which the dogs had no opportunity to point. The dogs were ordered up for a few minutes, taken into a field near by and turned loose again. A cotton patch and piece of stubble were drawn blank. Rounding a piece of timber Craig made a point, which his handler claimed. Not having located the bevy, Craig made a short cast to the left, and Mike, moving up to the right, caught the scent and pointed; Craig, coming through a patch of sedge, backed staunchly. Mr. Cock flushed and shot to order, but did not kill; both dogs steady to wing and shot. The birds were marked down in woods near by, where Craig got two points in dry leaves in quick succession; birds were flushed to both points. Mr. Starr shot, but did not kill; dogs steady. Ordered up, neither having an opportunity to retrieve. Craig was much the fastest and had more style in motion and on point. Craig won. Down thirty minutes.

RESS AND NICK.

At 3:10 Ress, handled by C. B. Cock, and Nick, handled by Frank Cock, his owner, were put down on scattered birds, left by Craig and Mike. They started off at a good pace, about equal in speed, style, etc. Ress made a handsome point, which her handler claimed; false point, Nick backed. Moving up a short distance Ress pointed again, her handler urged her on, and the bird was flushed by your reporter very near to the place where she had made the point; but for Mr. Cock's fear of another false point his bitch would have scored a nice point here. The balance of the wood was drawn blank and the dogs were ordered on. Crossing a branch and out in the open field, both dogs running close together pointed a rabbit. Going a short distance Nick made a stylish point on a bevy, which was acknowledged by Ress, backing well. Mr. Cock was ordered to flush and shoot; as he walked up to flush, Nick moved up and some nice roading was done, Ress going straight to the covey, Nick a short distance to the left. Birds flushed, Mr. F. Cock killed; both steady to wing and shot. Nick retrieved nicely. Working on, Ress flushed a single, but was a little unsteady; she then pointed a single well. Mr. June Cock shot and killed, Ress retrieved. Then moving up wind across a stubble Ress pointed a bevy. Nick backed, broke his back, moved up and took the point. Mr. Cock killed two birds; Nick brought one and Ress the other, done in good shape. Dogs up, Ress won. Down one hour.

JOHN SAUNDERS AND KATARAX.

At 4:15 Mr. C. B. Cock's John Saunders and Mr. Thomas Gregory's Katarax, handled by their owners, were cast off and worked back to where a bevy had been marked down by a spectator. After working a few minutes two birds flushed wild, then Katarax made a splendid point; held for Saunders to back, the latter backed to order. Mr. Gregory was told to flush and shoot. No bird found; very probably a bird had run from the dog's point. Working on down the branch Saunders made a flush; he was dropped to wing, and as he turned another flushed wild. After drawing the balance of the field blank they were worked over to where the birds flushed at end of the last heat, had been marked down; a very unpromising place to work a dog, briers and bushes being very dense. Nothing was found, and the dogs and handlers being separated, Rax was held up until Saunders could be brought up. They were cast off and in a few minutes Saunders pointed a bevy well, and Rax backed in grand style. Mr. Cock was told to flush and shoot; failed to kill; both dogs dropped to shot. Moving on across a branch Rax got two points in rapid succession. Dogs ordered up at 5 o'clock to be put down again next morning. Down forty-five minutes. On the way to town an accident befell Katarax, her foot being badly cut by a wire fence. Her owner therefore withdrew her, and John Saunders was given a bye.

Second Series.

Wednesday was cold and quite threatening, the wind tolerably high. At 9:30 A. M.

CAPT. CRAIG AND JOHN SAUNDERS

were cast off in a cotton patch, where a bevy had been located a few minutes before. After going some distance both dogs began to road where the bevy had run. The birds flushed wild, neither dog getting a point. Craig got a flush in a thick cover near the fence, worked on into some woods; in the dry leaves Craig got a point, and Saunders backed to order indifferently, then Craig flushed another in the dry leaves. No more work was done until crossing the road in a ragweed field Craig pointed a bevy staunchly and handsomely. Mr. Starr was ordered to flush and shoot. Before getting close enough the birds flushed wild; Craig steady to wing, Sandy not up to back. Casting off to the right Craig made a very handsome point. No bird was found on this point. Dogs ordered up, Craig winning. Down fifty-three minutes.

CRAIG AND RESS.

At 10:30, without waiting for the twenty minutes intermission that Craig was entitled to, Craig and Ress were put down in an open field, and worked across a fence and down the side of a hill in some sedge and pines. In rounding a thicket Craig established a point on a bevy, Ress to the left making game. Before she had an opportunity to establish her point, Mr. Starr walked in and flushed the birds from Craig's point; he did not shoot. The birds flew to a swale in which were briers and willows, cover very thick. Craig in the thick briers made three points in quick succession. Ress in moving about did very little—briers very thick and Ress would not go forward from her handler. Capt. Craig won. Down thirty minutes.

After running the second series in the Derby the handlers of the remaining dogs requested the judges to place first, second and third. First prize in the Derby was awarded to Amory R. Starr's black, white and tan Llewellyn setter Captain Craig, whelped Jan. 2, 1885, bred by D. W. Williams, of Ringold, Tenn., trained by W. W. Tucker, of Waskom, Texas. He is a handsome, stylish dog, rather small, has fair speed and a good nose. He is very docile and obedient, although full of spirit. He is by Gladstone out of Lady M., she by Mark out of Jennie.

Second was won by Walter Cock's Ress, a neat little liver and white pointer bitch, with good nose and fair style and speed, bred by Chas. Hendricks, of Harrison county, sired by Bruce Ranger (Dilley's Ranger—White Lily) out of Robertson's Frank (Orco—Norma). She was trained by owner and handled by C. B. Cock.

Third was won by Frank Cock's red Irish setter dog Mike trained and handled by owner and bred by W. C. Kennerly of White Post, Va., being by Irish Pat out of Gypsey Red He has tolerable speed and only moderate style, and is rather lacking in nose.

ALL-AGED STAKES.

The entries in the All Aged Stake were drawn and run as follows:

WAT (Amory R. Starr), black pointer dog (Starr's Bronco—Starr's Fan II.),
against
JOHN SAUNDERS (C. B. Cock), liver and white pointer dog (Meteor—Starr's Flirt).

CAPTAIN CRAIG (Amory R. Starr), black, white and tan English setter dog (Gladstone—Lady M.),
against
NICK (Frank Cock), liver and white pointer dog (Bruce Ranger—Robertson's Frank).

GEORGE NOBLE (M. Gillett), pointer dog (breeding not given),
against
FRED (W. E. Hughes), liver and white pointer dog (Meteor—Flash III.).

JUNO (J. L. Pernet), liver and white pointer bitch (Meteor—Dell),

against

RESS (Walter Cock), liver and white pointer bitch (Bruce Ranger—Robertson's Frank).

MIKE (Frank Cock), red Irish setter dog (Irish Pat—Gypsey Red),

against

FANTINE (W. J. Rosborough, Jr.), orange pointer bitch (Clipper—Dove).

FROU FROU (W. E. Hughes), liver and white pointer bitch (Maxim—Flash II.),

against

MONARCH II. (J. Wolz), liver and white pointer dog (Monarch—Scott's Minnie).

COUNTESS HOUSE (J. T. Trezevant, Jr.), black, white and tan English setter bitch (Gladstone—Juno),

against

ROB (M. Gillett), liver and white setter dog (breeding unknown).

First was won by Wat, 3yrs. old, bred by A. C. Waddell, of Topeka, Kan. He is a dog of great speed and good nose, ranges very wide and works his ground with judgment. Is rather above the medium size, stands high on his legs, and while not heavy, is very muscular. He won second in the All-Aged Stake last February at the Alexandria trials. Second was won by Fred, bred, trained and handled by owner. His muzzle is rather snipy, otherwise he is a remarkably handsome dog, with good speed and nose, and his style is perfect. He was the quickest and most stylish dog at the trials, and his quartering was superior to that of any other starter. Third was won by Juno, bred by J. W. Munson, of St. Louis. Her speed and style are very good and her nose excellent. She is a little above medium size and quite handsome. She was trained by Capt. W. W. Tucker, of Waskom, Texas, who also trained Wat, winner of the All-Aged Stake, and Craig, winner of the Derby.

First Series.

WAT AND JOHN SAUNDERS,

handled by their respective owners, were cast off at 11:15 in a cotton patch. Wat was the fastest from the start, going fast and with good style, Saunders showing effect of a heat run previously. On the north side of a field Wat pointed, but nothing was found. Moving to the left at a rattling gait, he established a fine point on a bevy in some pines. To order his handler, Mr. A. R. Starr, shot and killed, Wat dropped to shot; ordered to retrieve he did so in good shape. Dogs ordered up, Wat won. Down twenty minutes.

NICK AND CAPT. CRAIG

were put down at 11:45. Nick showed more dash and speed, Craig having just run two heats was a little stiff, he soon limbered up and showed that he had plenty of stuff left in him yet. Field drawn blank. In a pine thicket Ned pointed and almost at the same instant Craig dropped on a point. No bird found, some hogs feeding near by having probably flushed them. After working in the pines some time without result, the dogs were ordered up and taken to the Harris place. In crossing a branch of nice running water the party concluded to lunch. After lunch the dogs were put down again at 12:40 in a field covered with sedge, the large field was drawn blank. In passing, however, a piece of woods and out into the open field Craig made a handsome point, Nick passing to his right and all around him. Mr. Starr was ordered to flush and shoot; did not kill, dogs steady to shot. Working up the branch Craig pointed another bevy in good style; birds were flushed by Mr. Starr, who shot and missed, both dogs steady. Craig pointed and was ordered on by his owner; results barren. Dogs taken up at 1:15, Craig won. Down fifty-five minutes.

FRED AND GEORGE NOBLE.

At 1:15 Colonel Hughes resigned his position as judge to handle his dog in this heat, Mr. John L. Phillips taking his position as judge, which place he assumed each time Colonel Hughes ran. Fred, handled by his owner, Colonel Hughes, and Noble, by his owner, Mr. M. Gillett, were cast off where Craig and Nick had finished their heat. After a few minutes Fred made a handsome point, which Noble backed; Noble broke his back, ran in and flushed. Moving up, Noble pointed a rabbit, and when it broke cover Noble and the rabbit had a fine chase to a brier patch. This was the most exciting chase of the day. Fred made two points on singles in good shape and won. Down twenty minutes.

JUNO AND RESS.

At 1:40 Juno, handled by her owner, J. L. Pernet, and Ress, handled by C. B. Cock, were cast off where Fred and Noble finished their heat. In moving a little to the left Ress made a flush on a single, and immediately afterward another bird flushed wild. The dogs were then ordered forward. In a short time Ress established a point on a bevy, Juno moving up to the left pointed also, being in a position where she could not see the other dog; both dogs were given a point. The birds were flushed by Mr. Cock; both dogs were steady to wing and shot, no birds killed. In moving north to where a bevy had been marked Juno flushed a bird down wind. Both showed good speed, Juno the fastest; style in motion and on point about equal. Moving up in the dry leaves Juno established a fine point on a single, which flushed wild, her handler not having an opportunity to shoot; the balance of the singles were flushed. No more work done here. Moving up west to a sedge field Juno was lost to sight for a moment and found by your reporter on a staunch point; Ress, being called, backed handsomely. Mr. Pernet flushed the birds and killed two, both dogs steady to wing and shot. Juno was ordered to retrieve; going into some pines she found a bird with a broken wing, which she chased around for some time before she could catch him, when she brought it in good style, bird being still alive. Then Ress was sent in to retrieve the other bird, which she did well. Dogs were ordered up, Juno won. Down thirty minutes.

MIKE AND FANTINE.

At 2:20 Mike and Fantine were put down in a cornfield. In speed and style about equal; Fantine heavy with pups. Fantine pointed and Mike backed badly, the birds flushed wild and were not shot at, and were marked down by spectators in a branch. Dogs being worked on, Fantine pointed, backed by Mike. To order Mr. Rosborough flushed and shot, but did not kill; Fantine broke shot. Dogs taken up; Fantine won. Down twenty minutes.

FROU FROU AND MONARCH II.

At 2:50 Frou Frou, handled by owner, Colonel Hughes, and Monarch II., by his owner, Mr. W. J. Wolz, were put down in the edge of some pines, and in a few moments Monarch pointed for a few moments and flushed, and broke; dropped to order. Moving down the branch to work on the scattered birds, Monarch pointed a single. Frou Frou was ordered up to back, which she did. To order Wolz flushed and shot and killed; Wolz and Monarch both broke shot. To order Monarch retrieved. Dogs taken up at 3:20; Monarch won. Down thirty minutes.

Second Series.

WAT AND FRED.

At 3:30 Wat, handled by his owner, A. R. Starr, and Fred, handled by his owner, Col. Hughes, were put down in an open stubble and worked north into some sedge. Wat was the fastest and widest ranger. In style, Fred had the advantage. On the point of a ditch Wat pointed handsomely, backed by Fred. Wat moved up, and Fred, jumping into a ditch, pointed. Birds were flushed but not shot at; both dogs steady to wing and shot. Birds flew to a pine thicket, where they were followed, and some nice work was done. Fred pointed a single, which flushed wild. Wat pointed a single, birds were flushed on point and not shot at. No more work was done on this covey. Working up the branch Fred made a point which Col. Hughes claimed; he was held to have Wat come up and back. Wat backed well. No birds were found on this point. Moving up the branch to the left through some pines Wat was lost for some time, and your reporter found him standing firmly on a point in some sedge on the side of a hill. Mr. Starr, to order, flushed and killed. Dog steady to shot; to order, Wat retrieved in good shape. Moving in the direction that this bevy had flown, and just where the road crossed the branch, Wat in advance, turned to the right and established a point on a bevy which was flushed and not shot at. Dogs ordered up, Wat won. Down thirty minutes.

MONARCH II. AND FAN.

At 4 o'clock Monarch II., handled by W. J. Wolz, and Fan, by Mr. Rosborough, were put down. In moving up a swale Monarch pointed. Fan, going up, flushed the bevy. Moving on down the branch Monarch pointed a single. Fan refused to back. Taken up at 4:10. Monarch won. Down ten minutes.

CAPTAIN CRAIG AND JUNO.

At 4:15 Craig, handled by A. R. Starr, and Juno, handled by Mr. J. L. Pernet, were cast off in a sedge interspersed with pines, both dogs going at a good pace, Juno showing more speed and the widest range. Moving over a hill out of sight for a few moments both dogs were found on a point close together. Mr. Starr flushed and shot, both dogs steady to wing and shot. To order, Craig, after some difficulty in finding, retrieved his bird in good style. Working forward in the direction this covey had flown, crossed a branch and worked up on a slope in some sedge and pines, Craig pointed and Juno not up to back. Craig, after standing a few moments, moved up and commenced to road, when the covey was flushed about thirty steps to his left by the spectators. This ended the running for the day. Dogs taken up to be put down next morning.

At night the judges, officers of the club and handlers met at the club room, and the latter consenting they, as provided for by the rules, awarded the prizes without further running, owing to the fact that Col. Hughes could not well remain much longer and Mr. Trezevant was quite unwell.

The prizes were awarded as stated above, and the special prizes as follows: Consolation prize to best dog not placed in either stake, a handsome collar, donated by the Medford Fancy Goods Co., of New York, awarded John Saunders. To best trained dog trained by member of club in Derby, to John Saunders. Dog showing best natural qualities in the Derby, to Captain Craig. The English setter puppy, offered by Mr. Trezevant, was also won by Craig as winner of the Derby.

In the All-Aged Stake Fred received the prize for the dog with best natural qualities, and Nick the prize for the best trained dog trained by member of club. Wat also received a prize of a pointer puppy offered by Col. Hughes for the winner of the All-Aged.

The weather was pleasant throughout the trials and everything passed off harmoniously. Taking it all in all, and considering that it was the inaugural meeting of an amateur club, it was quite a success.

RABY MIXER.—Mr. John E. Thayer, of the Hillside Kennels, has just imported the celebrated fox-terrier Raby Mixer. He is by Raby Mixture out of Richmond Olive Bud, by Raby Tyrant out of Richmond Olive. Raby Mixture is a son of Mixture. He was whelped in August, 1885, and has won the following prizes: First in open class and first in puppy class, Lincoln summer show; first and cup in novice class and first and special in puppy class, Birmingham Fox-Terrier Club; first prize in open class and first prize in puppy class, Darlington; first prize and cup in open class and first in members' class, Stockton-on-Tees Fox-Terrier Club show; first prize champion class and special prize for the best fox-terrier, Market Rasin; first prize open class, West Bromwich; second prize open class, Oxford Fox-Terrier Club show; first prize and special for the best fox-terrier in the show, Lincoln; first prize in open class, Birmingham. The judges were Messrs. Astley, Vicary, Southwell, Burgess, Wood and Tinne. Raby Mixer was considered one of the best terriers in England, and if nothing happens, will do some winning for his new kennel.

BESSIE.—Haverhill, Dec. 26.—I noticed in the FOREST AND STREAM that J. H. Brown, of Boston, Mass., would like to know what authority I have for claiming the pedigree of the Llewellin setter Bessie, by Mingo out of Fausta II. I get my authority from A. W. Harrington, Ruthven, Ontario, Can., the gentleman who bred her. Now I would like to have Mr. Brown give his authority for saying there are only two bitches now living from that breeding.—I. TENNEY.

DOG LOST.—Watsontown, Pa., Dec. 18.—On Dec. 13, my English setter dog King Fred strayed or was stolen from my kennels; he has black head and ears, rust black spot at root of tail, body rust white with black ticks, tan under his jaws. Had a leather collar. Weight is from 60 to 65lbs. Information will be thankfully received and all trouble be rewarded. —DR. J. R. HOUSEL.

ATLANTA SHOW.—A show, given under auspices of National Poultry and Bench Show Association, is set down for Jan. 18-21, at Atlanta, Ga. The premiums are $3, $2 and $1, with gold medal in each class, and a number of specials. A. K. C. rules govern.—R. J. FISHER, Sec'y, Atlanta, Ga.

FALL RIVER SHOW.—A dog show will be given by the Southern Massachusetts Poultry Association at Fall River, Feb. 8 to 11.—A. R. G. MOSHER, Secretary.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope. Sets of 200 of any one form, bound for retaining duplicates are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Foreman's Ned, Foreman's Noble, Foreman's Nat, Foreman's Nick, Foreman's Nell and Foreman's Nan. By C. Fred Crawford, Pawtucket, R. I., for black, white and tan English setters, four dogs and two bitches, whelped Nov. 5, 1886, by Foreman (Dashing Monarch—Fairy II.) out of Nellie II. (Count Noble—Rosalind).

Lady Newton, Miss Bend 'Or, Miss Newton-Obo and Lady Obo. By A. Clinton Wilmerding, New York, for four black cocker spaniel bitches, whelped June 5, 1886, by Young Obo (Obo II.—Darkie) out of Newton Abbot Lady (Bend 'Or—Ladybird).

Nell Elcho. By Freestone Kennels, Middletown, Conn., for red Irish setter bitch, whelped July 28, 1886, by Elcho, Jr. (Elcho—Noreen) out of Pequot Jess (Barry—Floss).

Pug Glencho, Garry Glencho and Flora Elcho. By Freestone Kennels, Middletown, Conn., for two red, white on chest, dogs and one red bitch, whelped June 23, 1886, by Sarsfield (Garryowen—Currer Bell II.) out of Maud Fisher (Glencho—Vic).

Robert Sarsfield and Josie Sarsfield. By Freestone Kennels, Middletown, Conn., for red, white on chest, dog and red bitch, whelped Aug. 26, 1886, by Sarsfield (Garryowen—Currer Bell II.) out of Noreena (Elcho—Noreen).

Flash. By Alden C. T. Smith, Chester, Conn., for liver and white pointer dog, whelped Oct. 16, 1886, by Young Faust (A.K.R. 779) out Nellie (Sensation—Flirt, A.K.R. 1245).

Bob Breeze. By Jas. H. Squire, White Plains, N. Y., for orange and white setter dog, whelped July 27, 1886, by Breeze II. (Gen. Ely's Breeze—Maud Dale) out of Stoddard's Dian (Stoddard's Breeze—Stoddard's Mag).

Miss. By F. A. Moore, Louisville, Ky., for fawn mastiff bitch, whelped May 7, 1886, by Ilford Caution (A.K.R. 2980) out of Countess (A.K.R. 2220).

Nick o' Demus. By Herbert B. Atha, Newark, N. J., for white and liver ticked pointer dog, whelped July 14, 1886, by Nick of Naso (Naso II.—Pettigo) out of Swet Brier (Pete—Belle).

Nick o' Time. By Fred H. Hatch, New York, for white and lemon ticked pointer dog, whelped July 14, 1886, by Nick of Naso (Naso II.—Pettigo) out of Sweet Brier (Pete—Belle).

Nick o' Las. By W. C. Earle, New York, for white and lemon ticked pointer dog, whelped July 14, 1886, by Nick of Naso (Naso II.—Pete) out of Sweet Brier (Pete—Belle).

Johnny IV., Madge II., Maud and Meg. By F. H. D. Viette, Ottawa, Ont., for lemon and white Clumber spaniels, one dog and three bitches, whelped Aug. 12, 1886, by Johnny (Ben—Joan) out of Madge (Ben—Joan).

Teddie. By Chautauqua Kennels, Sheridan, N. Y., for blue belton English setter dog, whelped March 16, 1886, by Ted Llewellin (A.K.R. 909) out of Marcella (Prince Pinebus—Stella).

Dixie Career. By J. A. Merrill, Rutland, Vt., for black, white and tan setter dog, whelped Oct. 6, 1886, by Pride of Dixie out of Belle II.

Gladcaster. By J. A. Merrill, Rutland, Vt., for lemon belton setter dog, whelped Sept. 14, 1883, by Doncaster out of Princess Louise.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Bess—Sarsfield. Freestone Kennels' (Middletown, Conn.) Irish setter bitch Bess (Glencho—Syren II.) to Dr. Wm. Jarvis's Sarsfield (Garryowen—Currer Bell II.), Dec. 14.

Cadess—Bayard III. Weimer & Lincoln's (Boston, Mass.) imported rough St. Bernard bitch Cadess (Cadwallader—Myra) to Wm. Blakemoor's Bayard III. (Bayard, Jr.—Hero), Dec. 12.

Edith—Shady. C. E. Gilchrist's (Charlestown, Mass.) cocker spaniel bitch Edith (Brush II.—Olivia) to F. H. Perrin's Shady (Obo II.—Darkie), Dec. 13.

Dot—Goodwood Rattler. P. P. Lewis's (Tarrytown, N. Y.) beagle bitch Dot (Ringwood—Maida) to Geo. Laick's Goodwood Rattler King Pat—Rowett's Sis), Nov. 29.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

J. H. F., Millville, N. J.—My four months old puppy has had the distemper about two weeks. I have put tar on his nose and given him fine salt and buckthorn syrup. He seems to be growing steadily worse; is so weak that he staggers badly and jerks himself down at times, and while lying asleep (apparently) yelps and howls continually. Ans. Watch the discharges and be sure your dog does not pass worms. Give five grains of quinine morning and evening. If fever is present give two drops of tincture of aconite every hour until the fever abates. If great weakness exists give teaspoonful of brandy in water every three hours. If the dog convalesces give five drops tincture nux vomica three times daily. Look carefully for worms. The next time you write sign your name.

Rifle and Trap Shooting.

Address all communications to the Forest and Stream Pub. Co.

RANGE AND GALLERY.

CHRISTMAS DAY SHOOTING.

BOSTON, Dec. 25.—The shooters were out in large numbers to the Christmas matches, and a large number of entries were made, but owing to the high wind there were comparatively few scores finished. Mr. J. Francis made a splendid score of 87 with a military rifle in the military match.

Decimal Off-hand Match.

J Francis (Mil), B	8	10	10	10	10	5	9	7	9	9—87
W Henry, A	10	8	7	8	8	8	10	9	9	5—82

SALEM, Dec. 25.—A rifle match, open only to the members of the Massachusetts Volunteer Militia, was shot here to-day. The conditions were 200yds. standing, Springfield rifle as issued by the State (no objection to the Buffington sight; trigger pull, not less than six pounds; rounds, five; Creedmoor target; entries, unlimited at four scores for $1; four scores to count; prizes, military medals of gold, silver and bronze; to all competitors making four scores of 20 or more, a gold medal; to all competitors making four scores of 21 or more, a silver medal; to all competitors making four scores of 18 or more, a bronze medal. No competitor was allowed to win more than one medal of a kind, but winners of the lower class medal may compete for the higher ones, but only with scores made after those winning the previous medal. The summary:

First Class.

W H Merritt	33 34 31 29—127	S R Ayers	30 30 28 23—111
W G Hussey	33 31 31 31—126	G A Wilson	31 27 25 25—100

Second Class.

G A Ropes	21 21 18 18—78	R W Ropes	26 22 14 11—73
Capt W M Ward	23 18 16 17—74		

Third Class.

C F Ropes	27 26 23 22—98	E C Ropes	21 20 19 18—78
Allowance off for rifle, 12	—86	Four points off	—69
A M Locke	24 22 17 16—79	C C Redmond	21 18 11 11—61

The association medals were won by A. D. Gardener first, and E. F. Ropes second. Following is the score:

A D Gardener	9	3	4	3	7	6	4	6	5	8—57
G A Lawrence	6	7	4	5	3	4	7	6	6	4—52
G A Wilson	3	3	5	8	7	3	4	7	4	5—50

Second Class.

E F Ropes	6	3	0	8	6	3	3	5	6	5—45
With an allowance for sporting rifle of 6 points										—39

State Militia Match.

Lieut W G Hussey	22	21	21	21
W H Merritt	20	19	19	18
G H Lawrence	21	20	20	19
Lieut G R Nelson	20	20	18	
W E Smith	21			
R D Ropes	19			
R B Dawson	18			

Lieut. Hussey takes one silver and one bronze medal; W. H. Merritt, bronze medal; G. A. Lawrence, bronze medal.

NANTASKET BEACH, Dec. 25.—A new rifle range has been opened at Nantasket Beach, near Strawberry Hill. Just at present there are but two iron targets, and shooting is confined to 200yds. Later on it is expected that two 500yds. targets will be in position. Next summer the new range is likely to prove attractive to militiamen. The first shoot of the Nantasket Gun Club took place to-day on the new range. The attendance was small, but the scores made were very high. The score of Mr. J. T. Jones, a member of the National Lancers, an excellent 47, led the field. Under the rule of the club, two points are allowed military rifles. The score:

J T Jones (mil)	45554-5455—49	J G Brash	4455553253—40
G S Sargent (mil)	5554553345—47	Chas J Raymond	4234545645—39

The silver prize was won by J T Jones on a score of 66 out of a possible 75.

MALDEN, Dec. 25.—Company L, Eighth Regiment, Malden Rifles, had a shoot at their range at the Bear's den range to-day, and a large number of soldiers from the different companies throughout the State were present. There was a strong wind blowing, which was very unfavorable to the shooters. The match was open only to members of the Massachusetts Volunteer Militia, distance 200yds., and was for the military badges of silver and bronze. Following is the score:

The Practice Match.

Capt F E Benjamin	5445545444—44	H H Comings	3424405353—30
Corp C F Cook	5534444444—39	Pvt E A Coburn	4343234432—32
Mus C W Flanders	4443443333—37	Pvt E Gibson	0344350334—29
Sergt C E McSorley	3344504445—36	C Fernald	0324344323—28

Sergt C F Hillicutt	4035543443—30	S M Spencer	0503222224—20

Conditions—10 shots per man, off-hand, 200yds.

Silver Medal Match.

Sergt W E Smith, Co D, 8th	21	21	21	—84
Corp C F Cook, Co L, 8th	21	unfinished.		

Bronze Medal Match.

Lieut Saunders, 1st regt	19	21	18—58
Priv F W Smith, 1st regt	18	19	20—57
Sergt C T Hilliker, 8th regt	20	18	—38
Priv J E Thompson, 8th regt	19	18	19—56
Lieut Smith, 1st regt	18		—18

The new house at the range has just been completed, and its conveniences were highly appreciated by the large number of military men who were present yesterday. It is understood that Company L intends to have practice matches at the range every Saturday during the winter months.

WAKEFIED, Dec. 25.—The challenge rifle match between a picked team from Company A, Sixth Regiment, Richardson light Guards and the Wakefield Amateur Rifle Association, was shot off at the company's range here to-day. There was a strong wind which made it very unfavorable to the shooters. The conditions of the match were 10 shots per man, 200yds. off-hand. The picked team of Company A scored 261 and the Wakefield Amateurs 257. There were several individual scores shot off by members present. At the clay-pigeon shoot George Curtis won the Dutton gold medal for the third time. At the close of the match the club disbanded and its property was sold by public auction.

REVOLVER SHOOTING.—A very remarkable interest in revolver shooting has arisen both in amateur and military circles, and the late improvements in this arm have made the possibilities of accuracy very high. Mr. Conlin, in his gallery at the corner of Broadway and 31st street, N. Y., is making a specialty of this line of shooting, and has, at request of a number of his patrons procured some of the first revolvers of American make, notably S. & W. .32-cal., 8 and 9in. barrel, .32 pocket, .38-cal. 5in. barrel, Russian Frontier model, and Colt's Army, Police, and double action .41-cal. Mr. Conlin has taken especial pains to get the most perfect and handsomest arms of this kind and the appended scores give evidence that both the American aim and the American revolver are reaching the highest point of excellence. Shooting at Massachusetts Association target:

	Possible 72.	Decimal poss. 60.		Possible 72.	Decimal poss. 60.
Capt I H Paine	70	57	P J Lauritzen	64	51
F H Lord	68	55	L H Livingston	63	48
A M Hamilton	67	54	J B Miller	61	45
D A Davis	66	51	G L Garrigues	61	44
J T B Collins	66	50	W B Young	56	39
Maynard Bisby	64	48			

Shooting at the French target:

	Possible 42.	Decimal poss. 60.		Possible 42.	Decimal poss. 60.
F H Lord	38	56	A M Hamilton	35	48
J T B Collins	38	54	George Bird	34	49

H W Wickham*	35	51	Maynard Bisby	32	48
Chas F Jones	35	48	S T Crosby	32	48

*At the word.

Shooting at the standard decimal target, possible 60: Wm. M. Chase 56, J. B. Miller 49, Chas. E. Blydenburgh 49, W. S. Bigelow 47, C. F. Jones 45, G. L. Garrigues 45, H. D. Blydenburgh 40.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

ALGONQUIN GUN CLUB.—On Dec. 16 two teams composed of members of the Algonquin Gun Club shot at live birds with the following result, birds killed with the second barrel (denoted by figure 2) to count ½:

Lordly	1211111211— 9	Dunsouth	1110221122— 7
Van Schaick	1111111111—10	Simpson	1111111111—10
Brenner	2101212211— 7	Ring	2011111111— 8½
Sauer	1110111111— 9	Gordou	1110111111— 9
Robertson	1011112101— 7½	Garside	1021121101— 6½
Stadzinsky	0001112111— 6½	Rinn	2202202002— 2½
H Leopold	2221112122— 7½	Von Twistern	1102111221— 6½
Gill	2012111111— 8	Tomlin	0010100001— 3
Auld	1121110011— 7½	Meyer	1011210222— 6½
	72		59

On Dec. 23 the following scores were made at live birds:

Gordon	1002011—4	Fountain	1111120—6
Dunseith	1212111—7	Griswold	0221101—5
J Auld	0200012—2	Hanna	1111120—6½

R Auld	2100020—2	Ring	1020011—4½
Van Schaick	1111120?—6½	H Leopold	1?010111—5½
Robertson	1121?001—5½	Sauer	1?011111—6½
Tomlin	1102?000—2½	G Leopold	1020?110—5½
Beach	010:0001—2½	Lamson	1111?111—7½

RIVERSIDE CLUB.—Topsham, Me., Dec. 25.—A few members of the Riverside Gun Club met at the club house on the fair grounds to-day to smash a few clays, bats and blue rocks, and few they were with the most of us, as the wind was blowing a gale from the northwest and cut like a knife and the actions of those birds would have puzzled the traditional Philadelphia lawyer to tell what they were going to do next. However, we did manage to surprise the scorer once in a while by getting one that we had courage to claim without straining our conscience too much. The following is the score for three club badges, 25 birds:

Alexander	1001111111110111101001111—19
A Q Goud	1101010111111001110?111101—18
Winslow	1000110110111010000100000—11
Keen	0011010111111000010001100—11
C Goud	0100100010100000010111111—11
Dunning	0001000010110100100010001—8

Ties on 11 at 21yds.: Winslow 001; Keen 011; C. Goud 111.

FLEMINGTON, N. J., Dec. 25.—The holiday shoot of Flemington Gun Club was witnessed by about 150 persons. The day was very windy and cold, making it very hard to stand around on the wet ground, which one had to do, as the club has no club house yet. The weather was so cloudy that most of the good shots made very poor scores. Shoot No 1, 3 live birds per man, was won by Fink with 2 birds. Shoot No. 2, team shoot, open only to members of the club, teams chosen by the winners of first and third prizes on Thanksgiving day, was won by Capt. Hyde.

BROOKLYN, Dec. 24.—The Long Island Gun Club held its regular monthly shoot to-day, at Dexter Park, Jamaica, L. I. The attendance was rather small, and the shooting was very poor. In the shoot, J. Tipping carried off the first prize and cup, killing 6 out of 7. H. Hughes and J. Vroome divided second, killing 5 out of 7. R. Monseer took third prize, killing 4, and R. Midmer fourth prize, killing 3 out of 7. A sweepstakes then took place, in which five competed—H. Hughes and L. Lanzer dividing first, and Tipping outshot Midmer for second.

ESSEX ASSOCIATION.—Newark, N. J., Dec. 24.—At a meeting held on the evening of Dec. 23 at Newark, N. J., by delegates from the South Side and Nimrod clubs of Newark, East Orange, Mountain Side and Orange Valley clubs, of Orange, N. J., it was decided to form an association to be called the Essex County Gun Association. The object is promotion of a friendly rivalry among the clubs composing it by competition at artificial flying targets. The shoots are to take place monthly, each club to be represented by a team of five, and competition will be for a prize offered by the Association, which will be known as the Essex County Gun Association Trophy. The officers elected were Lewis Bush, of the Nimrod Club, President; J. R. Burnett, of the Mountain Side Club, Secretary and Treasurer, and W. R. Hobart, of the South Side Gun Club, Manager.

NEWARK, N. J.—The pigeon match between William Graham the English champion, and C. W. Budd, of Des Moines, Ia., will be shot at Erb's, next Saturday. Budd is the representative Western trap-shooter, and Graham is the best in all England. The match, it is claimed, will be in earnest, as each man has a reputation to sustain and $1,000 is posted on the result. The match is at 100 birds each, 30yds. rise, Hurlingham rules. The forfeit of $250 a side has been posted.

THE NATIONAL GUN ASSOCIATION.—Macon, Ga., Dec. 24. *Editor Forest and Stream:* The third annual election of the Board of Directors of the National Gun Association will be held at Covington, Ky., Jan. 11, at 3 o'clock, P. M., in the office of the County Clerk. Each stockholder is earnestly requested to be present in person or by proxy, as the next year gives promise of being an eventful one in trap shooting. A good board of directors is necessary to insure success.—F. C. ETHERIDGE, Sec. and Treas.

MEDFORD, Dec. 25.—The winners in the usual Christmas shoot of the Wellington Gun Club were: Dickey, Sauborn, Steele, Wilson, Lawson, Schaefer, Bancroft, Payson and Snow.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

OAKLAND C. C.

IT seems as though the O. C. C. is to have a monopoly of the canoeing reports at this season of the year. As we Californians read the weather reports, ice, snow, 10° to 20° below zero and all that sort of thing, we are sorry for you, that's all. About 50° in the morning and from 60 to 70° at mid-day. Flowers in the open and strawberries for dinner to-day—Dec. 9—that's Oakland, and canoeing right along.

On Thanksgiving Day we had the second contest for the Edwards cup. The first was in every way so delightful that it was decided to cruise up to the Basin and repeat our picnic at the Dredger floats. A goodly party was on hand—eight canoes and three or four yawls—and we arrived at the floats soon after noon with a salt-water appetite for lunch. While the edibles were being set out the skipper of the Colombia made some experiments with the mainsail of the Mystic. The wind being light he hoped his little craft (15ft. ×27in.) might carry the fifty odd feet of the big boat.

It went very nicely at first, but the zephyr increased to a catspaw and the catspaw to a puff, and in a very few minutes we all concluded we were going to have a regular, steady, wholesail afternoon breeze. Well, Colombia had a time of it; she skimmed along nearly on her beam ends, and the Nautilus was manned to go out and fish out the skipper, as we all expected to see him cast into the briny; but he was game, shifted ballast up to windward, pulled in a reef in no time, and while the party held their breath to see how close one could come to a capsize without it, he luffed up triumphantly at the landing. About 1 o'clock, after a merry discussion of the good things provided, the second class canoes were brought to the line for the second contest for the Edwards cup. Waif, Falcon and Colombia only started. With a free wind to the first two stakes they kept close to gether, taking the lead by turns; but the wind soon fell very light, and when close-hauled the Waif with her big centerboard soon drew away from her competitors. The Falcon sailed the whole course, vainly hoping for a breeze which would make her tonnage count, while the Colombia cut across lots and did not turn the last stake at all.

As the party all had Thanksgiving turkey in mind, it was concluded to sail the first class race over a shorter course while the other was in progress, so that the day's sport could be ended in good season. Therefore, at 1:45 the larger boats were sent off, each canoe (except the Echo) being handicapped with a lady passenger, the Flirt carrying two. This was the jolliest race on record. Scarce wind enough to make a decent ripple, they glided along almost in a dead calm, the whalin ringing with merry song and laugh. On the windward work the craft necessarily separated somewhat and crossed the line about a minute apart.

Record of sailing race, second class; prize, the Edwards Cup (second contest); Nov. 25, 1886; course, two miles; tide, high about noon; wind, southwest, light:

	Start.	Finish.	Time.	Cor. Time
Waif, F. Tallant	1 28 00	2 20 00	52 00	52 00
Falcon, Abe Gump	1 28 00	2 30 00	62 00	62 00
Colombia, P. Conzalez	1 28 00	Did not finish.		

Same Day—Handicap with a lady passenger; course about a mile:

	Start.	Finish.	Time.	Cor. Time
Echo, W. G. Morrow	1 45 00	2 10 00	25 00	25 00
Mystic, W. W. Blow	1 45 00	2 11 00	26 00	26 00
Nettie, Chas. G. Yale	1 45 00	2 11 30	26 30	26 30
Zoe Mou, H. Darneal	1 45 00	2 12 00	27 00	27 00
Flirt, A. D. Harrison	1 45 00	2 13 00	28 00	28 00

The next excursion—two days later, Nov. 27—was the celebration of Arbor Day. Some months ago Joaquin Miller, the poet of the Sierras, commenced the agitation of the importance of tree planting—the renewing of our forests. He was warmly seconded by Gen. Howard, commanding this Department, Adolf Sutro, Governor Perkins, and many other leading men of the State; and the canoe club was invited to take part. The scheme was to assemble and plant young trees at the various Government reservations—Goat Island, the Presidio, Fort Mason, etc. The affair was a complete success. Thousands of citizens and the school children from San Francisco and Oakland made a grand picnic of it. Appropriate ceremonies were held at the several places and many thousand young trees were planted.

The O. C. C. engaged a tug and a large lumber scow to transport the guests of the club and the canoes were towed behind. They arrived at the island about 11:30 A. M., a little late for the poetry and speechmaking, but in good season to plant several hundred trees and have a jolly picnic. As they had with them the orator of the day, the Hon. John P. Irish, there was no lack of good things well said. A nice little breeze enabled them to cruise about the island in the canoes and small craft. As on a former occasion, the skipper of the Spray put in an appearance, after a long absence, so this day Mr. Engelbrecht again took us all by surprise by sailing his new canoe from the city and joining the fleet. A very pretty boat she is, too, 15ft. 10in. long and 34in. beam, with a long keen bow, the widest section being about a foot aft of amidships. Of course, no test of speed with the other canoes could be made, as the skippers were all very busy cruising about the island with the guests. About 3:30 P. M. they set out for Oakland, but the breeze soon died out, and the tug took the fleet in tow about a mile from the island. By 5 o'clock all the boats were housed, and another crop of new canoe enthusiasts wended their way homeward.

MYSTIC.

THE A. C. A. AND UNATTACHED CANOEISTS.—*Editor Forest and Stream:* Referring to the remarks of Idlemere in your issue of Dec. 2, I would like to ask why only 10 per cent. of the canoeists on Passaic River are members of the A. C. A. if they want a meet there or near by? Surely he does not suppose that the executive committee are going to locate a meet down there just to secure a few more members and their $2. I would think if they wish such a meet as he asks for, their plan would be to join the A. C. A., come to our meets, and by their numbers and interest taken show that they are entitled to consideration. This plan I think preferable, and more likely to produce the result Idlemere desires than to stand off in the distance and say, "Come here and we will join you." My intimacy with members of the executive committee for the past three or four years has been close, and I must say their sole aim has been to locate the meets where they would have the largest attendance and accommodate the majority.—Mc.

SAGAMORE C. C.—The officers for 1887, elected Dec. 6 are Captain, D. W. Ross; Mate, F. E. Passamore; Purser, F. I. Pettingill.

CANOES VS. SAILING BOATS.

THE controversy raised by Mr. Clapham's description of his boat and her performance has excited much interest among boating men, and the discussion has gone so far beyond its original limits that we had changed its title before the receipt of the following letter, which brings up several important points. That the small sailing boat of various models has its good points is conceded by all canoeists, and also that for certain purposes various boats are superior to the canoe; but Mr. Clapham and the others who condemn canoes as unsafe, and advise canoeists to adopt various other craft, all overlook the important fact that the narrow canoe and its few friends have built up a large and powerful pleasure navy, have established the sport of canoeing on a national basis, have forced a recognition for it everywhere. Rowboats and sailboats have existed for years before the narrow canoe was thought of; but what have they done to-day that will compare with the progress of canoeing since 1871; and what condition would boating, camping and sailing, on a scale that is within the reach of all, have been without McGregor in a 36in. boat and Baden-Powell in one only 2in. wider. We, the canoeists of the United States, Canada and Great Britain, have given an impetus to real Corinthian sailing, to camping, to outdoor sports of the water and of the field, as well as to the collection and diffusion of facts relating to geographical research, and to the laws which govern the design and construction of vessels large or small, such as probably no other body has ever equalled. Now, Mr. Sneakbox man, Mr. Rowboat man, Mr. Sharpie man, we are willing to race with you and to listen to all fair suggestions; but do allow us to believe that we know what we want, that if we are capable of designing, building, racing and using successfully a certain kind of boat, we are also capable of judging whether or no it is the best possible boat for our, not your, purposes.

Editor Forest and Stream:

I am a very interested reader of the canoe department of your paper. I have been interested lately in the discussions of "Wide vs. Narrow Canoes." Now I think that these discussions are all right and should be encouraged, but it is my humble opinion that this subject should be headed "Sailboat vs. Canoe," instead of the title it now bears; not that there are no wide and narrow canoes, but that a canoe is a canoe and a small sailboat of over 36in. beam has no right to be called a canoe. I consider, and I think others will agree with me, that a canoe between 32 and 36in. beam, is "wide," and anything under 28in. "narrow," taking the length to be 15ft. A man may get as much pleasure, but I think no more, out of his craft with 40in. beam as another does out of his canoe of 30in. beam, providing the sailing is done on a lake or wide river; but the man with the narrow canoe can navigate a narrow, rapid stream, with much more ease and comfort than the other with the wider craft. And now I would like to ask what a canoe is for if it is not to carry its owner over rapids, down narrow, swift rivers, as well as on the broad rivers and small lakes! But I suppose I have said enough to rouse these "wide" canoemen already, and so I will leave the subject. I am surprised that in the discussions of canoes more has not been said of the merits of the canvas canoe, for I believe it possesses many. I think that many who would like to own good canoes are prevented from doing so on account of the cost, and that most of them, if they were told about it in proper manner, could construct good serviceable canoes that would give them as much pleasure, if not more, than their more wealthy neighbor with his $150 canoe; nor need these canoes be much, if any inferior to his, if they are properly made. I would much prefer a good canvas canoe to any good cedar canoe I have seen. I know a canvas boat will not last as long as a cedar canoe, but if the frame is strong and well formed, the only extra cost need be for new canvas with which to replace the old. L. H. K.

EVANSTON, Ill., Dec. 20.

Editor Forest and Stream:

I have been much interested in the controversy between the advocates of wide and narrow canoes. Mr. Clapham seems to be holding up his end pretty well, not only with his pen, but what is more important, with safe, comfortable light boats. A light boat that one man can handle in and out of the boat house and on the water is a desideratum. If she shows speed she is a jewel and is not to be sneered at. That Mr. Clapham's Red Jacket possesses these good qualities and more of the same sort has not yet been disputed. As to the ability of a narrow canoe to sail away from a Philadelphia ducker, the matter has been very ably discussed by Mr. Work. I have sailed in company with three or four of these boats all of last season and I considered it a streak of rare good luck if I ever got to windward of them. Two canoes, owned and sailed here, would lose about a quarter of a mile in every mile of windward work. I do not claim that those canoes were first-class racers. They did not carry ballast. Neither did I when the canoes were out with sail set. I used a 60lb. open rowboat, minus the oars.

Mr. Schamp, in your issue of Dec. 16, asks about a good form of centerboard. What is the matter with the weather grip? I have probably used this form of board during the past season quite as much as any one else, and there may be those who would like to know how it works. My boat is a lapstreak rowboat, built exclusively for rowing and hasn't a suspicion of decking from stem to stern. When I built her, two years ago, I had no more idea of ever stepping a mast in it than I had of putting wheels under it and using it for a street car. It is 12ft. long, 34in. beam, 12in. deep amidships, and 20in. at bow and stern, sharp at both ends.

Last spring I conceived the brilliant idea of trying to sail. I rigged her with a lateen sail of 28ft. This did very nicely for a couple of weeks, until I began to learn a little about sailing, and then added a leg-of-mutton mizzen of 10ft. About this time I began to keep company with the rest of the boys, excepting dead to windward. I had a 1in. keel and no centerboard. I could not go to windward with any degree of certainty in short tacks. I then put on two leeboards, one on either beam. In a fresh wind the water would pile up between the board and the boat, and finally pour into the boat. This would happen about the time the boat was heeling at the proper angle to sail fast. The next move was to set the boards out 4in. from the side of the boat. This was an improvement, but the water would still pile up and occasionally slop over into the boat. The next improvement was the "weather grip," rigged out from the boat, one on each side. The first time I went out with the weather grips on it seemed as though I had taken aboard about 50lbs. of ballast. The wind seemed to have lost its power to heel her over. She went to windward nicely, and stood up to her work when the duckers and tuckups had in one reef. I then increased the size of both sails, giving a total area of 56ft., and with this rig I sailed about five or six times a week throughout the season. Was out sailing about 100 times. Carried ballast to the extent of 40lbs. on five different occasions, and 15lbs. twice. Was single-reefed twice and double-reefed once, on which occasion shipped about 3 gallons of water in a 2-mile run before the wind. That was the only occasion on which I took in more water than the sponge would take up after applying the weather grips. For any ordinary weather my sails were too small. That was the universal opinion of those who sailed the other boats. I will increase my sail area considerably next season. Those who have used ordinary centerboards in such small boats as mine can judge about how much sail I could carry without the weather grip, on such a treacherous river as the Schuylkill, where the wind is liable to blow from every point of the compass within two minutes. It is a standing remark among those who know something about sailing elsewhere, that "any one who can sail on the Schuylkill can sail anywhere."

NORRISTOWN, Pa., Dec. 22. E. A. LEOPOLD.

Editor Forest and Stream:

I have just finished reading Mr. C. L. Work's article on wide canoes. Mr. Work thinks that the past season was my first. First at what? Sailing or canoeing? I was sailing on the Delaware in duckers, skiffs, etc., for about three years before I ever owned a canoe. This kind of sport never did agree with me. You would always get a crew that had a liking to the keg, which would be stowed high and dry somewhere in the boat under the pretense of "ballast," but poor ballast it makes on the return trip. You will generally find a hilarious and noisy crowd when homeward bound, which sometimes winds up with a fight or a case of drowning. His speaking in such a confident manner leads me to suppose that he was present at the time, when he says that the duckers I beat were open boats. The only one that was open carried 16yds. and had a centerboard. The three I met in midstream informed me that they came from the Kensington slip; of the other two I did not inquire their locality. In my article of Dec. 2 I admitted that a wide boat could outsail a narrow one, but I wanted to convince Mr. Clapham that a narrow boat can get the lead and keep it.

Does he think it only a little credit when a canoe can beat a semi-professional racer? It would be little credit if the ducker had a green hand at the helm; but having the hand of a good sailor at the stick, and beating him, is something worth crowing over.

I have been sailing canoes for the past three years, and think I can sail one in its native element better than on paper.

In my article I have not enumerated how many duckers beat my canoe. Ten chances to one a ducker can beat a canoe on account of her beam and superior sailing qualities.

Mr. Work says that canoeing has not met with favor on the Delaware. If canoeing has not met with favor how could the canoe clubs here keep up their organization? We have now three canoe clubs here, with something like 40 or 45 canoes, also a number of unattached canoeists. Is not this a fair showing for the canoeists on the Delaware? The Q. C. C. C. will probably inaugurate a scheme which will prove an immense lever to canoeing interests of this city, namely, a canoe meet on this river, which will place canoes on an equal footing with the larger and wider boats. If there should be a meet I would be pleased to try conclusions with a ducker, especially the one that can go two feet to my one.

Then he says, "The owners are boys (they look like boys in their knickerbockers) or gentlemen who know little of boating." Now, I would like to be informed how many of them know little or nothing of boating? Also how many of them have already graduated into larger and better boats? Of all the canoeists that I am acquainted with (numbering about twenty) not one thinks for a moment of owning a ducker. If they want anything larger than a canoe they prefer the canoe yawl or small yacht. As a rule most of the canoeists have sailed wider boats, from schooners down to catboats. Of the twenty about five never sailed any boat before they owned a canoe.

Tuckups and duckers generally meet at the same place. But why is any other type of boat out of place? Mr. Work speaks as though the boats he mentions are the only ones that travel in fleets. Do not canoes travel in the same manner?

Editor Forest and Stream:

A stranger reading Mr. Schamp's letter of Dec. 6 might infer that there are no sailing skiffs owned in this vicinity which are fit for anything but fire wood. If he desires to meet foemen worthy of his steel he might drop down the river to Black Rock Harbor any fine Sunday afternoon next summer. His boat is indeed a marvel if she can get away from some of our crack boats on the river. Very few good sailing boats are found on the lake here, and he probably had little difficulty in beating the ordinary keelless and under-rigged tub let by the various lake boat houses, which, though admirable in their way, are by no means considered flyers. I infer from his description of the "sloop-rigged catboat" (Ahoy there! Mr. Editor), the craft he beat was the notorious Arrow which was cremated by the yacht club as utterly worthless after drowning several men, her last caper being an upset in a summer puff, when her crew had the pleasure of drifting around on her bottom for several days, deriving sustenance and amusement from fruitless endeavors to get her mast out and right her. They were finally rescued by an expedition sent out by the yacht club. A stranger might also infer that Mr. S.'s boat could stand as much wind as the 45ft. cutter Vera, renowned for her weatherly qualities, and able to drown out the majority of the yachts here. It may interest Mr. S. to learn that the cutter could have carried all her kites with ease on Nov. 21. The reason she was triple-reefed (not double-reefed) is this. On her way to Buffalo an unexpected shift of wind caused her to jibe, carrying away her mainboom, and in order to return to Port Dover with the shortened stick, the Vera's crew triple-reefed the mainsail. A gale is her delight, and she frequently goes out for fun when our large three-and-afters are compelled to send under close-reefed foresail with peak settled, which is good time for small open boats to be in the house.

BUFFALO, N. Y. PERCH.

TORONTO C. C.—The annual meeting of the Toronto C. C. was held in the club house Dec. 15 inst. The secretary-treasurer's report showed the increase of membership from 17 to 33 active members and also a good balance to their credit in the bank, and it was the general opinion that the goose hung high with the T. C. C. just now. A heated debate took place on the proposed clause to appoint the regatta committee to look after club cruises, *i. e.*, to appoint the days, etc., instead of having the first Saturday in every month for cruising Saturday, and on which you cannot have club races. This has been found to work very unsatisfactorily, as there were several Saturdays during the season entirely wasted. The club knew they were not going to cruise, and yet were debarred from racing by the rule. A few of the members who do not race, but cruise whenever they can, were afraid that a regatta committee would take up every Saturday with races, but on counting noses it was found that every one of the racers was in favor of more cruising; and more cruising we must have, for while only three or four have a chance for a place in the races every one is on a par while cruising, and the youngest or oldest member can go on a cruise and feel that he is having a good time, while if he enters a race and takes only tenth place he feels that he hasn't a show with those other fellows, and will consequently lose interest in the club if there is not something else that he can take a hand in to keep up his spirit. The question was left over. Ballot papers were then distributed and the election of officers proceeded with, with the following result: Commodore, Hugh Neilson, re-elected: Vice-Com., W. B. Raymond; Secretary, W. G. McKendrick, who could not accept and retired in favor of J. B. McLean, who was unanimously declared elected; Executive Committee, Jno. L. Kerr and W. G. McKendrick; Regatta Committee, W. A. Leys, W. G. McKendrick and D. B. Jacques. Com. Neilson, in moving the adjournment, referred with pleasure to the handsome display of cups, prize flags, etc. (among which there were 34 won at A. C. A. meets) with which the room was decorated, and he hoped that in the future as in the past the club would keep up their record as paddlers, as sailors and as cruisers, to which we all said amen! and with a good song broke up for the evening.—MAC.

ROCHESTER C. C.—On Dec. 14, the Rochester C. C. held its fifth annual election. A new constitution and by-laws were adopted. The election of officers resulted as follows: Captain, H. L. Ward; Mate, W. B. Williams; Purser, Geo. H. Harris; Measurer, Angus E. Huther; Executive Committee, Samuel C. Eaton, H. J. Wilson, C. F. Wolters; Regatta Committee, F. F. Andrews, H. M. Stewart, Geo. W. Gray. There are now twenty-five active members and two proposals for membership. Four years ago the Rochester C. C. was organized with only four members. It now occupies two spacious club houses at Irondequoit Bay, but they are not large enough. The Executive Committee has in charge several important improvements, the principal of which is the enlarging of the canoe room and the sleeping apartments. The club held seven regattas last season, and are all well pleased with the satisfactory results attained. The membership of the club is limited to fifty members. After the business of the evening had been transacted, the members adjourned to Elmore & Carmody's Café, where an elaborate collation had been prepared. In the center of the long table there was placed a handsome floral design in the form of a miniature canoe laden with fruit, and emblematical of the prosperity of the club. The following toasts were responded to, Matt J. Angle acting as toast master: "Our club as it was, as it is, and as it will be," George H. Harris. "The retiring board of officers," C. H. Moody. "The new board of officers," W. B. Williams. "Our racing fleet," F. F. Andrews. "Our cruising fleet," H. J. Wilson. The newly-elected captain, H. L. Ward, was not present, being in Mexico in charge of a government vessel, but he will return in time to open up the season.—B.

THE DELANEY BILL TO THE A. C. A.—Brockville, Dec. 15.—*Editor Forest and Stream:* My attention has just been drawn to your report of the meeting of the Executive Committee of the A. C. A. and the Delaney bill against the Association. There is one item for a load of stumps, $2.50, which might, from the way it is put, be misleading, as it looks now as if the Brockville C. C. got a load of stumps for its members without paying for them. The members of the B. C. C. neither collectively nor individually ordered or received any wood from Delaney. There was a campfire held one night back some distance from the Brockville camp, I think on the day Delaney makes this charge, and possibly this item may be for the fuel for that, but the stumps were certainly not got by or for our club. By giving this an insertion in your valuable columns you will oblige JAMES MOORE, Commodore Brockville Canoe Club.

QUAKER CITY C. C.—The Quaker City C. C. held a special meeting on Dec. 7, to consider the subject of a club dinner. Messrs. Jackson, Munchen and Barten were appointed on the committee. Mr. Jackson resigned in favor of Mr. Leary. The committee will also consider the offer of a boat house, and if favorable, the house will be built in spring. A new member was elected, and the dates for the meetings were changed to the first Tuesday of every month. The regular meeting for the election of officers will take place on Dec. 30.—J. A. B.

THE SITE OF THE A. C. A. MEET.—Bow-Arrow Point, the probable camp ground for 1887, is the most southerly extremity of North Hero Island, extending into the Gut, between North and South Hero islands. It is about twenty miles distant from Plattsburg, N. Y. The locality is shown in detail on Government chart No. 1 of Lake Champlain.

CLUB DINNERS AND CAMP-FIRES.—The New York C. C., in place of their annual dinner, hold a Christmas camp-fire to-night at Clark's, 22 West Twenty-third street, at 8 P. M., to which all their friends, ladies included, are invited. We have received invitations from the Washington C. C. to a camp-fire on Jan. 3, and from the Rondout C. C. to one on Dec. 31.

Yachting.

Address all communications to the Forest and Stream Pub. Co.

CRUISE OF THE COOT.

XXXI.

(Concluded.)

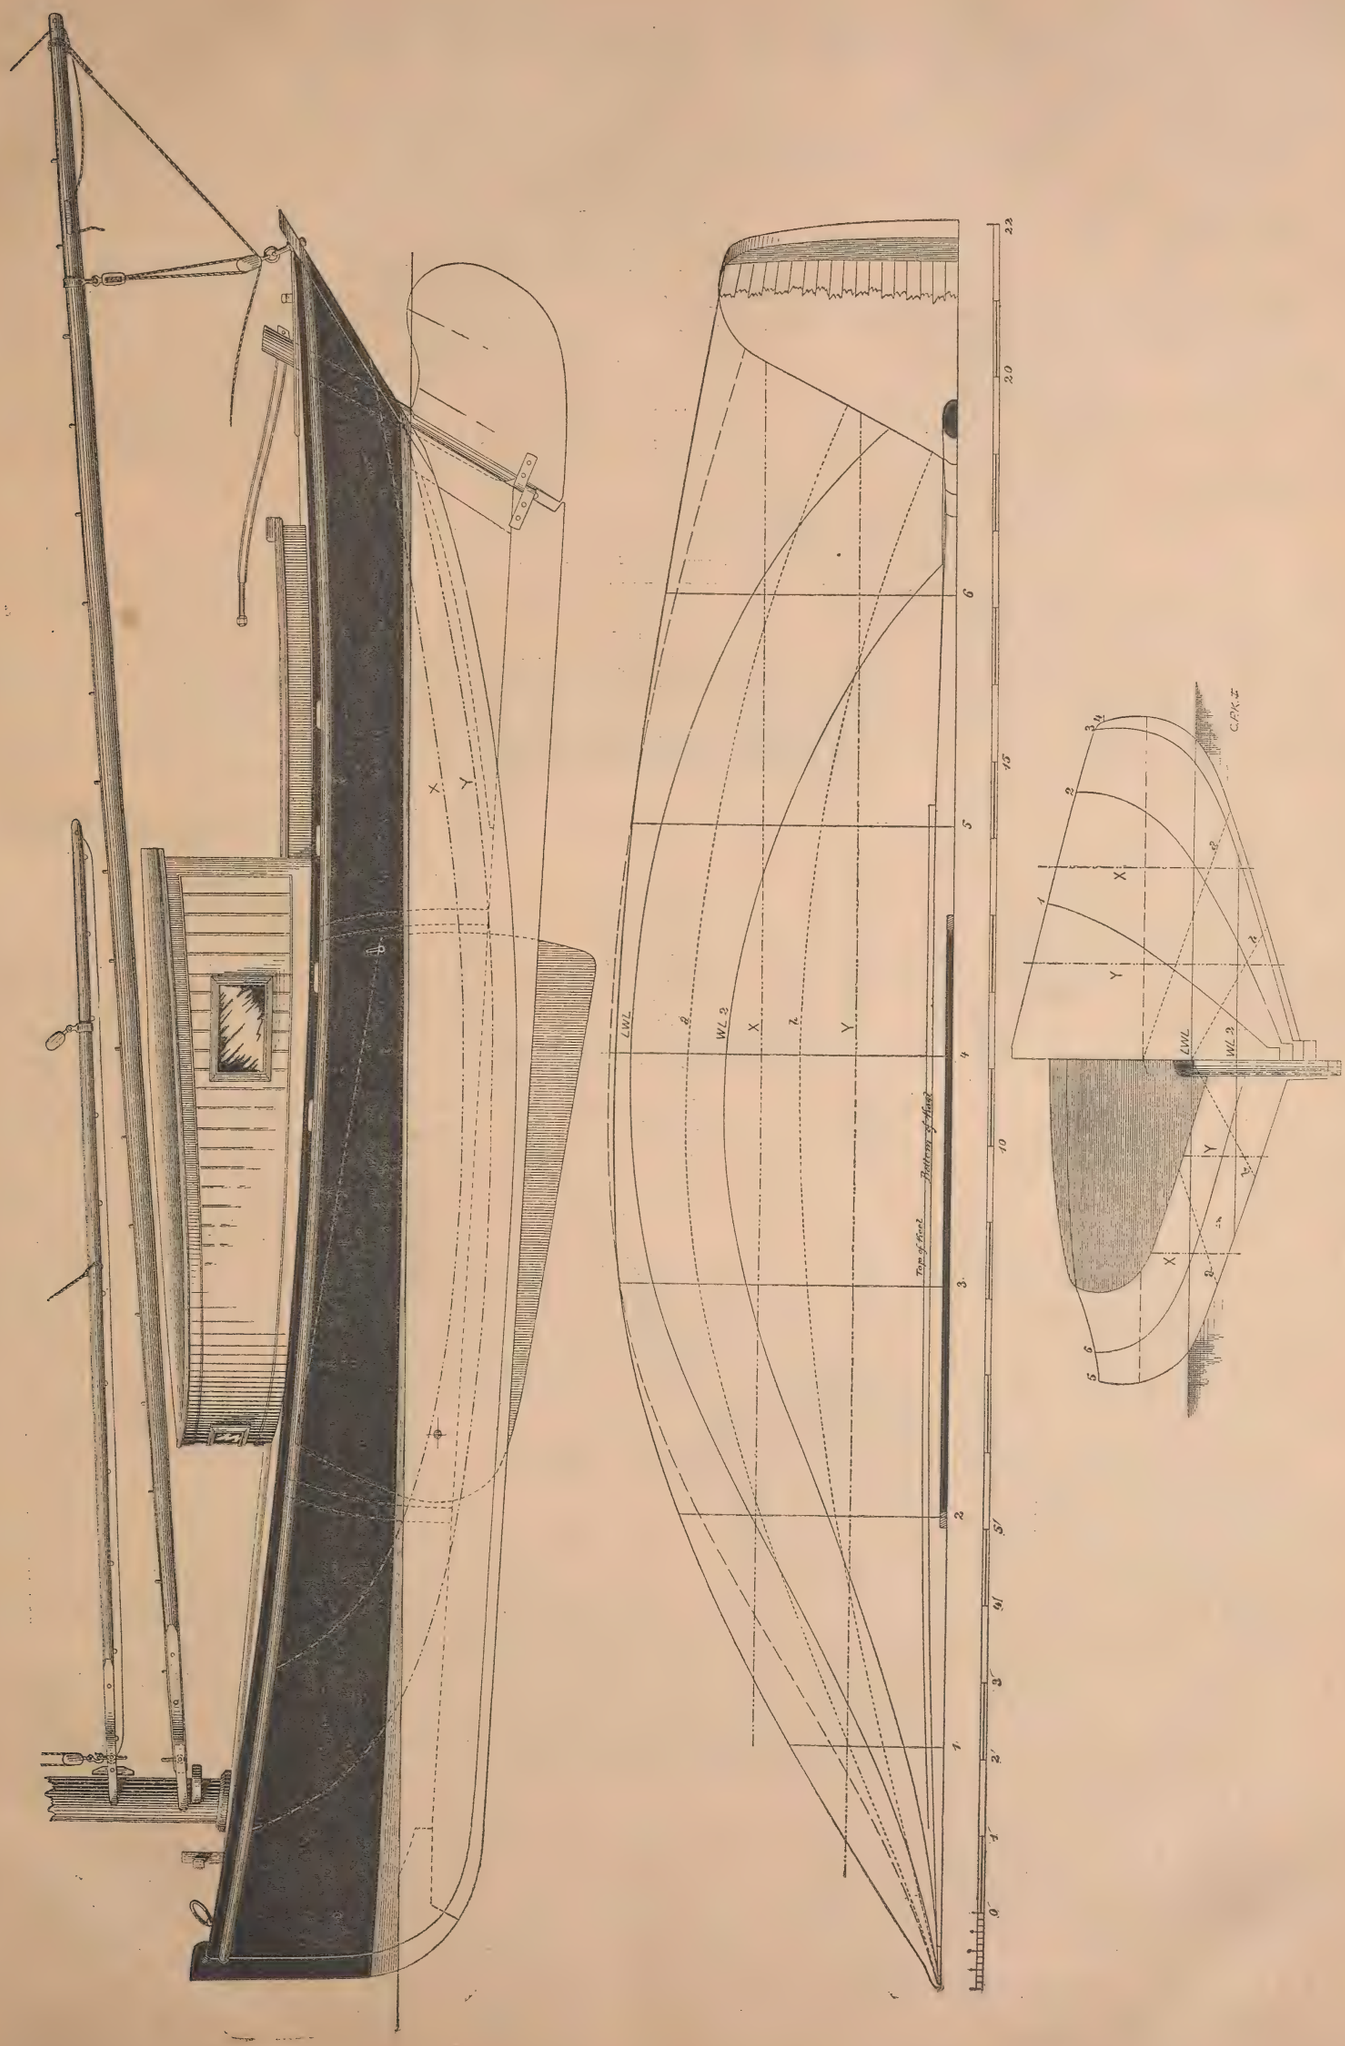
THE 8th of June saw the Coot homeward bound. With Mr. Lewis, who attends to the wants of shipping at Beaufort, for pilot, the inshore slew was attempted, leading to "the narrows" forming the lower entrance of Core Sound proper. After some light bumping, the boat got clear of the oyster reefs and shoals and sailed through the winding channel between Harker's Island and the mainland without trouble, as the government stakes are still standing. There is 5 to 6ft. in the channel of Core Sound. With a chart no trouble should be experienced in getting through. The Sound is about 20 miles long and makes quite pretty sailing. There are many snug harbors for small craft, and several settlements at which plain stores can be procured. The Sound, with the banks sheltering it from the sea, has become the last and chief refuge of the duck during winter. Geese are also plentiful and wild swan not uncommon. As yet there is but little shooting done, the ground being almost virgin, owing to its inaccessibility. With the influx of sportsmen from the North, certain to come in the near future, propellers will be put on from Norfolk and the value of stands will increase enormously. It is to be hoped that responsible clubs will secure the rights of the shores before the ruthless pot-hunters and city cockneys ruin the sport by reckless and illegal slaughter, as they have done elsewhere. Mr. Pike, of New York, at one time owner of the schooner sharpie Elsie, has become the owner of Harbor Island at the northern entrance to the Sound, a little lump of sand, purchased for a nominal sum, which some day will bring thousands for hotel or club purposes. There are three other islands close by which will no doubt be picked up for their prospective enhancement. At present they can be had for a few hundreds. Core Sound is of the same character as Currituck, but larger, and according to all accounts affords even better sport. The sharpie has been introduced in Beaufort waters through the instrumentality of Mr. Ivins, and is unquestionably the type of craft best adapted to purely local purposes. The shoals are very extensive with 2 to 5ft. of water, and only the sharpie can be navigated all over. Round bottoms would have to confine themselves to the channels and are for that reason of limited service in Core Sound, though much better fitted to cope with the rough waters of Pamlico and Albemarle. From what I saw of these inland seas I should not care to be caught out in any flat bottom. The Coot was bad enough, but a sharpie in the hollow seas of Pamlico would quickly come to grief without a harbor handy to run for. In Core Sound it seldom makes up so bad but what a small sharpie can be sailed. It is three to four miles across, and unless it blows hard up and down the Sound, the sea is of no great consequence. On the chart a thoroughfare is marked leading into Cedar Bay, connecting with Neuse River at the mouth. I tried this passage but found less than 2ft., and had to give up the idea of skirting the shore back to Stumpy Point Bay. So Harbor Island was made for the night preparatory to crossing Pamlico. Next morning I got out early and was fortunate in striking a light day. The distance across to Bluff Point is 25 miles. From the low deck of the Coot no land was in sight during part of the passage. Royal Shoal Light is about half-way across. This mark was passed during the forenoon, and then I shaped a course for the Long Shoal, edging over first to catch sight of some land mark. The lone cabin-house at the East Bluff served for this purpose. More wind came from the southward and the Coot bowled along with a streak of foam in her wake. The regulation squall made up for the afternoon, but passed over in half an hour with a deluge of cold rain. The Coot wallowed along under bare poles while it lasted.

All the afternoon there was a fine breeze, not strong enough to raise much sea. At the Long Shoal it came down pretty hard and the sail was close reefed. Then the sea rose fast, but I hugged the shore when round the shoals and got something of a lee, so that Stumpy Point was made at dark, after a grand day's run of sixty miles in fourteen hours. There I redeemed my skiff, which had been picked up by some of the fishermen, who preserved her in expectation of my return. Next day I got as far as Peter Mashew's Creek, at Croatan Light, and put in for the night. The fishing season had closed, but I gathered some interesting facts from a native concerning the largest fishery in the country. The plant is valued at $10,000, and consists of buildings, nets, steam engines, steam launches and boats. The concern cleared $8,000 above all expenses this year, which may be considered good business. The net is 2,000 yards long, with nine coils of rope attached at each end. It stretches clear across Croatan Sound from Peter Mashew's Creek to Roanoke Island. Shad and herring constitute the catch. The season lasts three months, and seventy-five hands are employed. One-third of the net is renewed every year, the twine coming from Boston.

Another fine run of 55 miles took me across Albemarle Sound, up North River, through the cut-off into Currituck, up that Sound and into Blackwater River for the night. Hitched on to a timber raft through the Albemarle Canal and reached the lock at Elizabeth River at 1 A. M., sailing down to Norfolk next forenoon. Met nothing but light and contrary winds up the Chesapeake and Delaware, with many days of absolute calm. Philadelphia was reached in thirteen actual sailing days from Norfolk. At the Quaker City I was very kindly received by your correspondent, Capt. R. G. Wilkins, at Cooper's Point, who placed a buoy at my disposal and looked after the yacht when I was away. Many friends welcomed me home, and I was sorry to leave for the last stage of the voyage. At Bordentown, Mr. Ferry, of the smart sloop Nahma, of Trenton, met me with his buggy. The Coot's line was hitched to the after axletree, and away we spun up to Trenton, passing through the locks without difficulty, thanks to the aid of the gentlemen who came to my assistance. Without wishing to underrate the intelligence of the average canal mule, it must be confessed that Ferry's mode of towing was a decided improvement upon the customary practice. Some pleasant days were spent at Mr. Ferry's house on the banks of the Delaware, and I had a chance to inspect the Nahma. This sloop has won many prizes in good shape from the Delaware fleet of racers since she was modernized by the addition of a long overhang and an iron keel. Her centerboard is entirely below the cabin floor. Mr. Ferry has also introduced an automatic topmast fid, which works to a charm and does away with sending a man aloft.

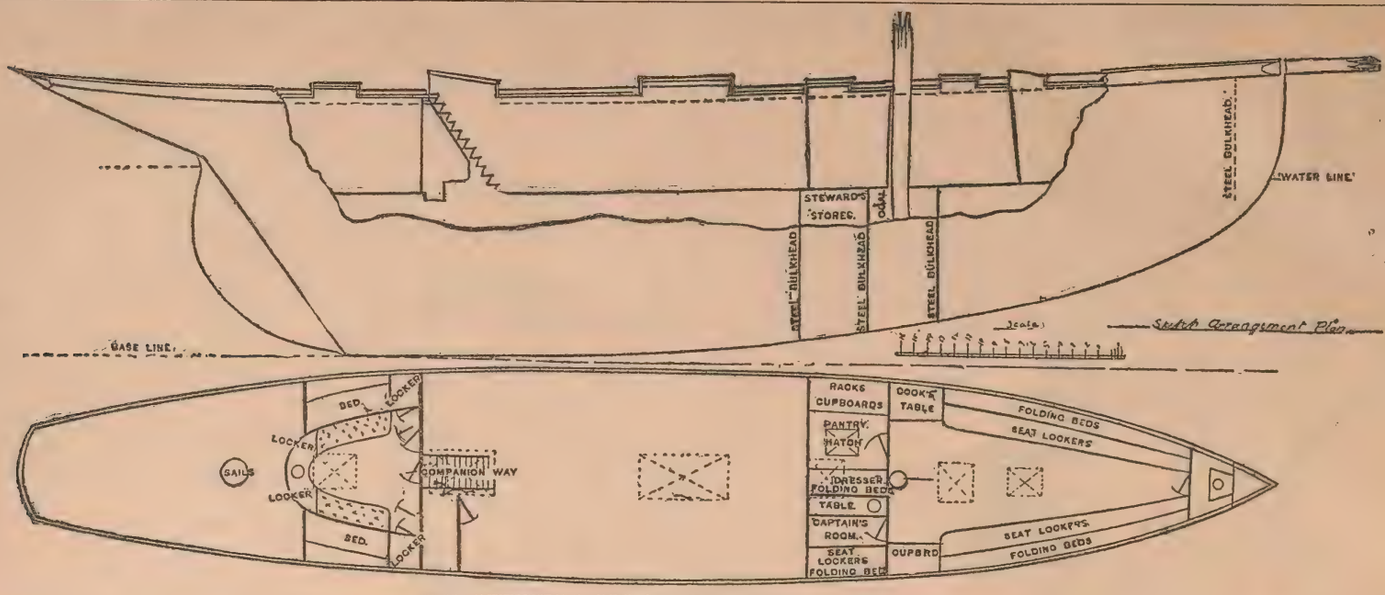
The rest of the canal was then passed through with two very narrow escapes from being crushed between loaded boats, owing to the stupidity of the driver. I was glad when the last lock closed upon me and the boat dropped down to the level of the Raritan once more.

A day later the Coot was riding to her moorings off West Brighton, and the fifteen-hundred-mile cruise, singlehanded, had been brought to a successful termination.



I had lived aboard for nearly eight months, had slept in a shore bunk two nights only, and taken but three meals on dry land until my return to Philadelphia; had not one hour's sickness; gained about twenty pounds in weight; enjoyed the voyage hugely, and regretted that all good things must come to an end.

It is not advisable to try a similar cruise in a boat like the Coot. Safety should be the first consideration. A keel boat with enough outside ballast to make her uncapsizable is the only tool fit for such work. A draft of 3 to 4ft. will never be an objection, and 5 to 6ft. could be carried anywhere but into Stumpy Point Bay. The Coot did "smell the bottom" occasionally, as this log has set forth, but this was the consequence of her model, which compelled me to skirt the shore and lay by many a day when an abler craft in a sea and a safe boat would have permitted cutting off corners.



As to rig, the cat is unfit for open water. Head sail of some kind is far preferable. With the mast stepped some distance aft, as in sloop or cutter, you need not resort to acrobatics in handling the sail. Any man who is not an adept gymnast would have been tossed out of the Coot upon several critical occasions I can remember. In general, the cat rig, for many reasons, is a lubberly contrivance for real work. Its very simplicity is its chief fault, for the rig is incapable of sufficient adaptability to the requirements of open water cruising. Next time I sail it will be in a loaded keel with a jib.

One word as to stoves. A kerosene stove is rank poison in a cabin closed tight. It impoverishes the air and brings on vertigo and palpitation of the heart. For heating the cabin, make use of a light sheet iron cylinder with a funnel to carry off the gases through the cabin top. Burn only coke, which is clean and can be carried in a gunny sack in the cockpit locker. C. P. K.

AN OPEN OCEAN RACE.—Next year being the fiftieth of Queen Victoria's reign, will be generally celebrated in England. The yachtsmen have already taken their part in hand, and the Royal Thames Y. C. have decided, at a meeting on Dec. 22, to offer a prize of 1,000 guineas for an ocean yacht race, to be open to the yachts of the world. The details will not be decided on until the January meeting, and it is not yet known what the course will be.

LINES OF THE "COOT."

THE "THISTLE" LINES.—From the Boston *Herald*, Dec. 25.

A SHARPIE ON THE GULF COAST.

Editor Forest and Stream:

It would be strange if no tar had stuck to my clothes during my many voyages on water, salt and fresh, blue, green or mud color; at least I have learned to know what kind of sailing pleases me best, and for the benefit of those whose tastes are similar I will give you an account of a successful attempt to gratify my liking for a light draft boat. My cruising ground nowadays is along the coast of the Gulf of Mexico, between Mobile and New Orleans; headquarters being in Biloxi Bay.

I wanted a boat equal to the task of facing a stiff wind on the Gulf, in case I should be caught out in one; and at the same time of so light a draft as to be able to cross the many shallow bars at the entrances of bayous and creeks. Having plenty of time to study the question before the moment of action should come, I studied the yachting department of your valuable paper, letting naught escape me, and many were the hulls and sail plans that adorned my sketch book ere the day when the lines of the Marguerite were drawn, "life size," on the floor of the big verandah of our winter home at Ocean Springs, Miss.

This craft was designed according to ideas derived from the writings of one of your most frequent contributors, Mr. Thomas Clapham, to whose unconscious aid I attribute her success. Practical hints and clear statements of general principles were not all the assistance I got from Mr. Clapham's writings. There was also the inestimable advantage of having a quotable authority with which to crush the opposition of others interested in the boat and doing the biggest half of the work involved, and often inclined to do some of the planning as well.

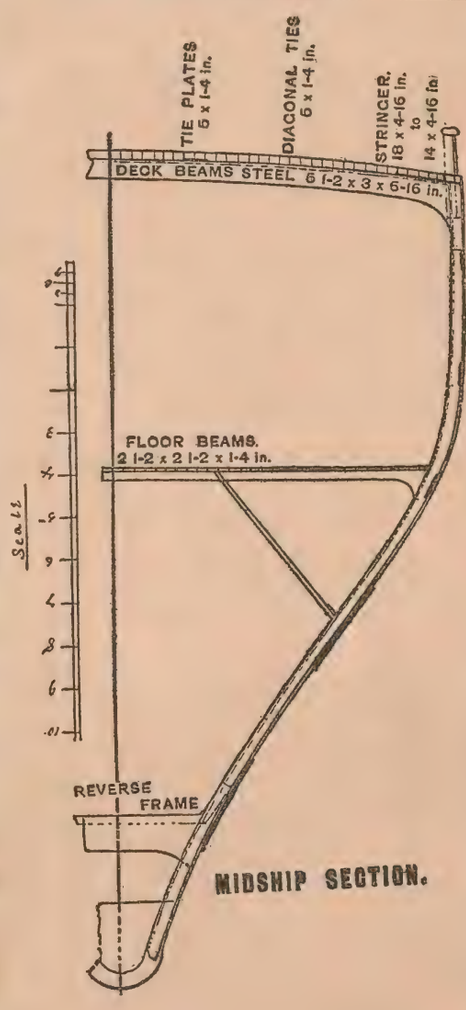
The Marguerite is a sharpie built entirely of yellow pine. Her dimensions are as follows:

	Ft.	In.
Length over all	20	00
Greatest beam (on deck)	6	07
Greatest beam (on bottom)	5	02
Breadth of stern (on deck)	5	07
Breadth of stern (on bottom)	4	01
Depth at bow	2	00
Depth amidships	1	08
Depth at stern	0	10
Rise of bottom from after end of centerboard box to stern	0	10
Rise of bottom from after end of centerboard box to bow	0	04
Length of centerboard	6	06
Drop of board	3	06
Length of rudder	2	00
Width or rudder	1	02
Distance of mainmast from bow	4	00

The rudder is hung on an iron fork passing through the boat at a point one foot from the stern, and having very little if any rake, after the manner of balance rudders. Just aft the rudder post is a step for a driver mast. There are two skags, one reaching from the centerboard aft to rudder with greatest width 10in. and one reaching from centerboard forward with greatest width 4in. This last put on at the urgent advice of Creole builders, but in my opinion only useful in receiving the wear and tear of scraping on oyster shell reefs when we suddenly bump on them. While building we were visited by several Creole builders, and by one Norwegian who has been very successful with small sail boats. All agreed that she would be fast and able, though they had never seen one like her. The Creoles are very skillful builders of "sailing skiffs" as they call them; being in fact sharpies with shallow keel and a good deal of deadrise, as well as considerable spring to the bottom. They are generally cat or lugger rigged.

When our boat was finished the season was so far advanced that we concluded to try her with a jury rig. I found an old catboat sail, 8ft. hoist, 12ft. on the gaff and 19ft. on the boom, a ragged, baggy, villainous old sail, and a small jib about 8ft. long and 5ft. in greatest width. These I fastened on to her spar with such odds and ends of ropes and marlin as came handy. I forgot to mention that she is decked for 7ft. forward, 4ft. aft and 6in. on each side, and has a 3in. coaming.

Our first trip was in a furious gale, so that we had to double reef mainsail, and the mast was nearly carried away at that. Yet we found that she was very stable and only wet her lee rail in the strongest puffs when held to it without easing sheet. She is about the hardest boat to knock down and the quickest to recover that I ever saw, and handles easily in every respect; takes little water on board in a sea, goes right along if there is ever so little breeze, and is very fast according to such tests as we could obtain.



We sailed trials against a number of boats, all larger than she. Only one of these was able to beat her. That was a catboat, 2ft. longer, and with a racing sail and shifting ballast, and in a light breeze. With a good breeze this boat could not come out at all owing to her great spread of canvas. A catboat of New York build, and a very good one too, with a very fine well-setting sail, sailed against us several times. This boat was 21ft. long and 9 or 10ft. wide. With the wind abeam we sailed at the rate of 8 miles an hour on the first trial, and beat her, as we also did with lighter winds. With stronger winds she could beat us, owing, as I think, to her greater weight. Yet we could stay out with comfort in a blow that would swamp her. Our trials were had on all points of sailing, and we were agreeably surprised at the way the Marguerite would go to windward. On one occasion we sailed 6 miles in forty minutes. Our course was E. S. E. with the wind south. Two miles of the distance was in a channel sheltered by a marsh where the water was smooth. The rest was across the broad water and in a very lively sea, with short sharp waves such as one gets in shoal water. We carried about 1,000lbs. of ballast and crew, and the boat's rail never came down to the water, even when we caught a sudden puff.

I am soon going to try the Marguerite under a new suit of sails, yawl rig, and hope to see her do even better. I shall certainly write you of the result.

JOHN M. TRACY.

HELEN.—Mr. C. D. Middleton's schooner Helen, of Philadelphia, arrived at Beaufort, N. C., on Dec. 26, after being ashore for some days in Core Sound. She is bound from Philadelphia for the South. Magnolia, steam yacht, also from Philadelphia, for Nassau, N. P., arrived at Beaufort on the same day, after grounding in the North River.

YACHTING IN CUBA.—*El Sport*, the sporting paper of Havana, devotes a part of its space to yachting each week. In the last issue to hand, Dec. 9, it publishes a translation into Spanish of the description of the Thetis given some time since in our columns.

THOSE PLANS OF THE THISTLE.

ON Saturday last the Boston *Herald* published a partial cabin plan, an outline of the sheer plan and a midship section of a yacht of 80ft. L.W.L., 95ft. over all, 16ft. beam, and 14ft. draft, which it claimed were authentic plans of the new Scotch yacht Thistle. That they were obtained from Mr. Watson is not stated, though it is intimated that they were given to the Glasgow correspondent of the paper; but it is stated that they bear the stamp of Mr. Watson's office, with the date Nov. 23, 1886. Accompanying the drawings are partial specifications for building. The drawings, received in Boston Dec. 24, must have left Glasgow by Dec. 14, about which time Mr. Watson had declined to give to Mr. Burgess the waterline length of the new boat; so it is not to be supposed that at that very time he was giving out the plans to a newspaper. How the plans, if they came as stated, from Mr. Watson's office, were obtained, we do not know; but an inspection of the drawings and accompanying description gives every reason for the belief that they are not what they purport to be. If further proof were needed, it is found in the following cablegrams. The FOREST AND STREAM cabled to Mr. Watson, last Monday, Dec. 27:

"Plans of Thistle in Boston *Herald* 80ft. waterline, 16ft. beam. Are they authentic?"

Mr. Watson's answer was received Tuesday, Dec. 28. He cabled:

"Quite impossible that *Herald* can have true plans."

It is evident from this that the plans in any case must have been obtained without the designer's knowledge or consent, and from their appearance we should say that they, as well as the specifications accompanying them, if not entirely fraudulent, are simply rough drafts given out for the purpose of making estimates, perhaps of the Thistle, perhaps of some other yacht, and obtained from some builder in violation of the rules of professional courtesy observed by designers and builders generally. That there is something wrong about the whole matter is evident, and until it is cleared up the mystery as to Thistle's dimensions remains as deep as ever. The plans given by the *Herald* are reprinted above.

OFF FOR FLORIDA.—Lieut. and Mrs. Henn left New York for Florida last week. They will cruise and fish there through the winter, returning in time for the yachting season here.

THE NEW BRITISH RATING.

WE learn from private advices that the proposed rule—

$$\frac{L.W.L. \times Sail\ Area}{6000.}$$

has been adopted at the Y. R. A. meeting on Dec. 14, and the old tonnage rule is a thing of the past. The new rule is, no doubt, an improvement on the old, but is objectionable as retaining the indefinite unit of tons, which with each change in the rules means, if possible, less than it did before.

The new rule is so framed as to keep the "sail tons" approximately near the old Y. R. A. tonnage, so that a 20 tonner is still practically a 20 tonner; but if, as is claimed, the rule is practically identical with the Seawanhaka rule—

$$\frac{L. + \sqrt{S.A.}}{2}$$

it is difficult to see any good reason for retaining the meaningless term tons, instead of adopting a rating as well as a classification like the Seawanhaka, which, while the result is the same, is far simpler and more definite as to the size of a yacht. The new rule goes into operation for seven years, at least.

A DESIGN FOR A LENGTH AND SAIL AREA RACER.—It seems probable that as soon as the dimensions of the Taistle are accurately known several yachts of her size will be built here, especially if that size brings her within the second class. In the meantime yachtsmen are engaged in the consideration of various designs with a view to building. We would call the attention of those interested in such matters to a new design which we believe is well worth a careful inspection and one that possess many excellent features. It is the work of Mr. Wm. Gardner, a young American, a graduate of Cornell University, who has been for several years in England as a student of naval architecture under the most advantageous circumstances. Late in the year 1885 Mr. Gardner sent a design to the New York Y. C., of a yacht to defend the America's Cup and last year he sent over another and newer one. The drawings were on the lost Oregon and were several months in coming to hand, being finally fished up and delivered in a somewhat damaged condition. On a visit to New York this summer Mr. Gardner brought out the model, which with the drawings and specifications, is now at the office of Mr. J. Murray Mitchell, the lawyer, 41 Wall street, where Mr. Mitchell, who is an enthusiastic lover of yachting, seems to be very happy to have yachtsmen examine it. The leading dimensions are: Length on waterline, 84ft.; beam, extreme, 18ft. 9in.; on waterline, 18ft.; draft 13ft. The stem is of clipper proportions with even more than the usual overhang, but of very graceful shape. The overhang aft is also quite long and carried out to an edge, while the sheer is fair and pleasing to the eye. The specifications, which are very carefully drawn, call for a composite hull of the highest quality with all ballast on the keel, the weight of the hull proper being kept as low as possible, while strength is fully provided for by a thorough system of bracing. Of course the yacht is a keel boat and a cutter, but she is very different from the extreme British type in the feature of beam. With over 3ft. more than Genesta or Galatea she has increased stability, a much wider deck for working spars, and more room below, her cabin plans showing a wonderful amount of accommodation. The plans show a cutter rig of moderate area only, but the immersed surface is also kept down. The increased beam permits a very different form from the extreme cutter, a boat with fairly rounded sides and with none of the flattening seen in the tonnage rule boats, which form certainly promises speed. The design is of the type we have of late alluded to, a cutter built outside of the rules that have produced Irex, Genesta and Doris; but embodying the best points of the American and British models while of less extreme proportions than either. Of course it is suitable for a smaller yacht, either 70 or 50ft., for second or third class, with some modifications as the size decreases. Mr. Gardner's work deserves recognition not only from the merit of the design, but because he is an American who is working quietly, but steadily for the improvement of our national type. There are plenty of yachtsmen able and willing to build, who could put their money in this design with a reasonable assurance of a full return, rather than risking it on the ordinary block model of which only too many failures will suggest themselves.

EXPERIMENTS ON YACHT MODELS.—An English exchange says: "Mr. R. S. Froude (owner and designer of the Jenny Wren), who conducts the Admiralty experimental works, lately removed from Torquay to Gosport, is about to make some exhaustive experiments with models of sailing yachts of various types, including Jenny Wren and another of the same extreme dimensions, but of greater displacement, though with less wetted surface, as well as many others of different proportions. From Mr. Froude's well-known ability and great experience, as well as his exceptional opportunities of experimenting with models of every kind, there is little doubt that he will collect much valuable data, from which a tolerably accurate opinion can be formed as to the best proportions of length, breadth and depth calculated to produce the fastest type of yacht under the proposed new rating by sail tons."

THE RADHA LAWSUIT.—On Dec. 21 the jury in the suit of Seymour against Lorillard brought in a sealed verdict, giving the sum of $5,750 to Mr. Seymour.

Two remarkable specimens of deformed fish, says *Nature*, were taken from a rearing pond at Delaford, and brought to the South Kensington Aquarium. One is a trout about three years old, whose tail is bent to such an extreme that it stands at right angles with the body of the fish. Its mode of progress is labored, and its appearance is very peculiar. The other specimen is an ordinary stickleback, measuring 4in. in length, whose body is swollen through dropsy to the extent of 1in. in diameter. At first sight its appearance is similar to a young mouse, and it requires close inspection to grasp the fact that it is a fish. It moves very slowly, with great expenditure of force, the weight of the contorted body being considerable.

"FOREST AND STREAM" FABLES (seven of them with a like number of illustrations) are for the edification of the wise and the instruction of the foolish. In this journal they are advertised for the wise. The foolish we cannot reach. The Fables are sent postpaid on receipt of ten cents.

Canoe and Camp Cookery.

By "SENECA."

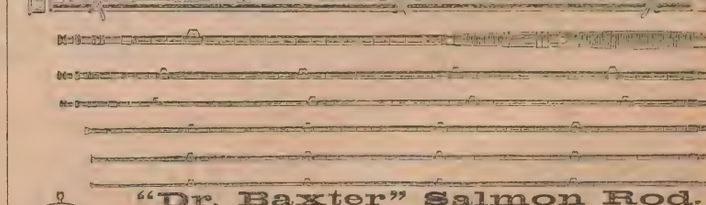
A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work Cloth, 96 pages. Price $1.00.

NEW YORK: FOREST AND STREAM PUBLISHING CO., 39 Park Row.
LONDON: DAVIES & CO., 1 Finch Lane, Cornhill.

R. H. POOLER'S Improved Patent Boss Cartridge Holder and Belts.

This Holder is for carrying brass or paper shells without being crimped. Has side cut away, showing wad supporter.

This Belt, as now made, is the handsomest and best shot cartridge belt in the world. Has 3-inch woven canvas belt, 1¼ inch double shoulder straps and large plated buckle. Will wear any sportsman a lifetime. The only practical Cartridge Holder in use. Will carry brass cartridges and positively prevent wads from starting on shot. Suitable for either paper or brass shells. Satisfaction guaranteed or money refunded. Manufactured by R. H. POOLER, Serena, La Salle Co., Ill.



Send ten cents in silver or currency for catalogue and sample cartridge holder, also a colored lithograph card of grouse shooting on the prairies.

FOR SALE BY FOREST AND STREAM PUBLISHING CO.

HOLIDAY PRESENTS.

Buy Them Early.

NO present gives so much pleasure or is so lasting as a good book, and none is so thoroughly appreciated by the average man, woman or child. A good book does not get broken or wear out, but remains always a source of pleasure and instruction.

Nothing is more annoying or inconvenient than to postpone the purchase of holiday gifts to the last moment, and appreciating this fact we call attention to the following list of standard works suitable for the holidays. These vary in price so as to fit every pocket, and among them all something will be found to appeal to every taste. Any of these books will be sent by mail, postpaid, on receipt of price.

Sport with Gun and Rod.

This superb volume contains a vast amount of matter of the highest interest to the sportsman. Almost all kinds of American game birds, mammals and fishes are treated in its pages, and it is profusely illustrated by some of the best American artists; 886 pp. Three styles are published: Embossed leather, $15; cloth, $10; cloth, on cheaper paper, $5.

Antelope and Deer of America.

By HON. J. D. CATON, LL. D. This volume is equally a necessity to the sportsman and the naturalist. It tells of the haunts and habits of our antelope and deer, where to find them, how to hunt them, of their life in the woods and under domestication. The best book on the subject ever written. A second edition. Price reduced to $2 50.

Rod and Gun in California.

By T. S. VAN DYKE. A story of outdoor life in semi-tropical land. Through the charmingly told narrative runs the tender thread of a love story. Price $1.50.

The Canoe Aurora.

By DR. C. A. NEIDE. The well told story of the author's cruise in a tiny canoe from an Adirondack lake to the Gulf of Mexico. Price $1.00.

Canoe Handling.

By C. BOWYER VAUX ("Dot"). The author of this pleasantly written volume is acknowledged to be the first of American, and so of living, canoeists. In this book he tells all about how to sail and handle a canoe, and how to care for it, either when in use or laid up for winter. Price $1.00.

Small Yachts,

THEIR DESIGN AND CONSTRUCTION, by C. P. KUNHARDT. This sumptuous quarto volume covers the whole range of yacht designing and care, and is the only work of the kind yet issued in America. The text occupies 325 pages, illustrated with many engravings, and besides there are 70 full page plates, showing the characteristics of the best modern yachts. Price $7.00.

The Forest Waters the Farm,

OR, THE VALUE OF WOODLANDS AS RESERVOIRS. By ANTONIN ROUSSET, translated by REV. S. W. POWELL. This famous French book has never before been put into English. Every farmer ought to have it, for the questions so intelligently discussed in it are of national importance; 109 pp. Price, paper, 50 cents; cloth, 75 cents.

Canoe and Boat Building

FOR AMATEURS. By W. P. STEPHENS. A manual of boat building by the canoeing editor of FOREST AND STREAM. Besides the 189 pages of descriptive text, there are 29 plates, working drawings, which enable even the novice to build his own canoe and build it well. Price $1.50.

Hunting Trips of a Ranchman.

By THEODORE ROOSEVELT. A delightful book of hunting adventure in Dakota and Montana. Price $3.50.

Training vs. Breaking.

By S. T. HAMMOND, kennel editor of FOREST AND STREAM. Nearly forty years experience in training and handling dogs has taught the author that these intelligent animals are more easily controlled by kindness than by severity. He tells how to accomplish by this kindness what you cannot with the whip. There is a chapter on training pet and house dogs. Price $1.00.

Canoe and Camp Cookery.

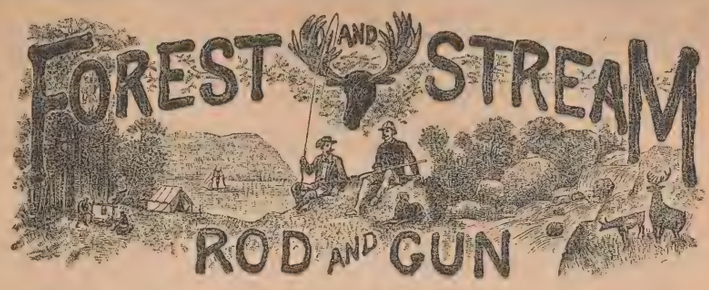
By "SENECA." A little book full of receipts and hints for the camp cook, by a practical man who has tried them. Indispensable to the camper. Price $1.00.

Fyshhe and Fysshynge.

By DAME JULIANA BERNERS. An elegant fac-simile reprint of a quaint old book written in the Fifteenth century. It is edited by an ardent angler and should find a place in every sportsman's library. Price $1.00.

Our New Alaska.

By CHAS. HALLOCK. In this handsome illustrated volume, Mr. Hallock gives the result of his travels in our northernmost possessions. He found Alaska a great country of almost boundless resources, and tells about it in his own happy style. Price $1.50.



Woodcraft.

By "NESSMUK." "Nessmuk" is a Nestor among America's sportsmen. In "Woodcraft" he imparts the knowledge of the woods that he has been fifty years in acquiring. No man, however much he has camped out, can read this book without learning something. Price $1.00.

The History of the Mastiff.

By M. B. WYNN, who is acknowledged on all hands to be one of the first authorities in the world on this splendid breed of dogs. The history of the guard dog is traced from prehistoric down to present time, and the tale is told with the enthusiasm of a true lover of man's best friend. Price $2.50.

Forest and Stream Publishing Co., 39 Park Row, N.Y.

A WORD IN SEASON.

Readers old and new of the FOREST AND STREAM may be pleased to know that the paper is now at the close of 1886 enjoying the support of a wider circle of friends than at any former period in its history. This is an interesting fact, for it proves, with the best possible demonstration of success, the sound sense of the theory long ago adopted by editors and publishers, and steadfastly adhered to, that there is room in this country for a journal treating the subjects embraced by our departments, and depending for its support wholly upon what have been accepted by the conductors of the FOREST AND STREAM as legitimate journalistic methods. In other words, we have kept faith with subscribers by devoting our reading columns exclusively to honest reading matter, and have not given up our pages to extended paid puffs of railroad routes clumsily disguised as accounts of sportsmen's travel, nor alluring descriptions of wonderful agricultural regions, all paid by the column. The conviction that a sportsman's journal for sportsmen could be conducted without resorting to such questionable makeshift expedients have proved quite correct.

The tone and high character of the journal, as one fit for sportsmen to receive into their homes, will be jealously maintained. As there is nothing in the recreations of field and stream inconsistent with the highest type of manhood, so, the editors are convinced, there should be in a journal like the FOREST AND STREAM nothing to offend good taste.

The FOREST AND STREAM will be, in the future as in the past, thoroughly representative of the best field sportsmanship of America. It will maintain its position as the chosen exponent of those who seek recreation with gun or rod, rifle, canoe or yacht. Its character will be scrupulously preserved, and readers in 1887 may expect a rich fund of sporting sketches and stories, suggestions, bright sayings, prompt, reliable news, and interesting discussions. Angler, shooter, dog breeder, canoeist and yachtsman, may be assured that whatever is of interest in these respective fields in 1887 will find its way into the columns of the FOREST AND STREAM.

The Sportsman Tourist

columns are filled with bright sketches of travel, camp life and adventure, the reflected experience of a host of outers.

Natural History.

Papers descriptive of bird life, chapters of animal biography, notes on the ways of field, forest and water creatures as observed by sportmen, anglers and naturalists, make up these pages. The special work of the past year has been the establishment of the Audubon Society for the Protection of Birds, begun in February, and having now a membership approaching 20,000.

Angling and Shooting.

Time was when a single journal sufficed in this country for adequate discussion of all the heterogenous pastimes and practices dubbed sport. That time has long since passed away. Some of the sports have been outgrown or put under a ban, others have developed to such a degree that each class requires a special organ. The particular fields chosen by the FOREST AND STREAM are those of angling and shooting. The pages given up to these topics are rich with the freshest, brightest, most wholesome, entertaining and valuable open air literature of the day. They have the sunlight and woodsy odor of the haunts of game and fish; they picture nature as seen by sportsman and angler. One has not long to read the FOREST AND STREAM before learning its attitude with respect to game and fish protection. The editors believe in conserving, by all legitimate methods, the game of fields and woods, and the fish of brook, river and lake, not for the exclusive benefit of any class or classes, but for the public. They are earnest, consistent and determined advocates of strict protection in the legal close season, and in restricting the taking of game both as to season and methods, so that the benefits of these natural resources may be evenly distributed.

The Kennel.

This department has kept even pace with the growth of the interest of breeding field and pet dogs. Reports of trials and shows are usually given in the FOREST AND STREAM in advance of other publications, and being prepared by competent writers their intelligent criticisms are of practical utility. This journal is not hampered by personal animosities. It has no judges to "kill." It does not decide a dog's merit by asking who the owner is. It treats all kennel subjects without fear, favor or ulterior motives, and in consequence enjoys a degree of public confidence and esteem denied to such as stagger beneath the incubus of malice and flounder in the bogs of ignorance.

Rifle and Trap Shooting

records scores of meetings and matches, discussions of topics pertaining to the butt, gallery and trap. Secretaries of gun and rifle clubs are invited to send their scores for publication.

Canoeing.

This country is a land of magnificent water courses, and Americans are just beginning to appreciate the canoe as a means of enjoying the delectable charms of river and lake, and bay and canal. The men who are making fortunes by making canoes know best how rapidly the ranks of canoeists are multiplying. Novices and old hands will find in the FOREST AND STREAM canoeing columns, in charge of a practical canoeist, accounts of cruises, lines of new craft, and hints and helps and suggestions without number. Closely allied is

Yachting,

in which the FOREST AND STREAM is the only competent, all-the-year-round, intelligent exponent. Our reports of races are full, prompt and accurate. The numerous illustrations of lines of new yachts make an invaluable record of the development of yacht building.

Weekly, $4 per year; $2 for six months.

Grand Bon-Secours Kennels.

Near Péruwelz (Hainault), Belgium.

ESTABLISHED IN 1865.

Property of Mr. Aug. Tondreau Loiseau, BANKER AT PÉRUWELZ.

These kennels enjoy a universal renown, and hundreds of sportsmen of the highest authority in the doggy world can bear witness to the scrupulous good faith which governs its operations, and the remarkable merit of many of the dogs which have gone out from them since 1865. The collection consists exclusively of English sporting dogs. Besides a splendid collection of English stud and field dogs—Laverack, Gordon and Irish setters, large and small pointers, Clumber, Sussex, Norfolk and black spaniels, large curly or wavy-coated retrievers, all of the most noted blood—which are employed for breeding and whose young are offered to the public, these kennels always have for sale a large number of other English dogs, warranted to be of pure and noble blood, handsome and good, of full pedigree, thoroughly trained to obey, to charge at the uplifted hand, and to retrieve perfectly all kinds of game.

The kennels are constantly open to visitors.

Adult and trained dogs can be shipped at Antwerp (Belgium) destined for the principal ports of the two Americas.

FOR SALE.—PAIR OF HIGH BRED IRISH setter pups, 7 mos. old, by Max Wenzel's Chief out of Canadian Belle; all red, no white, very handsome, very fast and kind.

Apply to ROBERT SEWELL,
dec30,3t 547 Church st., Toronto, Can.

FOR SALE.—THE LANDSEER KENNEL offers choice bred Scotch Deerhound and English greyhound puppies, bred only from stock of well-known field qualities. These are the aristocrats of all dogs. DR. VAN HUMMELL, Denver, Colo.

ANSWERS TO CORRESPONDENTS.

NO MONEY FOR THE PARK.

THE Sundry Civil Service Bill, which has passed the House of Representatives, included among its items the miserable sum of $20,000 for the improvement of roads and bridges in the National Park, but nothing at all was appropriated for the care and maintenance of this pleasure ground. It is extraordinary that so short-sighted a policy as the one followed in regard to the Park should prevail in the House of Representatives. This body does not appear to realize that this country will surely have to pay for the present neglect of that reservation. It does not seem to be understood that the harm which is being done in the Park, now that it is practically without guardians, cannot be repaired by any expense of money, but must be the work of nature alone. It will take the third of a century to reafforest the burned mountains; many years must elapse before the geyser craters, smashed and pulled down by selfish vandals who desire to carry a part of them away, can rebuild themselves, and the game once exterminated can never be replaced. To protect these natural features of this wonderland, money is needed to pay the men who are to look after it. With the best intentions in the world the troops are incapable of caring properly for the reservation. A civil force is required, and it must consist of competent men. This force should be a large one, for the territory to be covered is extensive and it all requires watching. If no more than the old appropriation of $40,000 can be secured for the Park during the present session, we must be content with that, but certainly no less sum than this should be made available. We hope therefore that the Senate will insert in the Sundry Civil Service Bill an item of $20,000 for the care and maintenance of the Park, and trust that it will take a firm stand and insist upon its being accepted by the House.

We believe the Senate takes a far broader view of this subject than does the House, and realizes that the people of the country are determined that their Park shall be preserved to them in spite of the attempts of corporations to get hold of it, and the failure of Congress to do its duty. Year by year this feeling is proving stronger; year by year it is being more plainly expressed; and we believe that the day is not distant when the irresistible force of public opinion will oblige Congress to take the action which we have for years pointed out as its plain duty.

This duty is to provide for the adequate protection of the Park, not by doling out the money in petty sums, which renders abortive all attempts at protection, but by authorizing liberal appropriations for a series of years until the necessary work has been done, and the vicious, the lawless, the selfish and the heedless have learned that the law will be sternly and unrelentingly enforced. When people shall have been taught that it is no more safe to hunt, to fire timber or to deface beautiful objects in the National Park than it is to do these same things in one of our great city parks, when the machinery for its care and guardianship shall have been for some years in working order and shall be running smoothly, then, and not till then, will the question of necessity of economy come up.

Possessed of the grandest Park in the world, a spot where are to be found natural wonders, organic and inorganic, nowhere equalled, the American people cannot be so dead to all national pride, to all patriotic feeling, as to be willing that their representatives in Congress should permit this Park of theirs to be plundered of all that makes it most attractive. We do not believe they will stand it.

THE LITTLE BIG HORN FIGHT.

THE Wild West show troupe of cowboys and Indians, now performing at the Madison Square Garden, New York, are giving daily exhibitions of how Gen. Custer was killed in the battle of Little Big Horn. Buffalo Bill, who takes the part of the hero, wears an auburn wig and otherwise makes up to represent Custer. The performance is thus described in the *Times:*

In the first scene is shown the camp of the troops commanded by Gen. Custer. The troops and scouts march out of camp. One of the scouts discovers the Sioux village. Sitting Bull and his warriors are apparently engaged in the innocent pastimes of prairie life. The scout retires and informs Custer that the enemy is at hand and in fair condition to be wiped off the face of the earth. The sound of a bugle is heard. The Indians instantly prepare an ambush. Custer and his men dash into the open space from the Madison avenue end of the Garden. The bugler sounds the charge. Custer waves his sword, puts spurs to his charger, and, followed by his men, rides down upon the Indian village like a cyclone. Instantly the troops are surrounded by whooping Indians, and "a terrific hand-to-hand combat" ensues. In an extremely short space of time the Indians gain a complete victory. Custer is the last man killed, and he dies after performing prodigies of valor. Then the surviving red men indulge in a war hop and a shrieking match and the curtain falls to slow music.

The battle of Little Big Horn was fought in the summer of 1876. The death of the gallant Custer, ten years ago, has not yet become an incident of history so remote as legitimately to be made the subject of a circus show. If we are not mistaken, Mrs. Custer is now a resident of this city. Under these circumstances the Wild West performance is an outrage on decency. From the uproarious mimicries of the deaths of our Generals killed in battle by Indians, it will be an easy transition to realistic plays having for their subject the assassinations of our Presidents. The depraved taste which applauds the one would relish the other.

There ought to be in this community sufficient respect for the memory of the men who have served their country and sacrificed their lives in the field to put the brand of public condemnation upon showmen with ghoulish instincts. If ordinary regard for the fitness of things does not suffice to secure respect for our dead heroes, we are sure that in this case, at least, there must be those who, like ourselves, have followed Custer as a leader in campaigns on the plains and among the mountains, who will join with us in protesting against such unseemly burlesquing of the Little Big Horn ambush on that fateful summer's day.

THE NEW YORK TROUT LAW.

AS the Legislature of New York is now in session, we expect to hear of all kinds of amendments to the trout law, emanating from all sources. We think that it is the sentiment of all anglers who are interested in the preservation of trout, and who know that this object can only be obtained by protecting the fry, that the six-inch clause should be restored, and the killing of all trout of, and under that measurement, be made unlawful. There is, however, a difference of opinion about a uniform date for opening and closing the season throughout the State. Such a date would be most desirable if it could be shown that it is entirely practicable, but there are, it appears to us, insurmountable obstacles in the way. These are the elevation and consequent temperature of the great Adirondack region, where the ice is seldom off the lakes before the first or middle of May, and where no angler cares to go before those dates. In the middle and more southern portions the streams are open and the trout are feeding much earlier, while on Long Island the anglers are impatiently waiting for the first of April. It has often happened that the latter date has been cold and even snowy on Long Island, but the trout have fed all through the pleasant days that have occurred through February and March, and are in fine trim for the fly, a fact that stimulates many eager anglers to brave the weather. Usually the first of April is pleasant enough to fish, and on this day all the Long Island clubs open their season, and we speak their sentiments when we say that the season there should be left as it is. We also speak the sentiments of the best informed anglers who go the Adirondacks when we say that the first or the middle of May is early enough to open the season there. We have advocated a central line through the State, north of which the season should open later than on the south of it, and our columns are open for a discussion of this subject.

GOOD FOR NOTHING GAME PROTECTORS.

THEORETICALLY New York State has a sensible and efficient system of game protection. Practically there is a vast amount of rottenness in it. There are game protectors who do not protect anything nor any body except the law breakers. The force needs an overhauling. As a rule the game protectors are not worth a rap. The law is openly and persistently violated before their very noses, while they stand around and suck their thumbs. The only diligence displayed is in accepting the salary which the State throws away upon them; they draw their pay as regularly as Detroit-bound Jones of Florida.

One flagrant example of the way the New York game protector system does not work has been brought to notice before. The lower part of Oneida Lake, in Oswego county, has been for months infested with nets set and drawn in violation of the law. The fishermen are known to the protector of the district, William H. Lindley; the matter has been repeatedly brought to his attention, but he has failed to take action. Lindley did at one time, as we were given to understand, bestir himself and pull up unlawful nets; but he has for some occult reason found it better to let the poachers have their way unmolested.

Not less disgraceful is the condition of things in New York city, where scores and hundreds of ruffed grouse are now displayed in the market, in flaunting defiance of the statute which forbids their sale after Jan. 1. Joseph H. Godwin, Jr., who pockets the game protector's salary for this district, meanwhile possesses his soul in patience and "has everything running along smoothly." Perhaps Godwin does not know a grouse when he sees it, or it may be that he is stone blind. Either plea, of ignorance or infirmity, would satisfactorily account for the smoothness with which affairs glide along in his district; but we want game protectors who know a thing or two, can see a thing or two, and once in four or five years, at least, will do a thing or two.

Other protectors vie with Lindley and Godwin in masterly inactivity. How do these men manage to draw their salary? The law explicitly provides that a protector shall be paid only upon presenting to the Comptroller a certificate from the Commissioners of Fisheries that he has in all respects faithfully performed his official duty. How do these delinquent protectors come by any such certificates?

SNAP SHOTS.

THE New York *World* has organized a winter snow-shoe expedition to explore the National Park. Rightly conducted the exploration will add considerably to our knowledge of the Park in winter, and the reports of the *World's* commissioners ought to do something toward augmenting public interest in the Park. Mr. Schwatka begins his exploration of the Park, at Rock Island, Ill., and what little information he has about it is evidently drawn from some old guide book or report, and is wholly unreliable. Among other things he states that only sufficient game for his own use can be killed by the traveler within the Park, and that no buffalo can be killed. It seems a pity that the *World* correspondent should not have taken pains to inform himself a little better about the regulations governing the reservation. He will find when he gets there that he can kill no game at all in the Park, and we think that we know enough of the acting superintendent to feel sure that if Schwatka or his party violate this regulation, Captain Harris will promptly expel them from the reservation.

The New York dog ordinance is in force all the year

around, and the pound remains open in winter. The licensed gang of snatchers who scour the streets in search of unattached dogs have committed a number of gross outrages this season by wresting pets from ladies. It is well enough to capture the lumber yard, garbage dump and ash barrel canine wretches and an act of mercy to put them out of their misery, but the dog-catchers display far greater zeal in efforts to steal dogs which are well cared for and likely to bring blood money for redemption at the pound. The purpose of the law would be fulfilled if a regulation were adopted prescribing that the catchers' gangs should be permitted to prosecute their calling only in certain defined districts. There is no reason under the sun why these fellows should invade the central avenues and adjacent streets.

Mr. William Trefethen, the fish dealer, of Portland, Me., referred to in our issue of Oct. 28 as having been convicted in Maine courts on the charge of having short lobsters in possession, advises us that neither of the cases referred to were ever decided adversely to him. The indictments were found before a police judge instead of a Grand Jury. The first case, without trial in the police court, was carried up to the Superior Court, where the jury disagreed. On second trial the verdict convicted the defendant of having in possession 122 shorts. Exceptions were filed and granted, the verdict set aside and case dismissed. The district attorney refused to try the second case before the jury which had disagreed on first case, Trefethen refused to give bonds, surrendered himself to the court, and was released on his own recognizance last May.

The "U. S. Fish Co." is a concern receiving mail at Columbus, O., with which the U. S. Fish Commission distinctly disclaims all connection. It appears that Prof. Baird has received a number of applications for carp, the requests being made out on blanks which seem to have been sold by the "U. S. Fish Co." Prof. Baird calls attention to the similarity of names as likely to deceive, and reminds the public that the United States makes no charge for fish fry application blanks. The Columbus concern must have done a large business, for the Commission has received these spurious blanks from many States and Territories.

A letter is printed elsewhere relative to a case of extortion by a baggage man on the St. Louis, Iron Mountain & Southern Railway. Communication with the general passenger agent developed the fact that this subordinate was practicing an unauthorized imposition for the benefit of his own pocket. Other sportsmen having been bled on this road will do well to communicate with the officers, who desire to be advised of such offenses that they may punish the perpetrators.

Wisconsin has a law forbidding the transportation of venison; but when the Legislature made this law they provided no means for its enforcement. It has been a dead-letter. A correspondent advises us that 3,245 carcasses of venison have been shipped from the State in the past season. United States District Attorney A. K. Delaney, of Milwaukee, is now preparing a bill for the next Legislature, providing for a game warden system to enforce the statutes.

A French genius has invented a boat which propels itself by artificial wings acting on the air, instead of sails acted upon by the air. This device will fill a long felt want, particularly in international yacht racing. The patent wings ought to be applied to the yachts in the next America Cup race over the New York Yacht Club course; they would make an end of drifting matches and of blanketing by excursion steamers.

Dog talk in the New York *Mail and Express:* "Ah! if broken dogs were only sold by the yard or by the square inch, then I could understand that a pointer or setter should fetch more money than a climber or a Sussex and especially a Crocker." The "climber" ought to make a good partridge treeing dog, and the "Crocker" must be a black spaniel.

Certain anglers have affected to sneer at the element of accuracy involved in some of the contests in fly-casting tournaments. In practical angling, they contend, accuracy plays no part. This reasoning is fallacious. Accuracy is absolutely essential in fly-fishing for big game, witness the experience of "L. S.," narrated elsewhere.

Ontario sportsmen are discussing the practicability of doing away with deer hounding. The conditions there are very similar to deer hounding grounds in the Adirondacks, where deer are driven into the lake and butchered by hunters in boats and canoes.

The feat of eating one quail a day for thirty successive days has been tried by two men in Chicago. One of them was overcome by nausea on the twenty-eighth day; the other succeeded in the task and was advertised to have received $1,000 for it.

Mr. H. H. Thompson, Secretary of the New York Commission of Fisheries, has prepared a synopsis of the game law of that State in convenient form for posting. The complex statutes are here reduced to intelligible statements, and a wide dissemination of the posters would be advantageous. Mr. Thompson may be addressed in care of Com. E. G. Blackford, Fulton Market, New York.

The Massachusetts Fish and Game Protective Association has adopted resolutions asking Massachusetts Senators and Representatives to support Senate Bill 2,436. A communication from the President, E. A. Samuels, Esq., is printed elsewhere.

The Michigan Sportsmen's Association convention at Lansing, Jan. 18, promises to be an important meeting. Michigan is in sore need of game and fish wardens, and the convention will give special attention to this subject.

New York's law against spring shooting is a half-way measure. It applies only to Long Island. Make it general in application, applying to inland waters as well.

The abolition of spring shooting is contemplated in Wisconsin. In fact the movement of public sentiment is toward such a law throughout the Union.

The paper on Scrimshawing, intended for publication in 1886, has been delayed and will be given in an early issue.

An esteemed and generally intelligent contemporary speaks of a man as having been "shot and wounded."

The Sportsman Tourist.

WHITE GOAT HUNTING.

(Concluded from page 443.)

THE scow having been hauled up from the lower lake, and the canvas boat put in the water, we were all ready to begin our explorations of the upper country. So one bright morning, leaving the cook and herder to watch the main camp and horses, we started out with a stiff ash breeze in our favor. The lake was perfectly quiet, and the boats, especially the canvas affair, were heavily loaded, so we hurried along, hoping to get to the head of the lake before the wind rose. For about six miles the lake is quite wide, perhaps 1½ miles at the broadest place. On the south side is the great pine-covered ridge which divides the Arctic and Atlantic waters. On the north old Singleshot looms up, a wonderful maze of rock, bright and beautiful now in the sunshine, far different in aspect from when "Yo" and I groped along its side in the dense fog. We kept close to the north shore going up, as it was the shortest route, and made the narrows in about an hour and a half. Here the steep mountains rise on each side, and the narrows are two great ledges of rock which jut far out into the water. In places they are perpendicular and several hundred feet high. Old Time has worn great holes in them at the water's edge, and as we passed along the rising waves surged into them with a melancholy roar. It made one shudder to think of an upset there. The water is inky black, a sign of great depth, and along the slippery ledge is no crevice or foothold. Passing through, we found that the lake widened rapidly to a breadth of about two miles. On the south shore, commencing at the narrows, is a series of mountains, rising ever higher and higher, until they join the summit at the head of the valley. Between each mountain or peak is a basin, often walled by ice, from which a small stream comes tumbling down into the lake. On the north shore, separated from Singleshot by a deep and narrow cañon, is a long, high red rock mountain which reaches nearly to the head of the lake. It is crowned by pillars and fantastic groups of time-worn rock of great height. This is the "Goat Mountain," where "Yo" and I one day attempted to hunt in the rain and fog.

The water was getting pretty rough, and after a further pull of about two miles we landed in a little cove to rest and eat our lunch. Opposite this point, quite a distance from shore, is a small, rocky island, on which grow a few wind-bent pines and quaking asps. I have named it Nät-ōs'-äp-ĭ Island, after a chief whose spirit has long since gone to the "sandhills." The meaning is Sun-old-man, and although it is a queer name for an island, it is at least original and much better than stony island, pine island, stormy island or any such common name. We resumed the oars, still hugging the north shore, and about three miles from where we ate our lunch on a low point in a grove of tall pines made camp. On the far end of this point a glacier stream flows swiftly into the lake, its milk-colored water making a vivid contrast with the clear green waters of the lake.

While getting camp in shape the elder gentlemen had jointed their fly-rods, and now came a shout for landing nets. Rushing out we found a fisherman on each side of the stream where it empties into the lake. Both rods were bent, and the lines cutting through the water at a great rate. The trout were gamy and fought long and valiantly. When brought to the net they weighed respectively 2¼ and 3½lbs. The next fish, caught by the Governor, weighed 4½lbs. While we were admiring this the Colonel struck one. It made for deep water and played back and fourth for what seemed to us an interminable time. However, he was finally landed and weighed, and pulled down the scales to 5lbs. plump. We had two sets of scales and both registered the fish at 5lbs. plump. This was the largest *Salmo purpuratus* caught on the trip, and in fact the largest one of the kind I ever saw. If any reader knows of a larger one, will he kindly mention it in FOREST AND STREAM? Several other fish were caught, none under 2lbs. or over 3½lbs. weight. During our stay here we often whiled away a spare hour catching lake trout. Standing on the shore and fishing with bait or spoon one could catch as many as he wanted. They did not average so large as those caught at the foot of the lake, the largest one weighing only 7lbs.

Next morning Cecil and I seemed to be the only ones who cared to hunt. So after breakfast we shouldered our guns and struck out. The glacier stream on which we were camped heads between Goat Mountain and the next one to the west, which, on account of its great height, I have named Nät-ō-yē' tûp-pō—Going-to-the-Sun. Following up this stream for a mile or more, we came to a very steep hill of slate rock, through which the creek had cut a narrow channel. We could see up it about 100yds. to where it made a bend to the left. From top to bottom this part of the cañon is about 200ft. in depth, and of an even width of about 4ft. We would have tried to go through it had it not been for several little falls, where we would have been sure to get wet. Lucky for us that we did not make the attempt, for half a mile further on we couldn't see the creek. Here the top of the cañon is about 30yds. across, and the steep sides are so slippery with dead pine needles that we did not dare attempt to look down into it. It must, however, be very deep, for we could hear the faint roar of a waterfall, which sounded as if it were way down in the bowels of the earth. A mile further we emerged from the pines and found ourselves at the entrance of a big round basin hemmed in by mountains of great height, some of which are perpendicular walls of rock rising far into the sky. On the west side of the basin, high up, are several glaciers, from which flow good-sized streams, but falling from such great heights and broken by several ledges, they are lost in spray before reaching the bottom. In the basin and on the less steep sides of the mountains stunted pines and beds of juniper grow in profusion. All in all, it is one of the grandest places I ever saw.

We had made a hearty breakfast and felt like climbing, so we went half way up the basin and started to climb on the right, the easiest place we could see. We had no dangerous places, but it was very steep, and we were four hours in reaching the summit. We had seen, half way up, many fresh goat signs, but here on top was not a single track, old or new, save three fresh trails in the snow, made by a mountain lion and her young. Except for the beautiful basin below, it was a dreary view from this elevated position. The Goat Mountain shut out all sight of the prairie, and of the valley of the lake. Looking the other way, was nothing but peak after peak of bare rock, ice and snow. Yet the scene was not without value. It gave one an idea—so far as man can comprehend such an idea—of the great force which was required to upheave these masses from the level plain.

We ate our lunch up here, and for drink ate snow. Then, becoming chilly, we went along a little further, and finding a shale slide which reached clear to the foot of the basin, we started down, and running, sliding and jumping, soon reached the bottom. Down by the creek we found some huckleberry bushes fairly loaded with fruit, and were feasting on them, when happening to look up, I saw a big goat, nearly opposite us, feeding. He was at the foot of the rock wall, just at the edge of the shale, half a mile away. Between, the shale sloped at an angle of 50°, and as it was a very old slide, covered in places with grass, stunted pines and bunches of juniper, it afforded excellent shelter for us to creep up to him. Just as we were about to start for him there was a roar and crash which fairly shook the mountains. Such an awful, deafening roar I never before heard. A large mass of ice, tons and tons of it, had broken from a glacier far up on the mountain side, and shivered into fine fragments, was pouring over the wall, glistening and scintillating in the sunshine like diamonds. Down, down it came, and falling into a branch of the stream, was soon sweeping by us, a tinkling, seething mass. All this roar and confusion of sound had not disturbed the goat any; he was still quietly feeding, as if with him this was an every day sight. As soon as the ice had all passed we crossed the creek and began to climb. We got along all right until within 250yds of the animal, when he smelled us, and sitting down on his haunches like a dog, head down, he proceeded to scrutinize the valley. Cecil now went on alone, and got within 150yds. of him. The climbing was very steep, and before Cecil could regain his breath, the goat started to walk along. Cecil fired both barrels at him, one after the other. The goat stopped, looked around and then resumed his walk. Twice more the rifle spoke, and this time one of the bullets struck near the animal and it started to climb. Going up a piece he struck a narrow shelf and ran along this faster and faster, for Cecil's bullets were flying around him pretty lively. Now the animal stopped. Before him was a very steep and dangerous place, for the spray from a glacier made the rocks very slippery. The goat turned back. Should he come toward us a hundred yards, there was a place where he could ascend the mountain and soon get out of sight. Then I began to fire, too. Three times the goat ran back and forth, stopped each time by the bullets striking before him. The third time back he made some desperate leaps, crossed the slippery place, ascended a few yards, made two last mighty leaps, and stopped on a small shelf not much longer than his body. Above, beyond, below was the sheer rock wall. He could go no further. The little ledge afforded him room to turn, and there was a crevice in the rock, into which he backed, concealing half of his body. I was satisfied that he never could get down from his perch. He had reached the place by two prodigious jumps while strong with excitement. A very small projection afforded him a hold to make the last jump, and I thought that he would not dare to come down for fear of missing his footing and being dashed on the rocks far below. And I was right. We had corralled a goat. Cecil beckoned me to come up to him. On the way I slipped and fell, the glasses (in the case) dropped from my hand and went bounding down the mountain a hundred yards or more, and striking a boulder, stopped short. "I have no cartridges," said Cecil. I felt in my belt and found one, in the magazine was another. "I have two," I replied, "take my gun and go and kill him."

He hesitated, but I urged him to do so, and laying down his now useless double barrel, he took my rifle and started up. Gaining the shelf where the goat had run along we followed it to the slippery place, where he was within a hundred yards of the animal. Sitting down and taking a rest he fired. The goat did not move. Once more he fired. The game was unhurt and the last cartridge was gone.

Night was coming on. The last rosy tint had faded from the lofty peaks. Without stopping to look for the glasses we hastened homeward, running at every opportunity. On the way Cecil tried to explain why he had missed the goat. He had never before shot at an animal, and I knew from his words that he had had a bad case of "buck fever;" I knew just how it was, for a long time ago I had "been there myself." Arrived at camp, we ate a hearty supper, and then Cecil related the events of the

day to an interested audience, and I may say a gentlemanly one, for they never once laughed nor sneered at him. How much more pleasant this is than to come into camp after an unlucky day, tired and worn out, and be joked and jeered by the other members of the party. I have noticed that those who indulge in this are themselves unskillful hunters and poor shots. The true hunter is always more considerate and never makes sport of others' misfortunes.

In the morning we started again up the creek, accompanied by the Governor and Jack. As soon as we got out of the pines I could see the goat just where we left him the previous evening. We now walked leisurely along; and in due time Cecil reached the spot where he had fired the last cartridge the night before. Bang! went his gun, and the goat fell from his perch and came whizzing down, striking a ledge now and then, and finally stopped short. The great height from which he fell broke every bone in his body. His skull was as soft as a ball of putty; the horns were hanging to the skin by mere shreds, and the entrails all lay just under the skin on the back. The hide was not injured. One ham only of all the meat was fit to eat. With these I returned to camp, while the others went up toward the head of the basin.

I found camp deserted, and, after pegging out the hide, I took a cold bite and stretched out for a snooze. The Colonel and Joe came in about 4 o'clock. They had been up toward the Goat Mountain, but had seen nothing more than tracks. Just before sunset I took the glasses, which had been recovered, and seated myself on the lake shore to take a view of the surrounding country. The first thing that met my eyes after adjusting them was a band of three goats directly opposite, just above timber and in a small basin. I called out to the others, and we watched them until too dark to see, not forgetting to take a survey of the surrounding country to find the best route to them. Expecting the hunters in any moment, we waited until 8 o'clock before we had supper, and after another hour had passed without sight or sound of them, we turned in and were soon asleep.

Early the next morning, just as we had breakfast ready, the belated ones came in, bringing a goat hide with them. After I left them they had gone to the head of the valley, and, after sitting around an hour or two, saw a band of goats high up, right under a glacier. They figured around a long time trying to get near them, but found no place where they could climb. As a last resort they fired at the band at long range, and Jack killed one. They did not have far to go then to get it, for it fell 550yds. (at least that was the elevation of Jack's gun sight) and landed almost at their feet, a shapeless mass of flesh and bones. Yet the hide was not spoiled. I believe there is no American ruminant except the buffalo which has as thick and tough a skin as the goat. By the time they had the skin off it was dusk, and when they reached timber it was dark and they could travel no further, so they made a fire and stayed there till daylight. We fried some of Cecil's goat for breakfast. As the steaming odor rose from the pan somebody hinted that there were muskrats around camp. Every one tasted of it, as in duty bound, but that was all. It was tough and strong flavored.

Not only was our little band of goats still in sight, but during the night its numbers had been augmented by one. Of course those who had been out all night did not feel like hunting, so the Colonel, Joe and I took one of the boats and quickly crossed the lake. The traveling was steep but good, the pines being open and the footing rocky, with a thin layer of dead needles on top. We went very leisurely, stopping now and then to rest, and in two and a half hours sighted the goats. Crawling up to within 250yds. of them, we sat down behind a couple of scrub pines and watched them a couple of hours. They seem to be very restless animals. They would feed a few minutes, paw a bed in the shade, lie down, get up again in a few minutes and go to feeding. To reach choice bunches of moss they would stand on their hindlegs, their front feet against the rock wall. In shape and action they are much like the buffalo bull. Their long beard gives them a melancholy appearance, and when they sit down on their haunches they are the most ludicrous-looking animal imaginable. While we were watching them another goat came down the steep mountain side and joined them. They seemed to think this an intrusion. One stepped out, deliberately smelled of the new comer, backed off, running up sideways gave him a butt and then struck at him with his front feet. The new comer didn't mind this a bit, but butted and struck back. Then they would stand for some minutes looking sideways at each other most surlily and repeat the performance. After sparring thus with two of the goats the newcomer was let alone and they all began to feed together. Meanwhile we had eaten our lunch and wanted to smoke, so we decided to kill or scare, and then fill the pipes. In full sight of the goats, and one especially which had lain down head toward us, we crawled up another hundred yards. Then the Colonel sat down, placed a handful of cartridges in his hat before him, and taking deliberate aim, fired and wounded one, which hobbled toward us. The Colonel downed him with another shot, and opening his gun, the extractor dropped out. While hunting for this the other goats ran back and forth, and Joe commenced shooting at them. Every time a bullet struck the rocks they would jump away from the place as if they thought that was what was after them. Joe wounded one, and the rest, at last satisfied that something was wrong, struck a shambling trot, disappeared behind a ledge and struck up the mountain. The wounded goat had a broken hindleg, but kept hobbling round the basin and ascending. Joe tried to follow him, but found the climbing too dangerous. When we left the basin we could see him standing on the opposite side, more than gunshot above us. We arrived at camp about 4 o'clock and found dinner waiting us, and our success was related between bites.

The others had slept most of the day. The Governor had caught a fine lot of trout which averaged 2½lbs. When they heard the sound of our guns they got out the glasses and saw the goats going up over the mountain. The next morning broke dark and windy. Soon after breakfast, the Governor and Jack started for Nătōyĕ tûppo and Cecil and I for Goat Mountain, leaving the Colonel and Joe in camp. We soon returned, however, as we found the wind too strong to climb with safety. About noon the others came in, bringing the hide and meat of a young doe or nanny goat. This animal was the stupidest of all. Emerging from the pines they saw her about 100yds. away, standing on a ledge. The goat saw them, too, and instead of running away it lay down out of sight. Laying down his gun Jack ascended to the ledge, walked up close to it and halloed and waved his arms. The goat rose up, its hair bristling forward like an angry dog's and acted as if it wanted to fight. Then Jack began throwing rocks at it and finally drove it in sight of the Governor, who put a bullet through it.

After dinner some of us got into one of the boats and rowed up to the head of the lake. An excellent view of the valley can be had from the water. For about eight miles it is heavily timbered and about two miles wide, then a round, flat-topped mountain rises from the center and the valley branches to the right and left. Three or four miles further on is the head of each fork, on the main divide. Some immense glaciers line the mountains there, the streams flowing from them forming the headwaters of the St. Mary's. This flat-topped mountain is covered with pine, and is the only one in the country covered with timber. Leaving the boat, we strolled up the valley a mile or two, following the course of the stream. We tried fishing, but did not get a rise. The water is milk-colored at the depth of a foot, bottom cannot be seen, perhaps trout will not stay in such water. We saw several fresh elk signs, and found where some moose had yarded the previous winter. Guided by the sound, we came to a very pretty set of falls, three in number, the lowest and largest being about 100ft. in height. The highest and most picturesque fall I have yet seen is one that pours into the valley from a large basin on the right hand side. The stream is a good-sized one, and the fall is not less than 1,000 feet, broken in only two places by projecting ledges.

On the next day Cecil and I rowed down opposite Goat Mountain. We saw some goats and spent the whole day trying to get within range of them, but did not succeed, owing to a high rock wall which effectually barred our way. The Governor and Jack had the same experience, but the Colonel and Joe killed two. They were walking along a ledge when two goats suddenly confronted them. The Colonel killed one and the other jumped down on to another shelf some six feet below and tried to hide. Joe leaned over and shot it, fairly powder-burning the beast.

I will not weary the writer with a further recital of our adventures, which, day in and day out, were pretty much the same as herein narrated.

From our experience with the goat we are led to the following conclusions: First, his eyesight is poor; second, he is clumsy, not near as fleet nor as sure-footed as the bighorn; third, he is, altogether, the stupidest animal we ever hunted. I quite believe Mr. Griffin's story—related in FOREST AND STREAM some time ago—that a goat once came and lay down near his camp-fire. The wonder is that he didn't come right up and ask for a plate. We considered the flesh of the female goat very good meat. It is tender and has not the musty odor peculiar to that of the males. The heaviest goat we killed was estimated to weigh 150lbs.

J. W. SCHULTZ.

MONTANA, 1886.

A NIGHT CRUISE DOWN THE ANCLOTE.

IT was the 2d of August, and the monsoon season. The cheerful Dominic had left us for his home in Minnesota, and time hung heavy on our hands, when Tarpon proposed that we fill out a couple of weeks by making our long-talked-of cruise up the coast to the Weik-e-wach-ee River, he to paddle the Bucktail, I the ten-pound Rushton. I had my doubts about it. It is true the weather was settled and fine, but it was equally true that there was a pretty stiff breeze every day from west to southwest, blowing directly on shore with an open water sweep of a thousand miles. And it was by no means clear to me that a 10lb. canoe with only 3in. of deadrise could ride the short, crisp waves of the coast without getting washed with unpleasant frequency. As the water anywhere along the coast is very shoal, this would be more disagreeable than dangerous. But it spoils all the pleasure of a cruise to be continually running ashore to build fires and dry out clothing and duffle.

Tarpon explained that there was a time in the early morning, and again in the evening, when the water was comparatively calm; and, by taking advantage of this, we could put in about six hours with the paddle, which would leave us six or seven hours in the hottest part of the day to run ashore, get dinner, shoot, fish, explore the country, or lie off in the shade. I thought this looked reasonable enough; so we got our duffle ready overnight and paddled out at early dawn the next morning, passing North Anclote Key by a little after sunrise. The coast was all before us where to choose, with a wilderness of waters on our port beam, and a pretty sharp sea. For the wind rose with the sun (it always does at that season) and before we reached Bailey's Point, where we ran ashore for breakfast, it took all the spare muscle I was master of to lift the frail craft over the waves without taking in water.

Bailey's Point is an exceedingly fine place for camping, subject to the usual drawback of the coast, *i. e.*, there is no fresh water to be had.

The coast is a succession of bays and out-reaching points, and it was five miles across the next bay to the point. Tarpon advised to swing into the trend of the bay, thereby having less sea and shallower water. But if I was to be headed off by a fair sailing breeze, it was as well to know it at the start; so I made a straight wake for the next point and reached it with everything in the canoe wet. Two hundred yards more would have swamped me, and I was very tired. Another start, wind and sea rising; and it soon became clear to my mind that the canoe was too light for heavy business. Every few minutes a steep wave with a white, curling crest would rise above the gunwale and gently drop about a pint of salt water inside; and at each repetition of this the canoe grew duller and more loggy. At last three crisp, sharp waves came in quick succession. I lifted her over two of them, but the third one caught me all wrong and nearly filled the canoe. I stepped sadly overboard and ignominiously waded ashore, while Tarpon paddled up to the head of the bay to prospect a camping ground. I saw him meandering along the shore for nearly an hour; but at length he hailed and I soon joined him. He had selected a fine, dry, shady spot, and we soon had a brisk fire going. We were near the mouth of Trouble Creek, and, as it was a nice, lonely spot, with plenty of beach birds, and the creek had a high reputation for redfish and sea trout, we decided to take things easy till the wind went down. It did not go down, however, but increased rather; and we spent the day fishing, trying to shoot beach birds and exploring the land. The fishing was a failure, though we did our best on a bayou where, a few weeks before, a party from the Springs had taken 160lbs. of large fish in a few hours. The beach birds, too, went away as the tide rose, and Tarpon tramped off landward to look for quail and squirrels, while I explored a large dry lagoon east of the camp.

These dry lagoons are usually found on the keys, but sometimes on the mainland. They are always interesting. Level as a floor and dry enough for pleasant walking at low tide; they are apt to have a slight covering of salt water when the tide is full. They are much resorted to by shore birds, and nearly always intersected by well-trodden paths, made by raccoons, possums and otters. The one in question had paths leading to nearly every point of the compass, and the tracks were fresh. Only for the fact that fur so far south is of little worth it would be worth while for a trapper to put in a winter among the keys and along the coast.

Late in the afternoon, as the water was still rough, I bedded the canoes in turtle grass and half filled them with cedar browse, intending to sleep in them in preference to bunking on the ground.

Tarpon came to camp before I had finished, and he brought five quail which he had ground-sluiced at a single shot—not a sportsman-like proceeding, but the camp needed the birds, as he explained.

After a good supper and a long chat by a pleasant campfire we turned in, and Tarpon was soon asleep. I was not so lucky. There seemed to be numerous insects or reptiles constantly crawling over and around me, and there was a steady, low, buzzing noise in the canoe wonderfully like a ground rattler. I tumbled out, raised a light, and proceeded to investigate. The cause was not far to seek. It was a host of fiddler crabs which had crawled up the turtle grass and blundered into the canoe, but were unable to get a toe-hold on the smooth varnished wood. Their constant scratching as they strove to climb out was what started me. I cleaned them out, rearranged the canoe, and made a resolute set at the drowsy god, but in vain. And it was not until late in the middle watch that I succeeded in getting an hour or so of uneasy slumber. We turned out at daylight, had a strong drink of hot coffee and paddled out.

"To-night we'll camp within ten miles of Bayport," said Tarpon. (Bayport is at the mouth of the Weik-a-wachee.) As we rounded the first point the sun came up, and also the wind, which in ten minutes managed to put white crests on the waves, and in crossing the next bay I again commenced taking in a supply of salt water. It was of no use trying to cruise on an open coast with a smart breeze on the beam in such an eggshell, and it happened that we were just then abreast of the pleasant little post office town of Port Richie, where we had intended to stop for our first camp. So I headed straight for a neat-looking cottage that stood at the head of the bay, about a mile distant. It proved a sensible and timely move. The wind soon rose to a pitch that would have driven us to land, and we happened to make the acquaintance of an interesting and intelligent family from the North, who were not only glad to see us, but treated us to an excellent breakfast.

Mr. Richie, the patron of the little hamlet, was only two years in the place, of which he was the first settler. But he had managed to get things in pleasant and home-like shape, and I would have thought the place had been twice as long settled. But he had been very fortunate in selecting the site for a town. The soil was exceptionally good for Florida, and the bay on which he had made his plant is at the mouth of the Cootie River, which is navigable for sloops several miles up, and the banks of which have a high reputation for fertility.

We were told that there was excellent fishing for channel bass and sea trout in the bay, and Tarpon got out his hand line and commenced trolling, holding the line in his teeth, as he always does. I watched him with much interest and some expectation of seeing a funny dental operation in case he happened to strike a large redfish, which he soon did, but managed to save his teeth, to my surprise rather. He landed the fish handsomely, and, as we had no use for it, gave it to our host.

Then Mr. R.'s daughter, a buxom lassie of twelve, became possessed with a strong desire for a cruise in one of the little canoes, and Tarpon stowed her in the forward stem of the Bucktail and paddled her up and down and across the bay for an hour, bringing her to the landing safe and dry, though the bay was white with crisp, steep waves. And the day was before us with the coast too rough for the canoes. "Why don't you cruise up the Cootie a few miles and come back as the wind dies down?" asked Mr. Richie. Sure enough, why not? The Cootie is an interesting stream, with high, dry banks, gamy, lonely, and of excellent repute for fishing. We decided to try the Cootie as far up as the new bridge, near which lived a new settler with whom we had some previous acquaintance.

Deer, bear, and turkeys may be plenty on the banks of the river; we did not go ashore to try for them. Fish, too, may be plenty at times. I only know that I trolled my best all the way up to the bridge (five miles) and did not get a rise. Alligators were very numerous and tame. Landing at the bridge, we climbed the steep bank and went to the cottage of Mr. Anderson, and found a really neat, home-like dwelling of squared logs and plank, that was like a Northern settler's home. And here we found Joe Grouse, who was putting the finishing touches to the doors and windows of Mr. A.'s cottage. Joe is a rough carpenter of the Florida type, and he is also a guide, hunter, sponger and fisherman, while no man is better acquainted with the country lying about the head waters of the Cootie and the Anclote. He told us that both rivers made a bend at this point, and it was only two miles across the woods to the banks of the latter stream. Also that it was only eight miles in a direct line to Tarpon Springs, while by the route we had come it was twenty. From the upper bridge of the Anclote it was about thirteen miles to Tarpon's ranche, and there was a half flood in the river with a swift current that would take us right along. Why not carry across the woods and paddle down to camp, taking another time and larger boats for the cruise to the Weik-a-wach-ee? No sooner said than done. We engaged Joe as guide over the carry and started, each with all the load he wanted to tote.

The distance proved to be full measure and Tarpon swore it was a long four miles. Anyhow it was within an hour of sundown when we launched the canoes at

the bottom of a steep, sandy bank, where the river ran swift and deep, with a tangle of vines and submerged limbs of trees that made a ticklish business of getting on board. We got afloat safely, however, and Tarpon said, "You lead off till it begins to get dark and then I'll lead. I know the channel from the footbridge and can make it in the darkest night you ever saw." So I led off at my best speed with a silent regret that we had not gone into camp and waited until next morning. An hour's paddling and five miles of distance brought us to the footbridge, which was a footbridge no more, having been carried away by high water. It also brought on darkness and Tarpon went ahead as pilot. It was fortunate that he had seen fit to indulge in a white shirt for the cruise; it made a beacon by which I could steer. The river was narrow and swift, with dense foliage meeting overhead and cutting off the dim starlight. Sometimes I lost sight of the dim, misty white spot ahead and a terse dialogue ensued about thus: "Hullo?" "Here you are." And then I would hasten the stroke until catching sight of the foggy beacon again. Several times we came to the end of the river through running plumb into the bank at abrupt turns, but T. always picked up the course in a minute or two.

At length we heard the faint swish and gurgle of water as of an obstructed current and the next instant T. yelled out sharply, "Halt! Tree across the river." I backed up stiffly, caught a limb in the darkness and held on for what might come next. For a long time I could faintly hear the rustle and plash of the flood trash as T. patiently worked his way through the drift down to the tree which held the surging mass against the current, but at length he announced, "I've found the tree and got the canoe over. If you can get through I think I can lead the Rushton over without getting you out."

Carefully and with some trepidation I worked slowly through the dangerous drift and found T. standing on the trunk of a green tree which the current had undermined. It had settled a few inches with his weight, and this enabled him to pass me over in safety without leaving my seat, and when fairly clear of that dangerous midnight tangle, I must own I breathed more freely. T. managed to board the Bucktail in safety, and he engineered the whole affair with a coolness and skill that excited my admiration. I was very tired and thoroughly disgusted with the trip before a misty glimmer ahead and the receding forest on either bank gave notice that we were entering the open marsh, where we could at least have the benefit of starlight and tell water from land.

It was still three miles to camp, but T. knew every rod of the course and made no mistakes, though the river was crooked as a wounded snake.

It was getting late in the night when we ran the little boats into the narrow canal which served us for a landing, and I had not moved out of my seat since launching at the upper bridge, by which it happened that I was so stiff and lame that it was only after several efforts that I could get on my feet.

Tarpon said, "Oh, this is nothing." To him, perhaps. To me it was decidedly pokerish. The worst night cruise I ever made.

Afterward I made a much longer cruise up the coast in the same canoe, spending a week at different points. I got plenty of beach birds, and found the trip on the whole interesting. But, if this meets the eye of any sojourner at Tarpon Springs who contemplates a trip along the Gulf coast, let me advise going down the coast rather than up.

NESSMUK.

THE THOUSAND ISLANDS.

NOTHING can surpass in grandeur and picturesqueness the scene which breaks upon the eyes of the traveler entering that vast expanse of the St. Lawrence, known, on account of the innumerable openings of the river through the granite rocks, as the Thousand Islands. In ages gone by the vast volume of water pent up in the immense inland basin of North America, weary of its confinement, has burst its way through the rocky barrier, and rushing over rapids and falls, at last flows silently but swiftly into the ocean. Nature is here found in every whim of its changing fancy; for great is the contrast between the islands, some being rocky and precipitous, covered with a dense growth of trees and bushes of every variety, while others are low and bedded with moss and ferns; many are miles in extent, but the "Devil's Fiddle Box" pushes not more than a few square feet of rock from beneath the water.

The river at this point is divided into two main channels about a mile apart, and connected with each other by numberless small straits so twisting and meandering in their course as to render an experienced boatman necessary for a day's row or sail. The islands about the American channel are, for the most part, inhabited during the summer months, and present a gala-like appearance with their pretty cottages and bright-colored tents. On the other hand the Canadian islands are left almost entirely in their natural state of wildness and beauty. It is here that the tourist takes delight in spending a day rowing leisurely about, with a trolling spoon dragging from the boat should he be a disciple of Walton's, and drinking in nature visible in all its loveliness. On one side a huge mass of tangled rock rises abruptly out of the water, its sides covered with the moss of ages, to which cling with wonderful tenacity huge trees shooting their heads out over the stream and softening the steady glare of the sun by their dense mass of quivering foliage. And on the other side stretches a low, rolling patch of green sward, edged by a sandy shore and framed with willow and alder, picturing a perfect camping ground of the once mighty Iroquois. So as one floats along each turn presents in quick succession some new fairy picture, whose banks of rocks and tops of green are so perfectly reflected in the transparent waters of the labyrinthine channel that the boat seems to glide over dense copses, and each moment one expects to dash against the rocks that so deceivingly appear to thrust their heads out of the river. A huge cavern in the depth of one of the islands, connected with the outer world by a passage just admitting the entrance of a small boat, is called the Devil's Oven. Tradition has it that a young Indian chief of the Iroquois having been condemned to torture, escaped and hid himself in this cavern for many weeks. The reflection of his fire on the cave's entrance and surrounding water gave a weird appearance to the rock at night, which, being seen by the superstitious Indians and believed by them to have been kindled by the Evil One's own hand, gave rise to the name. The Lake of the Isles is a narrow winding channel a few hundred yards in length and scarcely as many feet in breadth, hemmed in on all sides by a high bulwark of solid granite, which is surmounted by a mass of green so tangled and interwoven that one sees only a narrow strip of the blue sky overhead. The little excursion steamers twist their prows in every direction to avoid the rocks, and the quick throb of their engines echo and re-echo so quickly and distinctly from rock to rock that all nature seems to pulsate with the consciousness of its own beauty. No pen can fully depict the ever-changing loveliness of the scenery; no brush can portray the brilliant coloring of the sky. Venice, with its lagoon and sluggard-like canals, might well envy the noble Iroquois, embracing with its swift flowing and transparent waters the Thousand Islands. Days passed on the St. Lawrence are as the rays of the sinking sun, falling beneath the horizon of the past and leaving behind the rays of memory, glorious in their ever-deepening color.

ARIZONA BIRD NOTES.

Editor Forest and Stream:

Notwithstanding the several articles published on the subject, bird life in Arizona is as yet but little known, and to ornithologists in general, less understood than elsewhere in the United States. The dangers that menaced human life and the intense heat of the treeless plains, were, I know, much to contend with. Geronimo, the Chiricahua chief, and his following, spared no human shape that fell their way. For twenty years the Apache Indians sapped the very life of the Territory, as the graves of fourteen hundred of our murdered people truthfully attest, but thanks to General Miles, his brave officers and men, Arizona and her people have at length been rid of one of the worst bands of cutthroats that ever infested earth. With the exception of an occasional mishap on our southern border, life is now as secure in Arizona as in the older settled regions of the Atlantic States.

The summers of this "sun-kissed land" are proverbial for their warmth, and for them we offer no excuse. We sometimes complain of them ourselves, and would perhaps feel disappointed if newcomers failed to echo our feelings. Arizona, to the scientist, is full of interest, as likewise are the contiguous Mexican States of Sonora and Chihuahua. The former is somewhat unsettled toward its coast, where the Yaqui and Mayo Indians, under the leadership of their king, Cajame, are in revolt, and have thus far successfully withstood the assaults of the Mexican National troops, and while they thus continue, that portion of the Republic will be unsafe for travelers, whatever be their calling. The lands lying intermediate are, however, comparatively free from danger. Much like Arizona, the heat only is to contended with, their winters being like ours mild and even-tempered, and cannot be surpassed the world over.

Strange it seems to me, but it is nevertheless true, that during our so-called winter months bird life dwindles to a minimum. They go south, but for the time they stay the move is hardly worth the making. In this respect, however, no two years give a like result. In the winter of 1884 the common house finch (*Carpodacus frontalis*) disappeared almost to a bird; the winter of 1885, although much the colder of the two, gave no visible diminution of their numbers. The fall of 1884 (Sept. 28) was marked by an incoming of Lewis' and Clark's woodpeckers (*Asyndesmus torquatus*), but the autumns of '85 and '86 have failed to bring in a single bird. In 1884 they destroyed almost the entire pomegranate crop, as did the mocking thrush (*Mimus polyglottus*) the grape crop two months earlier. Last year the mocking thrushes, although abundant, were in point of numbers with the previous year, comparatively few, this year they are altogether absent. The Western robins (*Turdus migratorius*) were common on the Santa Cruz bottoms last winter. During the entire two years previous I had seen but three of these birds. Oregon snow birds (*Junco oregonus*) were likewise to be had, something I have never before noted hereabouts. They flocked with the house finch. White-winged blackbirds (*Calamospiza bicolor*) are common here the year through. Likewise shore larks (*Eremophila alpestris chrysolœma*). They can be found on desert and plain from the Mexican boundary line to the base of the Superstition Mountains, and possibly far beyond, but that is as far north as my observation in this particular instance goes. American titlarks (*Anthus ludovicianus*) are always common. The Texas cardinal (*Pyrrhuloxia sinuata*) and the new cardinal (*Cardinalis superbus*) both winter here. The Gila, so far as my observation goes, is the northern boundary of the latter bird. Hereabouts they are never common. On the 10th of last January Texas cardinals had apparently paired off, but a cold wind from the mountains again bunched them.

Last winter was unusually severe (if such a term is applicable to southern Arizona). The spring migrants failed to arrive on time, and nesting was, with a few exceptions, correspondingly late. February 21 Palmer's thrashers (*Harporhynchus curvirostris palmeri*) had their nests in shape, and by the 28th egg-laying with them was well under way. They are winter residents and first of the Turdinæ to begin the work of nidification. January 24 the fire-capped fly-catcher (*Pyrocephalus rubineus mexicanus*) put in appearance, but it was late in April before they began nesting. January 17 I noted the first song sparrow (*Melospiza fasciata fallax*). March 6 I took one in full moult. On the latter date I chronicled the first arrival of the Maryland yellow throat (*G. trichas*). October 19 witnessed their departure.

Feb. 21 I was in the Santa Catalina range, a massive chain of mountains north of Tucson, and well up their sides the blooming oquetillas were well patronized by humming birds, and in the deep cañons at midday bats were constantly on the wing. By Oct. 8, 1885, the last oriole had gone and did not reappear till April 10 following. On that date I noticed but one, a male (*Icterus cucullatus*). On the 11th they came in on a warm south wind by the score. *I. bullocki* and *I. cucullatus* were especially numerous. They were fully two weeks behind their migration of 1885. April 15 brought in the glossy ibis (*Plegadis guarauna*), the 16th Lincoln's finches (*Melospiza lincolni*), and on the 22d the bats hibernating in town buildings quit their winter sleep and filled the air by thousands.

Score another point of intelligence for the crow. In November last, on the plains west of Casa Grande, I saw them foraging for breakfast. The country at this point is covered with a stunted growth of white sage into which grasshoppers, horned toads, lizards and other crow game sought to escape when pursued, only to be systematically driven therefrom. The crows would fly up, strike the bushes with their feet, then drop aside and watch for their victims. If a bush was low and closely grown a crow would alight on top, strike with its feet, and then from that point of vantage await results. If any luckless insect or reptile attempted to escape its would-be devourers were all legs and wings in close pursuit. They won my admiration for the systematic, effective and intelligent manner in which they worked. They worked only one way and deliberately beat every bush in front of them.

During the past year 1885, Arizona quail (*Laphortyx gambeli*) have been very abundant. On the Salt and Gila rivers Indians and white men snared them by thousands. In September of that year I was in Phœnix and saw one man (a ranchman on the river bottom) drive in town with 600 live quail in one crate. They were purchased by a Mr. Whipley, a produce dealer, for 45 cents per dozen. The vender was anxious to contract for 1,500 more birds for the week following, but the offer was refused, as they were a drug in the market. This was what I called pot-hunting with a vengeance. This may be a quail story, but is a true one nevertheless.

TUSCON, Arizona, Nov. 10, 1886. HERBERT BROWN.

SNOWY OWLS.—Dansville, N. Y.—I notice in recent issues of FOREST AND STREAM occasional captures of snowy owls in this State. A large specimen of this handsome bird was recently captured by a farmer eight miles west of this village, and brought here and sold to one of our dealers, where it attracted considerable attention. Snowy owls are very scarce in this radius of country, as this is the only instance of one having been captured within a period of ten years or more.—UNCAS.....Forreston, Ill., Dec. 20.—Just received by express from Calhoun county, Ia., a fine snowy owl alive. He is snow white with the exception of a few dark specks. He ate a pigeon yesterday and drank water, but is very pugnacious, snapping his bill and hissing much like great horned owls do. I shall keep him alive for a time at least. A few are killed in Calhoun county every winter.—H. A. KLINE.....Rocky Ridge, O., Dec. 31.—About two weeks ago a snowy or white owl was sent to me for mounting. It was killed by Mr. Henry Mears on the A. W. Meeker farm, one mile east of Huron, on the shore of Lake Erie. It is a female, and in nice plumage. Weight in the flesh about 4lbs. Its stomach was full of chicken feathers. This, I believe, is the first snowy owl captured in this part of the country for some years. Although it is reported that several had been seen near where this was killed, so far none have been captured.—F. LEHMANN.

SPARROW-HAWK IN AN ODD PLACE.—New York, Dec. 15.—Fireman Patrick Kennedy, of Hook and Ladder No. 14, Harlem, met with a singular visitor when he went to strike the hour of twelve at Mount Morris Park on Saturday last. This was nothing else than a sparrow-hawk (*Tinnunculus sparverius*), which found its way into the old watch tower above the bell. The bird was flying from side to side and clinging to the window sashes as Patrick came up-stairs. How it got there was the question until a stovepipe hole was discovered up under the eaves. The fireman left the bell tower carrying the hawk carefully grasped in his hand, his forefinger not far from the bird's beak. All at once he felt a fearful pinch on his finger. The bird with wicked-looking eyes was tearing away at his hand as though it meant to swallow his finger down whole. Without thinking and in his astonishment Patrick opened his hand and the hawk simply flew away. The bird was a male in beautiful plumage and perfectly unharmed. In my own experience I never remember seeing any other than male birds of this species in this part of the country at this season of the year.—A. H. G.

A DOMESTICATED GROUSE.—Earlville, N. Y.—Twelve years ago a female ruffed grouse was caught in an orchard near the village, having been driven there from the woods by a hawk. The boy who caught her sold her to I. W. Rowe, our present postmaster. He placed her in a roomy cage, and for some days she refused to eat; but in a short time became quite tame. For three years she was kept confined in a cage, but one day by accident the cage was overturned, and she flew out and perched on a neighboring house. Mr. Rowe went to catch her. When about to place his hand upon her, she flew back to her home and entered the cage. On another occasion she was out and flew to a barn across the way. Mr. Rowe called her; she flew and lit on his hand and endeavored to crawl up his coat sleeve, seeming to express great joy at seeing him. Mr. Rowe kept her seven years. She died from roup, caught by roosting with a pair of bantam chicks. This bird was caught in the fall and undoubtedly was a spring bird, and if any doubt the above statements they may write to any resident of our village.—GROUSE.

CLARKE'S CROW IN BRITISH COLUMBIA.—Victoria, B. C.—The Clarke's crow (*Picicorvus columbianus*) is found in British Columbia, east of Cascades from our southern boundary north to the Upper Stickeen River, accidentally west to Vancouver Island. During my observations, extending over a period of fifteen years, I have only once seen this bird west of the Cascades. It is a peculiar bird, having the habits of several species. It will cling to an old stump while it extracts the grubs and worms found therein as do the woodpeckers. When on the ground it closely imitates the actions of Steller's jay, and, indeed, both birds are very often found in company. It hops, both feet leaving the ground together. It spends much of its time high up in the foliage of the fir and pine trees, feeding on the cones and constantly uttering its harsh discordant note, which may be heard nearly a mile away. The tongue of Clarke's crow is bifurcated, a clear slit of about half an inch in length dividing the tongue into two distinct points.—JOHN FANNIN.

PRAIRIE FOX IN KANSAS.—*Editor Forest and Stream:* A little over a year ago Mr. Fred Whitney killed a prairie fox (*Vulpes macrourus*, Baird) in Cowley county. He had the animal mounted, and it is now at his home in Meade county. It is the light colored variety spoken of by Prof. Baird in his work on mammals, P. R. R. Report, vol. 8, p. 130, and the first, to my knowledge, captured in the State. Mr. Whitney says that another one has since been killed in the same vicinity.—N. S. GOSS (Topeka, Kan., Dec. 27, 1886).

Game Bag and Gun.

THE EXPERIENCES OF A NOVICE.

SOMEWHAT worn out by strict attention to an exacting profession, and disgusted with the disputes of litigants and the noise of the courts, I speedily came to the conclusion that nothing but communing with nature and the pursuit of sundry specimens of the genus *Cervidæ* would alleviate my condition, and having resolved upon this, the question arose of where to go. The majority of my friends said Pennsylvania, of course; others recommended me to the Muskoka district in Canada, while still others said, why not try the vicinity of Eagle Lake lying north of Haliburton, the terminus of the Midland division of the Grand Trunk? To these last I harkened, and thus it came about in November, ——, I found myself leaving Buffalo on a Grand Trunk train, armed with a Winchester .45-90, model of 1886, and filled with glowing anticipations of the game I was about to bag. Crossing Suspension Bridge below Niagara Falls, I was compelled to leave a deposit of twenty per cent. upon the value of my gun with the genial (?) representative of the Canadian customs, as a guaranty that I would not dispose of my piece while in Her Majesty's dominion, with the assurance that upon my return said deposit would be refunded me if the rifle was still in my possession. Of this more anon. Arriving at Toronto I found it impossible to proceed that night, but the following morning at some unearthly hour I helped myself on board an accommodation train going north, and reaching Lindsay about 11 o'clock, was informed by the conductor that I would have a pleasant wait of four hours there before the train left for Haliburton, fifty-five miles away. Those who have traveled much in Canada will readily appreciate the delights of a four hours' wait in Lindsay, but at last 3 o'clock came around, and a mixed train of freight and passenger cars assumed the disagreeable task of carrying me still further north. I say disagreeable, because that wretched train insisted upon making stops of half an hour or more at every miserable little hamlet on our way, and their number was legion, so we didn't reach Haliburton before half-past seven in the evening, where I found good sleighing, and my guide waiting for me to drive me out to Eagle Lake, ten miles distant.

It was a bright moonlight night, with keen, frosty air, and the drive through the woods over an undulating country, with beaver meadows and barren hills, was about the pleasantest thing I had struck on the trip so far. Midnight found me snugly in bed at the comfortable farm house near Eagle Lake, occupied by my guide, and that night I dreamed of all the animals of the forest who were so soon to fall victims to my prowess during the three following days. The guide's name was Emerson Austin, who had lived in that country for many years, and whose father and brothers were, with himself, the ablest guides, the best shots and the keenest sportsmen the region afforded. We awoke the next morning bright and early, and after a hurried breakfast, Emerson, his father and myself, with two small mongrel hounds in leash, set out for the first day's hunt. The snow was about ten inches deep and the air still cold and clear, and after sliding down about half a mile of a very steep hill, we found ourselves on the ice of Eagle Lake, said ice being about five inches thick and nicely cushioned with an inch of snow. Walking the full length of the lake, about two miles and a half, we came to the portage leading over to Big Red Stone Lake, and climbing up over a high hill we descended into the valley of a little creek, where numerous tracks showed the deer had started to form a winter's runway, and on which I was posted about forty feet from the creek, behind the upturned roots of a large tree. Any deer coming down the hill facing me on the runway would have to jump the creek (at least so the guides said) between a young cedar and an old dead birch, and would land where I could, as the guides also said, "blow a hole through 'em," with which gratifying intelligence I was naturally much pleased. The hour was then half-past ten, and leaving me there the elder Austin took position upon a hillside about half way between me and Eagle Lake, while his son, with the dogs, went over toward Red Stone with the intention of bearing around to the right, and driving some deer over toward me from the hills lying to the eastward.

The snow was dotted with tracks of numerous wild animals, principally deer, fox, fisher, mink and hedgehog, and, after taking due note of these, I amused myself with looking through my rifle sights at imaginary deer jumping the creek in front of me. This occupation, however, soon became monotonous, and I busied myself with arranging a comfortable seat on the log of the tree which shielded me from view on the creek side. This satisfactorily accomplished, I began to realize that it was very, very cold, and was also conscious of a strange gnawing in my stomach, arising from the absence of a noonday meal. I looked at my watch; it was 1 o'clock, and the only game I had so far seen was numerous red squirrels and a small but very interesting specimen of a mole. It seemed to me to grow colder and colder, until I was fairly chilled to the bone, although warmly clad, and I began to wonder if I should never hear those dogs. By passing my hand slowly over my right side I could locate the chunks of ice forming on my liver, while my breath fell in cakes to the ground. By and by, however, I heard a faint baying which sounded miles away, and my hopes began to rise. By this time my hands and feet were almost frozen, and picking up my rifle I found I was shivering so that I could hardly hold it steady, even if the deer were tied to a tree right in front of me, to say nothing of the possibility of the chattering of my teeth driving him away. The music from the hounds was slowly swelling in volume, and presently they burst over the hill in full cry, possibly a thousand yards from me. "I hope it's a buck," said I to myself, and braced myself to give him his quietus with the rifle which I had never tried. A moment more and I thought I would have him, when he suddenly turned to the left, while still out of sight, and crossed the creek fully five hundred yards below me and went up the other hill beyond. The music gradually grew fainter and fainter, until I lost it altogether, and I knew that my hopes for that day were ended. Leaving my position, I slowly worked out to the lake shore and began the home journey, reaching the farm house about 5 o'clock, and having probably walked some ten or twelve miles. An hour later the guides came in, having had no better luck than I had, and explained my disappointment by saying that the deer must have scented me. But slightly comforted by this reflection I retired for the night, hoping for better luck another day.

The next morning I was placed on a presumptive runway about a mile and a half from the house, near the banks of the stream constituting the outlet of Eagle Lake, and patiently froze to death all that forenoon, with the result of the dogs driving two deer across the stream about a quarter of a mile below me. The older guide and myself then returned to the house to dinner, after which we took another hound and set out to work some high land lying to the west of Eagle Lake, he taking the dog along the road to put him into the woods over toward the lake, while I took to the ice for about a mile, and then climbed a small mountain where I could look down into a valley on either side, and indulge in some long range rifle practice if anything came within sight. On the way up I found at least a dozen places where deer had slept and browsed, but they were all old, and after a two hours' wait I set out to return across country. Selecting the valley to my left, I slid down very rapidly to its bottom, and started to climb up the other side. The snow here was only about six inches deep, and the leaves underneath were frozen together, making the walking so slippery that I had literally to haul myself from tree to tree, at last climbing up the face of a nearly perpendicular piece of rock to the summit above. From this point it was easy walking down to the road, and thence home, but the result of the day's efforts was most discouraging. Total distance covered, about eight miles.

The third day opened bright and warm, and donning my moccasins I walked up the road toward Haliburton about two miles with the younger guide and sat on a log facing a large swamp while he explored the same with a dog. Result, no deer. We then went east along the top of a high ridge about two miles to the Lake of Islands, so called, where we of course found very comfortable walking on the ice, from which we went further east about a mile along an old wood road, seeing no fresh tracks; and then he inquired if I felt equal to a trip over to Deer Lake about a mile away. I stated guardedly that I thought I was equal to it, and then followed the roughest walking for about two miles that I ever struggled through in my life. The snow was deeper here, in places being nearly a foot, and where there were no holes in the ground there were unavoidable brush-heaps, and by the time we got half way to the lake I was completely used up. Though accustomed to walking, having done much of it, and rather gifted by nature in that way, I was not equal to keeping up with a man who weighed 25lbs. less than I did, whose muscles were like whipcords and who would bound up a steep sidehill over logs and brush, with the snow knee deep, without sweating or puffing, and whose feet seemed to fairly rebound from the ground when he was in a hurry to get anywhere. So I sat down and consumed a few cookies I had been wise enough to put in my pocket before starting out that morning, while he said he believed he would take a run around the hill and through the swamp on the other side to see if there were any deer in hiding there. He was gone about fifteen minutes and must have covered nearly two miles from what I could see of the topography of the country, but returned fresh and smiling and said he guessed it was about time we moved on. We accordingly moved at no snail's pace down to Deer Lake, across the lake, climbed over and through the vilest cedar swamp in two counties and found ourselves in an open field two or three miles from home.

How I got home I don't very distinctly remember, but half-past 12 o'clock found me sitting down to the mid-day meal, so tired that I could hardly eat. After dinner I found my feet so lame from the unaccustomed use of wearing of moccasins that I was obliged to put on my heavy grain leather hunting shoes, and the old guide and myself again set out for the river where I had been unsuccessful the day before, and took position on a favorite runway, he standing right on the river's bank, while I stopped about 100yds. above him on the hillside. The younger Austin put the dogs in up near where he had started them the day before, but they were so unfortunate as to take after a large fawn, which paid no regard to runways, the formation of the country, or the expectations of a huntsman from afar. So he crossed the river 500 or 600yds. above us, we getting the full benefit of the music from the dogs, without a sight at the animal they were pursuing. It was after dark when we reached home, tired, discouraged, no deer, and 15 or 16 miles to be credited to that day's record. Every deer we had started went in the direction of Red Stone Lake, until it seemed as though the woods must be full of them over there, and we had decided to go hunting there on the following morning, Saturday, with the hope of shooting a carload at least. But I learned that no trains left Haliburton on Sunday, and so I was compelled perforce to drive that night back to Haliburton, in order to get the train the following morning to Toronto.

Of the numerous waits on that return journey I will not speak, it is sufficient to say that it took me the best part of two days to get back to Buffalo, and the deposit on my gun I was unable to obtain, because the particular inspector who had taken it from me on my entry into Canada had gone to attend the wedding of his deceased wife's sister, or something of the kind, and because of the unfailing discourtesy and lack of accommodation with which Canadian custom officials are inspired. Nor have I ever been able by correspondence since to get the same refunded to me, and I can only comfort myself with the remark of the gentlemanly (?) official at Clifton, Ontario, that "if I didn't like their way of doing business I needn't come over there to hunt." On the whole, after mature reflection, I am inclined to think that he was right.

In spite of my ill luck I saw enough to convince me that the country north of Eagle Lake must abound in deer, and the numerous lakes and streams make it a beautiful region to traverse in canoes, where you have guides to carry the same with your baggage over all the portages. As some one has remarked, it must have "rained lakes" up there at an early period of the world's history, and fifty miles from Eagle Lake there can still be found plenty of moose and bear. But it is to me little satisfaction to shoot in a territory where you are not allowed to bring back with you even so much as a solitary saddle of venison as proof of your prowess, and where an insufficient bounty for wolves scalps cause more deer to be destroyed by hungry packs than all the sportsmen of Canada can kill with their guns. AHMEEK.

THE EMPTY KENNEL.

ON the kennel floor the chain lies,
Where it lay a year ago.
Rusty, knotted, wound in cobweb,
Where cold spiders hide below.
Creaking on its unused hinges,
Swings the loose door to and fro;
And the kennel straw is mildewed,
Dampened by the sifting snow.

Now there is no dog to care for,
Silence only when I call.
But I *must* call: Grouse! My beauty!
Hark! A moan behind the wall.
Oh! What sound was that I heard then?
Moans the wind there—that is all.
Sighs the wind about the kennel,
While the rustling dead leaves fall.

When the dying leaves were falling,
Just one year ago to-day,
Grouse, the noblest of the setters,
Listened through the morning's gray
'Till he heard my footsteps coming;
Leaping, sprang at me in play,
Shook his sides with doggish laughter,
Said to me all he could say.

And he told me that he loved me,
Said he wanted to obey,
Said he knew just where a partridge,
Hidden 'neath the windfall lay.
There he pointed, staunch as granite,
While Bonasa dared to stay;
Brought the dead bird back so proudly,
Asked if that was not the way.

And I praised the dear old setter,
Looked down at his earnest eyes,
'Till we felt like two good fellows,
Bound by all the hunter's ties.
And I said to him: Now, Grousie,
Many a year before us lies,
Many a day we'll hunt together,
Ere the soul of either flies.

So we ranged along together,
Over meadow, ridge and swale;
In the swamp the twittering woodcock,
In the brush the calling quail
Found their hiding spots discovered,
Found their tricks of no avail.
All in vain the running partridge
Tried to throw us off his trail.

When at noon we stopped a moment,
At the spring beneath the pine,
If he put his nose in first there,
His was just as good as mine.
For we shared our things together,
On the moss we'd drink and dine;
Side by side, our single shadow
Made a pretty friendship's sign.

Late that day the slanting sunbeams
Reddened all the rocky hill,
With a strange, unnatural lighting,
Colors boding something ill.
Through the forest sped a rabbit,
Daring me to try my skill;
T'was no rabbit, but a spirit,
Some foul thing I could not kill.

Soon its evil work was ended.
Grouse came slowly back to me,
Looked up at me, asked a question,
Laid his head against my knee.
On his neck there was a blood stain,
But no mortal eye could see
What the wound was—how it came there.
Boy! asked I, what can this be?

Is it true that I have harmed you?
Oh! if you could only speak.
Do not pain me with forgiving,
But on me a vengeance wreak.

Said he: "Master, if you did it,
Then I know it must be right;
I have been a true companion,
Worked and loved with all my might.
If from you I should receive this,
Then my dying pains are light;
If my day has brought you pleasure,
Gladly pass I into night."

Tenderly I laid him out there,
On a golden wood brake sheaf,
Made for him a brilliant covering,
Of the sumac's scarlet leaf.
Sadly left him with the Dryads,
Asked of them to share my grief:—
Faithful friend of man—the setter,
Dead—with friend of nymph—the leaf.

On the kennel floor the chain lies,
Where it lay a year ago;
Rusty, knotted, wound in cobweb,
Where cold spiders hide below.
Creaking on its unused hinges,
Swings the loose door to and fro';
And the kennel straw is mildewed,
Dampened by the sifting snow.

NEW YORK, Nov. 6. ROBERT T. MORRIS.

THREE GROUSE.

THERE were only three of them, but they were a beautiful trio; and as we smoothed their glossy plumage and gently laid them side by side on the mossy stone, the Professor struck an attitude and thus apostrophized them: "Beautiful birds of royal lineage; your glorious mission is accomplished, and from the innermost depths of my soul I thank you for the overflowing measure of transcendant happiness vouchsafed me this day."

Just then Joe drove up with our team, and as he caught sight of the birds exclaimed, "My! won't them go good roasted."

"*Et tu Brute!*" said the Professor, "there is not a particle of sentiment under thy waistcoat, Joe." Then with a wave of his hand he added, "Take the bodies, Joe; I would as soon eat my own flesh and blood. Roast and devour them. Then may you truly boast that something noble within thy bosom dwells."

We had indeed been blessed with a day of most royal sport. It was near the close of November, and although the sky was cloudless, there was just enough of frost in the air to keep us comfortable, notwithstanding our vigorous exercise as we tramped over the rather rough country.

We had taken an early start in pursuit of a fine bevy of quail that harbored in the vicinity, and had beaten every stubble and likely looking place without finding them. As it was after ten o'clock, we decided to try some of the adjacent covers, and made our way toward a large patch of alders at the mouth of a long, narrow run that wound round among the hills for three or four miles. While yet a hundred yards from the edge of the thicket, a ruffed grouse, with wisdom born of experience, rose and was soon lost to sight up the valley. "The roar of the startled grouse" was ever sweetest music to my ears, and as the Professor was almost a monomaniac in this direction, we —with one accord—at once entered the run, congratulating ourselves upon the very favorable lay of the land and anticipating the early capture of our friend, notwithstanding his crafty disposition. Old Rock, too, appeared to feel confident of victory, as with head high in air and gently waving stern he proudly marched just in front of us. No need to explain to him any details of the campaign, no need to give him any word of caution as to his behavior, for had he not shown us many a time that his knowledge of the subject was far beyond human ken?

Working up the run to where the bird had disappeared we came to a wider place where the line of alders swung to the right and then turning back, forming a half circle. Glancing at the lay of the land the Professor, with a complacent look steered straight for the upper point and took up a position that completely commanded the only possible avenue of escape in that direction. He had no sooner taken his position than Rock with stealthy stride stole along close to the edge of the alders until he had passed the turn, when he suddenly froze in his tracks. Knowing that he had the bird fast, I went through the thicket and worked up on the opposite edge until I came to the turn, when I went straight to the dog and had just got well into the thickest of the cover, when with a roar that almost lifted me from my feet the bird rose behind me and with rare good judgment kept behind the only tree that was in the vicinity and flew straight over the hill to a small patch of cover that we had entirely ignored in our calculation. The Professor at once came down both mentally and physically from his commanding position and came toward me. He had gone about 50yds., when a second grouse rose within a few feet of where he had been standing and flew up the run. This was first-rate and keenly enjoyed by me; indeed I felt as good as the Professor had appeared to over the escape of my bird. "There is no real sport," remarked the Professor as he joined me, "in potting your birds at the first rise; and it is only a long and difficult pursuit that affords the true grouse hunter any pleasure. Why," said he, "I had rather follow that bird half the length of the run than to bag him so easily as I should have done had he risen while I stood there." Assuring him that a profound respect for the principle involved was alone responsible for the escape of my bird, and congratulating him upon the pleasing prospect for genuine sport, we started up the hill for the bit of cover that contained the first bird.

Just at the top of the hill there was a ledge of rock about four feet high, which was rather difficult to surmount. Laying down our guns, the Professor took the lead and I "boosted" him. Everything worked well and he was nearly up, but just at the most critical point of operations, there was again the roar of the startled grouse in our ears. When a bird rises within a reasonable distance, an innate sense of the fitness of things prompts me to shoot; and at the first sound of the fluttering wings, unmindful of aught save the opportunity for a shot, I made a grab for the gun. But fate was against me and I scored a lost opportunity, for the Professor literally sat down on me, and before we had got straightened out our bird was far up the run. This was the best yet; and although both of us were considerably astonished we came up smiling for the next round. Even old Rock gave unmistakable signs that he was thoroughly enjoying the sport, as he stood gazing at us with a quizzical look and expressively vibrating tail. The Professor, if one could judge from the curious working of his features, evidently wished to make a few remarks, but aside from the thoughts that his appearance suggested as he shook himself together, I never learned what his sentiments were. That his feelings upon the subject, however, were deeply stirred I had no doubt, for as we retraced our steps he plaintively whistled a quaint old tune, and as ever and anon he turned his head over his shoulder and gazed at the ledge, his notes wandered into a minor key and the tune became strangely jerky.

As we came to the place where the Professor had taken his stand to cut off the first bird, old Rock made a staunch point near where the second bird rose. "Ah!" said the Professor, addressing the dog, "we have at last caught you making a mistake. Your attitude, although striking, soul-inspiring, and all that, fails to cause the heart to bound and the finger's end to tingle, as our superior intelligence enables us to remember that the bird has flown, while you with blind instinct believe her still to be there." Just then he laid down his gun and was busy adjusting his clothing, when a third bird with a thunderous roar rose not ten feet from him. As he was right in line I could not shoot, but felt amply compensated for the loss of the shot in witnessing the ground and lofty tumbling of the Professor as he frantically turned round two or three times and grabbed for his gun; but he did not recover it until the bird was far up the run. As in the episode at the ledge, not a word was spoken; and we followed on with not even the plaintive melody of that weird old tune to cheer our steps. This silence upon his part was peculiarly suggestive, as the whistling or humming of this tune I had come to regard as a sure indication that he was exercised in his mind upon some point, and as I was quite certain that the occasion was most fitting, I every moment expected to hear him break out, and was fully prepared to listen to some extravagant variations; but except an occasional twitch of the corners of his mouth, and a frequent shifting of the position of his gun, he made no sign. This state of affairs continued until we turned an angle of the run and came to a large patch of grass, upon which the frost had lain thickly, but the rays of the sun had converted the plot into a glittering mass of gems that sparkled in the bright sunlight with dazzling brilliancy. It was a curious sight to watch the wrinkles fade from the countenance of the Professor as his eyes dwelt upon the scene. Soon after we halted all three of our birds rose some distance above us and disappeared around the next turn, but the Professor was immovable, and, save a slight suspicion of a furtive roll of his eye in their direction, he remained as motionless as old Rock on point just above us, with the hot scent full in his nostrils. The Professor is an ardent lover of the beautiful in nature, and no eye is more quick than his to discern it. After gazing at the sparkling scene a while, he majestically waved his hand in that direction and poured out a rhapsody in its praise that was most charming to hear; but he spoiled the sublime effect of his peroration by adding, with scarcely a comma between the sentences, "Did you mark those birds?"

In spite of my best efforts to contain myself, the smiles would come, and as the professor glanced at my open countenance, he exclaimed: "That's right; there is nothing so conducive to a long life as a good, hearty laugh, except, perhaps a well conducted grouse hunt." Then carelessly throwing his gun in the hollow of his arm, he turned and walked up the run. He had gone but a few steps, however, before he turned toward me and sententiously remarked: "It is not all of hunting to hunt." Then taking a few more steps, he again turned, and from the text, in his inimitable style, he preached me an eloquent discourse, replete with happy allusions to the mute sermons of the stones, the music of the laughing waters, the soft whisperings of the stately trees, the beauty of the brilliant flowers, and the manifold charms of nature in all her unadorned loveliness. Then drawing a beautiful word picture of the many haps and mishaps of the sportsman while in pursuit of pleasure, his joys and sorrows while contending against some wily denizen of the forest, he exclaimed: "Not for hecatombs of slaughtered grouse would I relinquish the memory of the soul-satisfying pleasures that I have enjoyed on many a day when I had not even a feather to show." Then after a few steps more, he added, in a much less assured tone, and with a grimace that I fully understood, "Even the little fun that we have had to-day will long outlive in memory the recollection of the death of these three condemned grouse that we are bound to have." The last words were spoken with an emphasis that could not be mistaken, and with firmer, quicker step, we followed our game up the run.

Coming to a branch of the run that led back to where we had left our team, we found old Rock pointing with his head up the branch. The Professor instinctively circled ahead for a knoll that commanded the run, while I took the other side and followed up. Our well-laid plan was useless, however, as the bird was away before we were nearly ready for it. Somewhat subdued in both appearance and spirits, we returned to the main run and were soon rewarded for our ill luck by getting a staunch point at the mouth of a small ravine some fifty yards in length, and entirely surrounded by a high bank that placed us on a level with the alders. Here was a grand opportunity for us, with no possibility for the doomed bird to escape, and as we gained the coign of vantage the Professor nodded so me in a self-satisfied way that was very expressive of my own thoughts.

Near the upper end of the gully there was the fallen trunk of a large tree about twenty feet long, with one end upon the bank on the Professor's side, while the other end was at the bottom of the gully, the log lying at an angle of about forty-five degrees. As we came opposite the log a magnificent cock grouse sprang from the ground at the lower end, and with many a stately nod of his head and expressive jerk of his half expanded tail and much ruffling of his beautiful plumes, with occasional petulant commands to us to *quit*, he slowly and gracefully walked up the log. Glancing at the Professor I saw that his gun was properly poised, his feet were firmly planted, and that in every sense of the term he was good and ready. I was, as calmly as I might, awaiting the end, and mingled with my feelings of triumph came thoughts of pity for the regal bird who had allowed himself to be caught in such a trap. Our victim soon came to the end of the log, and turning his head to one side gave the Professor a glance and then quietly dropping to the ground on the opposite side from him, ran like a ghost to the other end, and then rising just clear of the top of the brush suddenly dropped to the ground again just in time to escape the death-dealing charges that hurtled along the tops of the alders from both our guns. There was a rustling along the dry leaves clear to the mouth of the pocket, then the sound of quick beating pinions, and seventy-five yards away we caught a glimpse of the brave bird as he swung over a knoll and disappeared up the branch.

I was sorry that this should happen. The Professor was sorry too. At least I concluded that this must be the case, for I heard the words "bare-faced robbery" coming from his direction, and, judging from the sound, they came through his set teeth. He was placidly smiling, however, when I joined him, and went into ecstacies over the wonderful display that we had witnessed, and could hardly find words to express his admiration of the beauty and grace of our charming friend. There was never a word that could be construed to contain the slightest hint that we had any reason to complain that we had been unfairly treated in the transaction.

Returning to the run, old Rock swung ahead toward a small clump of alders that was isolated from the main cover, and after carefully feeling of it, he made a point but soon backed out, and with the tread of a cat circled the thicket until nearly opposite us, when he resumed his point. The Professor came out very strong on this occasion. With careless grace the gun was brought to position as with head erect and a martial bearing that did him infinite credit he gallantly strode to his chosen stand some twenty yards beyond and to the left of the thicket. His whole bearing as he calmly stood there in the bright sunlight powerfully impressed me that a crisis was at hand. His every appearance proclaimed "The hour has come and the man is here."

Taking this all in at a glance, I calmly moved forward and forced a rise. The bird went quartering from him—his favorite shot—and it was worth going a long distance to see the cool, calm, entirely confident manner in which he deftly brought the death-dealing tube to his shoulder and with matchless abandon cut loose at his helpless victim. It was also worth going much further to witness his blank look of amazement as the bird kept on, leaving not even a feather. This was, indeed, hard lines. Just how the Professor felt on the subject I never learned. That he was in a state of mind, however, I was firmly convinced, as his chop-fallen looks and dejected pose pretty plainly indicated that something was amiss.

With greatly subdued appearance, upon my companion's part at least, we followed up the bird and Rock soon scored another beautiful point in a narrow portion of the run, where it was impossible for a bird to escape. As we approached, the Professor motioned for me to take the lead, but wishing to give him an opportunity to retrieve his fortune, I refused and he swung ahead. As soon as he had obtained a commanding position I walked in and flushed the bird, but it rose behind me and started down the run. Whirling quickly I deliberately covered him and let go, and as I saw the result I was more than ever assured that I had not misjudged the feelings of the Professor a few minutes before. When he joined me there was a look in his eye that I did not half like, and as just then I spied the spike of a cardinal flower that somehow had escaped the frost, I plucked it and launched forth in extravagant praises of the lovely flower, radiant in its gorgeous beauty. This was a thrust with his own favorite weapon, or perhaps I should say shield, and that it struck home I had abundant proof in the queer contortions of his countenance and the merry twinkle of his eye.

We now had our bird headed in the right direction, and with unflagging step and still buoyant spirits we followed on. The wind was blowing partly down and across the run, and old Rock, with intuitive knowledge, stole along the leeward side and was soon lost to sight. When we found him he was standing at the mouth of the pocket, from which our second bird escaped; and as we came up he dropped his head and tail, and with a sheepish expression glanced across the pocket in the direction of the branch, where the first two birds had gone. The tale was well told and we needed no interpreter to explain its meaning. All three of our victims were now in the little branch, and, as the nature of the ground was very favorable for us, we pushed on with renewed courage.

The strip of cover was narrow and of small growth, with the bank upon either side nearly upon a level with the tops of the alders, just the right place to get the better of the unfortunate birds that had been so foolish as to imagine that escape was possible here. As the Professor crossed the branch and gained the opposite bank, I was pleased to note that his confidence had returned; at least I judged this to be the case, as his hat was cocked jauntily on one side and his gun was carried in a self-possessed manner that betokened a mind at ease. At the same time there was a deliberate firmness in every step and movement that plainly showed that the time for trifling had passed and that no mercy would be shown. Taking my position opposite him, with Rock just between us, as the wind was directly behind us, we marched on, serenely confident of an easy victory. I once heard an old and experienced hunter say that occasionally he had failed to make connection, even when his plans were well laid and seemingly perfect. This was our case exactly. We had no trouble in finding the birds. On the contrary, they were continually showing themselves, but the distance between us was exasperatingly provoking. We kept them going for more than a mile, until we arrived at the end, or rather beginning, of the branch, where there was a dense thicket of alders, briers and wild vines. This was circular in form and about 50 or 60yds. across. Rock at once stole around to the far side to get the wind and the Professor, motioning for me to hold the fort, went around the other way and, signalling a point, laid down his gun and crawled into the tangled mass. A couple of minutes later I heard the confused whirr of wings and braced myself for a supreme effort. With an instinctive perception of all the possibilities and a grim determination to retrieve the fortunes of the day I resolved to give it to one of them right in the face and eyes and then wheel and grass my second victim after he had passed me. It is needless to dwell upon the brilliancy of these tactics, as their excellence is apparent at a glance. There was a brief moment of ecstatic suspense, then I caught a glimpse of a brace of the birds going the other way across the open and soon the last one followed them and all settled at the corner of a ten-acre sprout lot, just beyond which we had left Joe with our team. The sprouts were about 15ft. high and so thickly grown that there was scarcely room to pass between them. Greatly depressed in spirit I joined the Professor, who appeared to rather enjoy my discomfiture, while I must confess that his scratched face and dilapidated appearance were somewhat consoling to my feelings.

No time was lost in vain regrets or murmurings at untoward fate, but with a courage that only comes with a long experience we gamely marched to the dread covert. My companion took the outside, while I entered the thicket. Rock soon struck the trail, and with head high in air drew along diagonally toward the edge. With every fiber of my body tingling and every nerve at its utmost tension I followed, until suddenly he froze in his tracks and a second later the bird rose; and as he crossed to my left I caught a glimpse of him, and taking a quick snap at him, held my breath until with unspeakable joy I heard that "soul-satisfying thud that told my aim was true." Hearing some self-congratulatory remarks from the Professor as well as the vigorous snap with which he closed his gun, I became aware that he also had shot, but even this knowledge could not take from me the pleasure I felt nor shake my belief that I had held dead on. Through an opening a fleeting glimpse of the Professor's face assured me that he, too, was not a little elated over

the brilliant shot. Ordering Rock to bring the bird, the dog slightly turned his head and giving me an expressive glance, accompanied with a slight wag of his tail, drew on a few yards and again stiffened on point. This time there was no partnership about it, for the bird rose inside from me, and, as I was keyed up to the proper pitch, he never topped the sprouts.

As before, old Rock just rolled his eyes in my direction and would not budge from the trail, but drew on in grand style and soon had his bird fast near the upper edge. The Professor was in position and I walked up and forced the bird into the open. I could not see the result of his shot, but a deep, long-drawn sigh of satisfaction assured me that our long chase was over. Sending Rock to bring in the birds, we crossed to the road a few rods distant, where Joe soon joined us, and in a few minutes we were on our way home. Our ride was almost a silent one. For my part I was too full of the recollections of our glorious day's sport to say a single word, and my companion evidently was in the same happy state of mind. As we left him at his door I handed the birds to him, at the same time remarking, "We have had a glorious hunt." Drawing himself up to his full height and waving back the proffered birds, in a deeply impressive tone he replied, "It is not all of hunting to hunt." SHADOW.

DEER AND DEER HUNTING.

THERE are yet deer in the woods of Pike county, Pa., despite constant hounding. George M. Quick, the Shockapee Farm hunter, whose log hut near Milford is nigh half a century old and of whom I wrote a few weeks ago, has had some legitimate fun with a few of them. Last week he started tracking in a light snowfall near what is known as the Yellow Pine Swamp and found where four deer had been feeding during the night. They all went away together to the Orry Cabin Brook and went into a dense little swamp. Quick and three members of his family, Rod, Vic and Frank, succeeded in routing out a fat young doe, which fell in her tracks when George's gun cracked. Another party hunting in the same region came across another doe and wounded her, and next day all hands combined and tracked her up and shot her. A couple of days later George, his son Charles and Frank, fired by the news that the mammoth track of "the big buck" had been followed all the preceding day by Charles, went out early, took the track where it had been abandoned the night before, near Button Rock, an the Sanvantine, and ran the track of the old and crafty bluecoat, who for the past three years had baffled many a hunter and dog and carried away some lead, for four hours, until they ran the old fellow into the Sanvantine Swamp, so that by crossing one arm of it they could cut him off and drive him to the comparatively open second-growth timber. Charles did the driving, and in ten minutes shouted as the buck went off on a crouching lope toward his father and uncle. The deer tried to slip past George at twenty-five paces and received two loads of big buckshot. He ran a hundred and fifty yards and dropped venison. He had a superb head and uninjured antlers, and, although poor from the late yearling doe rut, weighed nearly 200lbs. The three were five miles from home and without means of getting the deer in; so, dressing it and carrying and dragging it half the distance, they hung the carcass up and took it in next day. This ended the deer hunting for 1886 in spite of great temptation to follow a number of fine tracks. AMATEUR.

From reading the accounts of the Maine game warden tragedy published in the papers at the time, many a friend of the dog has been led to feel that perhaps the murders were standing between the wardens and the life of a beloved hound, and that a quarrel ensued wherein both of the wardens were shot, and that seeing what they had done in the heat of passion, they fled. It was not so. Both McFarlan and Graves are noted for their cruelty to dogs, as well as to other animals. This was not the first time they had been wanted by the wardens for dogging deer. They have been for some time notorious in the famous Nicatous Lake band of poachers, who had up notices that "No Wardens are Allowed Here," and they meant to enforce it too. In that band they have been noted for training hounds so that "they wouldn't yip." That is, they had their dogs trained so that at a moment's warning the dog could be driven into a corner of the cabin, and anything could be piled upon him, and he dared make no sound. In one case the game wardens, suspicious that there were dogs in the camp, entered. Not a dog could be seen. The campers also were out—had just left. There was a pile in the corner; first an old blanket, then any sort of camp furniture, followed by a camp table, bottom up, on the top. Under this pile the wardens discovered a poor hound, half dead from fear of a beating. Did this indicate pure love for the dog?

Again, the wardens were once following up the camp of these deer doggers. The roadway led through the deep woods. The baying of hounds was heard. Then came the thud of a deer's feet, slow-bounding, as though nearly exhausted. Then came another sound—it was the deer's tongue, flopping against his jaws as he tried to run. In a second the hounds hove in sight—two noble ones, of fine breed. The double shots of the warden leveled them both. The deer escaped with his life. The poor dogs had bleeding feet, they had been forced to run so long, and even the ends of their tails were skinned and bleeding, where they had beaten them against the brush and briers.

Another story is told of the love of these murderous hunters for their dogs. They are famous crust hunters, but they always preferred to have dogs with them to do the principal "yarding up." On a certain occasion, it is told of them, the crust was not sufficiently strong to bear the dogs, and there was a good deal of difficulty in getting the deer in hand. The poor dogs broke through at nearly every bound, and they soon began to fail. This enraged one of the men who was concerned in the warden murder, so the story goes, and he came up to a poor hound, lying in the snow with tongue protruding and bleeding, while the blood oozed from his belly and legs, and ordered the poor beast to "on!" The dog gave one pleading look, then tried to crawl to do his master's bidding. He only succeeded in making a few faint bounds, with a distressed attempt at baying, then fell exhausted again into the sharp snow crust. His master came up. The dog gave a beseeching look that would have drawn tears of pity from any but a heart that could deliberately shoot a game warden in the pursuit of his duty, and then cowered down into the snow. His master kicked and pounded the poor beast unmercifully, then in a rage he drew off and shot the dog dead. BOSTON.

In the "Gazetteer's" routes to hunting grounds, I find under Indiana, Allen Co., things that were but are not now, and I suppose a correction would not be inappropriate, for changes occur as the years glide by, and the facts, not what "they say" is what we want. Deer are no longer found along the Muncie route, but good turkey, pheasant, quail, rabbit and squirrel shooting may be had. In the eastern part of this county commence what are called the "Big Woods" or "Paulding Woods," embracing a tract of wooded land six or seven miles wide and twelve or thirteen miles long, extending into Ohio. In these woods deer are found as also are porcupines, some turkeys and smaller game. Last Saturday I saw three deer hanging up in front of a saloon on Main street, and on inquiry found that they were killed within twenty miles of this city, in these woods, by Mr. Frederick Hockemeier, with two shots. He killed the buck on the run when the doe and fawn stopped with their heads close together, and he dropped them both with the remaining load, shooting buckshot. Quite a number of porcupines are found in these woods and are often killed by our hunters.

J. P. HANCE.

FORT WAYNE, Ind.

A splendid red deer was killed at the Liscomb Lake in Guysboro county, a few days ago. This is the first red deer I have known to have been killed in this province. It was a full grown buck in good condition. The deer are gradually working down into this province, and the wolves are following. For many years no wolves were seen here, lately a few have made their appearance. Moose are fairly plentiful. I was out for three days in October and shot one. A hunter who lives here has killed several since the season opened. We will try to get a law passed at this session of the Legislature forbidding the killing of deer, so as to give them a chance to stay with us. Thirty-eight boxes of grouse were seized on the international steamship at St. John a day or two ago, consigned to Boston parties. The American office at Eastport also claims them, as they were entered on a false invoice as geese and turkeys. GLOBE SIGHT.

NEW GLASGOW, Nova Scotia.

About ten days ago I was out on the mountains with my favorite saddle horse and rifle for a few hours, and had the satisfaction of bringing down with the first shot a magnificent buck, standing at 200yds. It was done so quickly and easily that I almost felt disappointed in not having had more sport with so large a deer, but still it could not have been more satisfactory to me. Last season I brought home eleven deer in all with the same rifle, and had grand sport with some of them. The deer here are excellent eating, much better than in the lower country, I fancy, and I have killed them old and young in both parts of British Columbia. The difference must be in the food and climate, as they are the same species. I. L.

CACHE CREEK, British Columbia, Dec. 8.

A few deer are left on Cape Cod, Massachusetts. At a recent meeting of the Massachusetts Fish and Game Protective Association much interest was expressed regarding certain alleged violations of the game laws relating to the killing of deer in Barnstable and Plymouth counties, and the Association voted that any complaint should be investigated and prosecuted if accompanied with evidence, or willingness on the part of the complainant to co-operate with and assist the Association in the case.

We get occasional accounts of successful deer hunts in some of the border mountain counties, and have heard of bunches here and there appearing in long unfrequented haunts, but their destruction is assured soon after their discovery. KENTUCKIAN.

CENTRAL KENTUCKY.

C. O. Skidmore returned from Nettleton, Ark., yesterday, where he has been for three weeks hunting. He killed five deer. They boys say that Daniel Calvert killed one deer with a five dollar gold piece. J. B. D.

CHARLESTON, Ill., Dec. 23.

Settlers in northern Wisconsin are shooting dogs that are found chasing deer. B.

GRATIOT, Wis., Dec. 12.

INTEREST IN THE PARK.

Editor Forest and Stream:

It seems to me very important that early concerted action should be taken by scientific societies and individuals who are interested in the preservation of the different species of game and fish and the many objects of scientific interest and value contained in the Yellowstone Park, to secure from Congress a judicious law the present session. Every one admits that something ought to be done to bring about a different state of things from that now existing in the Park, and which you have so ably shown in your valuable paper, but unless a great deal of earnest work is done by those who are interested, nothing will be accomplished this session, and the longer the present conditions exist the harder they will be to remedy. I am doing all I can, and I hope every other sportsman will put in his quota of work.

As president of the Waltham (Mass.) Farmers' Club, one of the largest and most important in the State, I recently introduced for action by the club the following resolves in relation to the Yellowstone Park:

Resolved, That, in the opinion of the Waltham Farmers' Club decided action on the part of our general government, for securing a proper and efficient protection and management of the Yellowstone Park, can no longer with safety be delayed.

Resolved, That the Senators and Representatives from this State, in Congress assembled, are respectfully requested to give their early attention to this matter, and endeavor to secure enactment of the bill reported by Senator Manderson, from the Committee on Territories, May 17, 1886, and designated as Senate Bill No. 2,436, provided this bill, in their opinion, is found adequate to secure that degree of government and preservation of our great national reservation which is now so grievously needed.

These resolutions were adopted unanimously, and the secretary was directed by the club to send a copy of them to every member of Congress from this State.

Last evening I presented to the Massachusetts Fish and Game Protective Association the following resolutions for action by that body:

Whereas, Although a large tract of the public domain has been by the wisdom of the National Government, set aside as a perpetual national reservation and called the Yellowstone Park, no adequate laws have as yet been enacted which will secure, for the various species of game and fish and the many objects of scientific interest and value contained within its limits, protection from utter destruction; it is, therefore,

Resolved, That the Massachusetts Fish and Game Protective Association regards with anxiety and grave misgivings the comparatively unprotected condition in which the Yellowstone Park now exists.

Resolved, That the different members of Congress from this State are respectfully, yet most earnestly, requested to use all possible efforts to procure for the Park a proper system of management and protection, which may be done in the opinion of this Association, by securing the early enactment into law of the bill reported by Senator Manderson from the Committee on Territories, May 17, 1886, and designated as Senate Bill No. 2,436: "A bill to amend sections 2,474 and 2,475 of the Revised Statutes of the United States, setting apart a certain tract of land lying near the headwaters of the Yellowstone River as a public park."

These resolutions were adopted unanimously, and the secretary was directed to forward a copy to every Massachusetts member of Congress. I am connected with other associations and shall do all I can to push on the good work. EDWARD A. SAMUELS,

Pres. Mass. Fish and Game Protective Association.

The Memphis *Avalanche* of Dec. 25 has this to say about the National Park: "This area embraces, more than any other of equal extent, all the varieties of the most sublime scenery, the greatest natural curiosities, and the most favored haunts of the rarest kinds of American fauna, now fast disappearing from the face of the earth—the buffalo, the elk and the grizzly bear—which the continent of North America affords. The design of the National Park scheme is to perpetuate for our posterity this choice specimen of the natural grandeur of our national domain, so that, when all else of our vast expanse of territory shall be reduced to the dead level of dollars and cents, this one spot shall remain uncontaminated by the insatiate greed of money seekers, a miniature of America as it was portrayed so romantically by Longfellow and so truthfully by Cooper. Every individual whose soul can rise above the consideration of mere sordid gain should feel a hearty sympathy and a national pride in securing such a legacy to future generations, that they may be able to realize what would otherwise appear a wild romance in reading the early history of America. The Forty-eighth Congress provided a commission to take charge of this domain, to provide facilities for its enjoyment by the people, and to prevent its desecration and the destruction of its natural beauties by vandals. Coming within the Department of the Interior, Secretary Lamar selected Colonel Wear to take charge of the Park, who, with his able corps of assistants, peformed their duties in the most admirable manner. But the Forty-ninth Congress, in the wretched spirit of paradoxical absurdity which characterized much of its proceedings, after making an appropriation to continue the improvement of the Park, refused to provide for the sustenance of its own Park Commission, and so Colonel Wear and his staff were compelled to retire, whereupon it became the duty of the Secretary of War to send a cavalry company to take their places, an arrangement which is (almost) ludicrous from its unfitness, since the duties to be performed require the tact, skill and experience of trained hunters and mountaineers, duties entirely foreign to the character and training of dragoons. This state of things was brought about by the influence of certain railroad corporations who sought to invade the sanctity of the Park with their iron tracks, and all the attendant elements of destruction to everything which would not put money into their pockets. Senator Vest, of Missouri, has been one of the ablest champions of the National Park, resisting with all his might the determined effort to invade it with railroads. Senator Manderson reported a bill from the Committee on Territories, in the last Congress, which is designed to restore the Park government on a rational basis. This bill will come up before the present Congress, and it is to be hoped it will receive the support of all Southern Senators."

Editor Forest and Stream:

Your leading editoral of Dec. 16 (The Schemers Balked) has afforded me, as it doubtless will thousands of intelligent men and women the country over, an exquisite pleasure. It is certainly cause for general thanksgiving that our great National Park has, by timely and adroit legislation, been snatched from the perils by which it was imminently menaced. To see that magnificent heritage—one of the most majestic trophies of the Great Arranger's handiwork—transformed into a railway focus, as Niagara came within an ace of being into the "Great American Saw and Grist Mill," would have been an indelible disgrace to modern civilization.

Mr. Cox is an ingrained Democrat. I am an ingrained Republican. My admiration of him, however, as a man of exceptional talent, diamond wit, and stainless patriotism, has always been sincere. Let me add in further and well-merited compliment, that he has never, in all his brilliant career, done anything which will be more thoroughly appreciated, or more gratefully remembered by his countrymen, than this successful endeavor to preserve from desecration their great Museum of Natural Wonders.

ELIHU PHINNEY.

COOPERSTOWN, N. Y.

RAILWAY IMPOSITION.—A correspondent who was charged for carriage of his gun on a St. Louis, Iron Mountain & Southern train, on which he was a passenger, wrote to Gen'l Passenger Agent Townsend, and received the following reply: "The Missouri Pacific Railway Co. —Office of General Passenger and Ticket Agent, St. Louis, Mo., Nov. 30, 1886.—Dear Sir: I am in receipt of your favor of Nov. 25, being in substance a complaint against one of our train baggage men, who charged you $1 for carrying your gun from St. Louis to Neeleyville, and I note your belief that this charge was an imposition. In order to encourage sportsmen to visit the fine hunting grounds along our S. L., I. M. & S. Ry., we have issued positive written instructions to our baggage men to carry dogs, guns and other hunters' outfits free, and whenever we hear of this rule being violated the guilty one is promptly discharged. I have referred your letter to our General Baggage Agent for investigation, and instructions given to discharge the offender if he can be identified. We shall also take great pleasure in refunding the amount overcharged if investigation carries out your statements. Yours truly, H. C. TOWNSEND."

CARIBOU IN NEW BRUNSWICK.—Fredericton, N. B., Dec. 23.—I am informed by W. R. Conners, one of the chief lumbermen on the St. John River, New Brunswick, that about Nov. 20, when a party of his men were cutting a road through the woods on which to haul their supplies during the winter, they came suddenly upon a caribou feeding on the tops of some fallen trees. On the men calling out suddenly it jumped into a brush pile, in which it became so entangled that one of the crew quickly dispatched it with an axe. Mr. Conners says that about ten days were spent in cutting out this road, he being ahead all of the time marking the line to be followed, and there was no day in which he did not see from ten to twenty caribou. This was about fifteen miles distant from the mouth of the St. Francis, one of the branches of the St. John. Deer, he says, are also abundant in this locality. Caribou as well as deer are increasing rapidly in New Brunswick; he says there are no wolves on the Upper St. John where they were once very abundant; their absence is probably the cause of such increase. When Mr. Conners was coming down the St. John to St. Francis many years ago he saw a pack of wolves following a caribou, a few wolves kept the ice, while the greater part of the pack, which was from time to time increasing by additions from the adjoining forests, followed the banks of the river just outside of the bushes. About thirty miles distant from where he first saw signs of the chase he came upon a small piece of the caribou's skin, all the rest of the animal having been devoured by the ferocious pack, there was not even a bone visible, and all of the blood had been licked up from the snow on the river. His party spent the night in a deserted lumber camp where they could hear the howling of the wolves until dawn. This shows how plentiful they then were here. I have heard of one instance in which the Loup-cervier attacked a caribou.—EDWARD JACK.

OF THE CHRISTMAS NUMBER OF THE FOREST AND STREAM the Lowell, Mass., *Morning Mail* says: "It is a dessert rather than a feast. It is a sort of enjoyment to which one likes to sit down, feet to the grate with pipe or cigar, and calmly live over the days spent among the scenes which it treats so beautifully. Yet, this treat is not exceptional with FOREST AND STREAM. It has a field, all its own, and thoroughly covers it. Angling and shooting, natural history, rifle and trap shooting, canoeing and yachting, these are its specialties. Horse trotting, the prize ring, and other things called sport, are not in its line. FOREST AND STREAM distinguishes, and never lets a reader forget, that a "sportsman" and a "sporting man" are entirely different classes of beings, and to the better class of the former it caters. Every week it adds something to dispel prejudice against recreations of the field and stream, showing that there is nothing in them inconsistent with the highest manhood and the purest pleasure. That it so fully fulfills its mission, is the quality that made it so welcome a companion around many a Christmass fireside this year."

MISSOURI AND DAKOTA.—During the latter part of September, a partner and myself left on a hunting trip to the southeastern part of Missouri. Leaving Detroit by the Wabash route, we arrived at St. Louis in time to make connection with the St. Louis, Iron Mountain & Southern Railroad, our destination being the village of Neeleyville, about twenty miles below Poplar Bluff. Deer and turkey were plentiful. My trip extended northward. From Chicago I left on the Chicago Northwestern Railroad, and on this popular road everything was done that was possible to make a sportsman comfortable. Guns, dogs and all equipments were carefully looked after without charge, other than what any one desired to give of his own free will. In the vicinity of Devil's Lake, Dakota, game of all kinds was plentiful. At Lakota, a small place east of Devil's Lake, geese were found in large quantities. At Buffalo Lodge Lake, a place about seventy-five miles from Devil's Lake, duck, swans, geese, brant, prairie chickens, woodcock and plover were innumerable. Ten miles from the lake deer were plentiful.—CORRESPONDENT.

ODD EXPERIENCE WITH A GROUSE.—East Hampton, Conn., Dec. 14.—We have read with interest many remarkable freaks of wildfowl recorded in your paper, but nothing quite equal to the following. Mr. Haines Hollister, who has been in our employ, while coming from his house to-day, which is about a mile from the village, received a terrible blow on the side of the head. Supposing at first that some one had thrown a snowball or something and hit him, he turned quickly only to see a partridge recovering itself. Flying a short distance it lit in a peach orchard. Mr. Hollister approached the bird and picking her up, as she seemed perfectly tame, could not find any trouble with her wings or eyes; she seemed to be all right every way with the exception of being a little dazed or stunned. After stroking and admiring her he took her to some low cedars, where she walked off as promptly as if nothing unusual had occurred. Mr. Hollister is a man of truth and integrity, and we know the above to be as stated.—EUREKA SILK M'F'G CO.

SECTION THIRTY-SEVEN.—W. B. Mershon and Eben Briggs, of Saginaw, are experienced lumbermen as well as woodsmen. Recently they started up country on a hunt, and "Jack" Morley, a tenderfoot, accompanied them. Reaching the scene of operations, they decided to separate for the day, branch out and capture all the game in the neighborhood. Morley was fearful that he might get lost, and asking how he was to reach camp in the event of losing his bearings, was told to inquire for section thirty-seven. It so happened that late in the afternoon he did get mixed in his compass, and inquired of nearly every man in the township the location of section thirty-seven, but none could enlighten him. He has since learned that there are but thirty-six sections in a township, and it will be a long time before the boys will cease chaffing him about "section thirty-seven."—*Northwestern Lumberman.*

THE NEW JERSEY GAME LAW is published by the New Jersey Game and Fish Protective Society, in convenient pamphlet form. The secretary is Wm. L. Force, Plainfield. The society furnishes certificates of membership to non-residents at the rate of $2 each.

NOTES FROM CENTRAL KENTUCKY.—The unusual severity of the last two winters, it was thought, threatened the extinction of quail in our fields, but Robert pulled through bravely and multiplied greatly. The small bags of last season were so discouraging that many of the boys have either sworn off or are skeptical and will not be convinced. At any rate but few have been afield this fall, and they possibly failed to divulge their success. Rabbits are so numerous that some covers are designated by the little fellows rabbit towns. While good tracking snows remained on the ground the wholesale slaughter was so great as to suspend the numerical standard of value, and they were sold by the bushel. We were just off the line of march taken by an army of migratory squirrels last fall, still enough stragglers and skirmishing foragers ventured in to create comment, and led to the scouring out of every old muzzleloading rifle. It is noticeable that the migrants are almost invariably (some say always) young and fat.—KENTUCKIAN.

SUMMER WOODCOCK SHOOTING.—Taunton, Mass.—I have read with considerable interest in a recent issue of FOREST AND STREAM notes on summer woodcock shooting. I have followed shooting for the last thirty years. In this section of the Old Bay State, in my early shooting days, it was not an uncommon thing, in a day's tramp for partridge and quail, to bag half a dozen woodcock, with a good complement of partridge and quail; but for the last few seasons it has been difficult to bag a half dozen in a whole season. My shooting has always been fall shooting in open season on quail and partridge. I never have done any summer shooting. I find the general sentiment of sportsmen and market gunners is to abolish summer woodcock shooting and to have more stringent laws to protect game. I will give my scores of woodcock for a few seasons: In 1860, 87; in 1873, 10; in 1884, 2; in 1885, 1: in 1886, none. I have made fair bags of quail and partridge in all of these seasons.—WOODSMAN.

NEW JERSEY.—Smithburg, Dec. 13.—Since the opening of the season I have been out a few times and have found game, quail especially, quite plentiful. Were it not for the market-shooters we could have excellent shooting here; but the country is overrun with them and they go in for getting all they can, no matter what means are used. One shooter brought twenty-two quail to the store at the village on the night of Nov. 1. But as considerable shooting had been heard for a few days, it is probable that some of them were killed before the season opened. Quite a number of ruffed grouse have been killed and a few woodcock. A friend told me that he killed a woodcock on Dec. 6, there being quite a snow on the ground at the time. Were it not for the summer shooting we would have good woodcock shooting here in the fall. Since the snow fell a great many rabbits have been killed, but they could not do much with the birds.—B. L. W.

FERRETS IN PENNSYLVANIA.—Athens, Pa., Dec. 26.—There has been more bagging of rabbits with ferrets around here this winter than ever before, and most of the parties hunt for profit only. A grain bag and a ferret are the only weapons used. Our game constable has looked up some of these parties, but they claim that a farmer gives them permission to hunt on his land and tells them he wants the rabbits killed off as they are destroying his property and are a pest, the rabbit butchers have a right to use a ferret at any time of the year. There are many in the business who catch from 50 to 200 after every fresh snow, and they have them nearly cleaned out. I would like to know if they have a right to use a ferret in hunting rabbits under any circumstances. Has it ever been tried by law? If there is any way of punishing these law breakers we are going to try it and put a stop to this slaughter.—P.

WISCONSIN.—Gratiot, Dec. 12.—This has been an unusually good season for small game in this vicinity. The groves and thickets swarm with ruffed grouse and rabbits. A good shot can get a bag of grouse almost any day, and the rabbits can be taken by almost any boy able to handle a gun. They are exceedingly fat and of exceptionally fine flavor. Prairie chickens are scarce, as this is really not a chicken locality. The last two winters have been very hard on quail, but if what survived remain undisturbed they will soon regain their old foothold. The worst trouble is that the country is overrun with weasels and minks. Other vermin are numerous too. A white muskrat was recently caught and placed in a museum at Pestigo. Willie Smith, a lad of thirteen years, killed a black bear that weighed over 300lbs. in the woods near Eau Clair.—B.

A MICHIGAN COON SCORE.—Manistee, Mich., Dec. 13.—As my vacation came too late for a deer hunt, I could not make up my mind what to do until I overheard a drunken Indian saying to his partner, "Me catch um coon bumby, then me have plenty money." A happy thought struck me. I hunted up an Indian (a sober one), took my dog and axe, and eleven miles from Manistee, on the Manistee River, we pitched our tent. By dark we had six coons. We started at daylight next morning and had ten coons for our day's work. The third day we only got one coon—seventeen for our three days' hunt. I reached home tired, but well satisfied with my first coon hunt in the daytime.—RACOON AL.

TEXAS.—Belton, Dec. 22.—I have just returned from a three weeks' hunt on the San Saba River and Brady's Creek. Camped near where James Bowie and others had the terrible fight with the Keowas in 1834 while on their way to the silver mine at Camp San Saba. We killed several deer, ducks and squirrels, and caught fine black bass and yellow and blue cat out of the beautiful, pure and clear waters of the historic San Saba. I killed a rock squirrel. It is a grayish-black, about one-third larger than a large fox squirrel. Lives in the rocks on high bluffs on streams, and is as shy and nimble as a civit cat, its neighbor.—J. B.

MICHIGAN ASSOCIATION.—Grand Rapids, Mich., Dec. 28. —*Editor Forest and Stream:* The next annual session of the Michigan Sportsmen's Association will occur at Lansing on the 18th of January, 1887, commencing at 7:30 o'clock P. M. Our earnest work will be another effort to secure the enforcement of law by the appointment of game and fish wardens.—E. S. HOLMES, Pres.

SENATOR KENNA'S STYLE.—To-night Senator Kenna gave his unique dinner at John Chamberlin's. The deer, roasted whole, stood upon his feet, stuffed with celery dressing, and Senator Kenna carved him standing. The deer wore his natural horns, and glared at the crowd with glass eyes, which were natural enough to make some of the deer hunters and venison eaters nervous. The "bar" did not turn up, as he lost his way under a misunderstanding about the passage of the interstate commerce bill. But it was a very enjoyable dinner, and lasted in merry-making until the small hours.—*Washington Correspondence.*

RIFLES AGAIN.

Editor Forest and Stream:

Mr. Burns has replied to my article Nov. 25, and Mr. Leopold Dec. 16.

I am surprised at the reply of Mr. Burns and logic of Mr. Leopold. I had supposed that Mr. Burns had some good and sufficient reasons for the assertions in issue of July 8, but it seems that he can only say that the M.L. rifles in the FOREST AND STREAM test were not loaded to suit him, and as to his proof as regards the question of accuracy between the Maynard and the Romer rifles, he relates that he has been told by target shooters that if a rifle only shot good vertically it was all right. That is the point I am trying to get him to explain and which it seems that he and the target shooters do not understand. They have mistaken trajectory accuracy for target accuracy, assuming that they both represent the same thing. Far from it, they never or very rarely coincide.

They have taken the difference in the heights of the respective curves, as published in the FOREST AND STREAM trajectory report, and assumed that they represent the distance which the shots struck apart on the actual targets. Nothing is further from the truth. Two different shots might have exactly the same height of curve or trajectory and still strike 2ft. or 4ft. apart on the target vertically. Major Merrill and myself made a trial of a double express rifle, the same used at the FOREST AND STREAM trial. Trial for height of curve at 100yds. in a range of 200yds., shot No. 3 strikes the target at 200yds. 7.90in. below the horizontal base line; shot No. 4 strikes .30in. above the same.

Thus it will be seen that the two shots are apart vertically 8.20in.; still the height of curve at 100yds. for the two shots is exactly the same to the .01 of an inch, being 7.60in. for each. Now, then, according to the theory of Mr. Burns and Leopold, they should have been exactly in the same hole. How do you account for this, gentlemen?

As to Mr. Leopold's talk about the heavy target muzzleloading rifles used in the test, the Merrill rifle has no patent muzzle, and was loaded with a simple brass cap and rod, which can be carried in the vest pocket. As to its weight he is no nearer correct. As will be seen by reference to the report, there were some half dozen or more breechloaders within a few ounces of the same weight. As to its sights, they were the ordinary globe and peep such as are commonly used upon muzzleloaders. As to the Romer muzzleloader, it is not a regular target rifle as Messrs. Burns, Leopold and some others are trying to make out. On the contrary, it is lighter than many breechloaders in use in this country for off-hand shooting, and was made for hunting, shooting at turkeys and at a mark, or at anything that came along. It is a plain, common-looking rifle, fitted with a patent muzzle for greater accuracy, which takes a little more time in loading, but for a person who shoots for pleasure there is ample time for its use. Mr. Leopold's explanation of shot No. 5 of the Maynard series has altogether too much supposition and guess-work about it. He had better stick to the actual facts of the case as published in the Trajectory Report, and shown by the original screens and targets on file at the office of FOREST AND STREAM. He states that the rifle was removed from the rest after every shot. My copy of the trajectory report does not say so, but does say that the rifles were fired not sighted at the target direct, but upon the slight black patch which had been placed on the screen nearest the rifle as a precautionary measure. That black patch, a target bullseye paster, 1.35in. in diameter, can be seen by ordinary eyes very distinctly at 50yds., and I will testify that Mr. Sinclair has good eyes; do you suppose again that he aimed 3.10in. below it? That time for once the rifle shot where it was not aimed, and another shot had to be fired to make out the series.

One might suppose from reading Mr. Leopold's letter that the muzzles of the rifles at the FOREST AND STREAM trial were allowed to flop around almost anywhere. He and Mr. Burns have just been bragging about the great curve accuracy exhibited by the breechloaders in the trial. Is he so ignorant of the subject as not to know that if the center of bore of each and every rifle in the test had not been brought to the same point vertically for each shot of its series that it would have been impossible to have obtained correct curve? I can assure him that it was always done while I was present, and that the measurements were taken by Mr. Sinclair with a fine instrument to the .001 of an inch.

G. J. ROMER.

LYMAN'S PAT. PLAIN IVORY FRONT SIGHT.—This sight is constructed as to be very durable. The sectional cut shows the cylinder or plug of ivory standing vertically in the base of steel, and while the ivory is well protected it also protrudes sufficiently to give plenty of reflected light. —*Adv.*

Camp-Fire Flickerings.

"That reminds me."

202.

HERE'S another on Selman and Kent, the levee engineers. A few days ago they went out on Lake Charles, in Coahoma county, for a duck hunt. They borrowed a dugout from that admirable host and prince of sportsmen, Mr. Simpson, of Simpson's Nook. Having "launched their frail bark," so to speak, on the boisterous waters of Lake Charles, Selman in the bow with gun at "present," and Kent on the quarter deck managing the ship with an ash paddle (and an ashen face), they presently ran her nose upon a submerged log, which maneuver speedily eventuated in a capsize. Being some hundred yards from shore, Selman, incumbered with overcoat and heavy boots, gave himself up for lost, but determined to make a heroic struggle for his life. So consigning his gun to the tender mercies of the waves, he laid himself out at full length in the turbulent waters, and by most strenuous exertions, succeeded in reaching a snag about thirty yards away. With considerable difficulty he climbed on to the snag and then turned his bewildered gaze upon the scene of disaster to ascertain what had become of poor Kent (who couldn't swim), expecting to see the circling wavelets and unsympathetic bubbles calmly pointing to his last resting place. But a different sight greeted his eyes, to wit, Kent was quietly wading ashore. The water was only a little over knee deep. The voice of Kent came mockingly across the waters, "You got wet, didn't you, Selman?" COAHOMA.

FLORIDA RESORTS AND ROUTES.

Editor Forest and Stream:

The season has arrived when sportsmen prepare for a trip to Florida, and information regulating transportation may prove acceptable. Each year new sections are being opened up by railroads.

The Halifax River can be reached by leaving Jacksonville at 12:30 P. M. by the J. T. & K. W. Railway. Rolleston, on the St. John's River, is reached at 2:55, and Tomoko, on the Halifax, at 5 P. M.

Tampa, on the southwest coast, has been rendered accessible. Leaving Jacksonville by J. T. & K. W. Railway at 12:30, Tampa is reached at 8:50 P. M.

Access to Indian River is easy by the Enterprise & Titusville Railroad, leaving Jacksonville at 9:10 A. M. by the J. T. & K. W. Railway, reaching Titusville at 3:20 P. M. At Titusville connection is made with the steamer Rockledge for landings on Indian River.

Far-famed Charlotte Harbor, with its unrivalled fishing, can be reached inside of seventy hours from New York. The traveler can leave Jacksonville by the river steamer John Sylvester at 8:30, or by the J. T. & K. W. at 9:30 A. M., 12:30 and 3:30 P. M., remain overnight at Palatka, and leave there by the Florida Southern Railway at 9:15 A. M., arriving at Punta Gorda (Charlotte Harbor) at 10:30 P. M. Or by a train of Floriday Railway & Navigation Co., leaving Jacksonville at 8:30 P. M., connecting with Florida Southern Railway at Leesburgh or St. Catherine's, and thence to Punta Gorda. One can go by J. T. & K. W. Railway from Jacksonville at 12:30 P. M., stopping at Lakeland, taking train next day at 6:15 for Punta Gorda. At Punta Gorda (Charlotte Harbor) a large hotel is in course of construction, and will be completed at an early day. Until the hotel is finished sportsmen had better stop at Cleaveland. A steamboat leaves Cleaveland and Punta Gorda for Punta Rassa, southerly end of Pine Island and Fort Myers, thrice weekly. A large and comfortable hotel has been erected on Pine Island, where sportsmen can obtain boats and good accommodations. AL FRESCO.

JACKSONVILLE, Dec. 30.

A BEAR ON A FLY-ROD.

Editor Forest and Stream:

Wonders will never cease. Riflemen hit the bullseye and the world wonders, admires and praises, but was a story ever better told or a feat ever better accomplished than my companion for many a year in the good old times in the Adirondacks now for the first time relates of his feat with a split bamboo fly-rod—a Murphy make. Oh, ye shades of Jules Verne, Dave Crockett, Adirondack Murray and Ed Derby! You ask if I believe it? Why of course I do. Ask Dr. R. if L. S. ever exaggerated a trout capture. Never! If Dr. R. is so easily humbugged ask Cort Moody, and if he don't, as an old Adirondack guide and hunter, agree with Dr. R., why it must be regarded as incredible. Next! S. S. N.

P. S.—The bear tracks are still seen and the mouth of the brook also, but the latter only with a powerful telescope, but no trout. S. S. N.

The tale told by L. S. here follows:

I saw lately an item in a paper stating that Mr. Murray was soon to publish two books on the Adirondacks. I was glad I saw that item, for it told me it was time, if ever, to reveal a secret I had carried many years. It cannot be called an old story, though the facts I am about to relate occurred long ago, for this is the first time I ever mentioned it. I should not do so now were it not an innate peculiarity of all Californians that they do not like the slow-going people of "the States" to jump their claims. With this long preface I will begin the story.

I was staying one hot July at Bartlett's, when the only occupation was eating, smoking and lounging. Fishing was out of the question, as all the trout had long since left the rapids. Lute Evans came to the landing in his boat, going nowhere, but tired of holding down chairs where he came from. We discussed the trout question, that and the deer question being never-ending subjects up there. I never knew a guide who didn't profess to know where there was "an all-fired lot of trout," with many more strong sounding words thrown in. If you get him to take you there, and fail to take the fish, he tells you how many Mr. Chapin caught there, intimating that if you fished as well as Mr. C. you might be as fortunate. Who can fish as well, or who can argue against such an insinuation? During the conversation Lute told me of one Bill Moody, who had left that part of the country, but when there had a perfect trout mine in a stream entirely unknown except at the mouth, which comes into the Saranac River, just above the "Middle Falls." I secretly resolved then and there to prospect that stream and mine before the setting of the sun.

Arriving at the mouth of the stream I hid my boat in the brush and struck off into the back country by an old lumber road. After walking nearly a mile I came to the conclusion that the stream as a trout mine lacked one very important requisite, that was water. There was none it it. Also that the alders were fighting each other for standing room. I retraced my steps, repeating, "It was ever thus, from childhood's happy hours I've seen my fondest hopes decay," when I was brought to a halt by seeing in the path directly in front of me, not 30ft. off, a beautiful black bear, seated on his hindquarters, and inviting me with his fore paws to just step that way a moment if you please. I said he was beautiful, I mean as bears go. He had long, clean black hair, which gently waved in the wind, showing the glinting sunlight upon it, and strongly-made arms such as I had long wished to possess in order that with them I might confound mine enemies. He had claws and teeth that looked as though they were capable of performing any task the Creator intended them for when he first designed bears.

When in a tight fix one is apt to notice many things, and to remember many. Drowning men are said to have brought in view before them all the incidents of their lives. I hope I may not be drowned. My procession was marching by on the double quick. Among the rest I noticed a small dog I knew, who many years ago had one of his eyes cut out by a whip-snapper in the hands of a cruel hack driver, who passed the door where the dog sat. I had not thought of that poor dog for years. Call it providential interference if you will. At any rate it gave me an idea I was not slow to act upon. If a dog's eye was taken out with a whip, why not a bear's with a fly hook? I had on my line two flies. The stretcher was a coachman tipped with gold, body peacock hurl, wings lead-colored pigeon. The dropper was a small brown hackle. I should explain that this selection of flies was made for trout and not for bears. I was in very good training at fly-casting at the time; but in casting for trout and casting for bears' eyes there is this difference: In casting for trout an inch more or less in the length of the line is of no consequence, as the trout comes forward to meet it. In casting at a stationary object like a bear's eye the line used must be exactly the right length or it will fall short or strike beyond. If one had time to practice, the length in time could be adjusted to the distance. Bears won't generally stand that without disagreeable objections. I drew the line from the reel until I thought I had the right amount, made a cast straight and quick, prepared to strike hard as soon as the fly reached its aim. It fell, or rather flew, an inch short. I again drew from the reel an inch and an eighth, and cast again, planting the hook (a Sproat) square in the bear's right eye.

A sharp, well-tempered fish hook, when one thinks of it, is an ugly thing. Bartlett had told me of Coleman putting one into his nose, Coleman being unaware he was fast until Bartlett made a few gentle remarks as he was being lifted off the boat seat. Bears as a rule lead such quiet, uneventful lives that a fly-hook taking out the working part of this one's eye was such a new experience that he took no more interest in me, but occupied himself with rubbing the remains with his paw. Having got the range, as a rifleman would say, it was an easy task to put the coachman into his remaining optic at my leisure. I then had a blind bear on my hands. With a stick I drove him into the river, where in his perplexity he sank to the bottom.

Should any one doubt the truth of the story they can see the mouth of the brook as they go up the river in the spring, and the old lumber road if it is not overgrown.

SANTA CRUZ, California. L. S.

A COUNTY WARDEN SCHEME.

Editor Forest and Stream:

There are times when to save the patient's life heroic treatment must be taken and the surgeon's knife used. Thousands of dollars have been paid by the State of New York for the propagation and protection of fish, and in consequence the supply in inland waters has become so plentiful that marketmen have become daring and reckless, indifferent to and defiant of laws, and cunning and sly as foxes in their nefarious traffic of illegal fishing.

The time has come when, if this destruction is to be stopped, and the good work of our Commissioners of Fisheries is to be of any permanent value, and the money expended by the State of practical use, we must have further means for preventing illegal fishing. Knowing that the people are fully in sympathy with such a course, and are willing to adopt any reasonable means to accomplish so laudable an end, it is suggested that a bill be prepared and presented to the coming Legislature embodying substantially the following requirements:

First—Requiring the Supervisors of every county in the State to annually appropriate the sum of $1,000, to be made part of the general tax of the county, which sum shall be used exclusively and solely for the protection of game and for fish within the waters of their respective counties.

Second—Requiring the Supervisors at the annual session next succeeding the passage of such a law to appoint two county game and fish protectors at a salary of $500 each, who shall give good and acceptable bonds to the counties from which they shall have been appointed to faithfully discharge the duties of their office.

Third—These officers shall have power of arrest and receive the same portion of penalties as now provided by our present laws, and shall report annually to the Commissioners of Fisheries and to the supervisors their acts, money received, etc.

You will readily see, with a population in any county of 100,000, the percentage of such a tax to each individual would be too insignificant to be known to taxpayers, and yet when aggregated of sufficient importance to accomplished the desired purpose.

The application of such a law in every county in the State would give us over 100 men, each familiar with the waters of their county, familiar with the men who now defy the law, and directly and continually at hand to do the work.

This is simply what, it seems to me, would be practical and effective. SYRACUSE.

MASSACHUSETTS SEA FISHERIES.

THE time seems to have come when Massachusetts should have a marine fish commission, or rather it seems to have come to the senses of those interested that such a commission is needed. The active efforts of Deputy Commissioner F. R. Shattuck the past season to protect the lobster from an utter annihilation, brought about by its value as a food fish, has drawn attention to what is needed in the direction of our marine fisheries. It is shown that the value of the lobster catch landed at Boston alone is over $300,000 per annum, while if the whole State of Massachusetts be included, $375,000 will no more than cover what these fish are worth to the trade. The best lobster dealers are becoming interested, and doubtless the State will be asked to create a commission to look especially after the interests of our marine fisheries. If the value of the entire marine fishing industry is taken into account, the wonder will be still greater that the State of Massachusetts has so long allowed so great an interest to go without a special commission to look after its needs. The value of the mackerel catch alone, before it began to be apparent that the fish were being exhausted, as has been quite plainly shown by actual facts the past season, was some $2,500,000 landed by the New England mackerel fleet, chiefly at Boston, Gloucester and Provincetown. Then, if the entire catch of codfish be included, with all the fresh fish landed at our ports, it can be shown that the fishing industry is worth to Massachusetts alone some $11,000,000 or $12,000,000 per annum. Yet this industry has gone on year after year in the most haphazard manner, on the principle of catch all you can and sell it for all you can get, and if not, throw it into the dock.

Maine has a marine branch of her very able fish commission, and already good results are apparent. Any of the good things of nature which are to be had for the catching or the hunting are liable to be abused and wasted, and the time is coming when the supply of our marine food fishes can only be kept up by protection during the breeding season and perhaps with the aid of artificial propagation. The pursuit of the menhaden has about exhausted the supply, and the purse seine around the mackerel in the early spring, when they are hardly worth the taking, will soon exhaust the supply. Why, in your own New York harbor, good FOREST AND STREAM, as your Commissioner Blackford will tell you, there are thousands of barrels of little mackerel landed every spring, not worth the catching, and often they go into the dock unsold. It is not reasonable to suppose that this can all be remedied at once, but the remedy must be found ere long, or the mackerel fishery will have seen its best days. The least the States can do is to create intelligent commissions to look after such interests.

Another very desirable feature is a uniformity of lobster protective laws along our entire New England coast. The lobsters are almost entirely stripped from Long Island Sound, one of their natural breeding grounds, by persistant fishing and retaining of even the smallest lobsters caught. In many of the restaurants in the coast cities, and even in New York, these infant lobsters are served as a great delicacy. It would be just as reasonable for the farmers to kill all their calves for veal and then expect to find oxen for beef; and indeed it would be possible by such a practice to exterminate the entire race of beef cattle. SPECIAL.

INDIANA ANGLING.

FORT WAYNE, Ind.—I find noted in the "Gazetteer" "good bass, pike and pickerel fishing near the city." We have no pickerel in our waters, but it may be your informant meant the wall-eyed pike, using the local name for them. These we have and large ones. This season twenty-five or thirty have been taken weighing from 5 to 18lbs. each, and any number were taken weighing less. Were it not for the illegal use of seines, dip nets, etc., we would have as good fishing in our rivers as we could reasonably desire. Our anglers are awakening to the pleasures of fly-fishing, for which we are indebted to Mr. E. S. Osgood, of Boston, a gentleman who travels through here, and who took from our stream seven black bass in thirty-two minutes, using a 3¼oz. rod; and I took nine black bass in as many weeks, but then "delicacy, colors" and "when to strike" were, as you will observe, practically new to me. I expect to do better next season, as practice and observing one who has been there beats a book, although the book should not be derided, as it only directs. You will soon hear of casting tournaments in Indiana as well as in New York and Boston.

How can a pound wall-eyed pike be distinguished from a sauger of same weight? We have both, but which is which?

While fishing the West Lakes one day in October with a friend, we stopped for luncheon near a long point of land extending out into the lake. As I never like to have a line out while appeasing an appetite such as only a fisherman or a section hand has, I placed my rod in a secure place in the boat and fell to. My friend on the contrary would "rather fish than eat," so placing a large chub on the hook he cast his line out and felt for the basket, but watched for the fish. His zeal was soon rewarded, and he landed a large-mouthed black bass, weighing on our pocket scales 4lbs. 3oz. This fish had been struck with a spear, and a deep, ghastly gash was cut just forward of the spinous dorsal fin, and looked to us as though it had been done two or three days before. The wound was a bad one, and for the time being made me just a little sick of fish. Then it was the question of the sensibility of fish to pain came up with us, and for the purpose of enlightment on this question, although it may seem brutal, with the point of the hook we scored the wound, which operation was responded to by the fish by that quivering motion of the tail always seen when killing them with a knife by severing the spinal cord. It seems to me that if fishes are not sensible to pain, when the voracious pike, the gamy black bass and piratical dogfish meet, the result of the encounters would be that a great many of these fish would be traveling around with chunks of flesh torn or bitten out of them, "mutilated but still in the ring," and perfectly healthy, happy and contented. JOHN P. HANCE.

THE SIX-INCH TROUT LAW.

Editor Forest and Stream:

As the trout law in New York is to come to the front this winter, in all probability, it seems well to inquire whether the line heretofore drawn between brook trout, legal and illegal (6in. in measurement) was fixed after fully considering the age of the fish. If it was so, what was the supposed age when 6in. was reached? Will some of those interested in the matter or those that are posted in fish growth kindly answer?

Of course the conditions of growth in natural streams must have been considered, and any doubt as to length at certain ages must have been overbalanced by elements of certainty arrived at and made use of.

The writer believes that protection should be furnished in the first and the second years of growth, but whether it should be extended to include the third year, making a trout four years of age before he can be legally taken, is perhaps a question upon which fishermen may differ.

As the main part of trouting is done in those pleasant days of May and June when the summer is opening, it might perhaps be well to vary the question by asking what the length of a trout will probably be in June of the third year of his growth. Will it be quite 6in.?

A NEW YORK FISHERMAN.

TROUT PICTURES.—There are on view at Messrs. Abbey & Imbrie's, 18 Vesey street, this city, three paintings by Mr. Wakeman Holberton. The "Rise," the "Struggle" and the "Death." They are in Mr. Holberton's best vein, and show careful study. The trout are accurate and life like, and the setting gives pleasing effect to each. Mr. Holberton is a conscientious and skillful delineator of game fish and angling scenes.

THE life business of the Travelers Insurance Company, of Hartford, is increasing faster than that of almost any other company in existence.—*Adv.*

LANDLOCKED SALMON.

Editor Forest and Stream:

In FOREST AND STREAM, Dec. 30, in reply to a correspondent about landlocked salmon fly-fishing, you say, "The landlocked salmon is a native of Maine, and only exists outside that State where planted." Is not that a slip of memory? or am I wrong in supposing it settled that the landlocked salmon of Maine and the wininnish of Canada are the same? Mr. Hallock's "Sportsman's Gazetteer," p. 305, makes it the same, and quotes a letter from Mr. G. A. Boardman, of Calais, Me., in which Mr. Boardman says, "I have compared the wininnish of the Saguenay with the landlocked salmon (*Salmo gloveri*) and think them the same. Some years ago some of the Saguenay fish were sent to Cambridge. Professor Agassiz, Mr. Putnam and myself compared them, and Agassiz thought them the same. * * * They have been identified in several of our Maine rivers, also in Loch Lomond and Mespick, N. B., in Nova Scotia, in St. John's Lake, Grand Lake, Salmon River, and Pockwock Lake, and I have no doubt it will be found in many of the rivers of clear water coming into the St. Lawrence, and when caught are called young salmon." The latter would not be true in Canada. The Canadians know their own wininnish. MONATIQUOT.

Editor Forest and Stream:

I am surprised to read in the FOREST AND STREAM of Dec. 30 inst., bottom line of page 447, the statement that landlocked salmon do not exist outside the State of Maine, except where they have been planted. Surely so much has been written respecting the distribution of this fish that the facts ought to be well known and remembered. I saw landlocked salmon taken from Loch Lomond, six miles from St. John, N. B., in 1864, and Mr. Harry Venning, Fishery Inspector of the Province, then compared them with the Schoodic salmon of the river St. Croix, which separates New Brunswick from Maine, and fully established their identity, which had been previously in doubt, all of which circumstances were duly related in "Hallock's Fishing Tourist," published in 1873 by Harper & Brothers. I have also caught landlocked salmon in the Stony Lake chain of lakes, in Peterborough county, Ontario, Canada, some eighty miles north of Lake Ontario; and notably at the headwaters of the Saguenay River, designated as the "grand discharge" of Lake St. John, where the fish is locally known as the wininnish, all of which I am well aware has been printed in FOREST AND STREAM, with such specific details as were necessary to fully establish and identify the several locations with the facts. Yet it can hardly be wondered at that among such masses of information as have appeared in your journal since its birth, thirteen years ago, some matters should be momentarily overlooked. CHARLES HALLOCK.

SEA TROUT OF THE PACIFIC COAST.

"The red-spotted trout of Alaska and of the rest of the Pacific slope was once called *spectabilis*, but is now down in the book as *Salvelinus malma*. If any one has seen a red-spotted trout which is different from *malma*, he has seen a species which is not to be found in any collection of west coast fishes.—T. H. BEAN."

IN the summer of 1885, during a summer trip on the southeast coast of Alaska, one of the excursionists aboard the steamer caught an 8in. trout with a spoon along the rocky shore of an estuary, which I at once recognized as identical in pattern with the Canadian sea trout of the Atlantic coast. The markings were precisely the same, spots and all, and quite unlike those of any of the many varieties of west side trout. I am well aware that scientists admit no distinction between this so-called sea trout and the eastern *S. fontinalis* of the brooks, yet from their widely diverse habits I have persistently maintained that the distinction between the two is as different as that between the sea salmon and the landlocked salmon, and very much of the same character. I do not claim that they are structurally different or enough different to distinguish them as distinct species, but I can distinguish the fresh-water variety from the salt as readily as I can tell a Norman cart horse from an Indian cayuse.

This "brook trout with sea habits"—the sea trout—is peculiarly a Northern variety and is not found south of the northern coast of Maine, although brook trout are known to run down streams into salt water when they have access to it, and individual specimens have been taken in pound nets off the coast of Long Island a mile from shore. But the habits of these are in no respect like those of the Canadian sea trout, which make their appearance at stated periods in vast schools all along the coast from Maine to Labrador and northward. I have, by careful inquiry among Hudson's Bay factors, been able to trace these fish through the waters of those high latitudes which are washed by the Arctic Ocean, and I am by these data confirmed in the belief that their range is from the Atlantic to the Pacific, which the capture of the isolated Alaska specimen would seem to substantiate. I have been told by agents of the Mackenzie River and Rupert Land districts that salmon are not found on the Arctic coast, but that these are replaced in those waters by immense numbers of sea trout, identical with those under our present consideration. CHARLES HALLOCK.

To correct an ambiguity in Capt. Beardslee's communication of last week, it should be stated that the point of difference between Dr. Streets and himself was substantially one of nomenclature, Capt. Beardslee calling the trout *clarkii* which Dr. Streets called *purpuratus*.

THE OPTICS OF ANGLING.—At the monthly meeting of the Manchester Anglers' Association Dr. A. Hodgkinson gave an address on "The Optics of Angling." Vol. II. of "Anglers' Evenings" contains a paper which was alluded to by Dr. Hodgkinson, on the same subject, by Mr. Able Heywood, Jr. In considering the subject of angling optics, we are met, as Mr. Hodgkinson pointed out, by the difficulty that we do not know exactly what the sight of fishes is, but we must assume it to be not much unlike our own, and we are not without grounds for the assumption. By drawings on a blackboard Dr. Hodgkinson showed how the eyes of both men and fishes were alike in their main parts, the greatest divergence being that, whereas the optic nerve in man occupies only a small portion of the brain, in fishes it occupies pretty nearly the whole brain; and we may presume, therefore, that the sight of fishes is more sensitive. Dr. Hodgkinson then dealt with the phenomena of the passages of rays of light from the rare medium air, to the dense medium water, and the change in direction that the incident ray undergoes; he pointed out the fact that under certain conditions an angler on the bank might be invisible to a fish in the stream, but the exultation of the gentlemen assembled was probably damped when they heard that, in order practically to discover the distance, they must stand from the water, in order to be invisible, they must take their height and multiply it by 14, which, as an unfortunate angler who was present pointed out, would require him, seeing that he is 6ft. high, to stand 84ft. from the water's edge before he could take advantage of the invisible mantle Dr. Hodgkinson had promised him. The case, however, is not quite so hopeless as this, for, as the doctor pointed out, the water in which the fly-fisher angles is not generally so smooth as a mirror, and in ripple or broken water it is impossible for fish to see the object on two legs that may be on the bank. In fishing for trout, wading in many streams is a necessity, and by means of an ingeniously constructed tank Dr. Hodgkinson showed not only what the angler looked like to the fish when he waded, but how his aspect was affected by the color of the bottom of the river, and that of such cover as there might be on the bank. The rather startling announcement was made and demonstrated that, while the wader was duplicated so far as his legs were concerned, another pair appearing upside down on the actual legs, the man's body, if visible at all, was far away from the legs, and over head, where, if we put ourselves in the position of the fishes, we should expect to see nothing but sky. No fish then ever saw a wader with his two halves united, and whether its feeble brain can ever connect together the two distinct objects—the body up in the air and the legs down in the water—is extremely doubtful. The tank by which Dr. Hodgkinson was enabled to demonstrate his theories was made so that from one end the observer could, by directing his vision from various depths of water, always look through a slip of glass placed at right angles to the point toward which he looked. In this way, and by use of a little figure to represent a man, the point where invisibility begins (four degrees) could be clearly seen, as well as the effect which the water has of apparently lifting the object much above the position which it occupies. —*London Fishing Gazette.*

HOW TO COOK FISH.—This is a handy little book of sixty pages from the German, with additions, by Hugo Mulertt, Cincinnati, O. The recipes cover the cooking of carp in many ways, such as plain boiled; cooked blue, in Prussian style; in beer, Saxon style, etc., and includes most American salt and fresh water fishes, together with some soups and sauces. Price by mail, 25 cents.

THE ROD AND REEL ASSOCIATION.—A meeting of the National Rod and Reel Association to arrange for the tournament on May 25 and 26, will be held at the laboratory of E. G. Blackford, Fulton Market, on Saturday next, Jan. 8, at 2 P. M. The committees will be appointed and the rules may be revised. This will be an important meeting, and a full attendance is requested.

Fisheulture.

KENTUCKY'S PENNY WISDOM.

Editor Forest and Stream:

If conscientious editors and veracious reporters and correspondents err not in judgement and expression, Kentucky has in her last Legislatures exhibited the most magnificently unsurpassed specimens of aggregated jackassry that either State or nation can boast. Especially remarkable for their prolificacy of little local bills, they semi-occasionally essayed something general, and in their superlative zeal were rarely content with simply making bad worse. In extenuation of their prolonged picnic at the capital last winter, when the howl of disgust became threatening, they cut off a few insufficient appropriations which their predecessors had made for valuable works, and in their "sop to Cerberus" was our Fish Commission. Amendments (?) to fish law had already nullified that, and on reflection it was probably a huge financial stroke, as seining and netting fingerlings is so universal in the depleted rivers and brooks that the fry planted by the Commission would never have reached the magnitude of fingerlings. Nearly fifty years ago the struggle for a fish law began, and the fact that there was no fish in any of the streams where seines could be drawn, contributes to the passage of an imperfect act after a prolonged fight, and partial enforcement for two or three years produced such astounding results in increase and growth of the native fishes that the vandals persisted till they succeeded in killing the auriferous hen. There may be "a good time coming boys," but we who have started down the shady side will probably "not live to see the day," though "our sands have not run out," when we reach the limit. Let us hope, however, that a violent endemic of partial sanity may strike the legislators while in session, before many years, and a better law be enacted, never to be repealed.

To capture a respectable string of fish we must go far into the mountains or into a neighboring State, whose legislators have occasional outcroppings of intelligence. KENTUCKIAN.

BREEDING SALMONIDÆ.

THE largest fish breeding establishment in Great Britain is the Howietoun Fishery of Sir James R. G. Maitland, Bart., at Stirling, Scotland. A history of this fishery has been published, at least we read in English papers that Part I. has just been issued, and that the following is contained in the preface:

"The Howietoun Fishery having now been just completed, after ten years of continous constructive work, it seems to me unadvisable longer to delay publishing an account of the mode in which the design has been carried out, and of the results already obtained. The object in view has been to prove, by actual experience, that the culture of the Salmonidæ can be made commercially a success, if set about in a business-like manner. At a very early period I realized that, in comparison with the number of live fish claimed to have been produced the results of fishculture as applied to the Salmonidæ were in general very meagre. What the reasons were did not seem clear. At first I was inclined to attribute it principally to some want in the treatment of the ova. Now, with fuller knowledge, I only wonder that any results were obtained. At the head of the list stand out in strong relief over-statements, caused, no doubt, by the anxiety to claim the best possible results and insuperable difficulty in counting the fry; next in order, the most total ignorance of the habits and requirement of young fish, and the difficulty of transplanting them—for their mere conveyance alive to the destination is not sufficient; they must be carried in perfectly clean water, they must be perfectly prepared, the temperature of the transport-tank must be kept within a few degrees of that of the stream into which they are to be turned, and the stream itself must not only be suitable for fry, but the part of the stream where they are liberated must be skilfully selected. Next in point of deadliness, the insane overcrowding of the ova, and afterward of the fry in the trays. This was supposed to be the sovereign remedy for the admittedly meagre results. Do not waste money over your hatching-house. Only lay down enough eggs, and a few inches thick, if possible, and a very few pounds will suffice to stock all the waters in the country. The ova were laid down in this manner at first by hundreds of thousands, afterward by millions. Tens of thousands of pounds sterling have been spent—wasted, if you like—and to-day we are still asking, where is the result? Where? But there is a yet more fatal cause of failure, a cause so hidden that never was it suspected until the Howietoun experiments placed it beyond a doubt. The maturity of the parents is of paramount importance in determining the chance of the offspring in the struggle for existence. Old spawners produce strong and healthy fry; young spawners, though comparatively more prolific, produce weaker offspring, with a much smaller chance of holding their own in the waste of waters. The problem is now solved. The culture of the salmonidæ is now an achieved success. And in the hope that the methods followed may prove of use to those working on the still larger question of our sea fisheries, I will endeavor to bring the experimental part of the work, in which I have been largely helped by F. Day, C.I.E., F.L.S., down to the hour of publication. I take this opportunity of acknowledging the great assistance I have received from my wife, to whose untiring energy the fishery owes much of its present prosperity, and this book its existence.—J. R. G. MAITLAND (Stirling, N. B., Oct. 1886)."

The Kennel.

FIXTURES.

DOG SHOWS.

January, 1887.—Bench Show of Poultry and Pet Stock Association, at Adams, Mass. W. F. Davis, Secretary.

Jan. 17 to 21, 1887.—Ohio State Poultry, Pigeon and Pet Stock Association Dog Show, Columbus, O. W. F. Kuell, Superintendent, Columbus, O.

Jan. 18 to 21.—Exhibition under auspices of the National Poultry and Bench Show Association, Gate City Guards Armory, Atlanta, Ga. R. J. Fisher, Secretary.

Feb. 8 to 11.—Southern Massachusetts Poultry Association Bench Show, Fall River. A. R. G. Mosher, Secretary.

March 22 to 25, 1887.—Spring Show of the New Jersey Kennel Club, Waverly, N. J. A. C. Wilmerding, Secretary, Bergen Point, N. J.

March 29 to April 1, 1887.—Inaugural Bench Show of Rhode Island Kennel Club, Providence, R. I. N. Seabury, Secretary, Box 1333, Providence.

April 5 to 8, 1887.—Third Annual Show of New England Kennel Club, Boston. F. L. Weston, Secretary, Hotel Boylston, Boston, Mass.

April 12 to 15, 1887.—Thirteenth Annual Dog Show of the Western Pennsylvania Poultry Society, at Pittsburgh, Pa. C. B. Elben, Secretary.

May 3 to 6, 1887.—Eleventh Annual Show of the Westminster Kennel Club, Madison Square Garden, New York. James Mortimer, Superintendent.

FIELD TRIALS.

Feb. 15, 1887.—Inaugural Trials of Tennessee Sportsmen's Association. Entries close Jan. 10. R. M. Dudley, Secretary, No. 84 Broad street, Nashville, Tenn.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **4502.**

THE PACIFIC COAST FIELD TRIALS.

THE annual meeting of the Pacific Coast Field Trials Club was held near Hanford, Cal., commencing Dec. 13. Seven dogs competed in the All-Aged Stake. In the first series Judge Post's English setter bitch Janet beat W. Schreiber's pointer dog Mountain Boy. J. M. Barney's pointer dog Jim Pinch beat J. G. Edward's English setter dog Royal Duke II. W. Schreiber's pointer bitch Lassie beat J. B. Martin's English setter dog Dashing Money. California Kennels' Sweetheart a bye. In the second series Sweetheart beat Lassie, Tom Pinch beat Janet. In the final for first, Sweetheart beat Tom Pinch and won first prize. Lassie beat Tom Pinch and won second prize. Tom Pinch beat Dashing Money and won third prize. In the Derby but two dogs put in an appearance. C. Keading's English setter dog Shot beat E. W. Briggs's pointer dog Climax, and won. The trials were run on Mr. Lilli's magnificent ranch on Kings River. This ranch of 60,000 acres is fenced and well preserved. Beautiful streams traverse the estate and quail are abundant there, being found in good numbers for the trials. Nothing was wanting in the way of appointments and surroundings to make the trials most enjoyable. The judges were Messrs. Pyle, Fred. Taft, late of Boston, and Franklin Satterthwaite, of Newark, New Jersey, who is now out on the Coast enjoying the splendid shooting there. Mr. Satterthwaite's long experience in the field has done much to qualify him for the responsible position which he here occupied. Aside from Mr. Satterthwaite's great experience in the field, it will be remembered that he was one of the first sportsmen in this country to denounce the disreputable and lowering practices of certain handlers at our earlier field trials, and for his fearless action in the matter the sportsmen of America owe him a debt of gratitude. He speaks enthusiastically of the courteous and hospitable treatment accorded him by Mr. Lilli, and in fact by all the California sportsmen whom he met.

NATIONAL FIELD TRIALS CLUB.

THE regular annual meeting of the National Field Trials Club was held at the Stonewall House, Grand Junction, Tenn., on Tuesday evening, Dec. 14, Gen. W. B. Shattuc, the president, in the chair. On motion of Mr. P. H. Bryson it was voted that the chair appoint a committee of three to prepare running rules for the trials next year. The president appointed Mr. P. H. Bryson, Col. A. Merriman and Mr. B. Waters. On motion of Mr. T. M. Brumby it was voted that the rules be published sixty days previous to the closing of the entries for the Derby. On motion of Mr. Rowe it was voted that the president appoint a committee to revise the constitution and by-laws, and Hon. Thomas A. Logan, Major J. H. Trezevant and E. F. Stoddard were appointed. On motion of Capt. E. S. Gay the executive committee were authorized to secure suitable grounds for the trials next year. Eleven members were unanimously elected. Mr. P. H. Bryson and Mr. N. Rowe were appointed a committe to nominate officers for the ensuing year. They reported the following list which was unanimously elected: President, Gen. W. B. Shattuc, Cincinnati, O.; Vice-Presidents, Col. J. W. Renfroe, Atlanta,

Ga., and Hon. J. S. Wise, Richmond, Va.; Secretary and Treasurer, C. W. Paris, Cincinnati, O., Executive Committee, Hon. Thomas A. Logan, Col. L. A. Harris, Cincinnati, O.; E. F. Stoddard, Dayton, O.; F. L. Stone, Chattanooga, Tenn., and B. P. Holliday, Prairie, Miss. The executive committee were authorized to arrange the stakes and fix upon the dates for the trials of 1887. Mr. N. Rowe offered $100 as a prize for the Champion Stake next year, which was accepted, and he was tendered a vote of thanks. Mr. P. H. Bryson, Captain E. S. Gay and Mr. N. Rowe were appointed a committee to determine what amount should be paid to Mr. Stephenson for his services as secretary. The meeting then adjourned to the following evening. On Wednesday evening it was voted that the president be empowered to treat with the American Kennel Club for the transfer of the remaining copies of Vol. I. of the Stud Book with the right to publish a second edition. The committee reported that $100 should be paid Mr. Stephenson for his services, and it was so ordered. It was voted that the club retain its membership in the American Kennel Club. An adjournment was then made until Friday evening to hear the report of the treasurer, but he was unable to be present. The president gave notice that charges had been preferred, that in the heat between Ben Hill and Lillian the former had been pulled and that the charges would be referred to the executive committee. The meeting then adjourned to Saturday evening, when the treasurer stated that it would be impossible to present a detailed statement as several bills were outstanding. It was voted that he should pay the bills and send the papers to his successor. Messrs. Bryson and Stephenson called for the charges against the pulling of Ben Hill but the chair ruled the motion out of order. The meeting then adjourned *sine die*.

COLLIE CLUB SWEEPSTAKES.

PHILADELPHIA, Dec. 31.—*Editor Forest and Stream:* I take pleasure in sending you the following list of entries to the first annual Collie Sweepstakes, given under the auspices of the Collie Club of America:

CHESTNUT HILL KENNEL.—Dublin Scot, Jr. (Dublin Scot—Spoiled Miss), Scot's Bairn (Dublin Scot—Spoiled Miss), Scottish Hero (Dublin Scot—Spoiled Miss), Young Meg (Charleton—Old Meg). Albethorpe (Nullamore—Gem), Hazel Thorpe (Nullamore—Gem), Queen of Thorpe (Nullamore—Gem).

A. S. APGAR.—Nut Brown Maiden (Strephon—Dot).

J. R. MCALPINE.—Loris (Ben Nevis—Lady Mac).

G. A. SMITH.—Rutland Maid (Rutland—Maid), Rutland, Jr. (Rutland—Maid), Scotia (Rutland—Wild Rose).

G. A. FLETCHER.—Rutledge (Rutland—Maid), Rutland Jock (Rutland—Wild Rose), Rosemary (Rutland—Wild Rose) Rosalind (Rutland—Wild Rose).

J. VAN SCHAICK.—Lottie (Surbiton—Nancy Lee), Nancy III. (Surbiton—Nancy Lee). Pomp (Surbiton—Nancy Lee), Olivia II. (Sable—Olivia), Kaluria Scot (Scotson—Young Nancy), Darnley II. (Foxie—Sonsie).

HEMPSTEAD FARM CO.—Cheviot Boy (Robin Adair—Zulu Princess), Zulu (Robin Adair—Zulu Princess), May (Robin Adair—Lassie), March (Robin Adair—Lassie), April (Robin Adair—Lassie).

JAMES WATSON.—Startle (Northampton—Blackberry Girl), Surprise (Northampton—Blackberry Girl).

THOMAS LINDSAY.—Dew Drop (Strephon—Jersey Beauty).

JAMES LINDSAY.—Luella (Strephon—Mavis), Helen (Strephon—Mavis).

MRS. F. W. FOOTE.—Bijou (Darnley—Lucy).

J. HONE, JR.—Sandy (Surbiton—Henrietta).

J. D. SHOTWELL.—Shirley (Surbiton—Beauty IV.), Tom Brown (Ben Nevis—Lady Mac).

C. M. TEES.—David (Strephon—Mavis).

C. VAN W. FISH.—Sandy Kilt (Bobbie Burns—Witch Hazel), Young Trefoil (Bobbie Burns—Witch Hazel).

L. L. S. CLEARMAN.—Jolly (Surbiton—Henrietta).

J. P. GRAY, JR.—Donald V. (Robin Adair—Effie Dean), Glencairn (Nullamore—Effie Dean), Guenn (Nullamore—Effie Dean).

MARTIN DENNIS.—Franklin (Strephon—Flossie).

C. P. MATTOCKS.—Maggie XVI. (Clyde—Maggie), Clyde LXXIII. (Clyde—Maggie), Clyde LXXVIII. (Clyde—Yarrow).

A. R. KYLE.—Glenlivat (Strephon—Mavis).

J. S. ROGERS.—Toby Wayne, Scot Wayne, Frank Wayne, Wayne Beauty and Pomp Wayne (Darnley—Lucy).

H. J. IRELAND.—Unnamed (King Bruce—Beatrice).

We have three or four more entries, but have not as yet received full descriptions, so hold them over.

GEO. A. SMITH, Sec. and Treas.

NEW YORK DOG LAW.

TORONTO, Canada.—*Editor Forest and Stream:* The *Evening Telegram* of this city says: "The dog nuisance is becoming unbearable in Toronto and should at once be attended to. Objectionable scenes in the streets by day and horrid howlings at night are too prevalent to be tolerated any longer. There is no city so cursed with dogs and curs as in Toronto. In New York dogs are not allowed on the streets at all, unless their owners are tied to them by a chain or rope. The law appears to dread the owner as much as the dog. We must do the same here. Taxes appear to have no effect in decreasing the number of these brutes, for half of them have no taxes paid on them at all, while the other half are owned by people who would have a dog if they had to go without their meals in order to pay for it. Let these good people have their dogs, pay more taxes and keep their pets at home. The increased taxes might decrease the noise at night, by which noise many a weary sufferer is deprived of necessary sleep, and the shotgun or lasso would rid the streets in the daytime of this insufferable nuisance. Let us see whether the mayor or any of the aldermen has pluck enough to tackle this subject and confer a favor upon the city."

Please advise me if this dog-plagued editor is correct regarding the New York law. W.

The New York city ordinance is as follows:

"Hereafter it shall not be lawful to permit any dog to go abroad loose or at large in any of the public streets, lanes, alleys, highways, parks or places within the corporate limits of the city of New York, under a penalty of $3 for each offense, to be recovered against the owner, possessor or person who knowingly harbored such dog within three days previous to the time of such dog being so found going around loose or at large; and the Commissioners of Police are hereby authorized and directed to cause complaint to be made to the Corporation Attorney against the owner or possessor of every dog permitted to go loose or at large within the corporate limits, as aforesaid, for the recovery of the penalties prescribed in this ordinance; such penalties and all license fees, when collected, to be accounted for semi-monthly and paid to the Comptroller of said city, and, upon the requisition of the Mayor, to be applied towards the payment of enforcing the provisions of this ordinance. Nothing in this ordinance shall prevent any dog from going into any such street, lane, alley, highway, park or public place, provided such dog shall be held by such owner or other person securely by a cord or chain, to be not more than four feet long, fastened to a collar around the neck of the animal.

"The Mayor of the city of New York is hereby authorized and empowered to take such measures as he may deem most efficient to carry into effect the provisions of section 1 of this ordinance. All dogs found loose or at large, as aforesaid, shall be seized, captured and delivered by such persons as the Mayor shall designate, at a place to be provided and indicated by him, where such animals, if not within forty-eight hours thereafter claimed and redeemed by the owner or some other person, shall be killed and destroyed in such manner and by such persons as the Mayor shall designate.

"Any owner or other person who may claim such dog shall, before being placed in possession thereof, pay therefor the sum of $3. The provisions of this ordinance shall apply only to dogs owned or claimed by residents of this city, and any person who shall knowingly present any such dog, and claim payment for the capture thereof, which shall not be owned or captured within the corporate limits of this city, shall thereby incur a penalty of $10."

HANDLERS' ASSOCIATION.

THE annual meeting of The National Association of Field Trial Handlers was held at Grand Junction, Tenn., on Saturday evening, Dec. 18. In the absence of the president and vice-president, Dr. James N. Maclin, of Keeling, Tenn., was called to the chair. The minutes of the last meeting were read and approved, and the report of the treasurer, showing a handsome balance, was accepted. The report of the committee appointed to draft a constitution and by-laws was accepted. Several members were elected. The committee appointed to nominate officers for the ensuing year reported the following list, which was unanimously elected: President, D. E. Rose, Lawrenceburgh, Tenn.; Vice-President, H. H. Briggs, San Francisco, Cal.; Secretary and Treasurer, N. B. Nesbitt, Chesterville, Miss.; Executive Committee, H. M. Short, Middleton, Tenn.; B. Waters, Chicago, Ill.; W. W. Titus, Montpelier, Miss.; J. M. Avent, Hickory Valley, Tenn.; S. T. Hammond, New York. Mr. Rose then took the chair, thanking the association for the honor conferred. Charges having been preferred against Messrs. Stephenson and Bevan for conspiring to defeat the dog Ben Hill in his heat with Lillian, they were called upon for their defense. Mr. Stephenson made a straightforward and perfectly frank statement, entirely exonerating Mr. Bevan and taking all the responsibility for the act upon himself. He said that he entered Ben Hill merely for the purpose of showing that he was broken and a good dog, although he did not think him good enough to win, and that he considered Lillian a much better dog. When it was decided that they must compete he endeavored to withdraw his dog, but was not permitted to do so. He then determined that Ben should not win over the dog of his best friend, stating that he believed that the public would think him in such case to be playing false and trying to win a reputation for his dog by beating Lillian. He also said that he did not for a moment think that he was wronging any one but himself. After a full and impartial hearing the association, taking into consideration the motives that actuated Mr. Stephenson, accepted his explanation and decided to inflict no penalty. The secretary was instructed to have one hundred copies of the constitution and by-laws printed for distribution among the members. It was voted that a special meeting of the association be held at High Point, N. C., next year during the trials there.

BIRMINGHAM BENCH SHOW.

[From a Special Correspondent.]

THE twenty-seventh annual exhibition of dogs was held in Curzon Hall, Birmingham, Nov. 29 and 30 and Dec. 1 and 2, the total entry amounting to 1,060, which included double entries. The classes as a whole were equal to any of the Society's previous exhibitions, but the attendance was below the average.

In the deerhound challenge class Bevis I., looking bright and well for his years, won, and is still one of our best deerhounds. In the open dog class there was a good collection, and we fancied the hc. Warwick as one of the best in the class, being large and powerful with quality, and stood well. Buscar II. was entered not for competition; he is a very powerful dog, but coarse and we don't admire his coat. First and cup went to Athole II., a real good animal, just soft enough in coat. Donavourd Bran II. shows quality, but is rather fine in face. Ronald, hc., too small. We think Fingall II., unnoticed, very harshly treated; he won first at Warwick and we think should have been in the prize list here. Bitches—Spencer first, a bitch of good quality and good in coat, but shown in low condition. Glen Isla, hc., only 14 months, good size, quality, wonderful depth of chest, shown thin and looked flat-sided. Lassie II., third, good in head, body, legs and feet, fall off in hindquarters. Cheria (late Lady), here vhc. and reserve, we thought all-round as good as any in the class, but her ears and broad skull are decidedly against her.

In the challenge class for greyhounds Acalia, as last year won and held the same position here, but we preferred her kennel companion Lancashire Witch, and we know their owner agrees with us. In the open dog class Sampson won again this year. He is a good upstanding black dog, shown in very good condition and possessing bone and quality. Lemon Squash, another good upstanding dog, but we thought Balkis, hc., quite equal to any in the class, and a young dog, by Memnon, sadly out of condition, about the pick of the basket, bar being high on the leg, which we considered was owing a great deal to his low condition. In bitches the winner here last year again won this year, and, so far as we could see, she was about the worst specimen in the class, being small, long, flat back, straight behind and very plain in her shoulders. We fancied Lady Elinor, Coral and Telegram III. about the best in the lot. The two former were unnoticed. Touch-and-Go second, smart little bitch, but too small.

Beagles were a very fair collection, and we think, properly placed, the reserve Abigail is not up to her old form.

Regent won in the challenge class for fox-terriers, with Brookhouse Nick, looking well for his years, reserve. Rosemary won in bitches, with no opponent. Open dogs, a very moderate collection. Raby Mixer well ahead for first, a very nice little dog from the same kennel coming second, but a good way behind the form of the winner, but good in size and shows well, with a fair, good head and good coat, and sure to win more before he is out of the puppy class, where he also competed here and won second to Mr. Clark's young dog Reckon. In bitches, Mr. Raper was again to the front with Richmond Mince, who we fancy is getting coarser in head, and her shoulders are decidedly not improving. Mr. Clark's Rachel was here unnoticed. We understand she declined to show herself when the judge was officiating on this class. Otherwise no doubt she would have won and correctly so, as we fancy her one of the best if not the best fox-terrier we know of at the present time. Messrs. Hill & Ashton came second with a very nice young bitch, just light enough in bone and not properly furnished behind; her ears are also on the large side, but a good little terrier and won first in bitch puppies. Reckon, first in dog puppies, is a very true-made little terrier, with plenty of style and bone for his size, but to our mind he is small, weak and toyish in head, fine in muzzle and round in skull.

In wire-haired fox-terriers Jack's Yarn, not looking so well as we have seen him, had a walk over in the challenge class for this variety. Open dogs, Jack's Agau won first and held the same position in the puppy class. He is a real good dog but we consider him too large for his age and his ears are large. Carlisle Venture, a good dog, but plain and wants the quality of the winner. Bitches, Try Again second, and the same position in puppies, is on the large side. Coalville Mischief we think won well, Barton Model having lost her old form, and we are afraid she must take a back seat in the future. Mr. Raper won the team prize with Raby Mixer, Richmond Dazzle and Richmond Mince.

Pointers, challenge class, Naso of Upton won well, with his dam, Nan, a good second to him; as there was no second she got the reserve number. Open dogs, Alden Ben, a good lemon and white, plenty of bone, size and style, but lacking the quality of some others in the class. Perdix, good, useful-looking dog, not possessing the quality of his brother, Naso of Upton. Devon Ponto, very showy dog, looks like a worker with a very good head, but might be better in shoulders, and shown here much out of condition. Cornish Don, hc., should have about won, being full of quality with plenty of bone, but may be a bit short to please some. Gladsome, first, a fine upstanding lemon and white with good movements. This dog also won first in the class for field trial winners. Bitches, Tightfield Bloom, a very sweet bitch, when we had her off the bench she seemed timid and moved badly. Lady Croxteth, good-headed, liver and white, unnoticed, wide in front and light in bone. Duchess of Huntroyde, good bitch, with character and good feet and legs. We preferred her to some placed over her. Arizona, good stamp, coarse tail. Ilma, first, good bitch, heavily marked, dark liver color.

In challenge class for small-sized pointers the well-known good little bitch Beau Ideal won; we think her a trifle light in eye. Glee, reserved, not so good in bone as the winner. Small dogs, first, Forrest King, a lemon and white, plain before the eye, but a well-made dog with plenty of bone for his size. Brackett II., unnoticed, we considered should have been in the prize list; Milton Baron, rather fine, wants bone and substance. Chandos, first, possesses bone, substance and quality, and we think was correctly placed; he would be improved with a darker eye. Bitches, first and second, sisters, the latter very small and weedy. We fancied the third prize bitch, Opal, to any in the class, with the reserve, Kornish Kate, next. Mr. Tredennich exhibited two more very nice bitches in this class. King of Kent, reserve in the open class, won easily in puppy, and will be again to the front. Domino, second in puppies, too leggy. In the field trial class, the lemon and white Gladsome, first in open dogs, won here over Little Ben, and Rapid Ben being next best. Mr. Beck won the team prize with Nan, Naso of Upton, Rapid Ben and Nannie, Mr. Lloyd's team getting the reserve number.

Setters, field trial winners, first to the Irish setter Hector, looking remarkably well, as also was his kennel companion, Wee Kate, who later on defeated Garryowen in the challenge class for Irish setters. In the challenge class for English setters Bonnie Belle won. She is a very nice bitch, full of quality, with good head and black and tan markings, with blue marked body. Royalty came in for the reserve, but we fancied Count Howard, unnoticed, as best in the class. Open class English setter dogs, King Mac, good in coat and good color, with a good body and passing good feet and legs, but a trifle dished in face. Blue Dash, a strong useful dog, coat inclined to be curly about head and ears. Prince Rupert II., who made his first appearance here last year, only got a vhc., and we think him about correctly placed, and consider him a better dog now than when shown here as a puppy. He is stylish and possesses character and quality, but not the best of feet and legs. Monk of Furness, second to him in the puppy class last year, won this time and correctly so; possesses a beautiful level head, with good neck, shoulders and body, and the best of feet and legs; in color he is almost white. Royal Albert, third, is a very nice dog, possessing more quality than usual in Mr. Shorthose's dogs, being finer and more like galloping. The small dog Sir Totton, often reported upon, came second. In bitches, Mr. Cockerton won first and second with Madam Rachael and Belle of Furness, placed in the same position here last year. We fancy Madam Rachael as being younger and showing more quality. Mr. Potter showed a very nice dark blue ticked bitch in Queen Elsie, vhc,

Black and tan setters, challenge class, Czarina won, looking well, and in good coat and feather. Open dogs.—This class contained some good colored dogs, with good coats, and possessing good bodies, feet and legs, but the majority were plain in head. The bitches were a very small class, only four, and third prize was withheld. Mr. Chapman's well-known Heather Blossom winning, and a nice bitch, catalogued at 15 guineas, came second, which seemed a bargain for some person.

Irish setters, challenge class, as we have previously stated, Wee Kate won over Garryowen, who was here unnoticed. Mountaineer getting the reserve number. Open dogs.—Hector won well, but after this we could not follow the awards. The class was a real good strong class, with a lot of good dogs. Frisco was unnoticed. Kildare was marked disqualified, we don't know what for, and another good young dog in Moonlighter, also marked disqualified, and a special cup offered by the Irish Red Setter Club, upon condition that it may be won by any member who had previously won one of their cups, so the cup goes to a dog unnoticed in the class. In our notes we have marked the second prize dog lucky. Bitches, first to a young bitch, who afterward won in a very strong class of all varieties setter puppies. The second prize winner was also in the puppy class, but unnoticed. Molleen, a very good bitch, wants character in face. We preferred the unnoticed Kitty V. to the reserved Nadine.

In spaniels, the challenge class had nine entries, and first was awarded to the Clumber Psycho, ten years old. He looked very well, considering his age, and is no doubt the most typical Clumber now showing. Yet we think the black spaniels Squaw and Solus should have been placed first and second. Solus was shown here too fat, and we believe this is his first defeat for over two years. Water spaniels were a very moderate lot; only one entry in bitches, and it was an English water spaniel and looked like a half-bred retriever. In Clumber dogs, first went to Hotpot, a very good typical dog, a trifle short in back, but well shown. Trustfull, second prize, is plain of face and not in as good condition as the winner. In bitches, a small but very nice bitch, Snow, won. She was closely pressed by her sister, Cherie. In Sussex or liver-colored dogs, first went to Bridford Laddie, a very good colored dog of the correct type. Second is too dark in color, light in eye, long in body, but leggy. There were only two entries in bitches; Naomi an easy first, with a beautiful head, good coat and color, long and low; the best of the variety shown for a long while. Field spaniels, black, Beverley Rex, winner of second, is of small size, good color and coat, but crooked in forelegs. Newton Abbot Darkie is short on leg, but coarse in head. Newton Abbot Lord has a good head, but is leggy. In bitches, Birdie is a large, handsome bitch. Una is a perfect-bodied bitch, with the best of feet and legs; she also has good coat and feather, but is deficient in head and ears. Beverley Rhea is a nice bitch, but is small and of the cocker stamp. In other colored spaniels, Newton Abbot Laddie is short in head, but good in body and coat. Bungy, from the same kennel, is coarse. Councillor, looking worn out, was second. In cocker dogs, the first is good in head, but light in body. The second is good in body, but short in head. The bitches were a good class. Florence, a liver, has a head of the large spaniel type. First went to a young one likely to grow too large. Beverley Fan, unnoticed, we thought the best cocker in the class

In the challenge class for Basset hounds, Bourbon, looking very well, once more won over Fino VI. In open class Texas Fino is long and low, but short in ear. Judge is rather flat-sided and short in ear. Remus won well. He is a trifle high on the leg. In bitches first prize was withheld. But we thought Bertille and the unnoticed Purity quite good enough to have the prizes awarded to them.

In the challenge class for St. Bernards Plinlimmon won easily over Guylord. In open, dogs, Duke of Marlborough II. is a grand specimen, not shown in as good condition as his successful opponents, but we believe him to be quite equal to Prince Battenberg when judged as a St. Bernard. The latter won the cup over Plinlimmon, a decision we could not indorse, as after looking both dogs carefully over, we consider Plinlimmon much the better dog, and Duke of Marlborough the second best dog in the show, perhaps runs close on being the best in England. Lord Winmarleigh was third and correctly placed, being a large, upstanding dog, shown in perfect coat and condition. He is too long and fine in face. Bernardine won again this year, closely pressed by Queen Mab. The two classes provided for smooths were a failure.

In mastiffs, first went to King Canute, a good win, but we heard some talk about objections owing to lameness; second went to Victor Hugo, a good, strong dog, just large enough in face and not perfectly straight on his legs. Third to Albert Victor, a very large, strong made dog, with an enormous skull, very weak before the eye, but owing to deep flews he does not appear so at first sight; eye large and light in color. Reserve went to a small-sized dog, short in face, with badly carried ears. Nap, vhc., is a strong, powerful dog, not as short and square in head as the fancy requires. In bitches, first went to Cambrian Princess, looking well. Second to Toosie, often reported upon. Third to a moderately good brindle bitch, Countess of Woolands is a lengthy bitch of good size, but not with the short, square face of the winner.

In sheepdogs champion Rutland had no opponent. He was looking remarkably well. In open dogs Claudian, fourth prize, is a black and tan with a good coat. He is getting heavy and loaded looking. Oakham, third prize, is a nice sable, showing character and quality. Fred, fifth prize, is coarse. Bendigo, a very good sable dog, also won in puppies, possessing a very level long head, good ears, good coat, with body, shoulders, feet and legs all that could be wished for. In open bitches we liked Miss Posey equally as well as the second prize Bertha. We also faucied the vhc. Precious. Lady of the Lake, we considered deserved her position, possessing feet, legs, shoulders and with a collie head and ears, showing plenty of style and character all through. White Heather is a nice bitch with small ears carried well up.

Rustic King won easily in the challenge class for bulldogs over Mr. Shirley's entry. In open dogs, large size, first went to Oswego. He is leggy with a good head, but small loin, good in body and skull, but pinched in face. In bitches Royal Heiress is too leggy. The second prize is small in face. The third is plain and bad in ear. In small dogs Sailor Prince was a good first. The second is leggy. In bitches the first is small in face with a good chest, but stands too high on her legs.

In the challenge class for bull-terriers Trentham Dutch won well from Murderer II. In open dogs White Sam is a good dog, spoiled with a spotted nose. Royal III. is wide in chest. Dutch Lad is thick in skull. Eclipse is cheeky. King of Hearts has improved since the summer show in London, and we thought should have won here. In bitches Duchess III. is a good, medium-sized bitch. Duchess, second prize, is a large stylish bitch; she falls off before the eye. West End Maggie, hc., does not carry her ears properly, otherwise we consider her the most level-headed and best bitch in the class; she is of medium size. First went to Matchless, with a lemon mark on cheek; this bitch is much improved since the K. C. summer show, where she was unnoticed, and taking her condition and form into consideration, she may have been in her proper place on both occasions. Candidate, second prize, is cheeky. The Rake (late Peter II.) won here last year in the same class; he has grown coarse and cheeky since then; he is also much too large for the small class. In the small class Cribben, first, is a grand bodied little dog, with good feet and legs. Kelpie, second, is best in head but falls off in quarters.

There was a challenge class provided for white English terriers, which had one entry, Leading Star, who seems going back. For open dogs, Chesseth Model, from the same kennel, won, Mr. James Hinks coming second with a moderate young dog. In bitches Lady Lilly, small, very light in bone, and evidently not in good health, won second, with a very nice old bitch winning first.

In the challenge class for black and tans Mr. Royle's Sir Fredrick won well from Kenwood Queen. In the open class the winners were well placed, but nothing particularly good in quality turned up. A very moderate bitch, uncropped, won the special offered by the Black and Tan Terrier Club, although unnoticed in the open class.

Mr. John King won easy in prick-eared Skye terrier dogs with his well-known Prince Charlie II., and a very nice bitch from the same kennel won in a small class of bitches.

In drop-eared dogs Mr. King again won with Benmore, a strong dog, just large enough, and of a light-gray color, but with a good head, good body and plenty of coat. In prick-eared bitches Kirk Ella was the only entry. She was looking well, and is about the best of her class.

In the challenge class for Bedlingtons The Bishop won over Hairdresser, who is not as good as he was some time ago, yet we think he ought to have won on this occasion. Open dogs were a good class, so far as numbers, but from the point of general quality the Bedlingtons are not improving. Only two bitches turned up, the best winning.

In Irish terriers Gaily won easily over Buster, shown too fat. The open class was a very good collection, the winners were all cropped. We think the unnoticed Jaques and Begum were equal to any in the class. There were two classes provided for uncropped dogs and bitches, which turned out a failure, second prize in each class being withheld and the winning bitch was unnoticed in the open class.

Dundee won again in the Scotch terrier dogs, Mr. Ludlow coming second with a very nice small dog in Alister, while Truth pressed the rest very closely. In bitches Ashley Nettle won well, Glengyle coming second and changing hands at a good figure. We prefered the unnoticed Glen Brisbane, from the same kennel, as being much better in head and coat, but at present rather high on the legs. In bitches hc. is small and of good type, perhaps as good as any in the class.

Welsh terriers were a very unlevel lot both in size and quality. The winning dog is fine in bone, leggy and only moderate in coat.

Poodles were a very fair class. The winner, a very good dog, was quickly claimed at the catalogue price, £10. The second prize we liked very much, but he was all damp with oil. However, at 15 guineas he was a cheap dog.

In Pomeranians the winner, a nice little black dog, is undershot. The white Charlie, showing age, coming second.

Mrs. Foster won first and second in Yorkshire terriers. Bradford Hero shows age and is losing his color.

In pugs Stingo Sniffles just won from Little Count. In the open dog class Mr. Sheffield won with a very nice dog, breeder and pedigree unknown, yet the age is given as two years and one month. Mr. Lud, third prize, is of nice size and quality, very dark along his back. King of Diamonds was here unnoticed, which we think a decided mistake. Bitches were only a moderate class, third prize being withheld. Miss Boffin, unnoticed, is good in character, but wide in front. Sunset is small and cobby but small in skull and face.

There were no entries in Maltese.

Italian greyhounds were a very good class. Bankside, Daisy II. and Beauty II. were best to our mind, but Polo showed better, the others being more timid.

In the challenge class for toy spaniels Olivette won, looking very well with good coat and feather.

In Blenheims we preferred Prince Charlie to the winner, being better in color and best in coat, and equally as good in skull and face.

In King Charles second prize was withheld, which we think hard lines, as the reserve, Crown Princess, is a very good specimen, but a trifle dark in color. The winner, Jules, is a good dog, with not quite enough underjaw.

Tri-colored spaniels had no entry.

There was a very good class of black and tan toys, and the winners were correctly placed.

In rough toys Mr. Foster won with Daisy II., rather light in color but good in coat. The reserved, Little Wonder, has a good coat for the age and is good in color, and sure to be heard of again.

The list of premiums will be published in the *American Kennel Register*.

A. K. R. NUMBERS.

BELOW are given the numbers and owners' names of the 190 dogs entered in the December number of the *American Kennel Register:*

BASSET.

4312. Louisette, R. L. Hart.

BEAGLES.

4313. Blue Cap III., F. Hotchkiss.
4314. King William, S. C. Graff.
4315. Pinch, B. Hill.

BULLDOGS.

4316. Hillside Belle, J. E. Thayer.
4317. Hillside Crusoe, J. E. Thayer
4318. Hillside Juan, J. E. Thayer.
4319. Hillside Queen, J. E. Thayer.

CHESAPEAKE BAY DOGS.

4320. Dyesha, J. L. Turner.

COLLIES.

4321. Balmoral, J. Watson.
4322. Belle of Kalmia, J. D. Shotwell.
4323. Blanche D., W. P. Krom.
4324. Bonnie Jean II., W. R. G. Andrews.
4325. Fantilla, J. Lynn.
4326. Flossie Eldred, J. C. Eldred.
4327. Genlivaf, A. R. Kyle.
4328. Heather Belle II., A. R. Kyle
4329. Henrietta, J. Hone, Jr.
4330. Kenilworth, J. Watson.
4331. Lady Beasee, J. McCain.
4332. Lochinvar II., J. R. Shepley.
4333. Mr. Laddie, T. C. Beer.
4334. Nellie Allen, C. J. Allen.
4335. Noble, E. & R. H. Burdsall.
4336. Orphan Girl, Glencoe Collie Kennels.
4337. Queen Bess II., G. A. Drape.
4338. Queen Mary, J. Watson.
4339. Robert Lee, P. Burns.
4340. Sandy III., J. Hone, Jr.
4341. Scotch Rover, G. F. Liddy.
4342. Scotia, G. A. Smith.
4343. Shep II., W. Z. Cozens.
4344. Silva, J. Greenlee.
4345. Storm King, D. H. Hays.
4346. Tam O'Shanter, J. Watson.
4347. Vixen II., J. Hone, Jr.

DEERHOUNDS.

4348. Dauntless, J. E. Thayer.
4349. Highland Chieftain, J. E. Thayer.
4350. King of the Forest, J. E. Thayer.
4351. Lorna Secunda, J. E. Thayer
4352. Robber Chieftain, J. E. Thayer.

ITALIAN GREYHOUNDS.

4353. Goldie, C. J. Tanner.
4354. Italie, C. J. Tanner.

MASTIFFS.

4355. Beech Grove Ajax, J. B. Heywood.
4356. Beech Grove Lion, G. W. Colwell.
4357. Beech Grove Patsy, W. H. McCurdy.
4358. Beech Grove Queen, E. R. Brown.
4359. Bismarck Ashmont, G. P. Zeiss.
4360. Brock, D. F. Gulliver.
4361. Chispa, P. LeClare.
4362. Count Rosko, J. L. Winchell
4363. Countess Lofty, M. C. Harvey.
4364. Dondan, J. Clary & Son.
4365. Dread, A. A. Bennett.
4366. Duke de Richelieu, E. W. Jester.
4367. Emperor William, W. Ramsay.
4368. John, W. Von Steinwehr.
4369. Judge II., L. D. Ely.
4370. Louise, M. C. Harvey.
4371. Lulu Zulu, L. D. Ely.
4372. Mars II., P. LeClare.
4373. Plato, D. L. Fry.
4374. Quakeress, G. S. Roberts.
4375. Rover II., H. Mead.
4376. Tiger, G. Von Steinwehr.
4377. Wacouta Baby, Wacouta Kennels.
4378. Wacouta Belle, Wacouta Kennels.
4379. Wacouta Don, Wacouta Kennels.
4380. Wacouta Jester, Wacouta Kennels.
4381. Wacouta Tiger, Wacouta Kennels.
4382. Wacouta Zulu, Wacouta Kennels.

NEWFOUNDLAND.

4383. Bruno, J. H. Gallagher.

POINTERS.

MASTIFF TYPE.

Editor Forest and Stream:

I am very far from agreeing with Mr. Wynn's willingness to bury the hatchet on the above subject, for the facts are so strongly with Mr. Haldeman and myself that the more it is discussed the stronger our positions become. I will grant that there is not much fun in arguing with Mr. Wynn, as he is the one conspicuous instance of a fancier that I know of who always applies the rule of common sense, and does not let the hussy run away with him. As for instance I warrant that he scorns clipping a poodle, à la vogue, and I doubt if he entertains a very high opinion of the endeavors of the St. Bernard Club to make their pets six-toed dogs.

However, as his is the second tramping on a corn of mine, I must have something to say in reply to what he says as to the misleading tendency of photographs of dogs. Full well do I know that no photo or perhaps no dozen of them can give a true opinion of a dog; if they could there would be no reason for a judge looking at a dog in more than one point of view; but this I do maintain, and will stick it out against a thousand of "authorities," and defy them to a submission of the question to any intelligent tribunal, that if a photo of a dog, taken squarely in profile, shows him square in muzzle, he cannot be as undershot as Mr. Wynn's pet Ilford Caution, and I insist that the photos of such eminent dogs as Turk, Colonel, Taurus, Taurus II., Anlaf, Duchess (2366), Peeress, Rajah, Countess, Hanbury's Prince and Field's Nell, all taken squarely in front of the camera, show no such disgusting layback as I have cited in Crown Prince, Ilford Caution, etc. Further, I maintain again that no dog with properly bent hocks could possibly assume the position of hindlegs that is shown in the profile photo of Crown Prince.

If I am wrong in either of these propositions, it follows that a photo in profile of a freshly imported African may be a likeness of Sir Isaac Newton, or that a man may walk with his ankle joint perfectly vertical. It just amounts to this: If a photo shows a fault, plainly and unmistakably, the fault must exist, and I see no escape from this conclusion. As to "fancy" pictures, those of King in *American Kennel Register* and FOREST AND STREAM and the original of Turk, have been admitted by Mr. Wynn himself as good likenesses. As to how short-faced mastiffs may have been in the past, I do not pretend to dispute with Mr. Wynn, but I do assert that none of the dogs I have cited could have been as short-faced as, say Crown Prince, Orlando or Ilford Caution. Remember that I have always made a very broad distinction between "undershot" and "layback." If the dog is only so much undershot that the lips must be opened to determine it, it would seem almost a necessity; but when the lower jaw sticks out like the ram of an ironclad ship, it is as disgusting a deformity as I know of. Do not say this is an exaggeration; look up the pictures of an ironclad ram and see if a certain dog is not suggested. Further, on the question whether a dog can be too short-faced. Surely it will be admitted that a bulldog is the exemplar of short face? And it will also be admitted that Mr. Frank Adcock should be an authority on them? Well, did not he expressly characterize it as a great mistake to hold that a bulldog's head could not be too short? I am thoroughly in accord with Mr. Lukey and Mr. Wynn as to dislike of a narrow head, domed skull (a marked feature of Ilford Caution) and taper muzzle, but I dispute both of them in their saying that it is accompanied by ill temper, or a want of faithful guarding intelligence. No two mastiffs ever lived with higher qualifications in this line than my old Gipsey and her son Lion, yet both had muzzles that would have thrown Mr. Wynn into convulsions. Mr. Wynn very properly quotes Mr. Thompson as an authority. I accept it. Did not Mr. Thompson say that he wanted no better type of head, if it was not too long, than Mr. Wynn's Peeress? And she shows almost an exact copy of the head of Old Turk! I base this on a magnificent crayon drawing of her, in profile, that Mr. Wynn kindly sent me, and which forms the most prized ornament of my dog sanctum, and the idea that such disgusting-looking brutes as Ilford Caution, Crown Prince, etc., should be mastiffs in the same day as this noble-looking animal is too calamitous for contemplation. Take Orlando; he is apparently the shortest-faced of the whole lot, yet his photo shows a dog of a dignified, amiable, noble appearance, not quite the equal of Turk, Colonel or Peeress, but Hyperion to a Satyr compared with the snub-nosed beasts I have mentioned. If Mr. Wynn thinks it worth while worrying with such desperate cranks as Mr. Haldeman and me, fellows who obstinately persist in quoting hard facts in the teeth of "fancy," perhaps he will enlighten me as to whether Orlando shows the layback of Ilford Caution. I ask in good faith, as the photo is a front view of his head.

Again and again, I protest that I do not admire long heads. Peeress, Turk, King and Rajah are plenty long in face for my taste, but I do insist that because a mastiff is a short-faced dog, it doesn't follow that he may not be too short-faced.

However, as it is somewhat profitless to set up opinion vs. opinion, assertion against assertion, I propose this; Submit it to a trio of dog men, not mastiff men. I will furnish photos of Rajah, Duchess (2366) her sister, Mrs. Rawlinson's Countess, dam of The Emperor, Governor, King, Mr. Wynn's Young King II. and Peeress, Turk, Hanbury's Prince, Field's Nell (dam of King) Taurus and his son Taurus II., as samples of dogs of fame of past years, and as samples of true mastiff heads. *Per contra*, I will furnish photos of Crown Prince, Pontiff, Beaufort, the Lady Clare, and the cut in *A.K.R.* of Ilford Caution, as samples of "short-faced," snub-nosed dogs. All these were furnished me by Mr. Wynn himself, except Rajah's, which I got from Mr. Hanbury, and Crown Prince's, which is copied from one bearing Crown Prince's name in Mr. Woolmore's own handwriting. Let this committee say if the short-faced, snub-nose layback of the last lot is characteristic of the former lot? I name as my selection Mr. John Davidson, and trust that you, Mr. Editor, will be kind enough to name the others. I specify non-mastiff men, because all fanciers have some prepossessions as to their own hobby, and are, to that extent, unsatisfactory judges on such a point.

Nobody who knows his similarity to the mastiff he loves will suspect Mr. Wynn of "funking" on any controversy, and as to my being laughed at in the *Stock-Keeper* for attacking "Fancy" in her entrenchment of follies, I would say that those who laugh last laugh best, and until somebody else undertakes to attack me there, instead of leaving it all to Mr. Wynn, I can only twirl extended fingers at them. As I said before, there is not much fun in arguing with Mr. Wynn, but I would like to skin a fool on this subject.

W. WADE.

HULTON, Pa., Dec. 17.

JOHNNY'S REASONING.—*Editor Forest and Stream:* In your last issue a correspondent describes the sagacity, or rather reasoning of a setter bitch, and asks if any of your numerous readers know of an incident that is its equal. My Clumber spaniel Johnny, I think, when sixteen months old, showed as much, if not more, reasoning power than his bitch. The following is the incident: In the house where we lived at the time our sitting room overlooked the dogs' yard. Johnny always, when he heard me in the room, wanted to get in and always found out a way of opening the back door and so coming to me. This worked well for some days, when the other dogs found it out and came up too. Johnny did not approve of this, as he wanted me all to himself, and next day I noticed that when he came up the others did not follow. Wondering at this I went to look at the door, which was shut. No one had closed it, so I could not understand how it had been shut. Next day I hid in a place overlooking the door, and awaited developments. In a short time Master Johnny opened the door, walked in, and then, to my astonishment, turned round and pushed it to with his nose. Mentioning this I was not believed, so the dog was watched by others, when the same thing occurred. One day when a wind was blowing, rendering it difficult to close the door, he was seen to jump up against it and push it to. He evidently reasoned that when he opened the door to come in the others were able to follow, so to prevent this he closed it after him. He was never taught to open or to shut doors. The door was fastened with a latch. He also shows great intelligenc in the covert and marsh, where he is a splendid performer.—CLUMBER.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope. Sets of 200 of any one form, bound for retaining duplicates are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Rake II., Sandy and Topsy. By L. K. Mason, Hastings, Ia., for sedge Chesapeake Bays, two dogs and one bitch, whelped Oct. 10, 1886, by Gowrie (Sunday—Nellie) out of Ruby III. (A.K.R. 1913).

Rex and Rose II. By L. K. Mason, Hastings, Ia., for sedge and white Chesapeake Bay dog and bitch, whelped Oct. 10, 1886, by Gowrie (Sunday—Nellie) out of Ruby III. (A.K.R. 1913).

Roland. By A. F. Spoerri, Orange, N. J., for light fawn mastiff dog, whelped Nov. 5, 1886, by Govenor (Benedict— ———) out of Judith (Nero— ———).

Blanche Sensation. By F. Pitzer, Washington, D. C., for orange and white pointer bitch, whelped Oct. 28, 1886, by Fritz (A.K.R. 268) out of Bird (A.K.R. 1658).

Pelle Doc. By D. W. Oyster, Washington, D. C., for orange and white pointer dog, whelped May 27, 1886, by Fritz (A.K.R. 1551) out of Virginia (A.K.R. 1357).

Taglioni. By Chas. E. Taylor, Bath, Me., for liver ticked pointer bitch, whelped Aug. 3, 1886, by imported Bob (Bang—Princess Kate) out of Regalia (Sensation—Whiskey).

Barney. By W. T. Reynolds, Poughkeepsie, N. Y., for red Irish terrier dog, whelped Aug. 3, 1886, by Garry (A.K.R. 2198) out of Judy (A.K.R. 2199).

Sagamore Kennels. By Edward Brooks, West Medford, Mass.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Pearl Blue—Gun. Chas. York's (Bangor, Me.) English setter bitch Pearl Blue (A.K.R. 1542) to his Gun (A.K.R. 1558), Dec. 27.

Donna—Frank Dale. Chas. E. Taylor's (Bath, Me.) English setter bitch Donna (Royal Blue—Dryad) to A. Hatch's Frank Dale (Grouse Dale—Lady Thorn), Nov. 7.

Lundie A.—Bannerman. J. B. S. Holmes's (Rome, Ga.) beagle bitch Lundie A. (Elmore—Nina) to A. C. Krueger's Bannerman (A.K.R. 1709), Nov. 25.

Mottle—Cameron's Racket. W. L. Mann's (Elizabeth, N. J.) beagle bitch Mottle to A. C. Krueger's Cameron's Racket (A.K.R. 4010), Nov. 6.

Titania—Cicero. Essex Kennels' (Andover, Mass.) pug bitch Titania (A.K.R. 471) to their Cicero (A.K.R. 4269), Jan. 3.

Flotsam—Sweep. Pittsburgh Kennels' (Pittsburgh, Pa.) pointer bitch Flotsam (A.K.R. 2841) to their Sweep (King Lulu— ———), Dec. 27.

Queen Alice—Count Rapier. Pittsburgh Kennels' (Pittsburgh, Pa.) English setter bitch Queen Alice (A.K.R. 2286) to W. H. Pierce's Count Rapier (Druid—Magnolia), Dec. 22.

Bernaline—Rudolph II. Essex Kennels' (Andover, Mass.) St. Bernard bitch Bernaline (A.K.R. 3239) to Chequasset Kennels' Rudolph II., Dec. 17.

Daphne II.—Merchant Prince. Essex Kennels' (Andover, Mass.) St. Bernard bitch Daphne II. (A.K.R. 489) to E. H. Moore's Merchant Prince, Dec. 25.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Vickey. A. C. Krueger's (Wrightsville, Pa.) beagle bitch Vickey (Racer—Vic), Dec. 14, five (three dogs), by his Cameron's Racket (A.K.R. 4010).

Peg. T. F. Russel's (New York) English setter bitch Peg (A.K.R. 2062), Dec. 24, six (two dogs), by W. A. Coster's Buckellew (A.K.R. 30).

Glen. Theo. Potter's (Glendale, O.) English setter bitch Glen (A.K.R. 1953), Dec. 5, nine (three dogs), by J. Overman's Count Gladsome (Gladstone—Leila).

Queen Fan. John Campbell's (Port Andseid, Wis.) pointer bitch Queen Fan (King Philip—Lady Fan), Dec. 20, seven (six dogs), by Detroit Kennel Club's Fleet (Bodine—Ruby Croxteth).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Brother, Victor and Dora. Fawn mastiffs, two dogs and a bitch, whelped Aug. 22, 1884, by Danger out of Dido II., by C. R. Colwell, Weymouth, N. J., to W. W. Silvey, Philadelphia, Pa.

Deidomeia. Stone fawn mastiff bitch, whelped Aug. 23, 1885, by Danger out of Dido II., by C. R. Colwell, Weymouth, N. J., to W. W. Silvey, Philadelphia, Pa.

Phil. Black, white and tan beagle dog, whelped March 28, 1886, by Range out of Polly, by W. W. Silvey, Philadelphia, Pa., to C. R. Colwell, Weymouth, N. J.

Nell. Black, white and tan beagle bitch, whelped Aug. 10, 1886, by Skipper out of Nellie II., by W. W. Silvey, Philadelphia, Pa., to C. R. Colwell, Weymouth, N. J.

Deidomeia. Stone fawn mastiff bitch, whelped Aug. 23, 1885, by Danger out of Dido II., by W. W. Silvey, Philadelphia, Pa., to Chas. Honacker, same place.

Ivory. White bull-terrier dog, whelped Nov. 8, 1885, by The Earl out of White Rose, by Philip Randolph, Philadelphia, Pa., to W. W. Silvey, same place.

Heather Jock. Black and tan Gordon setter dog, whelped Aug. 23, 1886, by Argus II. out of Jessica, by Geo. E. Browne, Dedham, Mass., to Walter C. Drew, South Boston, Mass.

Stephen, Jr. Sable and white collie dog, whelped March 19, 1886, by Strephon (A.K.R. 2760) out of Beauty IV. (A.K.R. 2593), by W. S. Powers, St. Louis, Mo., to J. D. Shotwell, Rahway, N. J.

Skip. Liver and white ticked pointer dog, age and pedigree unknown, by Geo. L. Barnes, Tyringham, Mass., to S. H. Ellery, New York.

Winchester. White, orange markings, St. Bernard dog, whelped July 4, 1886, by Essex (A.K.R. 931) out of Daphne II. (A.K.R. 489), by Essex Kennels, Andover, Mass., to G. P. Wiggins, Lawrence, Mass.

Liberty. Lemon and white English setter bitch, whelped Oct. 26, 1885, by Count Gladsome out of Glen (A.K.R. 1953), by Theo. Potter, Glendale, O., to C. J. Wood, Jersey City, N. J.

Foreman. Silver fawn greyhound dog, whelped Aug. 30, 1886, by Blondie out of Jipsey, by Detroit Kennel Club, Detroit, Mich., to E. Robinson, same place.

Wacouta Belle. Light fawn, black points, mastiff bitch, whelped Aug. 22, 1886 (A.K.R. 4378), by Wacouta Kennels, St. Paul, Minn., to Oscar N. Kyle, Florence, Mass.

Wacouta Zulu. Light fawn, black points, mastiff bitch, whelped Aug. 22, 1886, by Wacouta Kennels, St. Paul, Minn., to Oscar N. Kyle, Florence, Mass.

Wacouta Don. Light fawn, black points, mastiff dog, whelped July 7, 1886 (A.K.R. 4379), by Wacouta Kennels, St. Paul, Minn., to F. A. Whiting, Helena, Mont.

Wacouta Tiger. Dark fawn, black points, mastiff dog, whelped Aug. 2, 1886 (A.K.R. 4381), by Wacouta Kennels, St. Paul, Minn., to Emil Mannheimer, same place.

Wacouta Jester. Dark fawn, black points, mastiff dog, whelped Aug. 2, 1886 (A.K.R. 4380), by Wacouta Kennels, St. Paul, Minn., to E. L. Frost, same place.

Govenor—Judith whelp. Light fawn mastiff dog, whelped Nov. 5, 1886, by Andrew Peterson, Orange Valley, N. J., to A. F. Spoerri, Orange, N. J.

DEATHS.

Wacouta Baby. Mastiff bitch, whelped Feb. 26, 1886 (A.K.R. 4377), owned by Wacouta Kennels, St. Paul, Minn., Dec. 22, from pneumonia.

Rifle and Trap Shooting.

RANGE AND GALLERY.

WILMINGTON, Dec. 27.—The unpromising condition of the weather this morning augured badly for the usual weekly sport of the local riflemen, but the sudden change of the wind toward noon brought in a fine afternoon. There was a fair turn out, and considering the cold wind the shooting was very good. The following are the scores out of possible 100 points, standard target, 200yds. off-hand:

First Match.

J Manz	8	7	7	7	6	9	8	6	6	3—67
H B Seeds	6	6	9	7	7	8	5	6	4	7—65
C Heinel, Sr	7	2	6	8	8	5	5	7	4	9—61
J E iSeeds	9	5	5	6	6	2	5	6	7	7—58
J E Newman	6	6	8	0	8	6	4	10	7	3—58
H Simpson	5	5	4	7	5	2	6	6	8	8—56
W O'Conner	2	4	6	3	4	8	3	7	6	4—47
S J Newman	5	4	7	4	3	4	5	4	5	3—44
W A Bacon	5	2	3	7	10	8	2	3	4	0—44

Second Match.

C Heinel, Sr	9	4	8	7	4	5	6	0	7	7—63
H B Seeds	8	6	6	5	4	5	7	7	7	4—57
J Manz	6	10	5	4	4	6	7	1	6	6—55
W O'Conner	6	7	4	3	5	5	5	6	6	7—54
H Simpson	3	4	10	7	8	3	3	2	5	6—53
S J Newman	6	5	5	5	5	4	2	4	7	7—50
J E Newman	8	3	0	7	7	5	2	7	4	4—47
J E Seeds	4	6	8	6	5	3	2	5	2	4—46
W A Bacon	0	2	10	4	4	5	5	2	4	6—42

LEAVENWORTH, Dec. 23.—Probably 200 people went out on the reservation to-day to witness the target shooting of the Pistol Club. The match was won by Police Officer Sutton with the best score so far on record here, it being 46 out of a possible 60. He used a Colts .45-cal., the other members of the club using Smith & Wesson .38-cal.

Cunningham	5	5	4	6—20	Hoffman	7	8	6	7—28	
Murphy	6	7	5	5—23	Raabe	5	3	5	3—19	
Sutton	12	12	12	9—46	Doane	10	10	8	10—38	

The target is 12in. square; the bullseye 5in. square. A bullseye counts 3, the line 2, side shots 1. The intersect in the Pistol Club is increasing with each week's meeting. It is the purpose to make it permanent, and to give exhibitions in the spring.

BOSTON, Jan. 1.—At the Walnut Hill range to-day there was a fair attendance and good scores were made. J. Francis made three clean scores in the rest match, making 30 tens before dropping a point. H. J. Foster also made a clean score. Appended are the scores:

Decimal Off-hand Match.

W Charles, A	10	8	7	10	10	8	6	8	7	8—82
R Davis, C	9	9	10	8	6	10	8	7	8	7—81

POOR MILITIA SHOOTING.—Salem, Mass., Dec. 31.—There was an interesting rifle shoot in Salem this afternoon between teams of the Salem Light Infantry (company H, 8th regiment) and the Salem Mechanic Light Infantry (company K, 8th regiment). The storm greatly interfered with the marksmanship. The result was a victory for company H by 22 points. Three good members of the defeated team were absent, and three inexperienced men took their places. The score:

Company K.		Company H.	
Priv Logan	3434444—26	Sergt Batcheller	3433444—27
Capt Ward	4433322—25	Lieut Saul	2433333—23

BOSTON, Jan. 1.—The monthly award of prizes took place this evening at the Mammoth rifle gallery. The shooting for the month was characterized by good scores. The diamond scarf pin was worn by J. W. Blake. F. E. Bennett finished first in the decimal rest match, E. Eagau second, G. E. Neral third, and L. O. Ring fourth. In the all-comers match M. A. Jaw won first prize, J. Smith second, S. B. Nator third, and W. Pillsbury fourth. In the amateur match Hill was first, Pettee second and Kent third. The prizes were gold, gold and silver and silver medals. Mr. Bent was first in the pistol match, Mr. Manchester second, and Mr. Loring third. The military match was the closest of the month. Ellsworth and Ball were tied up to 11 o'clock, when Ellsworth scored the necessary point to win. This month will begin a special rifle match, which will close March 31. It is to be a decimal rest match, the ten highest scores to count. The winner can choose any .22 rifle he wishes for his prize. The usual matches for diamond, gold and silver medals will be shot off this month.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

BUDD VS. GRAHAM.

JOHNNY ERB, at Bloomfield Road, Newark, New Jersey, saw the largest assembly of lovers of trap-shooting and their friends gathered together since the old-time shooting of Billy Seeds and Jack Taylor twenty years ago. They were from all sections of the country, there being hardly a club within a radius of 100 miles but had its representative. The veterans Miles Johnson and Wm. Hughes, shots of forty years ago, were pleased spectators by the side of Bogardus and Stice, of Illinois; Stark, of New Hampshire; Eager, of Boston; Ed Hudson and L. C. Smith, of Syracuse, N. Y.; Jas. McMurchy, of Ohio; Jas. Pilkington, of Oak Point; Mitchell, of Lynchburg, Va.; Hayes, Cavanaugh, Duryea, Sam Cassels, Overbaugh, F. Harrison, Dr. Pindel, Dr. Burdett, Brintnaland Al Heritage, not to forget the Mayor of Bound Brook and a solid thousand of newer or younger aspirants for honors at the traps. All were drawn together to see the long-talked-of match between C. W. Budd, of Des Moines, Ia., and Wm. Graham, late of England and a champion.

They were well paid, for a closer and a more exciting match has not been shot for years. Both men are keen blackeyed, with nerves of steel. They shot for all they were worth. Three times during the race were they tied, and much betting was made. The Western men freely backed their pet, while those of the East, who had seen Graham's wonderful second barrel, accepted all offers. Budd is a splendid first barrel man, but it was his misfortune to be outbirded from the start until nearly 60 birds had been shot, as the recapitulation will show. They shot Hurlingham rules with the exception of the provision in regard to weight of gun, for Budd used a Smith hammerless, 7lbs. 12oz., Graham, a Grant, 7lbs. 8oz. Budd shot American wood powder mixed in first barrel, black in second; Graham, Schultze powder only throughout the match. As this match resulted in a tie all bets were declared off. Another match between these men to take place on the grounds of the Jersey City Heights Gun Club this week was talked of, but it will not come off.

With even run of birds and use of one barrel only, the Western man would be a decided favorite. Many were the comments on the way Graham holds his gun, left hand close up to and grasping the trigger guard. It looks awkward at the trap; it would be worse in the field. We don't like Hurlingham rules any way—this boring a bird through on the ground with second barrel. Why can not we have a national set of rules for all such matches to be shot under? Now nearly every club has rules of its own, and there is often confusion and delay in consequence. There are national athletic, base ball and other associations which have rules that are universal throughout the country. Let us agitate this. Have the different clubs send delegates to a national association, where they can adopt rules to be the standard on all such occasions.

Wm. Siegler, of Montclair, was the referee, Hurlingham rules calling for no judges, and a more satisfactory arbitrator never refereed a match. He is an old trap shooter, knowing thoroughly the rules, prompt in his decision and just at all times, there was no chance for any dissatisfaction. Messrs. Ritch, Pense and Eaton were appointed official scorers. Budd's 98th bird lost him the match. He evidently expected a driver like the others, but it was a straight incomer, and his close choke missed clean with both barrels, and the bird sailed in over our heads. Both men were modest and unassuming in their appearance, and there was none of that feeling of bitterness so often the finale of a closely contested match. Graham made a good impression upon the Western men, and Budd, if he takes none of the Eastern money with him, will have the respect and hearty good wishes of many who met him here for the first time.

The Match.—C. W. Budd, of Des Moines, Ia., and Wm. Graham, English champion, for $1,000, $500 a side, 30yds. rise; Hurlingham rules, with exception of weight of gun; gun below armpit until shooter called pull; both barrels; the fence the boundary; birds retrieved by a relay of setters. The following is the score:

Budd, first 50	11110111111111101101011221102121111111101111111121—44
Second 50	11011112101120211112111112202210121012112222212012—43
	—
	87
Graham, first 50	12121101212212210011112211012211111211112121111121—46
Second 50	20110001110112111011112211210021212112022112222—41
	—
	87

Budd used his second barrel 21 times, and had incoming birds 3, drivers 30, rights, 40, lefts 27, two birds lost by dog and two birds dead out of bounds. Graham used his second barrel 34 times, was obliged to use it though but 29 times. He had incomers 12, drivers 26, rights 36, lefts 26. He also lost two birds by the dog, one dead out of bounds.

The men were tied on 60th, 78th, 98th birds.

The match took a little over two hours, after which sweepstake shooting commenced with some of the out-of-town notables at the front. First sweep, $5 entrance, divided into 50, 30 and 20 per cent., Essex Gun Club rules:

Graham	22111—5	Stark	21111—5
Mills	01001—2	Eager	10111—4
Hudson	20211—4	Stewart	11021—4
Mitchele	12112—5	Davis	10110—3
Cassell	20110—3	Truslow	20100—2
Stice	01001—2	Lever	10112—4
Heath	10110—3	Terment	11001—3
Collins	01111—4	Glass	21212—5
Pete K	00110—2		

Graham, Mitchele, Stark and Glass divided first money, $42.50; Hudson, Collins, Eager, Stewart and Lever divided second, $25.50. The third, $17, was shot off, miss and out, Davis winning on the 12th bird, shot with Cassell. Second sweep, $10 entrance, two moneys:

Stark	11111 11212—10	Budd	11111 21111—10
Stewart	11111 11110— 9	Cassell	21110 111 — 7
Davis	21001 — 4	Pilkington	11120 110 — 6

First money, $40, divided between Stark and Budd, Stewart being shot out on the 10th bird. Second money, $20, won by Cassell on the 8th bird.

And this ended a big day among the trap shooters.

JACOBSTAFF.

MIDDLESEX VS. ESSEX.—The return match between these clubs (the former match having been won by the Middlesex on their grounds at Dunellen some time ago) took place at Erb's, Newark, N. J., on the 30th ult., and was a very pleasant affair. The Essex had their best men on hand, notably the last squad, and succeeded easily in being winners. There was an unusually large number of the disciples of the trigger on the ground, many from abroad having come on to witness the great match on Saturday between Budd of the West and Graham of England. Both of these men were present looking over the ground that was to see their victory or defeat. Each had his group of backers, and considerable money was put up then and there. The following is the score of the return match, 10 birds each, 20 men a side, 25yds. rise, fence the boundary, Essex Gun Club rules. C. Hedden judge for Essex G. B. Eaton, judge for Middlesex, Wm. Siegler, referee, W. I. Ritch, official scorer:

Recapitulation: Essex, 157, Middlesex, 147.
*Dead out of bounds.

JACOBSTAFF.

ESSEX COUNTY GUN ASSOCIATION, N. J.—The present membership includes the following clubs: South Side Gun Club, of Newark; Nimrod Club, of Newark; East Orange Gun Club, of East Orange; Mountain Side Gun Club, of South Orange; Mountain Gun Club, of Orange Valley. It is hoped that other clubs not fully organized will avail themselves of this method of recreation and practice, and thus consolidate all the shooters in the county and lead to the formation of a State association.—JOHN B. BURNETT, Sec. and Treas., Newark, N. Y.

BOGARDUS.—Capt. A. H. Bogardus, champion wing shot of the world, arrived in New York Dec. 31 from his home, Elkhart, Ill. He will remain here ten or twelve days, and he is not averse to making a match. The Captain is of the opinion that Mr. Wm Graham, of England, will be inclined to meet him, and, if such is the case, he will wager $1,000 to $5,000 that he can defeat him 100 birds, half English and half American rules.

KEYPORT, N. J., Dec. 29.—Nearly 500 sporting men from New York, Philadelphia, Newark, Jersey City, Trenton and other cities went to the Midway Gun Club grounds to-day to witness and take part in the club shoot for sweepstakes, ranging from $25 to $75. Nearly 800 birds were shot at. The shooters comprised nearly all of the crack shots of the State. The shooting was exceptionally good, many men killing all of their birds.

BROOKLYN, Dec. 30.—The Coney Island Rod and Gun Club held a special shoot to-day at the half-mile track, Parkville, L. I. Fifteen members competed for the Donnelly medal. There was a large attendance of members and spectators. In Class A, M. Kearney, 27yds., and L. Duryea, 29yds., tied, killing 7 out of 10 each. H. McLaughlin, 25yds., killed 7 out of 10 in Class B. Judge Courtney did the same in Class C. Only one barrel being allowed, the score looks very small for the class of shooters. Several made a mistake, depending on the second barrel to kill. On account of darkness the ties in Class A were not able to be shot off, and on the proposition being made to give the club the badge for future competition, all hands agreed, so that the badge belongs to the club, to be competed for during the ensuing season. The following is the score of the match:

Class A.

L Duryea, 29yds.....1101101011—7 A Schwartz, 27yds...1011001101—6
R Monsell, 27yds....0100111101—6 M Kearney, 27yds....1110101011—7
J Schlieman, 28yds..1110001010—5

Class B.

H McLaughlin, 25yds1100111110—7 E Bucknell, 25yds...1110111000—6
G L Ayers, 24yds....1111100100—6

Class C.

J E Orr, 21yds.....0100001011—4 F Lanzer, 21yds.. ....0011110100—5
J Courtney, 21yds....1111100101—7 R Hyde, 21yds.....100000 —1
H P Donnelly, 22yds.00100001 —2 J Shevlin, 23yds.....1001110100—5
H Monsees, 21yds....0011001100—4

Referee, C. Wingate; scorer, L. P. Van Pelt.

PORTLAND, Me., Dec. 25.—There was a ball shooting match at Cape Elizabeth to-day, resident marksmen taking part. Each shot at 15 balls, 20yds. rise. Following is the score:

H L Parrott...1000111000100010— 6 C C Jordan....1000110101111010— 8
O Hannaford..1100101101171110—10 G Cushman....1000001000100111— 6
H B Perry.....1001111111111111—13 M C Jordan....1101111010101001—10
F Patterson...1011110100100110— 8 A Jordan.....0010010110111000— 6

J Peterson....1011111110111111—13 E Brown.....1111101111011111—13
E Verrill.....0010100000111100— 6 B Brown.....0011010111010110— 8
C E Bremon...1001011100001000— 6

Ties for first position—H. B. Perry, 101—2; E. Brown, 100—1; J. Peterson, 100—1. Ties for second position—O. Hannaford, 100001—2; W. C Jordan, 100000—1.

DENVER, Col., Dec. 25.—The pigeon shoot at Jewell Park to-day was a great success. The pigeons were strong flyers, and a stiff breeze from the left quarter assisted them materially. The programme was varied and well carried out. Below is the score of the regular matches:

Shoot No. 1, 5 single birds, 21yds. rise:

Pray.....10111—4 J P Lower.....11111—5
Edbrooke.....00111—3 Miller.....00011—2
Butters.....01001—2 Owenton.....10000—1
Dow.....11010—3 Bostwick.....11111—5
J N Lower.....11111—5 Heald.....11101—4
Compton.....10101—3 Kennicott.....10111—4

J. N. Lower, J. P. Lower and Bostwick divided the first prize, and Pray, Health and Kennicott the second.

Shoot No. 2, 8 single birds, 26yds. rise:

Butters.....00010100—2 Edbrooke.....11110011—6
Dow.....00111111—6 Suydam.....11111000—5
Pray.....11001011—5 J P Lower.....10101111—6
Compton.....11111111—8 Kennicott.....11110111—7
J N Lower.....10110100—4 Bradbury.....11010011—5
Heald.....01311111—6 King.....10010001—3
Bostwick.....11011011—6 Shirley.....10001111—5

Compton won first prize, Kennicutt second and third was divided.

Shoot No. 3, 4 double birds, $6 entrance:

J P Lower.....01 10 10 01—4 Bostwick.....01 10 00 11—4
Pray.....01 11 00 01—4 Kennicott.....01 00 11 11—5
Dow.....10 11 11 10—6 Shirley.....01 00 11 10—4
J N Lower.....11 10 01 01—5 Suydam.....11 10 11 10—6
Edbrooke.....11 01 11 01—6 Bradbury.....11 11 01 11—7
Compton.....01 01 11 00—4 King.....11 01 00 12—5
Heald.....10 01 01 10—4 H G Davis.....10 11 10 01—5
Owens.....10 00 01 11—4

Dow, Edbrook and Suydam divided first prize and J. N. Lower, Kennicott and Davis divided second prize and in shooting off for third Compton won.

Shoot No. 4, 10 single birds:

Suydam.....1111111111—10 Compton.....1111101010— 7
Bostwick.....0111110011— 7 J N Lower.....1111111110— 9
Dow.....1111101101— 8 Shirley.....0111111101— 8
Edbrook.....1111011111— 9 J P Lower.....0111110111— 8

Suydam took first prize, Edbrooke and J. N. Lower second and Dow, Shirley and J. P. Lower divided third.

NEW DORP, S. I., Dec. 21.—Emerald Gun Club of New York City. The birds were an excellent lot, live pigeons, 5 ground traps, 21, 25 and 30yds. rise, 80yds. boundary, 4 prizes:

R Reagan, 21.....1111111110— 9 G Remsen, 21.....0111111111— 9
J H Voss, 25.....1110111001— 8 G V Hudson, 30.....1111111110—10
P J Keenan, 21.....1101011010— 6 P Butz, 25.....1101110111— 8
N Maisel, 30.....1110110101— 7 C Grainger, 25.....1111110111— 9
J Sidley, 25.....0101110101— 6 J W Godfrey, 25.....0111011011— 7
J Howard, 21.....1011010011— 6 J Glacoum, 30.....1111111111—10
B Lynch, 21.....1111111111—10 L Gehering, 21.....1111111111—10
L Schermerhorn, 30.1111111111—10 M W Murphy, 21.....1101111011— 8
Thos Cody, 30.....1101100111— 7 A McHall, 21.....1010110110— 6

The prizes consisted of two gold medals, one silver medal and ten doll ars in gold. Ties on 10, 25 and 30yds.: Schermerhorn won. Ties on 9, 25 and 30yds.: Remsen won. Ties on 8, 21 and 30yds.: Voss won. Ties on 7, 21yds.: McHall won.

FLEMINGTON, N. J., Jan. 1.—New Year's day shoot of the Flemington Gun Club. Weather cloudy, cold and windy, 25 clay pigeons, 18yds., 1 trap, 3 angles, for four prizes. The day was so windy that, although the trap was set to throw them slow, they went fast and about 50yds. from the trap.

S Reed.....1111111010111011111110001—19
Hyde.....1100010101101111101100011—15
G Shepard.....0101000011301111100100101—12
Potts.....0110010001011110011001101—12
Shepard.....1100011010311100000110100—11
Reading.....0000011011100100010100101—10
Emmons.....1001101100000100010300011— 9
Boss.....1000100100010000160010101— 8

Potts lost his 21st bird by not having his gun cocked.

CINCINNATI, Dec. 28.—The members of the Price Hill Gun Club witnessed the finest shooting ever seen on their grounds or any other, as all previous records were completely lost sight of in the one of Mr. J. E. Miller, who made the wonderful record of 158 straight clay birds out of five traps. He missed his 159th bird on account of darkness. He was advised by those present to stop at his 150th bird, as it was getting too dark to do any more good shooting. Christmas morning he broke 97 out of 100, and the week before 95 out of 100. His scores have always been made in club shoots. To-day every bird he went into fragments, leaving no room for discussion as to their being broken. The members shooting all did excellent shooting, the day was clear, cold, and but little wind. Yet the birds were thrown hard and low. Five traps, 18yds. rise: First match, 20 singles: J. E. Miller 20, O. Toff 20, J. E. Maynard 16, Mark 17, E. Shott 16, Robinson 16, Wick 17, E. Waly 14, Robbins 13, C. Smith 15. Second match: J. E. Miller 20, O. Toff 18, J. E. Maynard 16, E. Scott 18, Mark 16, Robinson 18, Walz 13, Armstrong 12, Wick 18, Robbins 15. Third match: J. E. Miller 20, O. Toff 19, Maynard 20, E. Shott 20, Walz 10, Armstrong 14, Robbins 16, Wick 17, Mark 18, Robinson 19. Fourth match: J. E. Miller 20, O. Toff 19, Robinson 17, Williams 9, Shott 20, Maynard 20, Walz 14, Armstrong 14, Mark 17, Robbins 16. Fifth match: Miller 20, Toff 18, Maynard 19, Shott 18, Walz 16, Williams 13, Mark 16, Robinson 18.—W. A. L.

NEWARK, Jan. 1.—The Essex and Middlesex Gun Clubs met at Erb's grounds on Thursday last and shot a return match at live birds. Twenty men on each side shot at 10 birds each. Messrs. Eaton and C. M. Hedden were judges, and William Sigler was referee. The Essex Club won by killing 157 out of 200 birds. The Middlesex Club killed 147. Of the Essex Club, Hayes and Stewart killed 10 each; Kinsey, Belcher, Hunt, Burnett, Nicholas and Von Lengerke killed 9 each; Edwards, Hauck, Heath, Carr.ngton and Whitehead killed 8 each; Breintnall, Baldwin and Heinisch killed 7, and Beck and Terrill killed 6, Freche and Theurich each killing 4 birds. In the Middlesex team, Campbell, Wyckoff, Creeley and Lever each killed 9; Day, Pilkington, Quinlan, Force, Jobs and Terry killed 8; Clark, Wilson, Gaddis, Craft and Miller killed 7; Canon, Voorhees and Dickens killed 6, and Cameron and Squires killed 5... The West Newark Club held its first annual glass ball shoot this morning. The balls were sprung at 21yds., and each man shot at 25. The best score was made by D. Burgess, who broke 16, and the second best was G. Deisler's score of 15. J. Lamb broke 11. A. Assman 12, A. Wade 10 and H. Habig 10. L. Reiber made a clean score—of misses.

SMITH VS. DE FOREST.—New Year's day in Babylon saw the pigeon-shooting match between Jesse Smith, of Havemeyer's Point, and Wheeler De Forest, of Babylon, for $150 a side and a wine supper at the Watson House, Babylon. Both men are remarkably good shots and betting was lively, with Jesse Smith slightly the favorite. Thirty-five birds were to be shot at, 21yds. rise. At the 31st bird De Forest led by two birds, and the men who had been backing Mr. Smith began to feel like hedging. The excitement seemed to unsettle Mr. De Forest, who made three misses at the next four birds, leaving the two men tied on 28 birds each, out of the 35. Five birds more were given each man, and the rise lengthened to 26yds. De Forest missed one of his five birds, while Mr. Smith killed all five, winning the match by one bird. De Forest made the best run, killing 14 birds successively, while Smith's highest run was 10. The referee was Mr. Stellenwerf, of Islip, and the scorer, Theo. C. Fletcher, of Babylon, Fred Conklin trapped the birds. The shooting took place on the Crescent grounds, and was witnessed by a very large crowd. Another match will be arranged between the parties in a few days.

WELLINGTON GUN CLUB.—The leading event at the meeting on Jan. 1 of the Wellington Gun Club was the first shoot for medals which were taken as follows: Class A, Schaefer; Class B, Snow; Class C, Henry. First prize winners in other events: 1. Ten pigeons—Stanley. 2. Six sigeons—Swift and Sanborn. 3. Six blue rocks—Snow and Swift. 4. Six pigeons—Wilson and Schaefer. 5. Six blue rocks—Sanborn. 6. Six pigeons—Stanton. 7. Six blackbirds—Swift and Sanborn. 8. Six pigeons—Wilson, Stanton and McCoy. 9. Six pigeons—Stanton and Short. 10. Six blue rocks—Swift and Moore. 11. Six pigeons—Swift. 12. Six blue rocks—Snow and Stanton. 13, miss and out—Brown.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

CANOEING IN 1886.

THE year just ended has been the most important by far that American canoeing has yet passed through; for the first time the work of our canoeists in designing, building and sailing has been tested by a foreign standard; and, looking back, it is gratifying in every way to find that the victories have been on the side of the American boats. Further than this, however, is the fact that the races, hotly sailed and stoutly contested by both parties, have not only borne testimony to the increased good feeling that prevails between the canoeists of both nations, but have wrought substantial benefits to canoeing on both sides of the water. Furthermore, it is pleasant to see that outside of racing, canoeing has grown during the year; the popular interest has increased; new clubs have been formed; and, outside as well as within the Association, its growth has been greater than in any previous year.

As the most prominent, though not the most important department of canoeing, racing claims the first place. The season opened with a number of new boats ready for trial, and, as most of them were more or less known to canoeists, their possibilities and future performances were generally discussed in advance, adding much to the interest in the subsequent contests. Lassie, for instance, had raced a little the preceding autumn, and her lines had appeared in the FOREST AND STREAM, so she was well known both here and abroad. Vesper, a new model by her owner, and successor to the famous Snake, was known to canoeists through our columns, and a canoe of her model was shown at the canoe exhibition in New York, which was so successful last spring; so her first trials were eagerly looked for. As embodying the results of a long experience in the old Snake, as well as being the design of the leading advocate of the "no ballast" theory, a special interest attached to her success or failure. With her was a sister craft, Marion 4, B 2, (to speak accurately, fourth of the name and second of the class) identical with Vesper in hull, but with a different arrangement of board.

Another new craft hailed from the North—Mona, of Brockville—the result of much careful labor on the part of one of the most earnest and enthusiastic sailors in the Association. Several of the new Ruggles boats, all smooth-skins, were to make their first trials, among them Mr. Bailey's Delight, beside Mr. Andrews's Sofronia, seen the preceding season. The old Dido, of Newburg, has been replaced by a new and handsome double-board craft, 15× 28; Mr. Whitlock had on the stocks a 16×30 and a 15×28, and in the East Mr. Barney had ready a new and unknown craft. Of this fleet not one was the result of a hasty or ill-considered order, but the lines and details of each were the subject of much careful study on the part of some earnest canoeist, and the same may be said of a number of other boats of hardly less importance.

With this fleet in readiness, and several of the English cracks about to visit us, the racing prospects were more brilliant than the records of canoeing have ever known, and the performances of the season in no way discredited them. The racing throughout the year was the most successful in the annals of the sport, and the results must be hailed as a substantial benefit to legitimate canoeing. The issues involved were such as to make the contests doubly interesting: between the two nations was the question of heavy vs. light displacement, with the hardly less important one of position, lying down in the boat on the one hand and relying on lead ballast for stability, or, on the other hand, a position on deck where the full weight of the body was available as ballast of the most valuable kind in a boat of such limited depth.

At home there was also an important question to be settled; the boats were all very different from the English in carrying far less ballast, but there has long been a difference between some who sail entirely without ballast and others who contend that a moderate amount of lead is necessary.

On the international issues the results have been decisive, and they are admitted by both parties. The two gentlemen who raced at Grindstone and New York admitted the superiority of the light displacement boats in their determination to alter their own models before another season; and, further than this, the leading advocate of the heavy ballast boats, the one who has designed and built the most successful racers of the class, Mr. Tredwen, although not sharing the opportunities for comparison which Messrs. Baden-Powell and Stewart had, has accepted the same conclusions to a great extent, and writes thus in a late issue of the London *Field:*

"The recent international contests appear likely to have a great effect on canoeing in England, and will probably tend largely to increase the number of contestants in our sailing races. It has been clearly established that the deck position enables a very light canoe, that is very easy to paddle, to beat a heavy ballasted canoe with large sails, that have hitherto been regarded here as the only ones that could race successfully. The result is that the sailing races can be competed for by the most cruising paddler. No one could have been more bigoted than I was against the deck position of sailing; but, having tried it, I am convinced that it is by no means such an acrobatic feat as one would imagine. * * * * * The Pearl will be sailed next season without ballast, and with 41lbs. centerboard in place of 56lbs., the sail area being proportionately reduced, the same hull being used which Mr. Stewart sailed at the A. C. A. meet, except the new thicker plank below the waterline."

Coming from the source that it does this admission is most important, as Mr. Tredwen is one of the most expert amateur builders as well as an old and experienced racing man. The races have shown beyond dispute that in most, if not all weathers, a canoe with little or no ballast is the equal in speed of a canoe carrying several hundred pounds of lead and brass; and this, all must admit, is a most important point. It means that a canoe so light as to be easily handled ashore, easily paddled with stores on board and useful for rail transport, for river cruising and rapids, for short trips under sail or paddle; in short the all-round general utility boat, may compete in open races as well as "no ballast" and "cruising rig" races, with boats built solely for racing and too cumbersome, heavy and costly for most canoeists. It proves that an honest cruiser has nothing to fear from specially built craft, whose presence in any numbers in our fleet would make an end to racing as it is now, a most valuable adjunct to cruising. Some are disposed to see danger in the other direction, fearing the success of Pecowsic will lead to a fleet of very light racing machines, not only unfit for cruising, but positively dangerous. A few such boats may in time be tried, but they must develop more speed than the type has yet promised to induce canoeists to put up with their obvious defects.

The effect of the races on our visitors has been to turn their attention to a lighter class of boat, more like the craft of ten years since; to do away with the few expensive and complicated craft which have monopolized the racing to the exclusion of the great majority of legitimate canoes; and to make it possible for a much larger number to race. Of course this must benefit British canoeing, and must operate to awaken it from the lethargy into which it has fallen; but we in turn have reaped very great benefits from the contests. With all their failings both in build and speed the English canoes had many good points in which our boats were lacking and which appeared plainly during the races. The most important of these was handiness, as the English boats turned like tops, while some of the best of ours can at times be put about with difficulty. In this respect there is likely to be a great improvement this year. In many details of build, fittings and rig, especially the latter, there was much to be learned from the visitors, and our canoeists generally appreciated this fact, to their advantage.

Both of the visitors did such good work that it was evident that with some changes in their boats they would be most dangerous antagonists; and, as they intend to revisit us next year. American canoeists must bestir themselves in time if they would still retain the two cups. This time Mr. Tredwen will also be over, and with the experience of last season as a guide, they will make a hot battle for the cups.

In our home racing the honors rest largely with the "no ballast" canoes, owing to the brilliant performance of Vesper and Pecowsic at Grindstone. The races in New York, however, were won by Lassie, a boat built for and carrying a considerable amount of lead. If it is a fact that the boats with no ballast meet all the requirements of an all-around canoe, so much the better for canoeing; but those who are now carrying ballast began in unballasted canoes, and only put in lead when its benefits seemed apparent; and now, while the facts all point to the advisability of a reduction of weight, they are loth to give up the boats which have certainly proved well adapted to their requirements.

As last winter, canoeists are now busy with new models, new rigs and many minor devices for the improvement of their craft, and there will be a far finer fleet afloat next year than ever before. All this improvement is not confined, as some would have us think, to racing, but many who never race are as busily at work in the same line, as was shown lately by the inquiries that have come to us from cruisers in regard to the sail plan published a few weeks since.

Looking now at the Association and its work, evidences of a substantial advance are also seen. The year has been the most important that the A. C. A. has yet passed through, as a great change has been taking place in its organization. It has long been evident that the original scheme was far too limited in its scope for the needs of so large a territory as canoeing now covers; and last year an effort to enlarge the plan of organization was inaugurated. This year has seen it put into practical operation through the application of the Eastern canoeists for the establishment of an Eastern division, followed by similar action on the part of the main body, so that there now exists a Central and an Eastern division; while all seems ready for a further carrying out of the plan by the formation of a Canadian division in the spring, followed by further divisions as the need for them becomes apparent. The Western canoeists still retain their separate organization, now known as the Western Canoe Association, and have enjoyed a very successful season, the meet at Ballast Island being well attended, and they are doing good work in a very wide field. Between them and the A. C. A. perfect good will exists, some canoeists belonging to both, and the two bodies are working with one end only, the advancement of canoeing.

Of cruising there is little to say, and why? Not because racing is driving it out or because there is less cruising done, but because the cruiser is a quiet fellow who goes off alone or with only a friend or two, and finds his pleasure in solitary wandering without any great flourish of trumpets, perhaps telling his story in such logs as we have published many of during the year.

The growth of canoeing is a very difficult thing to estimate by figures, but it has evidently been all that could be expected during the year, advancing not by fictitious spurts, but by sure and steady steps. Recruits are steadily coming in from all directions, we hear of new clubs forming where canoeing has never been known, and new localities are represented at each meet.

It is pleasant to notice that while the large body of canoeists contains many young and inexperienced members, the disasters have been very few, and, in all cases of which we have learned, have been due to ignorance, recklessness, and a disregard of those simple precautions which all expert canoeists recognize. The use of small, badly built canoes, in some cases crowding two into a boat that was not safe for one, and the attempt to sail such craft, are the causes which have led to the few mishaps of the year, and novices should heed the lesson. While dealing mainly with canoeing east of the Mississippi, we must not overlook the great progress made during the year on the Pacific coast, where one club, the Oakland C. C., has placed canoeing on as prosperous a footing as it enjoys along the Atlantic, and after some years of hard work are reaping their reward in the many pleasures, both social and nautical, that belong to a well organized canoe club.

Looking at it in all aspects the year has been a prosperous one, and has departed with a promise of a still better one to follow; and while congratulating them on what has been done, we can, with every assurance of their fulfillment, offer to all canoeists our best wishes for a Happy New Year.

THE PECOWSIC'S CUP.

Editor Forest and Stream:

I think that you and every fair-minded canoeist who visited the A. C. A. meet last August will pardon me for giving a big growl. I have waited four months, in the dullest part of the season for my business, hoping against fate almost that Mr. Rushton would see the error of his ways in advertising in your columns that Vesper won the International Cup race at the meet. Was there more than one International Cup race at that meet? I am certain that Mr. Barney, in Pecowsic, won a very nice cup on which is engraved, "The International Cup of the A. C. A. Meet, 1886." I have seen and examined it, and also have an electrotype of it; and therefore fail to see what right Mr. Rushton has to advertise Vesper as the winner of this identical, individual cup. My advertisement and Mr. Rushton's have both appeared in your paper on the same page, and both of us have claimed the honor of building the winning canoe for a long enough time to exonerate me for kicking at this date. Now, can it be possible that Mr. Rushton has changed cups? Surely Vesper won the A. C. A. Perpetual Challenge Cup, the only one she did win, and, I believe, the only race she won at the meet. Why does not Mr. Rushton advertise the cup really won by Vesper, and leave Mr. Barney in possession of his own individual cup, fairly won by Pecowsic, and at the same time leave me in undisputed possession of my hard-earned laurels, and stop a large amount of correspondence from the public not acquainted with the facts of the case, asking for an explanation in regard to how it comes about that both of us claim the honor of building the canoe that won the International Cup at Grindstone Island? I have taken many a knockdown, and have turned and scud before a flawy gale, but in this breeze, that has increased for so long a time, I have decided to head up and ride it out if possible, rather than attempt a landing on a lee shore in full view of the public. F. JOYNER.

[The conditions governing the cup won by Vesper are as follows: "American Canoe Association Sailing Trophy, Classes A and B, no limit to rig or ballast, time limit 3 hours, distance 7½ miles. The race is sailed each year after the regular races at the annual meet, usually held in August. The prize will be held by the winner for one year, and then must be returned to the regatta committee for competition at the annual meet of the Association. Accredited representatives of foreign clubs not exceeding five in number shall be eligible. In case of more than five foreign entries, the first five received shall be eligible to start. The total number of starters shall not exceed fifteen, and the ten or more vacancies (after deducting the foreign entries) shall be filled from those entering, by a special 'record' prepared from the result of the A and B races at the meet, in case the entries exceed the vacancies." The cup won by Pecowsic was a subscription cup, presented by several canoeists, for a race between the two English visitors and the two leading Americans, to be the property of the winner.]

NEW YORK C. C.—The New York C. C. held a meeting on Dec. 29, at which the following officers for 1887 were elected: Commodore, C. K. Munroe; Vice-Commodore, H. B. Marchetti; Secretary, C. J. Stevens; Executive Committee, W. P. Stephens and B. H. Nadal. The constitution was amended so that in future no active member of any other canoe club can be an active member of the New York C. C. It has long been the custom of the club to hold an annual dinner, but this year a change was made and in answer to neat invitations, printed on thin wood, over a hundred ladies and gentlemen met at Clark's on Twenty-third street, on Thursday night, to join in a camp-fire of the club. The rooms were decorated with flags, and through the kindness of Mr. Squires two of Rushton's new canoes, a Bucktail and Vesper, served to give a homelike air to the scene. An exhibition of canoe photographs by means of a stereopticon was given by Mr. Burchard, after which followed music and recitations. After supper the floor was cleared for dancing. The entertainment was in every way a success and will probably take the place of the annual dinner in the future. On Saturday Comm odore and Mrs. Munroe left for Florida.

A MEET OF BRITISH CANOEISTS.—Mr. E. B. Tredwen makes a suggestion through the *Field* that a meet be held on the American plan, on the Norfolk Broads in July and August next.

OWING to the pressure on our columns, the Regatta Programme for 1887 and a continuation of the discussion of Sailing Boats vs. Canoes, are necessarily left until next week.

WESTERN CANOE ASSOCIATION.—The Executive Committee of the W. C. A. will meet at the Stillman House, Cleveland, O., on Jan. 9 and 10.

Yachting.

Address all communications to the Forest and Stream Pub. Co.

A RACE ACROSS THE ATLANTIC.

IN view of the probabilities of an international ocean race from some English port this summer, the following proposal has been made by Mr. R. T. Bush, owner of the keel schooner Coronet:

NEW YORK, Jan. 1, 1887.

To the Owners of all American Keel Schooner Yachts:

GENTLEMEN—For the purpose of testing and comparing the seagoing and sailing qualities of the keel schooner yachts built and now owned in this country the undersigned, owner of the Coronet, would be pleased to join as many of you as feel so inclined in organizing and carrying out an ocean race from Sandy Hook to Queenstown Harbor.

CONDITIONS.

The conditions to be about as follows:

First—The race to be open to all keel schooner yachts of American build without any allowance whatever.

Second—The amount of entrance fee to be agreed upon by the gentlemen in interest, but not to exceed $10,000 for each yacht.

Third—The total amount of fees paid for the entry of all the yachts shall be held in trust and paid to the owner of the winning yacht ten days after the result of the race becomes known, less the expenses for judges, their boat and some few other expenses which should properly be borne in common by all the owners of yachts participating in the race.

Fourth—The race to be started not later than May 15 next, which will enable the yachts to reach the other side in time for the sailing masters to "pick their flints" and start back in the race for the Royal Thames Club prize of 1,000 guineas.

Gentlemen interested in this matter are requested to confer with or address the secretary of the New York Y. C., 67 Madison avenue, New York. Very respectfully, R. T. BUSH.

THE NEW Y. R. A. RULE.

ON Dec. 14 a meeting of the Y. R. A. was held at the Langham Hotel, London, at which Mr. Henry Crawford presided. Sir William Forwood moved that the rule recommended by the committee be adopted, and his motion was seconded by Mr. A. Manning, and carried by a vote of 20 to 2. Sir William Forwood then moved that the rule be enacted for a period of seven years, unless repealed by a vote of three-fourths of the Council, confirmed by a majority at a general meeting. Mr. J. H. Gubbins suggested an amendment to the effect that the vote for repealing should be two-thirds of the members present at a general meeting, after notice, which was accepted, and the resolution, seconded by Mr. Gubbins, was carried. Sir William Forwood moved the adoption of the following recommendation, seconded by Mr. Baden-Powell: "That the classification shall be as follows:

5 tons equal to existing yachts of 3 tons.
10 tons equal to existing yachts of 5 tons.
20 tons equal to existing yachts of 10 tons.
40 tons equal to existing yachts of 20 tons.
60 tons equal to existing yachts of 40 tons

and above 60 tons." Mr. F. Willan suggested 2½ tons as the minimum, and also that the word rating be used instead of tons. A proposal was made to limit length and sail area in each class, and another to class by l. w. l. only; but the orignal motion was finally carried. A motion to expunge the rating by length in use on the Solent was carried, and also one to abolish Class B (ex-racers) entirely. Two other resolutions, "That the C class be retained for the season of 1887, but without interclass tonnage penalty," and "That the tonnage rule $\frac{(L\times B.)^2\times B.}{1730}$ be put into the Appendix for the season of 1887 for the purpose of the C class," were referred back to the Council for further consideration. The chairman offered the following resolution: "If the distance from the center fore and aft line of the mast to the outer end of the spinnaker boom, when shipped in its place and square to the keel, exceeds the distance from fore side of the mast to cranse iron on bowsprit end, the excess to be added to the base of the triangle formed by the headsail, and the area of the headsail to be computed accordingly. Foot yards not allowed on spinnakers." Sir William Forwood seconded the resolution and it was carried. The new measurement rule, as we have several times given it of late, is $\frac{L.+S.A.}{6000}$ the sail area being measured from the spars.

THE PLANS OF THE THISTLE.

THE *Boston Herald* replies as follows to the statement in our last issue concerning the plans of the Scotch yacht Thistle:

"The FOREST AND STREAM has undertaken to controvert the authenticity of the plans published last Saturday in the *Herald*, and in its comments published yesterday makes many misstatements regarding them. It says that "an inspection of the drawings and accompanying description gives every reason for the belief that they were not what they purported to be," and adds that, if further proof were needed, the following cablegram will supply it: The following was sent to Mr. Watson from New York, Dec. 27: 'Plans of Thistle in *Boston Herald*, 80ft. waterline, 18ft. beam. Are they authentic?' Mr. Watson answers as follows: 'Quite impossible that *Herald* can have true plans.' By the above answer the FOREST AND STREAM claims that the waterline length of the Thistle is still in dispute, and that it will not be made known for the present. The question asked by the FOREST AND STREAM was not a proper one, with the evidence it had, from what appeared in these columns. Had it asked the question, 'On the working plans of the Thistle, as given the builders, to estimate from, does the Thistle measure 80ft. waterline and 16ft. beam?' it would have been more in accord with the published plans. Mr. Watson's reply does not contradict the *Herald* statement of the dimension. On the contrary, he does not squarely answer the question asked him by the FOREST AND STREAM. Mr. Burgess has read Mr. Watson's reply, and he says: 'Mr. Watson's reply is an evasive answer. He does not deny in his reply that Thistle is 80ft. long.' The *Herald* correspondent in Scotland said that the plans were the working plans of the Thistle, and this positive statement has not yet been denied by Mr. Watson. The FOREST AND STREAM should investigate the mattter further."

* * * * * * * * * * *

Concerning his part in the work, as questioned in the *New York Herald*, Mr. John L. Frisbee writes to the *Boston Herald* as follows:

"Last Wednesday an attache of the *Boston Herald* called on me on professional business. Before informing me of his business, he exacted of me on my personal honor my word that the contents of a roll of paper which he held in his hands should not be disclosed by me without his permission. To this proposition (as it was a business matter) I agreed, and thereupon the paper was unrolled and handed me. If one goes through a lot of land, and it is filled with monuments and tombstones, the strong presumption is that it is a graveyard. So my experience in naval architecture forces me to the belief that the drawings in the paper handed me were the working plans of a cutter yacht. The plans were stamped 'G. L. Watson & Co., Naval Architects and Surveyors, Glasgow, Scotland,' and the date of issue was Nov. 23, 1886. The plans came from Scotland, for the wrapper, which was torn off, indicated this, besides a letter was shown me from the person who sent them. I made an exact copy of the drawing and gave it and Mr. Watson's drawing to the *Boston Herald's* secretary. It seems to me presumptous for any man without any knowledge of the subject about which he is criticising, to charge a respectable journal with publishing a 'humbug.' Mr. Harvey says that Mr. Watson never designed a steel vessel with inside and outside plates. The writer says he did, for he has seen the plans and worked on them. The copy of the plans made by me were exact, and, if there is any defect in their publication, it is the fault of the photographer and engraver, and not mine. Mr. Edward Burgess says the plans are genuine. He has seen them and is forced to this conclusion. He has compared the writing on the plans with letters he received from Mr. Watson, and the handwriting is the same. An experience of 30 years on land and sea, from boy to captain, a practical shipwright and an instructor of naval architecture in Boston for the past 15 years, warrants me in saying that I can tell a set of 'working plans' when I see them. I have had much experience in naval architecture, both practical and theoretical. The last work performed by me on big yachts was the 'laying down' in the 'mold loft' the famous yachts Mayflower and Sachem.—JOHN L. FRISBEE, Naval Architect."

The FOREST AND STREAM has not disputed the statement that the drawings in question came from Mr. Watson's office; to any one familar with Madge, Marjorie or Vanduara, they are evidently those of a Watson boat. What we questioned was their authenticity as correct plans, as far as they go, of the Thistle. The specifications are no doubt approximately correct, but it does not follow that the sketches accompanying them by any means accurately represent the new design. For the purpose for which they were made it is not necessary that they should do so, and considering the care that has been taken to conceal the dimensions of the new yacht, it is unlikely that they do. A comparison of them with the dimensions and photographs of Vanduara, designed by Mr. Watson seven years since, shows such a close similarity as to warrant the belief that her original plans have been used for the basis of the rough skeleton design that alone was necessary to accompany the specifications. We do not question the *Herald's* good faith in the matter. It would, however, be interesting to know just how the plans were obtained by its correspondent, without the consent of the designer, as builders are not generally at liberty to make public such details as may be intrusted to them for the purpose of making an estimate.

AMERICAN YACHTING IN 1886.

WITH yachts all hauled out and sails and gear stowed away, at least half of the yachtmen's occupation is gone until the return of warmer weather. Sailing is possible only with the few who are aboard of an keyacht as soon as their other craft are stripped, and the only resource left to the majority is to wander at times among the dismantled fleet, where some one is sure to be found with whom to sail over the races of the past season, or to draw forecasts of the coming year. Just now, perhaps, yachting is at its dullest ebb, and between the excitement and bustle of the lively season just closed and the hopes and expectations of one that promises to be no whit behind it, there is time for a quiet crack over the past and future.

As in 1885, the opening year found a challenge on hand for the America's Cup, the circumstances in each case being somewhat similar. It is true that on the first occasion there was no defender ready, and little was known of the strength of the challenger; while last year not only were two yachts all ready built and two new ones building, but much had been learned from the previous races. The competing boats, however, promised to be much the same in character; Galatea, the British challenger, being a newer and longer Genesta, by the same designer; and Mayflower, generally considered the probable defender, a newer and longer effort of Puritan's designer. Thus the contest promised to be of the same general character as in 1885, and no less interesting.

The additions to the fleet during the winter were not numerous, but were of some importance. First of course was Mr. Burgess's new venture, Mayflower, designed for General Paine, who purchased Puritan at the end of the season, only to sell her shortly after to Mr. J. Malcolm Forbes. As was to be expected the new boat departed but little from her successful predecessor; but those departures took her a step further in the direction in which all American yachts are steadily tending, more length, more draft, more outside lead. The model was fined in some directions, notably abreast the mast, where the fullness, so apparent in Puritan, was reduced, while the keel was widened at the rabbet. In general appearance the two yachts were too nearly alike to be readily distinguished at sight, but Mayflower was given a larger sail plan and a heavier outfit of spars and ironwork aloft, as Puritan's gear had proved rather light.

The other new aspirant for international laurels was built at Mumm's yard at Bay Ridge by a syndicate of members of the Atlantic Y. C., from a model made by Mr. Philip Ellsworth a year before, and submitted to Com. Bennett, but not then built from. The experience gained in the races of 1885 told so strongly in favor of low ballast that it was decided to follow Mr. Burgess' lead, and give the new yacht, besides her centerboard, a lead keel of 35 tons instead of inside lead as first proposed. Her length, 84ft., and beam, 23ft. 2in., did not vary much from Mayflower, but in displacement and model all resemblance ceased; Atlantic, as she was called, being of 126 tons displacement, with a large midship section, a long, wedge-shaped bow and a short run. She differed radically in the type of hull which her modeler had made his previous successes, and the chances of her success or failure were eagerly discussed by yachtsmen, the opinion generally being against her; while her appearance received only unfavorable criticism. The rig, following Puritan, was a modification of the cutter, and though for the sake of consistency a single jib was talked of, and indeed the sail was made, it was bent but once, and the yacht was sailed always with jib and staysail. To sum up briefly, Atlantic, though aided in the races by the skillful handling and local knowledge of Capt. Joe Ellsworth, and with alterations made and money freely expended, proved a failure, and in all probability has ended her career as a racer. During the season she was troubled by leaks that could never be stopped, and at its close she was sold for a fraction of her cost to close the accounts of her many owners.

Next to Mayflower in importance comes Sachem, a schooner, by Mr. Burgess, of almost identical dimensions with his now famous singlesticker; of the same length nearly, being 86ft. l. w. l., the same beam and draft, but with a clipper stem and only 26 tons on keel, with a centerboard. Handsome in hull and rig, and with a lockerful of kites, she has shown thus far great promise of speed, though luck has been against her. Ready late in the season she made her debut in the Goelet Cup race, sailing very fast but throwing away a chance of the prize by an ill-judged exploring expedition up the Sakonnet River. In the Citizens' Race at Newport, later on, she was with the leaders over the first leg, but jammed by the tide at the bell buoy, she laid for hours watching the fleet drift away from her. Her chance came, however, a few days later, when she sailed round the same buoy in a private match with the famed Miranda, and beat her badly, in racing weather. As yet she has shown little of what is evidently in her, and with sails and gear stretched next year she promises to be a worthy sister of Mayflower.

In the next lower class there was no building, the only change to note being the alteration of the old Gracie, a raising of the topsides and lengthening of the overhang, the bottom remaining the same with some alterations in rig. The improvement in appearance was very marked, but less can be said of the speed, as she has done nothing all the season, though frequently entered.

Going down in the scale of size, the only notable addition to the third class was Cinderella, a new rival of the famous Clara, a boat of the new type, 52ft. load waterline, 16ft. 6in. beam, 6ft. 7in. draft, with a lead keel of 12 tons besides her centerboard and a cutter rig. Entering the first races and racing steadily through the season, she has shown herself far ahead of all her class, so much so as to leave all the old boats hopelessly out of it; but she still is astern of Clara, having failed to score a single win against the redoubtable cutter. No doubt she has been less ably handled than Clara and is not yet in perfect form, though her sailing has improved during the season; but as far as the question of type goes her races in all weathers with Clara (ten all told, in all of which she has been beaten) by far overbalance the two light-weather contests by which the possession of the Cup was this year determined. This winter she will have more lead added to her keel and with other minor alterations will probably begin the season in better form than ever. In the same class among the new boats must be mentioned Adelaide, a 50ft. yacht, built in Boston and notable thus far for little besides a grotesque sheer and a stern which even rivals that of Atlantic. Though not a racer, another boat deserving of a passing notice is Vandal, 39ft. 8in. load waterline, designed by Mr. Burgess for a cruiser, with an iron keel 6 tons and a centerboard, the trunk being entirely below the cabin floor. She is a trim and sightly craft and thus far has answered her owner's purpose admirably. No important additions have been made in the next smaller class during the year, perhaps the most noteworthy being a miniature of Atlantic, dubbed the Arab, and resembling her big sister in all respects even to her faults. Coming within the season's record is the schooner Oriole, designed by Mr. A. Cary Smith and built at Toronto, a centerboard craft of 50ft. load waterline, that has hardly been tried yet, but has done well on two or three occasions and the new steel schooner Julia, from the same drawing board, just away on her first cruise.

In the old fleet Puritan remained practically unaltered; but Priscilla, in new hands, received a new rig, while her sternpost was raked, forefoot reduced, and bulwarks cut down, lessening the deck weight by over a ton. She has been raced steadily during the entire season, and at times has shown indications of great speed, which, however, have not been realized, and her record has been a disappointment to her friends. There yet remains the resource of a lead keel to be tried, but it seems little likely that it will be done, as she is now offered for sale. The second class was little changed during the season, Gracie being altered as described, Bedouin making some minor changes with excellent results, as she has never traveled as fast before.

Besides the new boats, some important additions were made to the fleet from across the Atlantic. The well-known Miranda was purchased by a New York yachtsman, sailed across, and arrived just too late to enter for the Goelet Cup. Twice afterward she came to the line, once in the Citizen's race at Newport, and a few days later in a private match with Sachem, in which she was defeated, as told further on. The addition of so famous a flyer to the American fleet was in itself a most interesting event, as Miranda represents the culmination of schooner racing in England; but it must not be forgotten that it is a long time since she was designed, in 1875, and that many important changes have since been made. When her career as a racer ended, several years since, improvements in her class stopped entirely, so that she by no means represents the latest possible developement of her type. Further than this, the boat that was once worthy of all of Cranfield's care and skill is now given over to a skipper who makes no claim to be a racing man, while sails, gear and copper are all old.

The great majority of American yachtsmen are now ready to judge a boat pretty fairly on her merits, no type in itself faulty can be saved by special pleading after a decided failure on the regatta courses, and we do not propose to try to aid Miranda in any such way, but in view of her long and honorable record, it is only fair to consider the circumstances under which she may be called upon to sail here, before sacrificing her to make a reputation for home-built craft. Coming here as she does, her position is a prominent one, and the question of her place alongside of American yachts is not only interesting in the extreme, but most important. All yachtsmen will be glad to see her next season at her best, and to know that her future failure or success is well deserved. Next to her on the list of emigrés is Cythera, a bold looking cruiser from the hands of the elder Fife, once famous as a racer, but long since outclassed, as with 88ft. 9in., l.w.l., she carries but 15 tons on her keel and iron inside. However, she crossed the Bay of Biscay in winter with her new owner and his family on board, and proved herself a grand seaboat. She is notable also for being the first large English yawl ever in these waters. Three of the small racers have also crossed this year, Ulidia, famous as a 10-ton flyer, and two fives, Delvin and Shona, rivals at home, but not yet matched here, as one hails from Boston and one from New York. Delvin has never raced here, but Shona has sailed twice, once in a sail-over and once in the Beverly Y. C. open regatta, when she not only led her own class easily, but at the same time beat by three minutes the famous sloop Shadow, which sailed the same course in the centerboard class. As Shadow is beyond question the best of her class, and deeper than most of her age, this contest between her and an extremely narrow boat of the same waterline and less than half her beam, is very interesting and instructive, though the daily press, for some reason, has not seen fit to notice it. As stated, the two were not classed together so the result does not appear on the record; but each was sailed to win, starting together over the same course, and the narrow cutter made the course in over three minutes less time than the sloop. Of course had the result been the other way, it would have been doubly "Heralded" in leaded headlines, with many irrefutable conclusions appended.

With the many exciting events ahead that the season promised, its opening was eagerly looked forward to, but all the early races suffered from calm weather and it was not until the end of June that a good breeze and a race day came together. The first to open the season were the bold skippers of the mosquito fleet of South Boston, who were afloat and racing in their diminutive cracks as early as April 8. The nominal opening of the season, Decoration Day, was a dismal failure about New York. Priscilla and Atlantic were both out but with no wind to try them. The day was generally observed by yachtsmen, and fifteen clubs celebrated it by races, while many more held informal reviews and made short cruises. Bringing, as it does, a full holiday just as the yachts are ready, the date is becoming each year more important in the yachtsman's calender, and serves well to mark the formal opening of the season.

Of course the events of regatta week were awaited this year with unusual impatience, as the first appearance together of the four big yachts was to be the principal feature. Shortly before the races, at a time when it was doubtful whether all four would enter, the Seawanhaka Corinthian Y. C. came forward with the offer of a valuable cup as a prize for the first class yachts in their annual regatta, at the same time altering their sailing regulation so as to make possible the entries of all four. The week opened with the Atlantic Y. C. regatta, June 15, a day of calms and cats paws that disappointed everyone. Priscilla carried off the laurels, beating Atlantic, while Puritan did not finish. Thetis scored a win over Gracie in the next class, while Clara, though in a lower class, beat Thetis on actual time. Two days later came the New York Y. C. regatta, with no better weather, calms, rain squalls and little wind. Priscilla did the best sailing of the four, this being Mayflower's first race, but the results were extremely unsatisfactory. The change in the club classes had left Bedouin on the line between the first class and the second class in which her mates all belonged. During the race, in which she sailed closely in company with Priscilla all day, it was supposed that she was in the second class, but at the finish she managed to save her time from the iron boat, and the subsequent measurement showed her to be 70.17ft., or just over the class limit. On this showing she was at first declared the winner in first class, the prize in second class going to Thetis, but the matter was subsequently arranged by the owners of Thetis and the other second class boats consenting to the first prize in the second class going to Bedouin, so that Priscilla scored first in first class. The matter was an awkward one and should never have happened, but the final decision was certainly an equitable one, as Bedouin always has been and always will be classed with Gracie and Fanny rather than with Priscilla and Mayflower. But little insight into the merits of the four was given by this race as the sailing was fluky and uneven. Fortuna and Montauk led the two schooner classes and Clara simply swept out the rest of the fleet, beating on elapsed time, without allowance, everything but Priscilla, Bedouin, Puritan and Atlantic. Both second and third classes were so far astern as to have no place beside her, and she finished two minutes ahead of Mayflower. As stated before the day was fluky and the sailing of little value as a test, but this is only one instance out of many in Clara's case where she won easily.

Two days later, June 19, came the Seawanhaka C. Y. C. regatta, with more bad weather. Puritan topped her class, with Priscilla second, Atlantic third. Grayling had a sailover, Bedouin beat Gracie by 20 minutes, and Clara beat the two by 5 and 24 minutes respectively on even time, and left her own class out of sight astern, her nearest competitor, Cinderella, being 15 minutes later at the finish. It must be noted that all the fleet were handicapped by a flood tide and a calm at gunfire, and the actual sailing times over the course make the order Mayflower, Priscilla, Puritan and Atlantic. The three races had shown little as to the relative sailing of the yachts, but indicated their future order as Mayflower, Puritan, Priscilla and Atlantic, a rating which the season has fully borne out, though the difference between the first and second is but small.

Priscilla and the cutters at once left New York, for Marblehead, but none of the sloops cared to go so far for one race, which is where they missed it. Looking back now there are one or two bright spots in the season's dull record of drifts and calms, the brightest of which certainly is the Eastern Y. C. regatta of June 29 at Marblehead; a clear, bright day, a fine open-water course, a rattling breeze, varying from clubtopsail to housed topmast strength, and as fine a picked fleet as is often brought together. Unfortunately no sloops were entered except Active, and a grand chance for a "vindication" was lost to them, with Bedouin, Stranger, Clara, Ulidia and Shona at the line. The new order of things was represented by Thetis, but none of the older boats showed up. The way that Priscilla opened the ball, how she traveled down the first leg swinging a big clubtopsail, while the two white ones held to thimbleheaders, and Mayflower at least had more wind than she wanted, was a sight well worth seeing. To windward, however, she fell astern, and Puritan served her out in short order. No doubt Mayflower fared best of the three when the time came to house topmasts, as her topsail stretched so as to more than fill the space between gaff and topmast, and was only hindering her, while she was clearly overweighted aloft. The end was that Puritan won easily and Priscilla led Mayflower by a few seconds. The sailing of the new boat in this race gave good promise when her sails were in better shape, but she showed a great lack of stability. Unfortunately Atlantic was not present, being on the ways for repairs to her leaky keel. Bedouin and Stranger both defeated Thetis easily and Clara disposed of Active. Owing to the faulty classification, Ulidia of 35ft. was matched against Clara of 52 and 50ft., with no possible chance in such a wind. Shona scored a sail-over, not a sloop entering against her. Fortuna left Gitana and Mohican so far astern as to rob the race of all excitement, and Gevalia defeated Alice and Meta in her class.

For the next month there was little racing, but a ripple of excitement was caused by the arrival of Galatea at Marblehead on Aug. 1, after a passage of thirty-one days.

The next event was the race for the Goelet Cups at Newport, Aug. 7, bringing together the entire fleet from Sandy Hook to Cape Ann. Here the weather was again favorable and a good breeze held all day. Mayflower had received more lead on her keel and had been lightened aloft; she was well sailed and won easily, with Puritan 5 min. astern and Atlantic and Priscilla fairly distanced. All the single-stickers sailed for one cup, so there was no show for the smaller yachts, but Bedouin simply left her class entirely, showing more plainly than ever how helplessly out of it Fanny, Hildegarde and even Gracie now are. Clara did as much for her class, the only one that made any show beside her being Cinderella, this time only 4 min. astern. Each of these classes had its own sweepstakes, and Ulidia and Regina did the same, the little cutter beating the sloop out of sight.

It is a reversal of the proper order to leave the big schooners to the last, but naturally the four racers have made the single-stickers most prominent this season. The honors of this day went to Grayling, with Montauk a good second out of a fleet of ten. Sachem, in spite of bad judgment in choosing her course, was third, and in the estimation of many would have won a far better place on her sailing had she not gone out of the way up the Sakonnet River, losing greatly as she weather-bowed a strong tide. Grayling on the contrary made a long leg on port tack for the Sow

and Pigs. As it was, for a new boat almost on her trial trip, and with baggy sails and slack gear, her performance was wonderfully good alongside of a tried crack like Grayling.

The four were now definitely placed in the opinion of most yachtsmen, and it was confidently believed that Mayflower would be selected to meet Galatea. However, the trial races were announced, and on Aug. 21 and 23 they were sailed, both in light weather. Mayflower won each day, and was at once selected as the defender. Save at Marblehead in the Eastern regatta she and Puritan had never met in a strong breeze, nor did they through the rest of the season, and many still believe Puritan to be the better vessel in heavy weather. The weather on the two days of the International race could not have suited Mayflower better had it been made to order; and as events proved the choice was a wise one.

Shortly after his arrival in America Lieut. Henn astonished and rather shocked American yachtsmen by issuing a challenge for a race around Bermuda after the Cup races were over. In spite of all that has been said about the ease with which the new boats could cross the Atlantic and retake the cups Genesta carried away, no one seemed to have any appetite for an ocean race, and the matter was allowed to fizzle out quietly, Lieut. Henn's challenge remaining unanswered.

For nearly a year the question of Galatea's ability, compared with Genesta, had been a subject of earnest discussion and conjecture among yachtsmen, and her chances had been pretty well discounted. The general disposition was to depreciate her, and many were confident of a very easy victory. The FOREST AND STREAM, however, believed that she would prove a more formidable rival than Genesta, and many experienced yachtsmen shared our views. They were based on a careful consideration of the facts of the case, as far as obtainable, rather than on the bare record of the few races she sailed in 1885. Certainly, since her launch, Galatea has been an unlucky craft, but in spite of her mishaps she had at times shown indications of considerable speed. It was but reasonable to conclude that, with a greatly improved ballast plan, a point in which she was very weak last year, a sail plan to correspond, and in the hands of a competent skipper, with the experience of one season as a guide, she would do far better than in the condition in which she first came out. After the weather of 1885 and Genesta's performance, the venture of a second challenge must command respect as a bold and plucky attempt to retrieve her failure, but at the same time it is evident now that it was ill-considered in its details, and that the second failure might in a measure have been prevented by a greater attention to the lessons of the previous year. The weather in 1885 was lighter than usual, and rather better winds were probable in the succeeding year; but still Genesta's performance in really heavy weather did not denote that she was by any means overrigged for racing, and the necessity for an ample sail plan for September racing was pretty clearly demonstrated. When Galatea arrived, however, and her sail area became known for the first time here, it was found that she had only 118ft., or 1.6 per cent. more canvas than Genesta, in spite of added length, ballast and displacement. The two compare as follows:

	L.W.L.	Sail Area.	√S. A.
Genesta	81.06	7387	85.94
Galatea	87.00	7505	86.63

Thus it will be seen that the square root of Genesta's sail area exceeds the length on waterline by 6 per cent., while in Galatea's it is less by ½ per cent. With Puritan and Mayflower on the other hand the actual increase of area for the added power of the longer boat was 732ft., or 8 per cent., compared with Galatea's 1.6 percent. increase. With wags clipped in this style the chances of her doing more in light weather than Genesta had done were very small, and the great disparity in rig was apparent as soon as Galatea was seen beside Mayflower. In regard to the sparring of the two yachts it would seem that in Mayflower the extreme light weather spread has been reached, a circumstance undoubtedly of great benefit to her in such a summer as the last, and furthermore had strong instead of light winds prevailed, she would have lost as much as she really gained. Mr. Burgess took certain chances, based on his experience and judgment and he has come out all right, which is so much to his credit. Galatea's designer, on the other hand, went to the opposite extreme with a rig that might have been all right for some certain conditions, but was altogether wrong for the weather in which Cup races are generally sailed. As we have pointed out before the question of sail area, while a most important factor in the result, especially where only two or three races are to be sailed in midsummer, is one in which the designer can only depend on his own judgment a little and on chance a great deal for success or failure.

To go into the races in detail is unnecessary now, but they may be quickly summed up. Three times the two yachts met, once over the New York course in a drift; once outside the Hook in weather almost as bad; and once, some days later, at Newport, in a most provoking day of calms. In all three races Mayflower was successful, but only once, and then for a short time, was there a breeze of working topsail strength. On the first day the wind was miserably light and paltry, and in it Galatea did as Genesta had done a year before; moving at a very low velocity, she simply failed to hold to windward and fell off, while the white boat, under greater headway, made far less leeway. On the second day the wind was also very light over the first half of the course, but on the beat home the breeze freshened a little, and for the first and only time Galatea had wind enough to waken her into life, though not enough to show her at her best. She stood up and footed bravely enough while it lasted; making up lost ground only to lie becalmed a little later while Mayflower was washing her scuppers at times as she came up the Beach to the Scotland Lightship with a moderate off-shore breeze. This finished the Cup contests, but they met again at Newport, and during the run out to the Bell Buoy Galatea footed well with the fleet, holding her place also in the long drift that closed this melancholy fizzle. After several proposals a match of 30 miles to windward was made, to be sailed off Marblehead in a lower-sail breeze, provided such a wind could be had prior to Oct. 1, as Gen. Paine desired to put Mayflower out of commission on that day. For ten days the two yachts waited, the only breeze during that time being on a Sunday, and when, on the morning of Sept. 30 the judges, Com. Hovey of the Fortuna and Mr. Lloyd Phœnix, of the Intrepid, decided that no race was possible on that day, Mayflower at once left for Beverly to lay up. Thus, on neither of the occasions on which they have met, has there been such a breeze as would fairly decide the merits of the two types, and the results of their races have added nothing in this respect to what was known a year ago. In very light weather the two cutters can do nothing with the Burgess boats. Of their relative sailing in a steady topsail breeze, little has been seen; in Genesta's case when outside the Hook in the race over the club course, a fair trial as far as it went, the two were very evenly matched; and during the short time that Galatea had the wind in the second race of 1886, her performance bears out the same belief. In stronger winds also only one meeting has taken place, with the result that the two have finished very evenly. If each meeting of the two pairs in the two seasons be summed up, it makes a formidable showing for the wide craft, and not a few have resorted to this method of argument; but if the races are to teach any lesson it will be by a careful study of all accompanying fact rather than by a hasty judgment based on superficial figures. Galatea's performance this year has certainly fallen below what her friends anticipated; but they are loath to believe that she has by any means shown what is in her. Next season she will be fitted out again, with some minor changes in her sail plan, and will enter such races as are open to her about New York and Boston; and it will be gratifying to her friends and opponents alike if her plucky owner has at least a chance for a thorough trial of his boat alongside of her American rivals.

The failure of the two challengers has raised a question as to the propriety of a yacht being allowed to contest for the Cup unless she can give proof of her rating as a proper representative of her class, and a letter from an owner of one of the first-class yachts has lately appeared in an English paper on the subject. That an attempt may be made by an inferior yacht for mere notoriety may be possible, but is by no means probable, considering the expense involved. In the present instances there can be no suspicion that Sir Richard Sutton and Lieutenant Henn were not thoroughly in earnest in their spirited attempt to capture the Cup; and certainly if it has cost the New York Y. C. something to defend it, the expense that each of these gentlemen has borne individually has been far greater in proportion.

The season of 1886 was specially remarkable for the races that took place after the date at which the racing usually ceases. The races at Newport on Sept. 18 have been alluded to before, and deserve no more extended notice than to compliment the citizens of Newport on the liberality displayed in their offer of valuable prizes, and also to call attention to the fact that, while a time limit to a race does not always effect its object, had there been one on this occasion the prizes would not have been literally thrown away, but that the finest opportunity of the season would have been realized on the Monday that succeded a Saturday of most vexatious calms.

Following closely on this race came the match between Sachem and Miranda before referred to. Sachem, as noted, is of the new lead keel centerboard type, while Miranda, the "two-masted cutter," is a keel yacht of 5ft. less beam and proportionate increase of depth. Built before the wide keels of to-day were in vogue, and though carrying some ballast outside, gaining far less from this feature than more modern craft, she nevertheless maintained her superiority long enough to put a quietus, and apparently a final one, on schooner racing in Great Britain. The wind for once redeemed itself, blowing strong and steadily, and the only fluke in the race favored Miranda; in spite of which she was badly beaten. Now, what is the inference? Is the pick of the British fleet so far astern of the new Yankee as the times would show; or is there a partial reason for her defeat in the old sails and copper, and in the green crew and strange hands at the tiller? It is only fair to say that if allowance is made here, Sachem is as yet in all probability far from her true form, in her first season and with gear and sails half stretched. So the case stands; each must weigh the evidence and decide for himself; but with every belief in Sachem's speed, and in a bright record before her, we are not yet ready to admit, as the face of the figures would show, that under equal conditions of rig and handling, she is from 15 to 20 min. faster over a 40-mile course than her famous rival.

While the yachts from which most was expected have done comparatively little through the faults of the weather, it is rather curious that two boats of moderate reputation should have brought the season to an end by a series of exciting races. Thetis has been known for three seasons without creating any marked sensation in the racing world, in fact her record has been the reverse of brilliant. Stranger has raced enough in the last two seasons to gain a reputation as a very fast boat in the lightest weather, but lacking in strong breezes. Between the two a strong rivalry has existed which finally led to a match from Newport to Marblehead, immediately following the Newport failure. The result was that in spite of serious delays from breakdowns Thetis won easily, the race being sailed in heavy weather. Certainly Thetis proved herself a far better boat in such weather than any one would suppose from her previous record, while Stranger was no worse than those familiar with her would have expected, as she has always shown herself at her poorest in a blow. Very pretty pictures have been drawn of Stranger with rail under and green water up to the mast, while the lookout on Thetis's low smoked his pipe with his hands in his pockets and the watch below took their ease from the tafrail. Any one who pleases is at liberty to credit these, but the cutter came into port in good shape and with all hands alive and well, pretty good evidence of the seaworthiness if not the speed of the boat. One fact just here that has generally been overlooked, but carries its own lesson. When reefed mainsails are in order and when bound seaward in a gale, the topmast may be in worse places than on deck or even overboard, and though Thetis lost some time at the beginning by her topmast going at the cap, it is probable that the reduced weight aloft helped her materially through the worst weather.

Following this race came another series, best two out of three, Thetis winning the first two races, the third, consequently, not being sailed. Again they determined to try it, this time Stranger winning two races, which ended the racing for the year, leaving the record for the two boats for the entire season—Thetis, nine starts, four firsts and one second; Stranger, nine starts, four firsts. In the seven races in which they were matched against each other the record stands: Thetis, three firsts; Stranger, three firsts. Stranger beat Thetis four times out of the seven, but in one race neither won a prize.

We have not enumerated Clara's races in detail, sufficient to say that throughout the season she entered every race open to her, scored ten prizes for eleven starts, and was never once beaten by anything that by right or courtesy could be called a sloop. She showed beyond question that none of the actual sloops could sail with her, and even Cinderella never succeeded in catching her. Near her on the record comes Bedouin, with a score of five starts and four firsts; while one looks in vain for the names of any of the old sloops in either class—they are not there.

What does it all teach? What are the true conclusions to draw from such a season? The Eastern yachtsman, and, in a more modest degree, his New York brother, points to Mayflower, Sachem and Thetis as the acme of naval design, the point where improvement ceases. No more old sloops—no more narrow cutters. The cutter man, on the contrary, denies the correctness of his adversary's conclusions, and points to Bedouin and Clara as evidences, not of work in light weather, or of some special combination of circumstances, but as continuous records made in one race after another against all competitors and in all weathers. Besides these are the owners of the old boats whose day has passed away; who can only look on without taking part in the discussion. This much is proved, that the old centerboard sloop, both in hull and rig, has passed away; that the lead keel is a factor of the first importance in a racer, and that, as far as American yachts are concerned, the movement is going on steadily for less beam, more lead, more depth. Has either side proved this season that it is all right and the other all wrong? We think not, but out of the general jumble of contradictory results this much is clear, that absolute perfection is found exclusively in no type, but that each has its merits and defects, and the best boats of each class are not far from equal in point of speed. For six years the narrow cutters have competed on American courses with the result that their old competitors have disappeared from the fight, and the records of the last three years show that they are more than able to hold their own as to speed with any of the centerboard sloops. As to their place compared with the new mongrel type of centerboard keel-cutter-sloop, that remains to be settled, but the probabilities are that, taking the racing season through, with its varying weathers and chances, the two types are on a fair equality as to speed, and the winners will be those in which every detail is carried out to the greatest perfection. Many have been looking for results that would show a marked and unquestionable superiority for one type, and, failing in this, are apt to consider the season as devoid of any important lesson. To those, however, who have followed its varied chances carefully one most important fact is evident, that the winning boats are those in which designer, builder, owner and skipper have worked together carefully and intelligently to get the best results; and where this has been done at least a reasonable amount of success has been certain. The two Burgess boats proved this, Clara and Bedouin proved it, and the records for years show the same, that races are won less by any radical feature of type or individual model than by that patient and intelligent labor on the part of all which brings out the most that the boat is capable of. If this much has been made clear then the year's work, in spite of its flukes and disappointments, has not been in vain.

It is natural that racing should play the major part in the history of the year, but beyond the principal events briefly outlined above there is much that—while attracting little attention—is gratifying as an evidence of substantial progress. Throughout the country generally the interest in yachting has increased, and a large number of minor races have been held. The standards of design, construction and practical sailing have been raised, with marked improvements in the safety and efficiency of the national pleasure navy. Cruising and Corinthian sailing have come in for a full share of favor, and their growth, together with the great interest which yachtsmen are taking in the important questions of design and construction, is most promising for the future of American yachting. On the lakes sport has been good; Ontario heads the list with a prosperous season for the Lake Y. R. A., and Erie comes next. On the Pacific coast the season has been dull; Western yachtsmen have not felt the great impulse which two Cup races have sent over all the Atlantic coast and the lakes, and yachting there is in need of a thorough revival.

In steam yachting beyond a successful season there is little to report, but the fleet is constantly improving and recruits are coming in steadily from the sailing division.

The new year again finds the holders of the Cup with a challenge on hand, and a repetition of the conjectures and guesses of 1885 and '86 is in order. To American yachtsmen the field of view is far wider than it was then. The two Burgess boats as well as their two opponents are no longer unknown quantities, but their powers may be fairly gauged. What the result of the coming races will be no one can say, but though both Genesta and Galatea have failed to justify the confidence that the FOREST AND STREAM has avowed in their performance, we venture again, with a vivid remembrance of the past two seasons before us to assert that it is fully within the powers of the general type which they represent to cope with the new type in a working breeze; and to express our belief that in the hands of Messrs. Watson and Barr, the new challenger will do no discredit to her friends. What her size will be is yet unknown, whether she will come in the first or second class, but there is no doubt that she will be a narrow cutter of the same type as Irex, Genesta and Marjorie. The recent change in the Y. R. A. makes it possible to build a large boat for the Cup Races and yet one that can race at home afterward; but we believe that in the Thistle Mr. Watson will avail himself to a very limited extent of this privilege, taking little, if any, more beam than in Marjorie and retaining the depth. To meet her there are Puritan and Mayflower, with the immediate prospect of four or five smaller yachts to be built if Thistle proves to be in the second class.

Besides the Cup races it is probable that the coming year will witness at least one important international ocean race, as the idea has been taken up by an English club in connection with the Queen's jubilee year; while a proposal for an Atlantic race for American schooners has just been made by an American yachtsman.

The most interesting question of the future is that of the coming type, for it is always the case that while various considerations may lead to the construction of several varities of craft in any locality, the climate, rules, and general conditions will encourage some one type which will be found in greater perfection than any other. In Great Britain such causes have created the narrow cutter, and here they produced the original shoal centerboard sloop. Just now attention is directed to an intermediate type, and none can say what the result will be. Certainly the conditions wern never so favorable for thorough tests, the cutters here have broken down old theories, and opened the door to new ideas as to model, ballast, rig and build, while the change in the rule abroad opens up a new field in which the designer can utilize the valuable lesson as to depth and lead which the old rule has taught him, with an increase of beam if it proves beneficial. Thus with beam untaxed on one side and with the extravagant estimate of its value exploded on the other, the two are likely to approach each other very closely in the future. Speed will always be the governing factor in selection, but there seems now little danger that either side will sacrifice safety or convenience to an extreme degree to obtain it. The new Boston yachts are very fast; but are they all that is desired as to accommodation and seagoing powers? Clara and her family are also fast; but can they be improved for American weather and requirements and for racing under American rules? This the future will show, and the coming year promises to inaugurate a still wider range of experiment on both sides, with the probable result of a closer approximation of the national types. As far as the coming American boat can be forecast it seems likely to be a cutter of four to five beams in the first, second and third classes, with lead keel, cutter rig, laced mainsail and standing bowsprit. The question of deep keel or centerboard, as well as of more or less beam within moderate limits, will be decided by no fixed rule but by the water and uses for which the boat is mainly intended.

This question brings up another point of great importance. American yachting has just reached a peculiar stage in its development. Year by year New York and Boston are drawing nearer, intermediate points are becoming interested, and in a few years a piece of ocean forming an independent center, as of old, with little in common, it will be a part of a system that will include all the yachts from the Hudson to the Kennebec. The elements of this system are now in a plastic state, the question of vested interest as yet has little weight, and now is the time, before these elements are crystallized into odd and conflicting shapes, for the creation of a general body, which shall consider the future requirements of yachting and enact such laws as may seem best to encourage its fullest development. To note only one point, there is the division into classes, the limit of the second class for instance varying with different clubs between 70 and 75ft. These yachts race together at New York, Marblehead and Newport each year; but a yacht that is fairly within one class in New York may find herself practically excluded by being placed in another class at Marblehead and *vice versa*. If nothing is done the matter will be worse as more yachts are built and more general regattas held, and the sooner some concerted action is taken the easier it will be. This is only one detail that should come before such a body, but there are many more. The time has not come for a National Yacht Racing Association, and it cannot come until the sport has grown stronger in the South and on the Lakes, but the time has come for a union of some kind between the leading clubs in the East, the center and backbone of American yachting. Before the year is out we hope to see a successful effort on the part of the leading yachtsmen to supplant the present haphazard and chaotic assembly of clubs by a definite and permanent organization that shall intelligently govern and direct the greatest of America's national sports.

BUILDING.—About New York there is little doing, either in repairing or building. Piepgrass, at City Island, is at work on rebuilding the schooner Palmer, as well as on the alterations to Cinderella,....At Bay Ridge, Ayers has a 55ft. steam launch, 10ft. beam, in frame and partly planked, and is also busy on the compromise boat Tahoe, built in 1885 by Wood, of Boston. She is flush decked 29ft. 3in. by 8ft., with 4ft. 3in. draft. She has a square stern with rudder hung outside, catboat fashion, a lead keel and centerboard, with mast stepped far aft. Her deck and topsides for a depth of 15ins. have been cut completely off and new timber heads put in, adding a couple of feet to the beam above water, while her stern has been spun out in a long overhang....Driscoll has nearly finished the woodwork on the Sea Gull, and is at work on the caulking. The interior is plainly finished in white pine, but there is plenty of room....Mumm has on his railway the Herreshoff steamer Marina, lately purchased by Mr. Charles F. Chicking. She is doubleskinned, and the outer skin has been partly removed at each end and additions made. A new and by no means graceful overhanging stem is built out over the plumb stem, which is left untouched. At the after end the homely round stern has been carried out into a longer overhang that is much more yacht-like. The length over all will be increased by 10ft. In the shop a cabin sloop has been commenced for a Mr. Ward. She will be 37ft. over all, 25ft. l.w.l., 10ft. 6in. beam with centerboard. Build now for work is a 22ft. catboat....Wallin and Gorman have just finished a small catboat, and are now busy with Dr. Loring's new Mignonette, which is now in frame. She is 29ft. l.w.l. and 11ft. beam, with 6ft. overhang. Her lead keel weighs 6,700lbs....In Boston Mr. Burgess has completed the design for Mr. C. E. Cunninghan. The dimensions are 22ft. 6in. l.w.l., 8ft. 6in. beam, and 4ft. 9in. draft, with lead keel. Mr. Burgess is also at work on several other orders....Thetis is offered for sale, her owner having a design of his own for a cruising keel schooner of 90ft. l.w.l. and 14ft. draft....E. L. Williams is building a nice looking keel boat, 31ft. 3in. over all; 21ft. 6in. l.w.l., 8ft. 10½in. beam extreme; 7ft. 9in. beam at loadline; 5ft. 3in. draft, 22ft. least freeboard, and 7,000lbs. of iron keel. The overhang is made short to fit the absurd racing rule. Her keel is 12x7in., framed 2x2in. at heel and 2x1½ at head, spaced 12; planking, 1in. yellow pine in entire lengths. There are iron floors 2x1in. on each frame. The trunk cabin will give 5ft. headroom. She will be cutter rigged with a rather large sail plan.

CUTTERS AND COEFFICIENTS.—A great deal of speculation is in progress just now regarding the Scotch cutter Thistle. The drawings and dimensions have been secured from an authentic source, they have been the text of numerous discourses by weighty experts, and they have been pronounced fictitious by thoroughly competent authorities. It seems to be a fact that the Scotchmen will send over a boat, but they have remained naturally reticent about a subject on which American newspapers are so well informed, for they may well be shy in anticipation of an international contest for which nearly every American newspaper has at least one yacht on the stocks. Meanwhile the sturdy champions of Yankee Doodle are not only going to keep the cup, as a matter of course, but propose to mop up the seas in the match for the 1,000-guinea cup which is to mark the fiftieth anniversary of the queen's career as a yachtman. The prospect of winning the prize is so much more brilliant than staying at home and casually scooping in the America Cup that it is believed that the owners of the invincible sloops will make a pool, and toss up for the privilege of entering for the queen's mug, on the condition that the one who sacrifices himself by staying at home to meet the Thistle shall divide profits with his luckier rival. Only one thing seems to have been forgotten in these speculations, and that is the influence of the *Saturday Review*. Everybody knows that that periodical knows everything, and the thing it knows best is that it will never do to admit centerboards into a contest for the queen's $6,000 mug. This bars out all our sloops and our fastest schooners. The other schooners would be troublesome, but it will be easy enough to rule out all yachts steered by a wheel, which nobody knows better than the nautical editor of the *Saturday Review* cannot be included in the category of seaworthy and sportsmanlike vessels. All these things should teach us patience, and our enterprising papers should hold back their yachts until they know definitely and beyond all dispute that "the coefficient of fineness of the immersed portion of the midship section of the Thistle is .55." Suppose it should turn out to be .57, or even .59, and the newspapers would have to build their yachts all over again. Coefficients and logarithms are horrid things to monkey with, and Scotch ones are the worst of all.—*Commercial Advertiser*, Dec. 28.

HUDSON RIVER ICE YACHT CLUB.—We have received the constitution and sailing regulations of the Hudson River Ice Yacht Club, containing a list of the yachts and members. The club has now 62 members, including some of the leading New York yachtsmen, and 28 boats, the largest being the Avalanche, 51ft. over all and carrying 84ft. in her single lateen sail.

THE PROPOSED ROYAL THAMES PRIZE.—Nothing further has been done in regard to the proposition to offer a prize of 1,000 guineas for an ocean race, but the matter will be considered at the next meeting of the R. T. Y. C. this month. The course will probably be around the Azores or Ireland.

CHELSEA Y. C.—Officers for 1887: Commodore, H. W. Wells; Vice-Commodore, William H. Wedger; Secretary, Fred V. Prior; Secretary pro tem, William H. Wedger; Treasurer, A. D. Black; Measurer, Charles R. Fisher; Directors, Dr. J. H. Reed, C. R. Fisher, F. T. Clayton.

FAITHFUL TO THE LAST.—*Editor Forest and Stream:* Another year is about to close and as with the last it shows a victory for the Englishmen, not that they have secured the Cup, for that of itself is of small value, but that they have forced an acknowledgment from us by the acceptance of their ideas that we were not able if left to our own resources, independent of help, to successfully cope with them and defend the Cup. For more than twenty years have we successfully defended the Cup without any foreign interference, but in the last two years we have been forced to ask for aid, having, to all appearances, exhausted all the resources in Yankeedom. Very few people seem to understand the issue at stake and to realize the hold that English ideas have secured on American yachtsmen. These contests are not merely for the possession of the America's Cup, but to show whether England or America has made the greatest advancement in yachts for speed, independent of each other. The English contended that a cutter of 30ft. was superior to the centerboard sloop of the same length, and that the 30ft. cutter reproduced in the yacht of 100 tons was superior to the centerboard sloop of 100ft. We have met them with good results in the 35ft. boat, and in the 45ft. boat, and in the 75ft. boat, but preferred a back down to anything larger without even a contest. Very few people understand that the designer of the Puritan spent considerable time in Britain, picking up points from the builders there. The only American representatives we have left are the schooners Montauk and Grayling, who defeated Priscilla and Atlantic, as well as the schooner Sachem, in the Goelet cup race. And it was a fitting rebuke to the designers of the Atlantic and Sachem for their departure from American principles under which the cup was secured. And I sincerely believe that keeping these principles in sight that there are other designers in New York, Boston and Bristol who can defeat any cutter or mongrel without appropriating any English methods or rope yarns.—LOYALTY (Dec. 29).

WILL JOHN HOLMES, of Vineyard Haven, Mass., who answered "W.'s" query about Cape Cod navigation last year, please give his address in FOREST AND STREAM and oblige—W.

AHOI!—The German yachting magazine *Ahoi!* after a successful existence of two years as a monthly has now changed to a weekly edition, and has enlarged its field to include other water sports, rowing, canoeing, swimming and skating. The introductory number comes to us in the form of a quarto sheet of 12 pages, containing among other articles a description of Galatea and Mayflower, and a call to German canoeists. Water sports are growing in favor each year in Germany, and our contemporary has our best wishes in its efforts in their behalf.

ORIVA'S CREW.—Since Oriva has been laid up her crew have shipped on other craft, but they are still, and always will be, "Oriva's Crew," the finest Corinthian crew in New York waters. Last week their captain, Mr. C. Smith Lee, gave his annual dinner to them at the New York Y. C. The ten who were present were Messrs. A. B. Alley, mate; H. A. Sanderson, A. P. Montant, R. C. Cornell, W. B. Simonds, J. Leslie Cotton, W. A. W. Stewart, C. L. W. Eidlitz, H. Van Wyck and A. Simonds.

CRUISING.—The steam yacht Sans Peur, owned by the Duke of Sutherland, left England on Dec. 10, and is looked for at Charleston, S. C., where her owner will join her....Dream, sloop, of New York, arrived at Beaufort, N. C., on Dec. 29, after 13 days in the ice in Chesapeake Bay, and sailed on Dec. 31 for Charleston for orders from her owner....Magnolia, steam yacht, arrived at Charleston on Dec. 28.

JULIA.—Mr. Chapin's new steel schooner arrived at Charleston last week after a passage of 5 days 10 hours, from New York. The wind was ahead all the time, once blowing a gale from S. E., while for several days the yacht had hardly steerage way. She is reported as behaving very well in a sea.

A MODEL FOR THE N. Y. Y. C.—Mr. Joseph McCormick, of New York, has sent to the N. Y. Y. C. a model of a centerboard yacht, 82ft. l. w. l.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

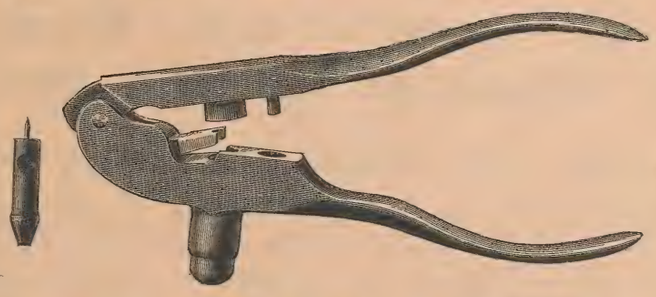
J. W. J., New Haven.—Answer has been sent by mail.

H. M. P., Greenwich, Conn.—The three shots score 8 8 6—22.

F. D. W., Buffalo.—We advise you to read Norris's American Angler's Book.

W. E., Tremont, N. Y.—1. For the rifle apply to makers, advertised elsewhere. 2. The Florida Annual has map of the State.

H. C. G.—We have no list of men who have breeding carp for sale. Probably Mr. E. G. Blackford, Fulton Market, New York, can give you the addresses you want. Some breeders have sent him fish for market.



H. P. C., Richmond, Va.—Can you put me in communication with some trout hatchery, where I can obtain some practical experience in that branch of fishculture? Ans. Write to Col. M. McDonald, Commissioner of Fisheries, Berryville, Va.; Prof. S. F. Baird, Washington, D. C.; Frank N. Clark, Northville, Mich.; James Annin, Jr., Caledonia, N. Y.; Fred Mather, Cold Spring Harbor, N. Y.; Livingston Stone, Charlestown, N. H., or W. L. Gilbert, Plymouth, Mass.

HALE'S HONEY OF HOREHOUND AND TAR softens the cough, relieves the windpipe and bronchial tubes of mucus, tones the lungs and the membranes of the throat, and restores to the organs of respiration their natural strength and vigor. PIKE'S TOOTHACHE DROPS cure in one minute.—*Adv.*

THE SETTER,
—BY—
LAVERACK.
With colored illustrations. Price, postpaid, $3.00
For sale by the Forest and Stream Pub. Co.

Among the Many Novelties
Introduced by us last spring were the
Dead Finish, Waterproof, Braided Silk Fly Lines,
FOR SALMON, TROUT AND BLACK BASS.
TRADE MARK.
These lines have given perfect satisfaction and stood the most severe tests. *They do not crack, chip or become sticky and stiff,* but remain soft and pliable. These lines are waterproofed through and through, not merely on the surface. They will not become tender in use or by age.
Also a new style **LANDING NET,** made of *waterproof braided linen line,* which prevents the hooks from catching in the meshes. The prices of these nets are only a little in advance of the old style made from twisted thread.

SMALL YACHTS.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice.

By C. P. KUNHARDT.

THE FOREST AND STREAM PUBLISHING COMPANY takes pleasure in announcing the publication of a magnificent quarto volume, bearing the above title. This book covers the eld of Small Yachts, with special regard to their design, construction, equipment and keep. The opening chapters are devoted to a consideration of the model and the draft, their clations to one another, and the purposes which they subserve. Full directions are given for producing the plans of a yacht with reference to the chief points in design, and the method of taking off the lines of a boat already built is likewise described in detail.

All elements entering into design, such as Resistance, Stability, Balance of Rig, Handiness, Displacement, etc., are dealt with in separate chapters. The rules necessary for the mathematical computations, and a review of theory and practice close the first division of the book.

The second portion comprises the description of the Plates, covering the whole range of type in small yachts, from the shoal catboat and American centerboard sloop to examples of the narrowest and deepest British cutter yet built. These yachts have their lines, build and fittings depicted in the Plates, which are drawn to scale. With their aid and the specifications presented, the reader is placed in possession of accurate information concerning the mould, accommodations, rig and characteristics of all styles of yachts which have received favorable recognition. Sporting boats, combination row and sailboats, and various examples of special form are introduced.

The third division offers a comprehensive review of single-hand sailing, to which small yachts are especially adapted. Directions are given as a guide in selection of type and sail plan, and subsequent equipment and proper management.

The iron work of yachts, their gear, yawls, stearing apparatus, boat building and much other closely related matter is entered upon. The new International Rules of the Road, Signal Service, and a Bibliography appear in the Appendix.

The work is profusely and handsomely illustrated with 150 illustrations inserted in the text, besides the sixty-three plates.

A folio (size of page 14½x12½ inches), printed on paper specially manufactured for it, and with great beauty of execution and finish in every detail, making a volume vastly superior to any other work of the kind ever published. Pages 370, with 136 plate pages additional, or a total of more than 500. Price, postpaid, $7.00.

LIST OF PLATES.

HOLIDAY PRESENTS.

Buy Them Early.

NO present gives so much pleasure or is so lasting as a good book, and none is so thoroughly appreciated by the average man, woman or child. A good book does not get broken or wear out, but remains always a source of pleasure and instruction.

Nothing is more annoying or inconvenient than to postpone the purchase of holiday gifts to the last moment, and appreciating this fact we call attention to the following list of standard works suitable for the holidays. These vary in price so as to fit every pocket, and among them all something will be found to appeal to every taste. Any of these books will be sent by mail, postpaid, on receipt of price.

Sport with Gun and Rod.

This superb volume contains a vast amount of matter of the highest interest to the sportsman. Almost all kinds of American game birds, mammals and fishes are treated in its pages, and it is profusely illustrated by some of the best American artists; 886 pp. Three styles are published: Embossed leather, $15; cloth, $10; cloth, on cheaper paper, $5.

Antelope and Deer of America.

By Hon. J. D. Caton, LL. D. This volume is equally a necessity to the sportsman and the naturalist. It tells of the haunts and habits of our antelope and deer, where to find them, how to hunt them, of their life in the woods and under domestication. The best book on the subject ever written. A second edition. Price reduced to $2.50.

Rod and Gun in California.

By T. S. Van Dyke. A story of outdoor life in semi-tropical land. Through the charmingly told narrative runs the tender thread of a love story. Price $1.50.

The Canoe Aurora.

By Dr. C. A. Neide. The well told story of the author's cruise in a tiny canoe from an Adirondack lake to the Gulf of Mexico. Price $1.00.

Canoe Handling.

By C. Bowyer Vaux ("Dot"). The author of this pleasantly written volume is acknowledged to be the first of American, and so of living, canoeists. In this book he tells all about how to sail and handle a canoe, and how to care for it, either when in use or laid up for winter. Price $1.00.

Small Yachts,

Their Design and Construction, by C. P. Kunhardt. This sumptuous quarto volume covers the whole range of yacht designing and care, and is the only work of the kind yet issued in America. The text occupies 325 pages, illustrated with many engravings, and besides there are 70 full page plates, showing the characteristics of the best modern yachts. Price $7.00.

The Forest Waters the Farm,

or, the Value of Woodlands as Reservoirs. By Antonin Rousset, translated by Rev. S. W. Powell. This famous French book has never before been put into English. Every farmer ought to have it, for the questions so intelligently discussed in it are of national importance; 109 pp. Price, paper, 50 cents; cloth, 75 cents.

Canoe and Boat Building

For Amateurs. By W. P. Stephens. A manual of boat building by the canoeing editor of Forest and Stream. Besides the 189 pages of descriptive text, there are 29 plates, working drawings, which enable even the novice to build his own canoe and build it well. Price $1.50.

Hunting Trips of a Ranchman.

By Theodore Roosevelt. A delightful book of hunting adventure in Dakota and Montana. Price $3.50.

Training vs. Breaking.

By S. T. Hammond, kennel editor of Forest and Stream. Nearly forty years experience in training and handling dogs has taught the author that these intelligent animals are more easily controlled by kindness than by severity. He tells how to accomplish by this kindness what you cannot with the whip. There is a chapter on training pet and house dogs. Price $1.00.

Canoe and Camp Cookery.

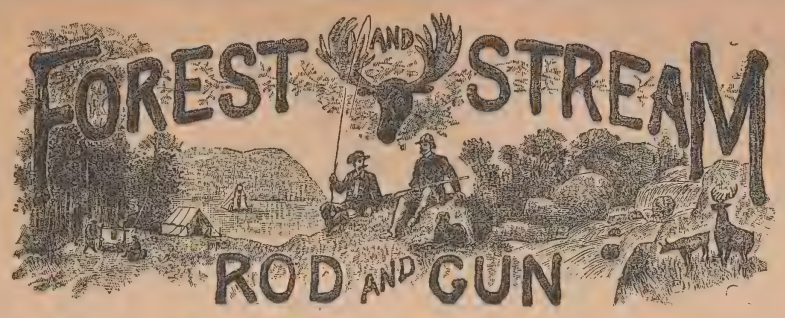
By "Seneca." A little book full of receipts and hints for the camp cook, by a practical man who has tried them. Indispensable to the camper. Price $1.00.

Fyshhe and Fysshynge.

By Dame Juliana Berners. An elegant fac-simile reprint of a quaint old book written in the Fifteenth century. It is edited by an ardent angler and should find a place in every sportsman's library. Price $1.00.

Our New Alaska.

By Chas. Hallock. In this handsome illustrated volume, Mr. Hallock gives the result of his travels in our northernmost possessions. He found Alaska a great country of almost boundless resources, and tells about it in his own happy style. Price $1.50.



Woodcraft.

By "Nessmuk." "Nessmuk" is a Nestor among America's sportsmen. In "Woodcraft" he imparts the knowledge of the woods that he has been fifty years in acquiring. No man, however much he has camped out, can read this book without learning something. Price $1.00.

The History of the Mastiff.

By M. B. Wynn, who is acknowledged on all hands to be one of the first authorities in the world on this splendid breed of dogs. The history of the guard dog is traced from prehistoric down to present time, and the tale is told with the enthusiasm of a true lover of man's best friend. Price $2.50.

Forest and Stream Publishing Co., 39 Park Row, N.Y.

A WORD IN SEASON.

Readers old and new of the Forest and Stream may be pleased to know that the paper is now at the close of 1886 enjoying the support of a wider circle of friends than at any former period in its history. This is an interesting fact, for it proves, with the best possible demonstration of success, the sound sense of the theory long ago adopted by editors and publishers, and steadfastly adhered to, that there is room in this country for a journal treating the subjects embraced by our departments, and depending for its support wholly upon what have been accepted by the conductors of the Forest and Stream as legitimate journalistic methods. In other words, we have kept faith with subscribers by devoting our reading columns exclusively to honest reading matter, and have not given up our pages to extended paid puffs of railroad routes clumsily disguised as accounts of sportsmen's travel, nor alluring descriptions of wonderful agricultural regions, all paid by the column. The conviction that a sportsman's journal for sportsmen could be conducted without resorting to such questionable makeshift expedients have proved quite correct.

The tone and high character of the journal, as one fit for sportsmen to receive into their homes, will be jealously maintained. As there is nothing in the recreations of field and stream inconsistent with the highest type of manhood, so, the editors are convinced, there should be in a journal like the Forest and Stream nothing to offend good taste.

The Forest and Stream will be, in the future as in the past, thoroughly representative of the best field sportsmanship of America. It will maintain its position as the chosen exponent of those who seek recreation with gun or rod, rifle, canoe or yacht. Its character will be scrupulously preserved, and readers in 1887 may expect a rich fund of sporting sketches and stories, suggestions, bright sayings, prompt, reliable news, and interesting discussions. Angler, shooter, dog breeder, canoeist and yachtsman, may be assured that whatever is of interest in these respective fields in 1887 will find its way into the columns of the Forest and Stream.

The Sportsman Tourist

columns are filled with bright sketches of travel, camp life and adventure, the reflected experience of a host of outers.

Natural History.

Papers descriptive of bird life, chapters of animal biography, notes on the ways of field, forest and water creatures as observed by sportmen, anglers and naturalists, make up these pages. The special work of the past year has been the establishment of the Audubon Society for the Protection of Birds, begun in February, and having now a membership approaching 20,000.

Angling and Shooting.

Time was when a single journal sufficed in this country for adequate discussion of all the heterogenous pastimes and practices dubbed sport. That time has long since passed away. Some of the sports have been outgrown or put under a ban, others have developed to such a degree that each class requires a special organ. The particular fields chosen by the Forest and Stream are those of angling and shooting. The pages given up to these topics are rich with the freshest, brightest, most wholesome, entertaining and valuable open air literature of the day. They have the sunlight and woodsy odor of the haunts of game and fish; they picture nature as seen by sportsman and angler. One has not long to read the Forest and Stream before learning its attitude with respect to game and fish protection. The editors believe in conserving, by all legitimate methods, the game of fields and woods, and the fish of brook, river and lake, not for the exclusive benefit of any class or classes, but for the public. They are earnest, consistent and determined advocates of strict protection in the legal close season, and in restricting the taking of game both as to season and methods, so that the benefits of these natural resources may be evenly distributed.

The Kennel.

This department has kept even pace with the growth of the interest of breeding field and pet dogs. Reports of trials and shows are usually given in the Forest and Stream in advance of other publications, and being prepared by competent writers their intelligent criticisms are of practical utility. This journal is not hampered by personal animosities. It has no judges to "kill." It does not decide a dog's merit by asking who the owner is. It treats all kennel subjects without fear, favor or ulterior motives, and in consequence enjoys a degree of public confidence and esteem denied to such as stagger beneath the incubus of malice and flounder in the bogs of ignorance.

Rifle and Trap Shooting

records scores of meetings and matches, discussions of topics pertaining to the butt, gallery and trap. Secretaries of gun and rifle clubs are invited to send their scores for publication.

Canoeing.

This country is a land of magnificent water courses, and Americans are just beginning to appreciate the canoe as a means of enjoying the delectable charms of river and lake, and bay and canal. The men who are making fortunes by making canoes know best how rapidly the ranks of canoeists are multiplying. Novices and old hands will find in the Forest and Stream canoeing columns, in charge of a practical canoeist, accounts of cruises, lines of new craft, and hints and helps and suggestions without number. Closely allied is

Yachting,

in which the Forest and Stream is the only competent, all-the-year-round, intelligent exponent. Our reports of races are full, prompt and accurate. The numerous illustrations of lines of new yachts make an invaluable record of the development of yacht building.

Weekly, $4 per year; $2 for six months.

Forest and Stream Pub. Co., 39 Park Row.

Wanted.

WANTED.—A FEW PAIRS OR ODD BIRDS of the following species: Green-winged teal, blue-winged teal, widgeon, redheads, canvas-backs, hooded merganser, golden eye and buffle-head ducks. Will buy or exchange tame wood ducks. FRED MATHER, Cold Spring Harbor, N. Y. jan6,tf

K 9 Breaking Kennels.

Pointers and setters thoroughly broken for field trials or private use. Reference given. W. G. SMITH, Marydel, Md.

The Kennel.

Grand Bon-Secours Kennels.

Near Péruwelz (Hainault), Belgium.

ESTABLISHED IN 1865.

Property of Mr. Aug. Tondreau Loiseau, BANKER AT PÉRUWELZ.

These kennels enjoy a wide-spread fame, and hundreds of sportsmen of the highest authority in the doggy world can bear witness to the scrupulous good faith which governs their operations, and the remarkable merit of many of the dogs which have gone out from them since 1865. The collection consists exclusively of English sporting dogs. Besides a splendid collection of English stud and field dogs—Laverack, Gordon and Irish setters, large and small pointers, Clumber, Sussex, Norfolk and black spaniels, large curly or wavy-coated retrievers, all of the most noted blood—which are employed for breeding and whose young are offered to the public, these kennels always have for sale a large number of other English dogs, warranted to be of pure and noble blood, handsome and good, of full pedigree, thoroughly trained to obey, to charge at the uplifted hand, and to retrieve perfectly all kinds of game.

The kennels are constantly open to visitors.

Adult and trained dogs can be shipped at Antwerp (Belgium) destined for the principal ports of the two Americas.

Mastiff For Sale,

Breeder of Irish Setters

Under guarantee and life insurance.
Send for circular.

PRIZE AND PEDIGREE ENGLISH MASTIFFS.—Mr. James Hutchings, 25 Gandy st., Exeter, England, has several grand ones for sale, brindles and fawns, including stud dogs brood bitches and puppies. Tourists' inspection invited.

FOR SALE.—A NUMBER OF WELL BRED and well broken pointers and setters; also dogs boarded and broken; satisfaction guaranteed. Address H. B. RICHMOND, Lakeville, Mass. sept22,tf

Claire-Reeta Kennels.

PALMYRA, N. Y.

Irish and Gordon setters for work as well as show
dec17,tf

Setter Puppies for $5.

We have a number of setter puppies from 5 to 10 wks. old, dogs and bitches, of all colors; we will close out for $5 each. Dogs of same breed from 6 mos. to 1 yr. old, $8 each. These setters are of good native blood, fair nose and not gunshy, and satisfaction is guaranteed in every case.

WM. W. SILVEY,
135 South Eighth street, Philadelphia, Pa.

Basket Beagle Stud Dogs.

For Sale—Two wonderful good ones, age 2 yrs., highly bred and of great quality; one 10½in. high, the other 12in. Both sure and vigorous stud dogs. Also a magnificent puppy. Address with stamp, A. C. KRUEGER, Wrightsville, York Co., Pa. dec30,3t

Great Bargains in St. Bernards.

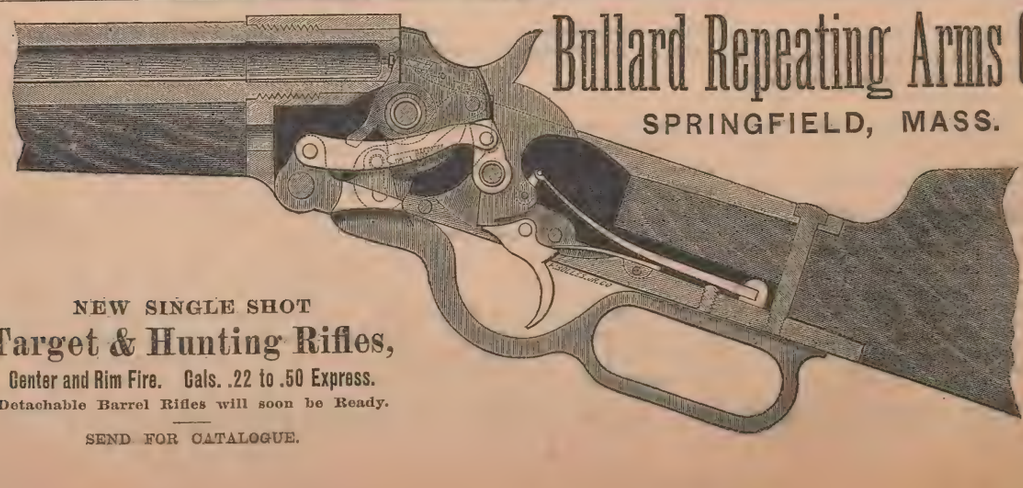
We offer for sale at the following extraordinary low figures the following Swiss St. Bernards:

Rough-coats, stud dogs: Barry I., Hadjar and Alvier at $200, $175, $175. Tromba, young bitch (had a litter of 9, 7 dogs, by Eiger, in Dec.), $175.

Smooth-coats, stud dogs: Wotan, a prize winner, $140; Semaphoic, a very typical, most promising young dog, $250. Bitches: Kader, Tresa, Tamina at $150, $250, $150.

The above is a bona fide offer, made low in order to close out, and is good for January only. The stock is of the very best that is to be had in Switzerland. All the specimens are guaranteed to be as represented, and are sure to make their mark either on the bench or as breeding stock.

Orders booked for a litter by champion Otho—La Duchesse (champion Duke of Leeds—Sheila); a few Hector—Belline bitch puppies left, for sale cheap. THE HOSPICE KENNELS,
Arlington, N. J.



FOR SALE.—NEWFOUNDLAND BITCH puppy from imported prize-winning stock. Will exchange for foxhound or beagle. HIRAM CARD, Elora, Ontario, Can. 1t

FOR SALE.—A FINE ENGLISH SETTER dog, broken, litter brother to Grover, who won 1st in puppy class, Hartford, 1886. Will exchange for B. L. shotgun of approved quality. Address THOS. CRUTTENDEN, Southington, Conn. 1t

WANTED.—A YOUNG BEAR DOG, HALF bull and half hound preferred. Send description and price to BEAR, Forest and Stream office. 1t

POINTER PUPS, SENSATION STOCK, ONLY $5. For particulars address J. P. GRAY, 172 Genesee st., Utica, N. Y. 1t

WANTED.—COLLIE BITCH EXTRA SPECImen, black and tan, finely bred, 9 mos. to 2 yrs. Address full description and lowest price, Z. MULLER, Penn and Rebecca sts., Pittsburgh, Pa. 1t

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, JANUARY 13, 1887.

VOL. XXVII.—No. 25. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price, $5 per year; $2.50 for six months.

Address all communications,

ANSWERS TO CORRESPONDENTS.

PITY IN A HOSTILE CAMP.

UP in the Northwest Province and in Alberta live the Cree Indians. Just south of the boundary line in Northwestern Montana live the Pegunny, a tribe of the once powerful Blackfeet nation. From time immemorial the Crees and the Pegunny have been bitter enemies. Many a bloody battle has been fought between them; many a horse-stealing party, sent out by one tribe against the other, has never returned, but, surprised by the enemy, has been killed; and the scalps have dried in the smoke of hostile fires.

In the days of the Riel rebellion in Canada, a number of Cree bands took side with the half-breeds. When the latter were defeated some of the hostile chiefs were tried and sent to prison. Others escaped, and with their followers have since been wandering far from the reservations, ever in fear of the Canadian Government. Soon after the rebellion was crushed out one of these little bands of Crees escaped over the line. It was led by Big Bear's Son. They tried hard to get along after the flight into Montana, but there is scarcely any game to be had there, and they had nothing to trade for provisions, so they were starving. Day by day they grew weaker; day by day their condition became more hopeless. Then the little ones began to die. They had at last to eat the few horses that were left. But the winter was just beginning, and they could see well enough that unless something were done they would all starve before spring. In their desperation they determined to go in to the Pegunny Agency and throw themselves on the mercy of their old-time enemies.

So one day the little company were seen straggling slowly and feebly down the bluffs toward the broad valley and the Agency. They had only two horses left; and the laden and hunger-enfeebled people came on at a snail's pace. As they approached they were recognized by the Pegunny, who wondered what had brought this little band of their enemies into the very midst of them. When within about 300yds. of the stockade, the Crees halted and began to sing the peace song. Then the Cree chief placed his arms on the ground and came forward and was met by the chief of the Pegunny. The Cree chief made a speech, telling his hearers of the miserable and desperate condition of his little band. The chiefs of the Pegunny replied; they expressed pity for the misfortunes of their enemies, and invited them to stay and eat. It was a most affecting sight to see the meeting of these people, and more than one man unused to tears brushed from his eyes the drops that sacred pity had engendered.

The Blackfoot Agent told the Crees that they could not remain at the Agency; that they were British Indians and could not be fed by our Government.

Then an old Piegan stepped out from the crowd and said to him: "Here is misery and starvation, people so weak and hungry that they can hardly stand; yet you keep them talking. Why not have a little pity in your heart? Let them alone and we will take care of them."

So the Pegunny, their lifelong enemies, took the Crees away to their lodges, fed them, cared for them and kept them.

Who after this can say that an Indian has no feeling?

AN AUDUBON MAGAZINE.

THE methods of personal letter writing and circular distribution, heretofore adopted by the AUDUBON SOCIETY, have proved inadequate to keep pace with the growth of the movement, and now the SOCIETY is to have its own special medium in the world of journalism. The *Audubon Magazine*, devoted to extending and building up song-bird protection, will be published in the interest of the SOCIETY by the Forest and Stream Publishing Co. The special purpose of the new monthly will be to advance the work already so well under way, give stability and permanence to that work, and broaden the sphere of effort in such directions as may with reason suggest themselves. Ornithology, discussed in a popular way, will, as a matter of course, take precedence over other subjects of natural history, to which the pages of the new magazine will be largely devoted, but it will treat of outdoor life and animated nature in many forms. The price has been made merely nominal—fifty cents per year—and that is the only cheap thing about it. The first number, for January, will be ready shortly. We bespeak for the *Audubon* a generous welcome and the full measure of support it must be entitled to.

The AUDUBON SOCIETY will hereafter grant admission to associate membership. This step is taken out of deference to the expressed desires of a large number of persons who are in hearty sympathy with the SOCIETY in its aims and in all of its methods except the pledging of members. For one reason or another such persons do not care to sign the Audubon Pledges. They will, however, be glad to lend to the work their influence and active aid, and it is therefore desirable that they should in some way be recognized.

THIRTEEN DAYS.

THE city of Brooklyn is the second in point of size in America; at its present rate of growth it promises to be the first. And this great city has a game protector. This official is Mr. Geo. W. Whitaker, who lives at Southampton. The distance by rail between Southampton and Brooklyn is ninety-one miles, and the schedule time is 3hrs. 28min. By a game protector's route the distance is ninety-one hundred miles, and the schedule time thirteen days, barring snow drifts and freshets. With an officer who is sworn to enforce the law liable to swoop down upon them in such swift flight, Brooklyn dealers in illicit game are naturally wary, and they lay in only such a supply of snared ruffed grouse as they have reason to suppose can be sold within a month or two after the season has closed. In an hour's stroll through Brooklyn streets one day last week fourteen different shops were noted where ruffed grouse were unlawfully displayed for sale. This was several days after the close of the season as well as several days in advance of Game Protector Whitaker's visit, which, if all went well, might be expected on the thirteenth of the month.

According to schedule time, the protector is due in Brooklyn to-day. Whether or not he arrives there on time, and whether anything startling happens to the illicit grouse dealers, will be told in our next issue. In the meantime, it is suggested that a Long Island game protector who consumes thirteen days in going from Southampton to Brooklyn is as much of a success as the New York city game protector who patrols the markets blindfolded.

SNAP SHOTS.

THE Kentucky Court of Appeals has just rendered an interesting decision in the case of one Hazlewood, indicted for dog stealing. The lower courts decided that a dog was not property and hence not a subject of larceny. The Appellate Court has overruled this demurrer and decided that dogs are property. The text of the opinion will be given in our next issue. The Mount Vernon, N. Y., treatment of dog thieves, reported elsewhere, ought to be emulated.

The present season, with its generous snow falls, is beginning to be spoken of as a "regular old-fashioned winter." There have been a number of ice storms, and these are always trying to the game. In many sections of New Hampshire and other parts of New England there is a heavy snow crust and the trees are loaded down with ice. It is a good time to note how the grouse fare under these circumstances, and we shall be glad to have reports on these points.

The Michigan Sportsmen's Association's convention at Lansing next Tuesday ought to be well attended. Michigan's game interests are now practically in the hands of market hunters, and it will be the special effort of the Association to secure the long needed game police force. Governor Luce, in his message, recommends that a lake fisheries warden be provided, so that the work of the fish commissioners may not be frustrated by greedy netters.

Mr. H. H. Briggs, one of the editors of the San Francisco *Breeder and Sportsman*, has this year attended the Western, Eastern and National field trials, having judged at the first and reported the others. He is now on a tour of inspection among the prominent kennels of the East. Mr. Briggs has everywhere made many friends, and his visit will do much to bring into closer relationship the sportsmen of the Atlantic and Pacific coasts.

These are three words to remember: Abolish Spring Shooting. They are words which will have a queer sound to readers of the FOREST AND STREAM in 1987, for by that time the average American sportsman will be blessed with sense enough to permit breeding game to pass northward unmolested to its nesting grounds, and no one will then dream of spring shooting, nor quite comprehend how we used to kill birds about to lay eggs.

"Bike," the pet bear of the Missouri Bicycle Club, of St. Louis, is dead. In the brief period of his gentle captivity he had found his way to the hearts of his proud possessors, and how poignant is their grief at his untimely taking off is pictured in the paper they send to the FOREST AND STREAM. Meanwhile our own winsome grizzlies are pursuing their seductive gambols in the pit at Central Park.

How all-embracing in geographical range is the FOREST AND STREAM has just been shown in a pleasant way by calls received at this office, in four successive days, from Dr. R. C. Hodges, of Galveston; Mr. H. H. Briggs, of San Francisco; Mr. Henry J. Thayer, Secretary of the Massachusetts Fish and Game Protective Association, Boston, and Commodore J. U. Gregory, of the Quebec Y. C.

The New York genius who has set out to eat forty quail in forty days, beginning Jan. 5, has doubtless devised some plan to crowd his forty days into the present month; or perhaps we are to see a repetition of the quail-devouring feat in close season that made such a scandal here two or three years ago.

The annual dinner of the Massachusetts Fish and Game Protective Association will be given at the Parker House, Boston, Jan. 25. The fish commissioners of New England are expected to be present, with many others interested in the work of the Association.

Brant are reported in great numbers on the waters of Accomack county, Va. A correspondent writing from Mappsburgh says that gunners are killing the fowl "right and left," and several barrels of spoils have been shipped from that station.

"Nessmuk's" book of poems, "Forest Runes," will be a larger book than was anticipated. It will approach 200 pages. We hope to announce its appearance from the press very soon.

The Sportsman Tourist.

A DAY OF DECEPTIONS.

TERRITORIAL nobility among the Normans is clothed with the glamour of distance. The man severely scientific, who seeks the origin and growth of things, can find a similar idea developed among our own frontiersmen, in spite of the fulminations of the Constitution. Heroes of imagination (too often their own imagination), such as Jim Baker or Joe Bridger, have arrived, indeed, at that eminence of rank which is distinguished by a free use of the Christian name, as is seen in the European examples of William Rufus, Rob Roy or Julius Cæsar, but the height of renown is gained in the West when some aspiring hunter gets a "hole" named after him. The eponym of "Jones's Hole," for instance, goes down to history in connection with as large and, perhaps, in the future, as important a tract of land as John of Gaunt or William of Nassau.

For the word hole is elastic. The puncture of a pin is thus called, and the opening at the North Pole, which leads to the inhabited regions in the center of the earth, is called after its discoverer or inventor, "Symmes's Hole"—but with the possible exception of this last, which has not been exactly measured, the largest regular holes in the world are those which in the Rocky Mountains carry some trapper's name. Group together the holes of Burns, Brady, Jones and the rest, and we have a mighty State. Taken separately, each is as large as a Dakota county. For in the West, where things are broadly done, if the people once give you a hole, it will be no petty sink, but the valley of a great stream, fed by many tributaries, holding within its borders peaks and ranges of its own, and only required to be separated from the rest of the country by a mountain wall or a clear-cut watershed. Such is Jones's Hole, on one of the tributaries of the Missouri.

Probably the depression is twenty miles long and ten miles wide. As you approach the region you see across the rim of the rolling sage-grown mesa a vast pyramid of grayish white color, four-sided and regular nearly to its base, so as to look like the work of the lifetime of a vanished race. Further on a great bare butte juts into the basin, with only a few groups of stunted trees to relieve its dusty glare. You are amid typical bad lands, where the few trees are but withered dwarfs, where the scanty grasses fail to cloak the yellow clay that clings to your foot like a fetter when even a little moist. Far down near the mouth of the creek rises an isolated mass of tertiary strata, whittled into a thousand sharp and spindling forms by the recurrent storms of many ages. If you are a lover of Lowell you think of his comparison of the Milan Cathedral—

> "where Milan's pale Duomo lies,
> A stranded glacier on the plain;
> Its peaks and pinnacles of ice
> Glittering with many a rare device."

The strata are tertiary, and that I know, because a friend who is acquainted with *Brontotheridæ* found one there. Perhaps he said the strata were cretaceous. In that case they are so; but as this cathedral seems to have been built "not for an age, but for all time," we will not date its origin too precisely.

Now comes the incident to which the above description is but a prelude.

We were three. West, long chief of the Crow scouts, Bird, a scientist whose light is veiled only by the bushel of his own modesty, and myself, sometimes known as the Miner, because of my abortive attempts to grow rich in that calling. My two companions, hardened and expert hunters, smilingly watched me missing, or perhaps now and then bagging, an antelope. My intemperate zeal pleased them. They could remember shooting at those things themselves, but regarding antelope now as mere lumber equivalent to jack rabbits, with an unpleasant musky taste, they reserved their shot for the blacktail, whose country we were invading; and to say the truth, when the deer were found they got them.

We had wandered down the rim of Jones's Hole till at last we camped in a neighboring bottom not far from the Cathedral Butte.

Away across the river beyond the rolling sage prairie, beyond the limestone ridges with their cedar groves, rose the sloping lines of the water shed opposite.

The stream, hidden in a deep, narrow gash, showed no break in the sweep of the strata. The broad, upturned edges—red, yellow and brown—stretched from one crest to another, with not a line or shadow to show the distant spectator where the crack opened for the river to pass. Really the cañon ran through the heart of a lofty, naked hill. For 2,000ft. the narrow wall rose over the water, which crept along so hidden by fallen boulders that one could catch no sparkle of the current—a grand and impassable gorge; but this we failed to see because of the want of signs visible from afar.

I myself rode off toward the river in the afternoon, while the others looked for game; but the sun dropped faster and faster toward the hills, the increasing wind blew colder and colder, and I turned to join the hunters and help them perhaps to pack home a deer.

As I neared the Cathedral Butte a shot came echoing up from the steep, cliff-girt valley, seeming to grow louder and louder and then dying again, like batteries fired in succession down the line of a long army.

I hastened to the verge, and after some time saw a dark object on all fours. It seemed a bear mangling its prey. Now and then it would rise erect and stand for a moment, then busy itself with the victim on the ground. At so great a distance it was safe to fire, safe, in fact, for us both; but being anxious not to run the risk of frightening a friend, I took another look and decided that my bear was West cleaning a deer.

The ground between us could be traversed only by a bird or goat, but I tried to shout a few questions and thought that the hoarse echoes brought intelligent replies. In the light of future events, I must admit that the answers were framed out of idle wind by my own fancy.

With a parting shout, pieced out by pantomime, I informed my friend that I would fetch a compass, go around the butte and come down on the other side. This was managed by spurring my pony up to the divide behind and then pulling him down the steep opposite incline by the bridle. He didn't want to follow me, but the friable soil gave him no firm hold, and by a gentle pull I could start him sliding.

In this way we made the circuit of the entire butte, but when the other side was reached there was no deer visible and no hunter, while my pony, perched on the cliff side, looked almost as unsupported as a bird. At last, far down the gulch, I saw a man moving, and him I hailed: "Have you got a deer?" "Yes," broke out from the hillside, with the tone of a cannon. Now, West is not a large man for all his strength, and as he was a mile away, I was the more struck by the power of the sound. And now back and forth were bandied question and reply, as I sought to find where the deer lay. The answers were always swelled to a small-volumed thunder by the time they reached me, though at times a little indistinct. Meanwhile West had gone from sight, leaving only his bodiless voice on the premises, as I thought; but as I had been instructed that the deer lay near me, and as he thought of taking the game home on his back if I could not bring my horse down, I summoned a proper pride, jerked the bridle and slid round a projecting point with my horse at my heels. And there, not one hundred yards from the place whence I had been bawling, lay the deer and its slayer, not West at all, but Bird, who, as well as I, had been keeping up a colloquy, as he thought, with the distant West, while the latter, who at times had us both in view, was partly puzzled and partly amused at our game of cross-purposes.

It was very dark when we got to camp with that deer. The wind was stronger and colder than ever, so that our prospects of sleep were poor, but West, with an energy equal to so good a cause, set us to work raising the tent, and after a stout struggle with the wind our house was built and our peace secure. H. G. DULOG.

"BIKE."

IT now becomes my duty to write the second and last chapter of his story; the first one of which appeared in these columns a few weeks ago.* It is with a feeling of sadness and remorse that I recall my part in his experience. And if there is aught in his story to lessen my regret, it is the circumstance which first excited the emotion within me—his illness and untimely death. His short life is a sermon in behalf of the heart's affections, whose mute eloquence must always appeal to those who knew him best and who brought him away from his own people, never to do the like again. During his last illness, which lasted through a fortnight, he was well cared for by almost his best friend, Dr. Keith, who was with him often after his condition became serious, and who did all that a kind but misguided physician could to save him. I say misguided, because of an incident of the night before he was attacked by his severe symptoms. It had not yet occurred to me that a bear could desire anything more than a life of pampered captivity in St. Louis. It was late, and everybody had gone home, when I, on my way thither, dropped through the Club House to the tennis courts to see him. There was a suspicion of rain in the atmosphere, and many clouds were in the sky, constantly obscuring the moon in their feverish haste toward some tempestuous rendezvous. I found him hastily, nervously pacing the semi-circular track his feet had worn so smooth at the end of his chain, now and then giving expression to his feelings in a suppressed whimper like that a child makes in some lasting pain or grief. And when he saw me he struggled to his feet and strained at his chain until I reached him, when he put his paws in mine, pointed his sharp muzzle upward as he looked searchingly at me, and gave vent to a howl that was half a moan of sorrow and half a sob of comfort at seeing a familiar face above him, and feeling a familiar hand on his woolly pate. I had expected to go out there a minute and say, "Hello! Bikey, old fellow; how's your stomach?" —that wonderfully elastic and abnormally distended organ being a constant source of wonder and amusement to us—and then go home; but there was something in the tone of his voice that night that stopped me, and I stood there a long while without speaking, the silence being broken only by some straggling raindrops and his short and plaintive whimperings.

And while my eyes sought the moving sky, my mind, moved by that strange alchemy which sometimes extends its influence over man and beast, rendering the confusion of tongues betwixt them of no avail in the presence of a sympathy that bridges their intelligence together, betook itself to the mountains, up, up miles above the Vermejo Plaza, until there arose against the sky the ghostly outline of a mountain, the crevices of whose summit held banks of snow, but whose sides held many a sheltered patch of grass and willows. And down its side in one of those luxuriant fields, my mind's eye perceived a group of clumsy, velvety animals disporting themselves in the moonlight, snorting and sniffing in the cool and rarified night, in that contentment which, it seems to me, reigns nowhere on earth but over wild beasts safe from mankind and hunger. Apart from the large forms I thought I saw two little baby bears—children bears—in a little nest they had there in the grass, rolling over and over each other in mimic semblance of snarling rage, from underneath which surface play there came a steady stream of bearish hilarity. And the little she bear that bit and scratched the harder, making her brother the more realistic in his rage, was well nigh hysterical in her delight, and the little he bear, thus reduced to anger, became fairly intoxicated in his glee.

And all at once, when these happy little bears, moved by a common instinct, had at length scampered over to their dam whose udders called for their unctuous attentions, this little bear of ours, giving a desultory side bite at my trousers, made me look down at him standing there against me on his groggy legs, shivering, twitching, perplexed, awed by the mystery of some pain that was making him suffer. For pain afflicts with double severity those who have not only been unused to it themselves, but whose ancestors were strangers to it. And the little bears in bearland faded away and I involuntarily exclaimed, "Poor little devil!" and after a while left him.

The next afternoon a great many ladies were at the club. Some playing tennis outside, while others inside helped brothers and husbands to gaily decorate their cycles with parti-colored ribbonds and Japanese lanterns in preparation for the morrow's parade. And little Bike, stretched out on the mat in the gymnasium, appeared sluggish and distrait, and many a warm-hearted girl—his friend—deplored the unwonted indifference to the apple she had brought him, sadly turning away to her work with the wish that physicians, who know the art of healing, also possessed the power to save life.

But the Arabs of the desert say that there are two days when it is useless to arm ourselves against death: the day when God orders Azreel to strike us, and the day when he forbids him to approach us. And to-day orders had been given him, so that, in through the open door, past the groups of gentle women, perhaps rustling a rose-hued ribbon here and there, came Azreel upon his mission.

And up in the high mountain fields the little children bears again absorbed themselves in childish glee, and beside the little boy bear and the little girl bear, his sister, there was a little tame bear from the low country, a little orphan, cousin bear, and may the God of bears rest his soul and give him a life of never-ending play!

In his death, the club lost its most unregenerate member. Precept and example, threat and entreaty, had alike proved futile in his behalf. Selfish, greedy, irascible, quarrelsome, and even now and then dangerous, he left behind him the paradoxical spectacle of a wide group of disconsolate friends. Never before had Satan succeeded in making vice so lovely. A single virtue would have rendered it possible for us to forget him, one noble deed for us to have traduced him. AHRIMAN.

ST. LOUIS, MO.

*FOREST AND STREAM, Oct. 7, 1886.

A WOOD ROAD.

IN an unfrequented, desolate place, a cart road branches off from the highway and plunges into the forest, to degenerate into an abandoned woodpath, a brace of unkempt, strolling wheel tracks that ramble on together over all sorts of obstacles and into all manner of inaccessible places, with an utter want of regard for the proportions of any vehicle that might choose to follow.

First among chips and stumps and tangled underbrush into a growth of saplings, where they thread their way with increasing difficulty among the encroaching stems, for here and there a little one has found a footing in the pathway, and the larger ones are pressing forward to weave an overarching grasp and question the right of way. Then clattering recklessly down the hillside, they enter the solemn, deep-toned woods, and go jolting cautiously over stony places, or sinking along through fern-fringed, loamy ruts, that sometimes stray among patches of perennial green, or crush through beds of woodland berries; then turn aside to avoid a boulder, glide under a fallen log, and disappear in a dark, glassy pool that holds a miniature forest in its bosom. Emerging all black and dripping, their identity is lost for a time where a pile of brush was strewn to corduroy the swamp.

There is a place where the forest draws back on either hand from a pleasant intervale that stretches away toward the foot of the hills, where a brook comes hurrying through, sweeping past beneath a primitive bridge of logs. In the autumn it has time to pause, and then comes back, rising higher and higher, till the cranberry meadows are all a winter lake.

There are long sunny stretches, with endless perspectives, among the pines, where the wind in the topmost branches is quietly strewing a carpet to mend the gaps where the ruts expose the stratified layers of years. The vast, funereal silence that dwells here reigns so supremely that every movement of Nature is hushed in so strained a stillness you might almost hear the footsteps of Time, save when a muffled flight of wings rises in the distance. No life is visible, but there are traces among the roots and stones where some shrewd-nosed creature has been burrowing.

The journey ends in a deep solitude where some slight evidence still remains that the hand of man was active here many years before. No trace of a dwelling is seen, but down in a hollow some few relics remain of a former attempt at a New England orchard. The boundary wall, which once kept out the advancing forest, has tumbled before the onslaughts of successive generations of youthful nimrods, and now the fruit trees mingle with the native growth in democratic confusion. The former, however, are sadly in the minority, and many have given up the struggle for existence, to lay themselves down a pile of crumbling branches.

Some few in favored spots are keeping up a show of former prosperity and the topmost branches are flaunting their shriveled fruit, but a numerous progeny of suckling shoots crowding about the parent stem are threatening to absorb its little remaining vitality.

One spreading monarch, the patriarch of them all, has long been dying by inches, till now he stands from sheer force of habit. The sap receding from his ancient frame left the limbs to be stripped and mutilated by the wood birds like vultures around a wounded carcass. Altogether a melancholy spectacle. JEFFERSON SCRIBB.

TRAVELS IN BOON GAH ARRAHBIGGEE.

FROM THE DIARY OF JOSEPH GOATER.

EDITED BY F. H. TEMPLE BELLEW.

(Continued.)

* * * WITH the exception of the huge plantigrade I had so fortunately depatched with a single shot in the eye under the palisades, we had not so far met with any beasts of great ferocity or size, still we kept a sharp lookout in all our excursions against surprises, not knowing what might turn up at any moment. Indeed there were vague traditions among the native islanders, of huge and dangerous monsters somewhere in the region, lying further north. It seemed that their ignorance of this part of the country was attributable to a dread of encountering some enemies with whom they were unable to cope, and it was only their unbounded faith in the Little Goorta (myself) and his fire sticks (rifles) that gave them confidence to venture so far as they had already done. The mainland natives, of whom I had only two with my present detachment, not having any traditions, though far less courageous and efficient than the others, had no special fears, on the principle of the old sea captain's motto, "Them as knows nothin' fears nothin'."

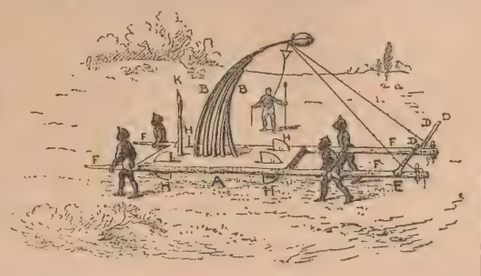
We did not make many excursions to that hive of animal life, the cliffs, having so many other places to explore in different directions; but I fully intended before leaving the neighborhood to make a thorough inspection of this colony, taking with me my warriors in full fighting rig,

and all my attendants properly armed. On my last visit to the spot I found the skeleton of the plantigrade (a very powerful one) completely bereft of every particle of flesh, and lying bleached and weird among the flowers and sweet grass; but as yet I had seen no second one of the species, though I did not doubt of there being more hidden

THE WOF.

in caves along the base of that wonderful palisade. In some of our excursions, eight or ten miles from camp, we had several times caught glimpses of huge herds of antelope or ibex, but we could not get near enough to them for a shot, and having so many other things at hand to attract our attention, with abundance of game to supply the camp, I deferred any attempt at trapping them.

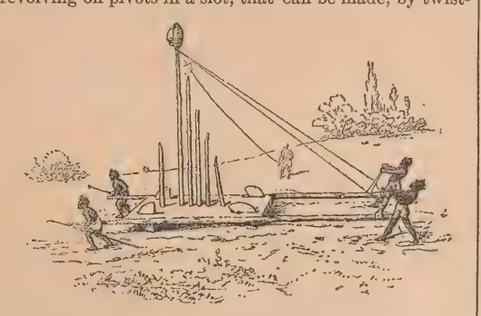
Though we had met with no other large beasts but the plantigrade, we had observed in several places what appeared to be the foot prints of some animals of unusual dimensions, but on this point I was not too ready to form a positive opinion, having noticed that with some leaping creatures, such as squirrels for example, by coming down with their whole body and all four feet together, they left an impression in the snow, or mud, resembling the spoor of a monster. Indeed one queer little creature I met led me to suppose that this might possibly be the case with the mysterious marks I refer to. The little creature I speak of was a one-footed animal, whose mode of progression was entirely by bounds. The two hind legs of this anomaly were welded together, as we sometimes see in *lusus naturæ*, joining in one large foot with nine toes, the middle one being very broad and powerful. This was really two feet welded together like the hind feet of a seal. The skeleton exhibited rudimentary fore legs, but they were quite invisible outside the skin, though they may have helped the animal somewhat in rolling over or in adjusting its position when lying down. The natives named it *Wof*, or "foot." It was a marsupial and very gentle in its nature. One we caught and tamed became a great pet, displaying much affection for those who treated it kindly. The little thing slept in my tent and would hop up on my bed in the morning and root under my head with its pointed nose until I noticed it, then it would nestle down, quite content, until I chose to get up.



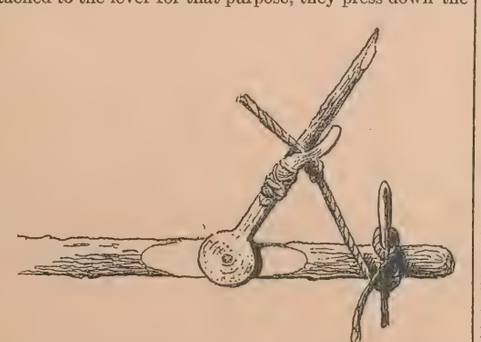
One track I observed puzzled me as well as my attendants exceedingly, appearing at times like the footprints of three animals moving side by side, while at other places two of the tracks would be discontinued, but would commence again further on. I at first supposed them to be the tracks of some marsupial animal and its young, the sudden discontinuance of the tracks being caused by the parent taking up its progeny from time to time and carrying them in its pouch. But more of that anon.

MYSTERIOUS SPOOR.

At present I must refer to another manifestation that caused us much anxiety, keeping us in a continual state of uneasiness, since we could get no clue whatever to the mystery. In several of our wanderings, when skirting the dense jungles of the hookera thorn, we had frequently seen two flaming eyes glaring at us through the bushes. We saw them mostly in the evening toward dusk, but could distinguish no part of the animal to which they belonged; but, judging by the size of the orbs and their width apart—at least eighteen inches—the inference was that the creature must be of gigantic proportions. Several times I gave it a shot from my Reilly No. 10, but without any effect whatever; neither could any subsequent search discover the slightest traces of blood or footprints. The nearest approach to any response from my fire was once a muffled groan or sigh and a slight rustling among the branches. If this should prove to be some huge monster of the gorilla or leopard species, endowed with such cunning and secrecy as to defy all our efforts at detection, and at the same time protected by a hide or armor of such strength as to resist my No. 10, it would be truly a most terrible enemy. That it was not one of the plantigrades I felt certain, since the eyes of the latter were set very close together, and their movements (judging by the one I had killed) both bold and aggressive. The very mystery that shrouded the creature made it the more alarming, and caused me, as well as my attendants, many a heart throb, as wending our way homeward through the lovely woods at twilight, the sudden snapping of a branch or bound of a night hare would break the stillness. Weary at last with the nervous tension caused by the discovery of this animal, I determined to concentrate all the energies of my force, and bring all the resources of my camp to accomplish a solution of the mystery. I had recently sent Poptee and one of the mainland natives in the canoe on a mission to our entrepot, of which Dope Yeukta had charge, 100 miles above Pluckella, for a fresh supply of ammunition and other necessaries, so that I was well provided with the appliances of war, including some large, strong nets of gobwich, which Dope Yeukta had had made during my absence, and which I found wonderfully useful on the present occasion.

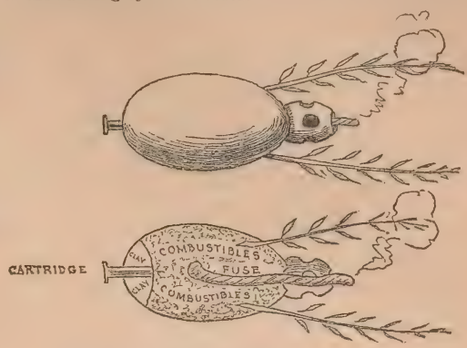


Poor Dope, my messenger, found him in a terrible state of mind, not knowing what had become of, and fearing that we had all been devoured by some of those terrible monsters he had learned to dread from his infancy upward. He fairly shed tears and rolled on the ground with delight on learning that the "Little Goorta" was sound and well, and doing wonders with his blow-up stick.* Among other things he forwarded to me was a fixed Khi-goorta, or species of catapult, capable of throwing a stone of fifty pounds weight, or a gourd charged with combustibles. This also proved of inestimable value in rescuing us from imminent peril of death in our forthcoming encounters. It may be well to pause here to give



a short description of this rather curious machine, the better to understand the part it played in our subsequent serious engagements. A reference to my sketch will aid materially in conveying an accurate idea of its construction. A represents a heavy plank. B B are five long wands, or rods, made from a peculiarly elastic wood that grows abundantly on the island. These are firmly planted in

the loose board at a distance of about 3in. apart, and vary in length from about 6ft. to 25. C C are two ropes of gobwich with knots at intervals of 12in. apart. D D are two levers working on pivots at E E on the handles, F F, the handles being for the purpose of enabling the bearers to carry the machine. H H H H are four semi-circular legs revolving on pivots in a slot, that can be made, by twist-



ing them around, of any length desired, so as to get the machine level on uneven ground. K is an elastic wand to check the recoil of the wands, B B. When placed in position the spoon of the longest wand is loaded with a stone or bomb. Then two men grasp the levers, D D, and fixing one of the knots of the rope in a crotch attached to the lever for that purpose, they press down the

levers as far as they will go, and then make the ropes fast around belaying pins in the handles, F F. Then they repeat the motion until the wands or propellers are drawn down as far as desired. At first this motion is done alternately for the sake of rapidity, but the last two or three pulls, where greater resistance is offered, the motions are made simultaneously. When it is desired to discharge the piece one of the artillery men pulls a string attached to the spoon, so arranged as to immediately release it, and the missile is sent flying to its destination with great force.

In our coming foray on the monster with the glaring eyes, I resolved to use bombs as projectiles to launch from the Khi-goorta. These I constructed from some large gourds, filling them with combustibles of a resinous character and a good-sized cartridge of gunpowder that would explode either by concussion or by the action of the heat generated by the other combustibles. A torch and slow match combined served to ignite the whole affair, and this my men christened "Kerry berry Goorta bomb," or the barking eyes of Goorta.

SECTION OF KERRY BERRY GOORTA BOMB.

As will be seen by my sketch, the projectile is constructed of two gourds, the larger being filled with combustibles, and the smaller, perforated with holes, serving as a protection of the fuse in passing through the air. Four long palm leaves act in the capacity of a tail in directing the flight of the missile.

*The natives gave my rifles all manner of names. Bit of thunder, long finger, fire stick, blow-up stick, and extra long mouth, or clock hoong bok. The latter because it resembled, while it excelled, the tube through which they blow their darts.

WHAT A BIRD SAID.

FROM our standpoint what poor insignificant things you human beings are, compelled to creep about upon the earth's surface like snails, while we, mounting upon our wings, soar even above the clouds, and, upon the first sniff of winter's icy blast, hie away to sunny climes, there to rollick and gambol amid perpetual flowers and spring! How often we have hovered over your heads, chirped our farewell notes, and were often on the point of saying "come," but then came the sad thought that if we trudged along at your poor pace, winter's storm would catch us both. Yes, you can mount in the air by aid of gas and silk, but when there, you are at the sport of the wind. You know not in what direction you will fly nor where you will light. Why, even our foolish sandhill cranes, who are by no means the smartest of our race, float among the clouds as securely as you walk upon the ground, go where they will, remain in the air as long as they please, and alight upon the spot of their choice.

Oh, yes, your lightning express, we know about that. You "fly," you say, and we suppose you imagine that you do. Now, we never bet, but if we did, we would wager that the whistle wing duck and barn swallow will start with your lightning express at New York city, fly around it in circles one mile in diameter, leave it at Buffalo, and be quietly adjusting their feathers in Chicago before your lightning express whistles for Toledo. Yes, you can cross the ocean—that is, in fair weather, when the wind is in the right quarter; but we heard one of our sea gulls the other day, in company with a stormy petrel, laughing above your wrecked ship, poised as they were upon safe wing above her, as she stood on beam ends and above the waves that you said were rolling mountain high. Oh how we pity you, poor foolish, foolish mortals. You say that you have a soul, but from the way you treat us sometimes, we doubt it. Lovely women, who are indeed the fairest and best of your race, wear the skins of the most beautiful of our species upon their bonnets without blush or thought of pity. The boy wantonly destroys the nest of the mother bird, while the sportsman, with breech-loader, hurls destruction to half of a happy little family of quail, and thinks that he is more merciful than the pot-hunter, because he flushes them and kills them one at a time, instead of wiping them out at one blast from an old muzzleloader, as they sit in a huddle on the ground. Yes, you may have a soul, but will you swear, with all your boasted philosophy, that we haven't one, too?

ROBIN A. DARE.

CAPTIVE MOOSE.

WHEN Mr. M. Welch was traveling last August through the woods on Big Black River, one of the branches of the St. John, he came upon the dwelling of an Indian, William Nichols. This Indian lived with his family of children in a log hut close to Big Black River, about thirty-five miles from its junction with the St. John. He was farming a little piece of poor, sandy land, in which he had a few potatoes planted, as well as a little buckwheat and oats, and he was cultivating in addition to this a little garden. His whole stock consisted of two young moose about the size of colts six or seven months old. These he fed on the leafy branches of poplar, mountain ash and birch, the poplar leaves being preferred. Occasionally the captives were treated to an armful of the Indian's oats, which they relished well. In the daytime they were turned out to feed, and when night came on were taken into the little yard surrounding the house. Nichols had been accustoming them to the restraint of the bridle. One of the children used to lead them about, and Nichols told Mr. Welch that he expected to be able to drive them out to the St. Lawrence this winter. The account which he gave Mr. Welch of their capture was as follows: One night last May he was in his canoe on Depot Stream, a branch of the Big Black River, when he heard a large animal splashing in the water. Cautiously and silently paddling up as near as he could to where the sound was without being discovered, he fired in its direction, and found that he had desperately wounded an animal which proved to be a cow moose. He dispatched her with his knife. The little ones were with the mother. These he placed in his canoe and carried to his camp, where they had been ever since. EDWARD JACK.

FREDERICTON, New Brunswick.

FLORIDA BIRD NOTES.

EAGLES, HAWKS AND OWLS.

THE winter and spring of 1885-6 was spent by the writer in the vicinity of Tallahassee, Florida, for the purpose of collecting specimens of natural history. I shall endeavor in these papers to give correct observations of some of the principal birds found at and near this place. Florida for many scores of years has been a paradise to the ornithologist. The most beautiful species to be found on the American continent to-day are found there, and some that at one time were comparatively abundant throughout the South are found only in some of the impenetrable swamps of this State. Where thousands existed twenty years ago, you will only find scores now; more especially is this true of the birds of plume, such as the heron, egret and others. Tallahassee is located midway between Pensacola and Jacksonville, about twenty miles north of the Gulf of Mexico. This portion of the State is known as the hill country of Florida, and it is justly entitled to the name, for the surrounding country is very hilly, and Tallahassee itself is built on hills. The country is heavily timbered with yellow pine, and in the lowlands and marsh are found the cypress, bay, gum, magnolia, live oak, water oak, palmetto, and many other kinds of trees.

Among the hills surrounding Tallahasse are many lakes noted for their beauty, where any who like to fish with rod and line can find good fishing almost every day in the year. Wildfowl abound here, especially in the winter months. The principal ducks are the mallard, pintail, wood duck, hooded merganser, blue and green winged teal and ring-billed blackhead. Lake Jackson, lying north of town, is the largest lake, being twenty miles in length and from one to four miles wide. East of Lake Jackson, and four miles from town, is Lake Hall, or Crescent Lake, about two miles long and half a mile wide. Lake Lafayette lies three miles north of town. It is three miles long and one mile wide, and is located on a large tract of land, given to the distinguished foreigner whose name it bears by the United States Government. Lake Bradford, lying four miles southwest of town, is a beautiful sheet of water, about two miles in diameter. In addition to these principal lakes are hundreds of smaller ones, varying in extent from a few rods to several miles. Some are clear and deep, others shallow and grown up with rushes and lilies, affording excellent feeding grounds for the number of aquatic birds that visit them. In the winter you will find the birds that migrate north regularly, but when spring opens and these winter visitors have gone northward, their places are taken by other species that have been wintering still further south.

Among the birds of prey to be found here none are more abundant than the white-headed or bald eagle, which breeds abundantly about the lakes and rivers. Any person visiting any of these lakes can see these birds daily perched on some tall dead tree or flying over the surface of the water watching for fish, which is their principal food. Their nesting places are usually the tallest pine trees that can be found. On the west side of Lake Jackson, half a mile from the shore, and about five miles from town, is one of the loftiest pine trees in the State. It is situated on the bank of a deep ravine and in its top is a very large eagle's nest that has been occupied by a pair of these birds for many years. On March 13, 1885, a gentleman from Cincinnati shot the male bird; the nest then contained young. I visited the place a week later and found the female had secured another mate. On Feb. 2, 1886, the nest again contained young. I shot the female bird and could easily have killed the other, but not wanting the young to perish it was spared. Four days later, on visiting the eyrie the remaining bird was found to have a mate. The bird I killed was an adult in mature plumage, and the new comer was a young bird in the gray plumage, probably two or three years old. I had made up my mind several times to attempt to climb to the nest, and on this occasion I was provided with a pair of steel climbing irons with long spurs. The tree, 5ft. from the ground, measured over 13ft. in circumference and it was fully 80ft. to the first limb, which was broken off about 8ft. from the trunk. I was also furnished with a heavy wire which I passed nearly around the tree and formed a loop for hand holds; by throwing the wire upward a few feet at a time I ascended easily to the broken limb, but was obliged to stop there as I could not get my wire above the limb from the opposite side, and as the tree at this point leaned considerable it was impracticable to pass around to that side. After several attempts the task was given up. I had climbed many trees in different parts of the country; some very lofty ones, and never met my match until I tried the mammoth yellow pine on the shores of Lake Jackson. I could have climbed to this nest by providing myself with some long, sharp steel hooks to use in my hands instead of the wire, but as the nest contained young, and not the set of eggs I so wished, I gave this pair of birds no further disturbance. Further up the lake on the same side, is another nest that has been used for many years. This pair has not been persecuted as much as the one just spoken of, and they are therefore not so wary. About one mile north of Lake Hall is an old nest, not in use now, but up to the winter of 1884-5 it had been used for many years. It was placed in a pine tree about 60ft. from the ground, and not over 150yds. from a dwelling house. The man living there told me he had climbed to the nest many times, and that he always found two eggs or two young. In the spring, 1885, he went to shooting the old birds after the eggs were laid. He said he never killed more than one at a time, and the other would always get another mate in from three to five days. During the rearing of the brood he said he killed five. After this kind of treatment they went to the south shore of the lake, and in an immense pine constructed another nest. This pair especially seemed not to fear man, for the new nest is not over 200yds. from a dwelling.

I visited the nest March 20, 1886, and found the young had already left the nest. Walking down to the shore of the lake I saw one of the old ones, that frequently came within 50yds., uttering loud screams. It was soon joined by its mate, and both were very uneasy on account of my presence. Looking around carefully I found both young sitting in a small grove of live-oak trees. They were already very shy and almost as difficult to approach as the old ones. These small inland lakes are a favorite resort of these birds to breed; the waters of the lakes abound in fish and they are easily taken. Very seldom will you find more than one nest near a lake unless the lake is large. They are very jealous of their feeding and breeding grounds, and drive away all intruders. Although fish is their principal food, I have known them to capture other birds.

Once while hunting on the Wakulla River my attention was attracted by an eagle in pursuit of a duck. The duck was trying to escape its deadly enemy by swimming and diving; but wherever it went, either on the surface or beneath, it was closely followed until, coming once more to the surface to breathe, it was seized and carried away to the woods. Another time I observed several feeding on the carcass of an ox, and a friend of mine shot one while it was feeding on a dead sheep.

Five miles from Tallahassee on the south shore of Lake Lafayette, is another nest in a cypress tree. This is the only nest seen that was not placed in a pine tree. On a small island in Munson's Pond, eight miles southwest of town, is another nest that has been used for many years. On the west shore of Lake Bradford is still another. These are all the nests that I noticed in the immediate vicinity of town. About eight miles above St. Mark's, on the St. Mark's River, are two more nests in use, and a third in a dead tree that is deserted. About two miles above St. Mark's, on the Wakulla River, is another nest. Any one passing down the river from St. Mark's, will, if they look to the east from a point two miles below the town, see a nest in a large dead pine. It is situated at a point about midway between the East River and the St. Mark's, directly off old Port Leon. On Feb. 24, 1886, three friends and myself visited the nest. There were two very large birds in mature plumage around it, but they kept well out of range. I was very anxious to procure one of them for my cabinet. After trying for about four hours to get a shot I gave up the attempt, and strapping on my climbing irons I started for a long climb of 100ft. I felt sure that I would be rewarded by a set of eggs. On reaching the nest I was somewhat disappointed to find a full grown eagle. On March 6, 1885, I had cut down a tree on the Pin Hook River that had two young in it that were not more than a couple of days old, and as this had a full grown young one a month earlier, it goes to prove that they are not as regular in their breeding as other birds of prey. In fact I believe from what I saw and what I could learn from others, that they lay almost any time from December until March. The bird in the nest showed fight, spread his wings to their full extent and made a hissing noise, similar to a goose. After backing to the edge of the nest he sprang in the air, and soaring about 200yds. alighted in the broom sage, where, being unable to rise, he was easily captured. He was taken into camp and tied by his leg with a string to a tree. He ate heartily of fresh pork, fish, and, in fact, everything in the line of meat that was given him; he soon was the acknowledged pet of the camp, and made friends with everybody, but was the avowed enemy of the dogs. I took him along to town and confined him in an old house in the back yard, with a red-tailed hawk for company. He grew very tame and would take food from the hand. After six weeks' confinement he made his escape through a broken window and was seen no more. The nest from which he was taken was a large, bulky affair of coarse sticks. The depth was about 3ft. and the diameter over 6ft. In the center was a slight depression, lined with smooth pieces of bark, coarse leaves and Spanish moss. Several dead mullet and other sea fish were lying in the nest. About a mile and a half north of this nest were three others, two of which were in inaccessible parts of a swamp. I have visited a great number of the small streams and rivers emptying in the Gulf near St. Mark's and find them breeding abundantly. The naturalist or sportsman desires either the eggs, young or adult bird of the white-headed eagle, I know of no place in our country where he will find more fine specimens than in the vicinity of Tallahassee or the adjacent Gulf coast. I occasionally met with the gray eagle along the coast and in Wakulla county, several miles from the sea, in an eyrie of these birds, I secured one specimen in the winter of 1885.

The most numerous birds of prey in Florida are the black vultures, which can be seen by dozens any day sitting on the roofs of the houses, and more especially the Capitol building. In this warm country they are very useful as scavengers, devouring greedily all refuse and animal matter about the streets. They are so numerous, and feed so voraciously, that in a few hours I have known them to devour an alligator 10ft. long, leaving only the bones and tough hide. The vultures breed here and lay their eggs on the ground under some low bush or shrub. The turkey buzzard, too, is very common, and its habits are much like those of the black vulture, with which it associates. Among the smaller birds of prey I noticed the red-tailed hawk, red-shouldered hawk, Cooper's hawk, marsh harrier, pigeon hawk, sharp-shinned hawk, sparrow hawk, swallow-tailed kite and Mississippi kite. The most common of the above is the sparrow hawk, especially in winter. They are found about in old fields, along the roadside and in the woods. They are easy to kill, and sometimes would sit until you approach within a few yards. The red-shouldered and red-tailed are both very common, as well as the Cooper's and sharp-shinned. The marsh harrier was only observed twice. The swallow-tailed kite is moderately common and breeds. They begin to arrive in April, although a few remain all winter. I often noticed them in the vicinity of the St. Mark's River.

In June, 1886, I found a nest of this species half a mile north of town. It was placed on the horizontal limbs of a pine tree about 30ft. from the ground, and contained two eggs. The Mississippi kite is very rare, and I only noticed it three times. It breeds in the State, and one nest with two young was seen in an oak tree. It was probably an old crow's nest. It is known in Florida by the name of "blue darter," and the sparrow hawk there bears the name of "killy hawk." Screech owls are the most abundant of the nocturnal Raptores. They are seldom seen, as they usually hide in the long Spanish moss during the day, which affords an excellent place of concealment. They breed in hollow trees and deserted woodpecker holes, and they lay their eggs in April. The barred owl is also very common and the great-horned owl is frequently met with. Both inhabit the heavy timbered swamps. The barn owl is commoner in Florida than is usually supposed, but like all other owls, it has its places of concealment which are in the Spanish moss. These places are discovered by looking for the balls of refuse they eject through their mouths. I know of five individuals of this species being killed in the neighborhood of Tallahassee; one by myself and four others that were brought to me to be mounted.

FORRESTON, Ill. HORACE A. KLINE.

HIBERNATING ANIMALS AND REPTILES.

THERE is no phenomenon in natural history so well known, and yet so little understood, as that of hibernation in animals, fish and reptiles. Nearly every one who lives in the country for any length of time is acquainted with the peculiar habits of the snakes, woodchucks, raccoons and other hibernating animals in winter, when they coil themselves up in their burrow or nest and sleep the long winter through, showing neither life nor energy until the warm weather of spring is come again.

Many farmer boys make it a practice to locate a woodchuck's nest in the summer time, and as soon as cold weather sets in to dig down to it and carry off the little captive. When the nest is reached the little occupant of it is found, with its mate, rolled up like two frightened caterpillars, with no more sign of life about them than if they had been shot. The underground house is a simple affair, and not a particle of food can be discovered in it, showing plainly that the animal does not wake up in the winter time and go to eating, as many other partly hibernating animals do. The appearance of the animal is so much like that of a dead one that it would be impossible to tell whether or not the creature was really in a lethargic sleep or dead. Breathing is nearly, if not entirely, suspended, and the temperature of the blood falls so low that it is a deep mystery to scientists how life is maintained.

But soon after taking the animal in a warm room the question whether or not it is dead can be quickly determined. The stagnant blood is soon started in circulation, and the breathing becomes more and more apparent, until the creature opens its eyes, stretches its limbs, and blinks wonderingly at its captors. A few minutes later it regains its old powers of activity, and a desire to escape into the open air again is dominant.

Raccoons and squirrels are hibernating animals, but from various reasons it is certain that they wake up during the winter time and supply themselves with food. Both of these animals collect large stores of food in the summer months and hide them in their retreat, where they remain safely until winter. Then they coil themselves up in their nest and remain dormant for a long while, varying from several weeks to a month. When they get hungry they wake up and gorge themselves with the food which they have collected. The raccoons are not so far-sighted as the squirrels in providing for their winter needs, and quite frequently they are compelled to leave their nests in the dead of winter and search around for food. Squirrels, besides making an immense store house of their nest in some trunk of a tree, will make several additional ones throughout the forest. Several decayed tree trunks will be filled with nuts and berries, and located so accurately by the little animal that it can find them without any difficulty when needed. Holes in the ground are also filled with articles of food and covered up with dirt and leaves. Yet, even when several feet of snow is on the ground, they will go straight to the store house and dig it up without any difficulty.

It is not an unfrequent discovery for those who live in the country through winter to find squirrels lying dead on the snow. The cause of this is usually very simply explained. If the snow is thickly covered with a hard crust the squirrel cannot break through it, and in its endeavors to get at its storehouse it either works or starves itself to death. The little creature feels that its only hope rests in the food under the snow and it works diligently to get at it.

The bears and woodchucks are probably the most perfect hibernating animals that we have. They do not require food in the winter, unless awakened from their long sleep by a sudden change in the weather. During the summer they have acquired a fatty secretion between the skin and the flesh, which, it is generally supposed, assists them to sustain life. If they are aroused from their sleep, however, they come forth from their den with the sharpest appetite. The bears are especially to be avoided at such times, if one has much regard for his own life.

Probably the most curious creatures that sleep through the long winter are the bats. At the beginning of cold weather they begin to huddle together in regular bundles, in deserted houses, in hollow trees, and in caves in the rocks. The manner in which they do this is strange. One of the largest bats hooks its wing on the roof of the old building with his head downward. Another one hooks itself to the first one in a similar position, and a third does the same with the second until a dozen or more are thus suspended from the roof of the house. In this position they gradually lose all sensibility, and continue in a comatose state until the return of warm weather. As many as forty or fifty have been found thus linked together, making a weight suspended by the hooks of the first bat of over twelve pounds. The strength of the hooks can be partly imagined when such a strain is placed upon them. The cold weather often freezes the outside bats while hanging in this position, and not unfrequently their wings have been so brittle when taken in their long sleep that they could be broken into pieces like so many tender twigs of a tree.

Nature, however, has made perfect arrangements for all of its creatures, and even the frozen bats are not so badly off, if left alone and allowed to work out their own cure. The frozen wings thaw out before a fire or by the warm spring weather, and no harm results from the freezing. This peculiarity is known to exist in the flesh of a number of different animals. An eel can be placed in a pail of water in winter and allowed to freeze up in the ice, remaining so for an indefinite period, and then taken out and placed in warm water, when it will regain life once more. The grave of ice apparently does not disturb them, but merely suspends the operations of nature for a time, to be resumed again when placed under favorable conditions.

The phenomenon of hibernation has received careful study from scientists, but there is really more conjecture than anything else regarding the matter. The cause of the peculiar state into which the animal gradually sinks is attributed to the want of proper food, the effects of the cold, and the involuntary retardation of the respiration. Even in the lower animals there must be a certain amount of heat to maintain life. The bear and woodchuck grow fat during the winter, and derive considerable warmth from the fatty secretion all winter, while the lower animals crowd together in bunches, and communicate a certain amount of animal heat to each other. Snakes collect together in large numbers and roll and twist about

each other until a perfect ball, a foot or so in diameter, is formed. Blacksnakes, rattlesnakes, and various other kinds wind themselves in a common ball in the crevices of rocks. The bats, as explained above, collect together in the same way. Frogs, toads and lizards, however, bury themselves in the mud in the winter, and seem to freeze up with the ground and thaw out with it again.

G. E. WALSH.

THE CALIFORNIA SEA-ELEPHANT.

ON October 14, 1886, I sailed from the port of San Diego, California, in the schooner Laura, of San Francisco, Captain Morrison, bound on a cruise in search of the sea-elephant (*Macrorhinus angustirostris*) for the Smithsonian Institution.

Previous to leaving San Francisco I had made special arrangements with the owners of the vessel there for the trip, which was undertaken under the directions of Professor Baird.

During a cruise of two months along the peninsula of Lower California, from San Diego to Magdalena Bay, 600 miles south of the United States and Mexico boundary, we explored carefully the intermediate coast line and all the outlying islands, including Guadalupe, 160 miles off the coast, in about latitude 28° 55'.

As predicted by the captain of the Laura, the desired animals were found only at one place. This was a point on the mainland, 50 miles south of Cerros Island, and known to seal hunters as "Elephant Beach." The locality is indicated on the charts as San Cristobal Bay.

At this isolated and desolate place, on October 20, we discovered three young sea-elephants sleeping on the sandy beach. As this locality had long been known to seal hunters as a favorite resort of the species, and is now known as the only remaining breeding rookery, the captain counseled that these three for the present remain undisturbed, that their presence on the rookery might induce larger animals to haul out there later in the season when we should return. After observing their action on the beach and in the water for some time, we proceeded on our journey further south, leaving three of the men to camp near by and take possession of all animals that might appear in the meantime. Returning to this place a month later (Nov. 18) we found but one of the three sea-elephants we had left there remaining, a female, which we killed. Three had been seen by the men on one occasion, but were probably the same ones we had left there.

Although we remained at San Cristobal Bay a week longer, no more animals appeared, and, after arranging with the captain to visit the place late in December and make a last attempt to procure the desired specimens for me, we sailed for San Diego, where I took the steamer for San Francisco.

While cruising about in search of sea-elephents we killed numbers of the black sea-lion (*Zalophus californianus*) and in preparing the skins and skeletons of these I had the help of the crew, and took special pains to instruct them in the preservations of such specimens.

The last visit was made to the Elephant Beach Dec. 31, and fifteen sea-elephants were killed and preserved in the best manner. There being no indications of others, the Laura proceeded to San Francisco. Of these fifteen animals only one was a male, which measured nearly 12ft. in length. The rest, with the exception of two pups, each about a week old, and over 4ft. long, were females, averaging 10ft. in length.

Thirty or forty years ago the sea-elephant was found at many places on the coast between Santa Barbara Islands and Cape St. Lucas, but continual persecution has almost exterminated the species.

I conversed with a number of old men at San Diego and elsewhere, who were in the seal-oil business in its balmiest days, and learned that about the year 1860 the species became so scarce that their pursuit could no longer be carried on with profit, and that from about 1865 to nearly 1880 none of the animals were seen to the best of their knowledge, except stragglers observed at Guadalupe and Benita Islands. They were accordingly reported as extinct. My informants thought that, notwithstanding the fact of the sea-elephant having been found in limited numbers the last few years, it was doomed to speedy extinction. I took pains to ascertain how many animals had been found by the different vessels that have searched for them since their reappearance at their former haunts and collected the information which is given in the following record:

1880. Schooner San Diego killed thirty sea-elephants at Elephant Beach, at San Cristobal Bay, during the fall and winter.

1882. Schooner San Mateo, of San Pedro, killed forty sea-elephants at Elephant Beach. Six live young ones were brought to San Francisco by a certain Captain Smith. What disposition was made of them was not ascertained.

1883. Schooner ——, of San Francisco, Captain Lee, arriving at Elephant Beach Oct. 9, found sixty sea-elephants. Of these the majority were young bulls; fourteen were bulls of large size, and there was one young one three weeks old. Other animals hauled out there later in the season, and the schooner left Dec. 13, loaded with oil of one hundred and ten sea-elephants over one year old.

Schooner San Diego found four good-sized bulls at Guadalupe Island. Date not ascertained.

1884. Sloop Liberty, of San Diego, Captain Morrison, arrived at the beach Jan. 25, and killed thirty-three sea-elephants. Returned in March and killed sixty, over one year old, leaving a few females and young undisturbed.

Schooner City of San Diego, of San Diego, arrived in May, and, finding no large animals, killed the females and young animals spared by the crew of the Liberty, forty in all.

Schooner Laura, of San Francisco, Captain James Morrison, the writer being on board, arrived at Cristobal Bay and saw three young sea-elephants. After unsuccessful searching elsewhere, returned Nov. 18 and killed a female, the only animal on the beach. After another trip as far north as San Diego, returned again Dec. 31, and found fifteen animals, all of which were carefully preserved and are now in the Smithsonian Institution.

From this it would appear that this interesting and valuable animal has heavy odds to encounter in its struggle for existence. No sooner were the three hundred or more that had appeared during the years of their seclusion discovered than they were speedily made away with. That a pretty clean sweep had been made of them was evident from the meagre results of our own careful search, during which we did not only inspect the coast line, but circumnavigated the islands of the region both large and small. The herds of black sea-lions (*Zalophus*) inhabiting many places were also looked over for stray sea-elephants that might be among them. The great number killed at the old rookery at San Cristobal Bay in the fall and winter preceding our visit was, no doubt, the principal cause of their scarcity.

I had but little opportunity for observing their habits. Having had considerable experience with other species of seal during the summer, I was struck at once by the different mode of progression employed by these animals. Like the true *Phocidæ*, they do not throw their hind flippers foreward in crawling, nor indeed lift them from the ground at all, but by arching the back the hind parts are dragged forward and used as a prop to serve in shoving the forequarters forward. Compared with it in this respect *Eumetopias* and *Zalophus* are animals of remarkable agility. Even when forced to exert themselves the hind limbs were never turned forward, but literally trailed in the sand behind the body as if they were paralyzed. The black sea-lion especially is capable of making effective leaps and plunges when hurried toward the water, contrasted with which the retreat of the sea-elephant seemed a feeble crawl, the breast apparently never being raised from the ground.

Old sealers told me that in all their experience with the sea-elephant they had never observed it swimming far out at sea as sea-lions often do, in fact they had never seen it outside the surf. This may have been due to the fact that they are less conspicuous in their actions. In protruding their heads above the surface, they are very quiet, making no blowing noises as sea-lions do. A favorite attitude in the water is to float about with the nose and hind flippers only above the surface.

The smaller animals are apparently liable to be attacked by sharks. The specimen we obtained Nov. 18 (No. 233) was disfigured by a great gash on the rump, in which the print of shark's teeth were plainly evident. I was assured that one-fourth of the females they had killed at San Cristobal Bay bore unmistakable traces of the teeth of sharks. The specimen referred to was found to be terribly infested with abdominal parasites, which I have never seen in any other pinniped. They were white thread-like worms, 3 or 4in. in length. The eyes in the sea-elephant appear to be larger and more bulging than in their congeners. Where they are found in abundance they are easier to kill than the more agile seals. They also produce more oil in proportion to their size. They have had no chance during late years to attain large size, and it is doubtful whether they will ever again be found as large as that one which Captain Scammon found to measure 22ft. in length. He also mentions one measuring 18ft., which yielded 210 gallons of oil. The largest bull killed by Captains Lee and Morrison in 1883 and 1884 averaged but 90 gallons of oil each. I found a weather-worn, but still well-preserved skull on the Elephant Beach, which measured exactly 2ft. This indicates an animal of very great size, having probably a length of 20ft.

While at Magdalena Bay I learned of their former occurence at San Hipolito Bay, which may be about half way between Cerros Island and Cape St. Lucas. From the great number of weather-worn skulls and other bones found at various places, it is evident that their former abundance has not been overestimated. The beach at San Cristobal Bay was lined with bones, and we found them at places on Cerros, Benita and Natividad Islands. The new-born young that were met with in 1883-'84 were dropped at various times between Nov. 1 and Feb. 1

The sea-elephant without doubt affects the vicinity of the roughest breakers. We seemed always to find its bones opposite places so rough that we could not land without danger. Captain Scammon mentions finding ruins of the stone huts built by the seal hunters of half a century ago. We met with these, too, but I should also add that we found many a nameless grave where the body of some unfortunate man, drowned in the surf, had found a last resting place when the sea gave up its dead. At San Cristobal Bay we often had our boats half filled with water in landing. It was not safe in fact to land through the surf there in any other boat than a dory, while we were compelled to anchor our schooner at Turtle Bay, nearly 20 miles distant. After these wettings some one had usually a harrowing tale of drowning to relate, and could adduce evidence thereto by pointing out some lonely grave.—*C. H. Townsend in Proceedings National Museum.*

BREEDING WILD PIGEONS.

MR. BEN FROST, who lives near Toledo and across the Michigan line, is a very successful hunter and trapper, and pays much attention to the capture of wild pigeons. His "stool" birds he keeps over from one season to another, and this past summer he has raised several young pigeons from the old ones kept in confinement in the coops. Another year he purposes attempting a cross between the wild birds and some of the tame varieties. His achievements in this direction are quite new to me, and possibly to the readers of the FOREST AND STREAM.

TOLEDO, O., Dec. 6. JAY BEBE.

THE TERNS OF MATINICUS ROCK.

MATINICUS ROCK LIGHT STATION,
Coast of Maine, October 8, 1886.

DEAR SIR—My nephew tells me that you wish to be informed in regard to the particulars of the shooting of the Medrick gulls or tern that inhabit the Rock, with a view of preventing a repetition of it another season. I cheerfully comply with your request, and would sacrifice considerable in order to prevent such destruction of a bird which, though it may be of no good, certainly does no harm.

The person who was engaged in shooting them the past summer first came to Matinicus in July to reconnoiter and ascertain how much opposition he would meet with from the people, giving out that he was seeking recreation and a few birds to set up or stuff. I saw him a few days after he came, and in answer to his inquiry if there would be any objections to his shooting a few for the purpose referred to, I told him that I would assist him in getting them, also some sea pigeons and rock birds. He left Matinicus a few days after to ascertain, I presume, if there was any law in Maine protecting the tern. Finding there was not, he came back prepared for curing the birds for market. I understood it was the breast of the birds he saved, and he was to ship them to a party in New York, who prepared them for plumage for ladies' hats. He offered 5 cents a piece for all the tern they would bring him, and furnished ammunition. I am pleased to learn that none of the Matinicus people engaged in the business, with the exception of one man he hired to go round with him and a few boys.

He employed a man and a sailboat and went from one island to another; and the Matinicus people tell me that he entirely exterminated the birds from Seal Island, Wooden Boll and Green Ledge before he came to the Rock.

His method of shooting the birds here was to lie off one-quarter to one-half mile from the shore and lay a crippled bird on the water, when the others would hover over it and he would often get eight or ten at a shot. The worst feature of it was that it was at the time when the young were dependent on the mother bird for food, and the Rock was strewn with the dead young birds a few days after he was here.

In answer to a letter I wrote him, threatening him with the law and my personal defense of the birds if he came again, he informed me that there was no law on the tern in Maine, and accused me of inconsistency in inviting him here to shoot the birds and then trying to stop it.

When the tern began to migrate I think he had collected some 500 or 600 birds, perhaps more; but I learn they were taken from him for debt by a man that had followed him down here.

Inclosed please find the card of the person referred to, and I would add an apology for writing at such length if it were not that I thought you would wish for full particulars attending the shooting of the birds and the conversation I had with Mr. Cahoon in regard to them. I have the honor to be, sir, Very respectfully yours, WM. G. GRANT.

Commander O. A. BATCHELLER, U. S. Navy.

[The card bears the name of C. E. Cahoon, Taunton, Mass.]

Camp-Fire Flickerings.

"That reminds me."

203.

ONE day in early November a friend and myself decided to have a hunt for ducks, as reports were coming in of large bags of them being killed in some sloughs about four or five miles north of this place. We set out very early in the morning so as to be there before any one else and to have the first crack at the ducks. After driving about four miles and walking another mile and a half the sloughs were at last in sight; but where are the ducks? After tramping and wading all over the slough, spending nearly three hours, and getting very wet we at last made up our minds to retire.

The slough is very wide, and nearly in its center is a little island, somewhat higher than the rest and about two or three rods in diameter, covered thickly with weeds and willows. For this island we made our way to rest and await the rising of the sun, which we knew would not be very long, for already the light clouds which were strewn over the sky were beginning to grow bright, promising a fine day.

We had scarcely proceeded one quarter the distance to the island, when lo! right in front of us, not more than 30yds. away and looking straight at us, was a fine mallard duck. Of course I hastily brought my gun to my shoulder and fired a heavy charge right at it. When the smoke cleared away, to our surprise, instead of a duck lying dead upon the water as we had expected, it sat there in the same place still, with its neck bowed, and as it looked almost in the very act of flying, I hastily fired my second barrel at it with the same effect. My friend laughed at me and said to let him shoot, he could fix it; so stepping up he took deliberate aim and fired both barrels simultaneously at it. Though the gun was loaded very heavily the duck did not seem to mind it the least. The effect on my friend, however, was very different; he let go of the gun very hurriedly and sat right down backward in the water, the gun went right over his shoulder and the muzzle penetrated the mud nearly a foot.

My friend got up, pulled his gun out of the mud, shook himself, and after a little rash talk declared he would kill that duck or never go hunting again. As for myself I was beginning to "smell a mice," but said nothing. After cleaning the mud from his gun Will again put in two heavy loads; he stepped up a couple of paces further and fired another charge at it, but still the duck moved not. I then told him that the thing must be dead and that I believed some one was playing a trick on us. He did not seem inclined to think so at first, but said he would go and scare it up and shoot it on the fly. Nearer and nearer we approached, but it did not fly, and when Will picked it up it was perfectly stiff, having probably been there for some time; it had a weight attached to it for an anchor, and a willow down its throat to keep its head up.

Well, we felt sold, it is true, but said nothing, merely looked at each other and smiled, Will rubbing his shoulder very sympathetically all the time, which brought a roaring laugh from me. "I have it, Will," I said at last, "some one has fixed it up to get a rig on the boys that come here to shoot, and if we only manage it right we can pay them back at their own price."

I told him of a boat I had seen away down at the end of the slough which I believed belonged to the ones that had fixed up the duck, and that they would probably take their boat and come to the island to watch the fun they expected to have with the duck. I had a small fish line with me, about 200yds. long. I tied one end of this around the body of the duck, under the wings, so that on being pulled along it would float very natural and life-like. Will then went to place the duck as far down the channel as the string would reach, while I went to the island to fix a place so that we could see all and not be seen.

We did not have long to wait after Will got back, for from out of the woods to our right came two young men. They went straight to the boat, and, after putting out, pulled up the narrow channel toward the island. We could plainly hear them say: "Won't we have a picnic with it, watching the fellows shoot at it? I wonder who will be the first to shoot at it." They were just rounding a corner that would bring them in full view of the duck, when I started it in motion. How majestically it floated! At last one of them spied it, and snatching up his gun fired. The duck stopped for a moment and then started off faster than ever. He slipped another charge into his gun and then told his companion to pull harder, for the duck was going faster than they were. At last they were within 40yds. of it and about 80yds. from us. They both grasped their guns and fired at the same time. The shock was so great that it upset the boat and landed them in 4ft. of water. What was their dismay, when on getting up, to see the duck still floating along toward the island. We could stand it no longer; so, bursting with laughter, we sallied forth, cheering them and asking if they had a picnic watching the folks shoot it. They looked at us for some time as if they could eat us; they then righted their canoe and made for the shore in altogether a different mood from what they left in, and I have never seen them since. A THREE-PRONGED BUCK.

THE western slope of the Allegheny Mountains, where the Conemaugh River breaks through, is composed of three great divisions, or ridges. The first of these, on the west, is the Chestnut ridge, the second the Laurel, and the third the main ridge, or the Alleghenies proper. From the glades and spurs of the first range, nearly all of the mountain proper is very rough, wild country. As a consequence, there are very few settlements on it, and the time will never come when they will be very numerous. Between these ranges there are valleys, which are more or less extensive, and which are occupied for farming and grazing purposes. There are also many towns of good size, some of them almost reaching the limits of cities. These mountains are full of game. When I say they are full of it, I do not want to be understood as intending to convey the idea that one can go out at any time and load a wagon with game, but that there are wild turkeys in small numbers in the Chestnut ridge, and turkeys and deer in the two higher ranges. I have had the pleasure of following the track of deer over the hills of Laurel ridge in the winters of the last ten years, and such is the roughness of the country in which they stay that, notwithstanding the fact that there are sometimes so many hunters in the woods that it is really dangerous to be out, yet there seem to be as many deer there to-day as there were ten years ago.

When the first snow of the season begins to fall—and I know that the familiar haunts of the thickets, runways and crossings are covered with the white mantle which makes known the goings of the deer—I become as restless as if I had never been lost in a mountain fog or snow and had never vowed that if I got safely out of the eternal thickets and into some place of safety and comfort I would never be foolish enough to try the tempting of Providence again. But when the soft flakes come sifting down, the study becomes odious and I feel as if I would smother it if I did not get out into it somehow. If there is no possibility of my getting to the hills, where the deer will lead me a wild and often useless chase, I take down my rifle, the companion of so many eventful days in the woods and lovingly talk to it of the better days that are to come. Then when the time does come, when the duties of business may be laid aside for a few days, I feel like a schoolboy with a long vacation before him.

Two weeks ago I received word from a hunting companion, with whom I had searched the wilds of the northern parts of this State for game, that he would be with me for a hunt on my old grounds here. He arrived on time, but only to tell me that he could not go. I had made my arrangements and concluded not to be disappointed in my trip. So I had only to slip over to a neighbor who is always in for an expedition of this kind when it is possible for him to get away, and found him all ready for the start. When he heard that I was going, it put the fever into him so that he said he intended to go whether I asked him or not.

It was raining in the morning when we boarded the cars for our twenty miles' ride, but we thought that the rain here would be snow when we got to the top of the ridge. When we changed cars at the intersection we found another hunting companion, who lived in a town at the foot of the mountains, and who invited us to stay with him and he would go out with us. So when we left the cars, without waiting to get dinner, with only a lunch in our pockets, we struck out for the high ground. The first question to be settled was as to what part of the ground we should go over, as it was afternoon and we must get back that night. Frank insisted on going up through the "gap of rocks," a very high part of the mountains, because he had killed a fawn there a few days before. I insisted on taking an easier climb for that afternoon, and then trying his ground when we had a full day before us. By insisting, I at last succeeded in turning his hard head in the right direction, but he declared there was no game on that ground. It took us two weary hours of the hardest climbing to get to the hunting grounds at the top of the ridge. All the way up I was continually reminded of my folly in taking the party to a ground where there was no game, and was threatened with the direst consequences if such should prove to be the fact.

We had skirted along the crest of the mountain for an hour without seeing a sign, and I was beginning to search for some way by which to save my scalp, when we crossed a fresh buck track. It was evident to each that it was only a few minutes old. We immediately arranged for a flanking hunt. That is, one was to follow the track, while each of the others were to keep about a hundred yards on either side of him. In this way some one would get a shot, if we routed him up. Did you ever follow a wary old mountain buck that has ears enough for a mule, eyes like those of an eagle and the nose of a sleuth hound? If you never did, your education is deficient and your experience lacking an important element. The ground here is very rocky and uneven, covered with more or less brush and small timber, but there is very little of it that is open woods. When a deer knows that he is pursued he usually takes the roughest ground he can find, and if possible gets the sun, hill and wind on you. Fortunately for us this one did not know that we were after him. We learned afterward that he had been followed some time earlier in the day. Something of this we suspected from his peculiar motions. We followed slowly, scanning everything within the range of vision, watching every crook and turn in his devious windings, and creeping up carefully to every knoll to look over on the bench below to see if he was not either lying down or watching on his back track to see if he was pursued. After about an hour of this continual watching, Frank got a glimpse of him at a hundred yards as he stepped out to move on. Instantly there was the voice of a .45-75 rifle heard, a puff of smoke seen, and then a general advance all along the line to see what had been the result. We did not rush up, but each advanced with rifle ready for a shot. When we reached the spot where he had been seen there was presented to our gaze as beautiful a sight as ever met the eyes of a hunter. There, in all his glory, lay a three-pronged buck, as sleek as a mole and as fat as butter. The bullet had struck him in the middle of the neck and so stunned him as to knock him down. It was but the work of a minute to put a foot on his horn to hold him and then send a knife to the hilt into his throat.

It is one thing to kill a deer in this rough country and quite another to get him out of it. We cut two saplings and lashed them together, and then lashed him on this improvised sled and commenced our weary drag of two miles over stones and through thickets and briers, until we could get him to a place which could be reached by a horse. When we did at last get there we were not by any means cold, and it would not be "stretching the blanket" any to say that we were tired. Two of us waited there while the other went on down and sent a horse after the deer. When the horse arrived we were careful not to let it see or smell the deer, and so had no difficulty in putting it on before the messenger. Following the horse through the darkness of a three-miles' tramp brought us to our stopping place. Thus, in that half day's tramp we had covered twelve miles of mountain travel, killed a deer, gotten good and tired, and, if you had seen the way the supper disappeared, had found an appetite and were well satisfied.

HOMERUS.

IN TURKEY COVER.

"SHADOW," in FOREST AND STREAM of Dec. 9, suggests only that which none of your contributors have advised, *i. e.*, the sport and practicability of shooting turkeys over pointers and setters. In fact I think that while many sportsmen have now and then done so, they suppose that the cases were exceptional and that the wild, very wild turkey will lie to a dog. While I have not made turkey hunting with a dog the main object, I have sufficient experience and observation to convince me that a wild turkey will lie only too close to be found in cover without a dog; and lie often as close as a quail, at any time in good cover close enough to get to shoot when they flush. So I propose to flush some of the sportsmen, who have had opportunities, with my story of how I had them.

My first was thirty years ago, on the Elkhorn River, Neb. While shooting there with a friend grouse, chickens, ducks, deer, etc., we found turkeys. After a flight they always sought cover of grass, rushes, etc. There was no difficulty in marking them, and it was simply a question of walking right on to them or my friend's setter being able to get to them. The first flock we found were under a bluff overlooking the river bottom land. Some sixteen or twenty flew into a dry slough filled with rushes, which had grown very tall, but were then a broken down, tangled and interwoven mass, about 4ft. high, impenetrable to the dog, and indescribably fatiguing to man, as every step had to be over, not through. While trying to compass the four-foot lift, my first turkey attempted to rise from under the raised foot. Had I thrown myself forward I could have caught it, but I caught something else, not necessarily explainable to deer shooters or the inhabitants of Charleston, and during the half hour or so that turkey was tumbling and disengaging itself from those dry rushes, I was trying to compose myself, but I was so anxious for the poor turkey to get out and away, that when it did make its appearance, I assisted it with the muzzle of my gun, which, unfortunately for my kindly reputation, and the turkey, discharged itself. That composed me. I didn't hang the fragments by a string over my brand new moleskin coat. I was composed enough to stop my friend from spoiling another turkey, which was putting him through the same experience. So he held on until his turkey had covered a fair distance, then gave the right barrel, then the left. As it passed me within range I gave it right and left, and at each shot bunches of feathers flew and so did the turkey for a hundred yards, and afterward rose again before me, having the hinder parts all shot away. Of course I gave it the fifth charge and declined that fragment. That slough was not 30yds. wide, and the whole flock had alighted within 150yds. of its length, yet we were able to walk up but two more, which we secured in good order. At least twelve to sixteen turkeys were still lying so close that the rustling, talking and shooting would not start them. We were convinced that they had not run out, as we afterward carried the dog over to find the much shot at one, and we found no others.

On another occasion while lunching we marked four turkeys alight in grass, only one to two feet high, and they were found and pointed very close. One that had run a short distance I could not find nor flush, until I hied the dog on to the turkey's tail and had to step past the dog to kick it up. While shooting at the four, a fifth, a large gobbler, came sailing over my companion and dropped to his interview; as I passed to assist him with the dog to find, two deer jumped up before me. The first one fell down, but as I secured the second one the first got up and got away; and they too had been pointed where they lay quietly while six shots were fired at the turkeys not 50yds. away.

Here in the dense laurel of Pennsylvania hills and mountains the turkeys lie in cover. In November, as the last of my experience, I was driving down a steep mountain road when I saw five turkeys feeding. As I drove near to them they went off the road down the mountain side. Satisfied that they had merely passed far enough to cover, I tied my horse, uncased the gun and shells, and put my dog to heel, intending to follow the road down to where they had passed out of sight. Unluckily, within 6yds. of it a road led down and away, and I thought that the turkeys had taken this; so I went down for 50yds., when, feeling convinced that I was mistaken and looking back and along the steep, laurel-covered mountain side, I concluded to send my dog in. The turkeys rose up within a few yards of the main road, from the exact spot where my first impression had placed them, by neglecting which I also scored a lost chance for a sure double. Near the foot of the mountain I saw one rise from the road and fly into the woods, and, again taking gun and dog, I had the pleasure of raising it with the dog from scarcely cover enough to hide it and not eight steps from me. I scored one.

These are not my only experiences, but are enough to convince me that you have plenty of readers who can tell tales of turkeys over dogs, and induce sportsmen who may mark turkeys go into cover to follow with their dogs and get some shooting not otherwise on their programme.

THOMPSONTOWN, Pa. JUNIATA.

COOT SHOOTING.

Editor Forest and Stream:

I cannot refrain from correcting an unfavorable impression that "O. O. S." recently tried to give of the coot. His description (Nov. 11) refers more to the loon, northern diver or peggingawl. I consider a coot for the most part very shy. I doubt if "O. O. S." ever had one light in his boat while hunting for them. If cooked properly their flesh is very tender and not fishy at all. I have heard sportsmen say they preferred them to a canvasback, and they knew how canvasbacks tasted, too.

I have shot coot upon the southern coast and they are the same kind that we get here in Massachusetts. The sportsmen who go to our point here for coot shooting are not pot-hunters, they go for the mere sport of the thing, and sport it is, for I have been there myself, and this season, too. Let "O. O. S." come to Old Plymouth and go down to Monument Point, and see how long it would be before he could rise in his boat when two single birds fly by him, one on each side of his boat, 30yds. distance. If he can bring them both down, one with each barrel, he would, with us, be called a good shot. Or let him sit in his boat with a little east wind and a good chop, and how many single birds do you suppose he would bring to bag? Clark Holmes, who is our champion coot shooter, has been known to kill nineteen single birds in succession. I have seen him kill one on each side of his boat, one with each barrel, several times in a morning's gunning.

Let me give your readers a correct account of how coots are killed and what sport it is. First, one must rise early (which is very healthy), eat a hearty breakfast and walk to the point, say an eighth of a mile. The boat should be perfectly tight; the decoys from five to eight in number. Row off and select your berth, throw over your anchor, fill and light your pipe, lie down in your boat out of the wind if there be any, and wait for approaching daylight. When light appears you should try to get into a line with the other boats, stationed from eighty to one hundred yards apart. String out your decoys and anchor them twenty to thirty yards ahead of you. By this time the birds will have begun to fly. Be ready with shells in gun, overcoat and mittens off. The first flock is in sight, and the ever welcome sound of "Nor'ad! Nor'ad!" passes along the line from boat to boat. Each man crouches down in his boat and awaits the coming flock, every one by chance expecting a shot; but the birds generally fly through over the boats, though sometimes I have known them to give a whole line a shot, when, after the fusilade, scarcely a bird would be left. The fortunate men who happen to be under the unfortunate birds, fire into the flock, and if near enough, generally get from one to eight. If it be a clear morning and you yourself are sharing the sport, it is great fun to see them fall, and it is sport for me to see other sportsmen drop them as well as to kill them myself. At this point, with a good flight, one is either shooting and killing or seeing some one else shoot and kill all the time. If Mr. "O. O. S." will come here and try our coot shooting, I think he will agree with me that it is the most pleasant and most pleasing to the eye of any gunning along the coast.

COOTER.

PLYMOUTH, Mass.

VIRGINIA MOUNTAINS.

TAZEWELL COUNTY, in Southwest Virginia, never fails to charm the stranger and visitor, nor does the Scotchman love his native heath, with its blooming heather, more ardently than do the natives of this charming section love their sweet grass-clad coves and valleys, their craggy mountains, their clear, cold, swift-running streams, the pure fountain heads of rivers, that wend their way to the south. The natives are of that splendid physique so noted in the blue grass regions of Kentucky, a section this so much resembles. Many of them are of Scotch and Scotch-Irish descent, generous, brave and noble; owning magnificent grazing farms, whose picturesque hills and vales are crowded with the contented herds of cattle and sheep.

In the western section of this country, nature once so convulsed, but now so gently at peace in this favored spot, broke up the mountains and spread their steep sides into a beautiful high ground level, called Ward's Cove. I have sometimes thought this beautiful region had, with the divinely skilled hand of Nature, been literally carved into beautiful landscapes, so that, when our nation becomes a surging mass of tired toilers, whose accomplishments shall exceed utopian dreams, there may be found amid pure elements of air, water, sunshine and plenty, the perfection of human rest.

Yonder on the west of this cove loom the carelessly tossed mountain and its spurs, with soil and altitude that rears the hemlock, the laurel and the balsam. Just east is a rival, but the indigenous grass is matted to the top and the adventurous young bovine is making animate its steeps, in quest of succulent food. North and south in bold relief stand out the spurs of the craggy mountain, the dark-shadowed gulfy hollows, through which "November's surly blasts" remind us that the sturdy oak and poplar are the sentries of the winter storms that will settle down amid us soon.

Near the middle of this favored spot there bursts boldly from limestone caverns, two noted fountains, which soon commingle their waters, forming a large and swift flowing stream. All round here, too, are still the houses of the sturdy pioneer who contested with the Indian this huntsman's paradise. The weird and undecipherable figures of these aborigines that yet look fresh on the cliffs would indicate that this was for them a favored land of peace and plenty. A few hundred paces from these fountains is an inviting place for machinery, the opportunity to erect which was embraced by a firm of young lawyers, whose manager, also on the bank of this stream, amid the forest of beech, oak and arbor vitæ, erected a little cottage for his home. Græme, one of these legal gentlemen, is fond of sport, and often becomes the guest of his employe on partridge shooting exploits.

It is not to be understood that the beautiful region which is described is an eternal paradise in climate. When winter grows well matured nature tires of regaling this favored spot with flowering summers, gentle autumns and hazy Indian summers, and now and then wakes up the storm demon that loves to stalk about our altitude.

About the last day of November a robust Episcopal divine, Græme, Charlie, the miller's son, who carried behind him George, an unadulterated African gammon, about fourteen, started to the field on horseback. You

have seen these sickly sun-glare winter days, called by old folks "weather breeders." The morning of this day was one of them. About the time we reached an inviting looking stubble the surly wind clouds rolled up, the wind blew as "'twould blown its last," and then came down a mixture of rain, hail and snow. Have you not seen in this commingled change of elements unseasonable lightning and thunder? Well, all this came, too. So our overcoats were pulled on by all except darky George, who crept into a corn shock. Finally the storm somewhat abated and a retreat was decided on, when Gem, the young setter, wild from his summer vacation at the mill, flushed a covey of birds in neighboring brush. The order for retreat had scattered the party, each man to care for himself. The sight of game, however, restored good order, and as the birds flew toward Charlie, in quick succession he fired two shots, and when approached, exhibited two birds; whether or not his ambition for slaughter had gotten the better of him and the birds had met their fate on foot, was not inquired into. The day improved and the sport was excellent. George came over a hill, his eyes shining, "Gentmen, dem dogs over here in de holler done frize stiff, lookin' at one nur." Sure enough, Scot, the old dog, had on his hare attitude, pointing a brush heap, with the younger one on the opposite side honoring the point. "Græme," said the parson, "how do you know the point is on a hare?" "Because, look how careless and indifferent he stands, his tail not straight and now and then moves; totally different from his form on birds." "Let's start and bag him," said the parson. "If we do," said Græme, "we will be troubled all day with the young dog chasing. I have yet to shoot the first hare before these dogs." "Yander! Ya-n-der dat cotton tail, please shoot 'im, preacher, boss, please sir," said George. It was upon compromise decided that the preacher might punch him, and while Græme secured the young dog the parson gave "puss" a good "chug" with the breech of his gun, to the unbounded delectation of our Senegambian. George was ordered back to take charge of the horses, but soon returned and with chattering teeth said, "Bosses, I hain't cold, but yer shootin' round sich close like, 'fraid might splatter feller. Can't I go warm, case I'm so hungry don't know whar to git a drik of warter?" He was released.

As the scattered birds of the flushed covey were followed and picked up, three more bevies were found and scattered. "Charlie," said the preacher, "when a bird flies to your side, you then shoot, but when it flies my side you should not shoot and powder, smoke and deafen me." There were practical reasons, it was perceived, for this lecture, as the smoke from the discharge of Charlie's gun had been inhaled by the lecturer, and was being emitted from the latters nostrils like twin smoke stacks. "All right," said the amiable Charlie, for he is the embodiment of politeness, amiability and boyish enthusiasm.

A beautiful stand was made by the dogs in a sink and it was the parson's time to walk in and shoot. So with steady step (and he is a cool, deadly veteran) he flushed, but Charlie forgot his lesson and poured a gust of smoke and thunder over his head, which did not discomfort the parson, who grassed his bird with deliberate grace. Charlie, however, received a lecture for deafening the parson.

Charlie carried a light double muzzleloader and Graeme observed him crossing the fence with muzzle straightforemost, dragging the locks carelessly; took hold of the gun and proceeded to show this eager youth how to handle his gun at such time, holding in the other hand at the same time his own gun. About the middle of this lesson a cock bird, with his ringing whirr, arose right under their feet, when Græme handed the tyro his gun and grassed the bird at forty paces. "Good enough," cried Charlie, "Mr. Græme, if I had such a gun as yours I could shoot, too."

Another stand was made on "fur" at a brush heap and the dogs ordered away, but the old canine placed one paw on the brush and artistically put up the hare, which ran into the mouth of the youngster, but his grip failed to hold, and such a race (the example set by the parson). A blue-winged hawk hovering around gave chase with the puppy and made some clever stoops in the 200yds. run, but seemed too shy of the young setter to close in.

This shall not be written to the disparagement of the young dog, for soon after he in grand style drew to the top of a knoll, and under the shelter of a ledge of rocks, leaves and briers, made a beautiful stand. The old dog, doubtful of the youngsters truthfulness, drew up to the scent himself. A bird was flushed, killed and retrieved. The youngster returned and pointed again. A second bird, flushed and missed. A third point made at the same place by the young dog, on which the old one again pressed by to scent, and it so taxed the patience of the junior that he fairly bent double to hold. This bird was flushed and killed and the hunt ended.

That weird day of warring elements was the harbinger of worse. The greenswards are now burdened with two feet of fleecy snow, the scattered relics of the swift-winged bevies that eluded the aims of steady guns are now battling with the hungry fox and hawk. G.

THE ALASKA EXCURSION.—New York, Jan. 6.—I am corresponding only with some twenty-five different people, located in all the Eastern States, and as far West as Detroit, Mich. If a party of thirty can be organized it is proposed to go to Tacoma, W. T., and from there to Alaska, and if this can not be done, those who will go anyway propose to go to San Francisco, and go from there on a whaling vessel to Cook's Inlet, Alaska, and from there to Lake Walker, Ilyamna Lake, Bristol Bay, Kuskovim Bay and up the Yukon River, and such other places as they may hereafter decide upon, in this northwestern portion of Alaska.—J. E. PALMER.

"PIG STICKING."—*Editor Forest and Stream:* If the Tuxedo Park club men really want to try pig sticking at "sure enough" wild pigs, let them take a trip down here and we will furnish them all the amusement they will care for in that line. Our pigs have not much of a pedigree to boast of, and they're not English, you know; but each and every one of them is guaranteed to "tree" a would-be pig-sticker every time his broncho pitches him off, which will be as often as the broncho takes a notion to do it. Come down friends, chapparal cocks make a pretty good substitute for English pheasants.—GUADALUPE (Victoria, Tex., Dec. 30, 1886).

STOVES IN CAMP.

Editor Forest and Stream:

"Seneca," in a late number of FOREST AND STREAM, says: "I don't believe any one who takes a stove into camp can possess a genuine and absorbing interest in the beauties of nature." "Seneca" I think is far too sweeping in his assertion. Ever since I was a boy (and I am not very young now) I have chosen to spend my life among the great forests and mountains and on the broad prairies where I have thoroughly enjoyed the beauties of nature—some of the grandest scenery to be found in America—and no one more loves to contemplate the dark cañons, the towering mountains, the woods and prairies, the lakes and rivers, than I do. Yet I never camp out without tent and stove. If one is camping in the great eastern forests in summer time I will allow that he does not need a stove, for there the dense growth of timber protects him from the wind, and a charming camp can be made of bark or balsam boughs. Here the conditions are different; even in summer we have cold, raw winds that chill one to the bone. If we are camping on the prairie there is no wood, but we always carry some in the wagon. Up goes the tent, the stove soon gives forth a genial heat, and there we sit, indifferent to the blinding rain and rushing wind without. Again, we always have horses on our hunting expeditions, even in the mountains we must camp on the edge of the little prairies where we can watch and care for them. Here again on cold and windy days do we find comfort and safety with our tent and stove, having no camp-fire there is no danger of the flames getting beyond our control and burning a vast stretch of country. From the tone of "Kingfisher's" letters in FOREST AND STREAM I judge that no one possesses a more "genuine and absorbing interest in the beauties of nature" than he, and if he wants a stove in camp why should any one criticise him? I don't know anything about a Michigan summer, but I hunted there once from September to December, and found a log cabin and stove very comfortable. If "Seneca" should make two trips in this country I am quite sure that the second time he would have a four-hole sheet-iron stove. J. W. SCHULTZ.

MONTANA.

NEW ENGLAND GAME.

THE Main Legislature is in session and the committees are to be appointed early this week. The friends of fish and game protection are hopeful of such a committee as will look out for their interests, while the enemies of such action are but very poorly organized in that State. It is a curious fact that these enemies quite frequently come to Boston for aid and consolation in their work of opposing the game laws of their own State. I learn from good authority that two or three noted poachers, whose business the past season has been undoubtedly that of guiding Boston sportsmen to shoot deer out of season, have recently been in this city and that they have visited these same sportsmen. What their purpose has been it is not very plain, though the upholders of the Maine game laws are free to declare that these chaps are trying to raise money here with which to fight the obnoxious game laws of their own State. That they have met with very poor success is plain enough. They came too late. They should have come before the murder of those wardens changed public sentiment in their own State to the extent that even their new governor found occasion in his inaugural to refer to a crime so dastardly and to even recommend that a pension be granted to their families, or at least some action be taken for their aid. No other murder ever called forth such a recommendation from the governor. The action goes to show the turn that public sentiment has taken; and even the worst Maine game poacher in Boston would not be bold enough to lend open aid in the direction these visiting guides desire. I learn that the notorious Jack Darling, who has given the Maine commissioners so much trouble at Nicatous Lake the past summer, has been here on the money raising errand. I do not know that this is true, for I did not see him here; and if he has not been here, why then he has been misrepresented, but such is the claim of those who do not love him any too well.

There is generally a good deal of satisfaction expressed among the best and the most reasonable of sportsmen here concerning the report of the Maine Fish and Game Commissioners, which the FOREST AND STREAM has already published extracts from, and which it probably has in full before this time. It is looked upon as a valuable work, both in the methods it maps out and the amount of actual experience it involves in fields to a great extent untried heretofore. It is also looked upon as magnanimous, and coming from the hearts of earnest men—men who have encountered and surmounted difficulties in their work which would have disheartened any but true lovers of the cause. In point of magnanimity, the recommendation that the whole of September be granted as an addition to the open season for moose, deer and caribou hunting ought to convince even the worst enemies the Commission has ever made by the enforcement of the laws, that the Commissioners have never had any other motive at heart than the best good of the sportsman himself. Indeed it is looked upon in this light by thinking sportsmen, even if they have hitherto been unfriendly to the work of the Commission. I have heard a gentleman say within a couple of days, and I know him to be a true gentleman, notwithstanding that he has been in disgrace in Maine for shooting game out of season, for which shooting he has paid his fines. I have heard him say that if Maine changed her game laws so as to give September as a part of the open season on her larger game, that he should do all in his power toward helping the Commission. At the same time he would like to see, as we all should, some tremendous effort put forth toward making the lumbermen and the Indians obey the law, as well as the sportsmen. He claims, and not without good reason, that the Indians, and many of the other men who act as guides in the summer and hunt, trap or lumber in the winter, destroy more moose and deer for their hides alone, than it would ever be possible for sportsmen to do, even with the open season made to include August as well as September. In proof of his position the gentleman mentions the thirteen moose hides found in the camp of one noted guide, also mentioned in the report of the Commissioners themselves. These hides were the work of a skin hunter when the snow was on the ground, deserted because they were too heavy to be carried to the settlement.

The chances are most excellent for some of the best fish and game protective legislation in Maine this winter that the world has ever seen. The Governor recommends such changes as are needed. Alas! If we could only have the same in Massachusetts. The game of the whole country would be saved thereby. There are less of western deer in our Boston markets at the present time than usual at this season, but there is too much of the disgusting venison. It comes largely from States where it is killed illegally, and in most cases shipped illegally, but it reaches this dumping ground some way, and the laws of one of the best governed States in the Union—so say its boasters—permits it to be sold when it is close time in almost every other State that makes any pretenses to game protection. It permits it to be sold just to help a few marketmen to make a few hundred dollars. The Massachusetts Fish and Game Protective Association has not yet laid down its arms, and some wholesome legislation may be reached this winter. But the mere opening of the question before the committee will call out the marketmen in full force. They very much desire to be let alone. SPECIAL.

WHITE CRANE.—*Editor Forest and Stream:* How many, think you, of the gallant nimrods whose exploits are recorded in the columns of your journal, have ever killed the trumpeter or white sandhill crane? I have never succeeded in bagging one, although I have spent a great deal of time in their pursuit. It is the shyest and wariest bird I know of. The wild turkey is a barnyard fowl in comparison. The only fair opportunity to kill one I ever had occurred a few days ago, and was lost through my own stupidity. I was lying flat in the grass calling a flock of sandhills, and when they had approached sufficiently near I raised quickly and fired right and left at the two nearest me, killing both. Just as I pulled the trigger of the second barrel I saw a white crane in the bunch, but too late to withhold my fire. I could easily have killed it if I had seen it in time. The other cranes flew off about 400 or 500yds. and lit, but the white one seemed in a hurry to get into Mexico, and unless he has arrived there I am sure he is still going. They seem to be somewhat larger than the ordinary sandhill, and I presume from their similarity of habits they are also edible. Will not some reader who has been more successful favor us with an account of the killing, weight, dimensions, etc., of this bird? In my note book I find the following account of the bagging of a good bird: "Dec. 18, '86. Killed sandhill crane, following measurements: Length, tip of tail to end of toes, 56in. Spread of wings, 76in; weight, 11lbs. 14oz. Shot at 240 paces with .32-40 rifle." —C. S. WELLS, (Victoria, Tex., Dec. 30, 1886). [The name "white sandhill crane," though often used, is not quite correct, the white and sandhill being distinct species. The white is the whooping crane (*Grus americana*), and the gray the sandhill crane (*G. canadensis*). A third perhaps doubtful species is given in the books, resembling the sandhill, called *G. mexicana*.]

MASSACHUSETTS GAME.—Taunton, Mass., Jan. 8.—Your correspondent "Woodman" seems to be of the opinion that woodcock are getting scarce in this locality, and gives his scores for several years as evidence. I am afraid he does not keep up with the times, or rather the birds. Of late years the best grounds have been cleared and cut into house lots, and the sportsman must tramp further each year to find the birds. But I am sure they are not all gone yet, as I shot five in a half day's hunt this year during September, and I know of several gentlemen whose scores for the season have been over a dozen. Last year I made several trips and succeeded in bagging twenty odd birds as the season's work. Others have done better than I, but I agree with "Woodman" that the birds are not as plentiful as they might be. Quail were never so thick, in my remembrance, as this year. Partridges, however, although they promised to be thick, were killed by ticks in large numbers. One bird that came under my observation had a great fat tick as large as a five cent piece. It was back of the ear, and the poor bird was wasted nearly to a skeleton. The gunners who went from here to the "Cape" had fine sport and very fair bags. Fowling at the ponds has been unusually poor, and I have not been the means of killing one duck. Summer woodcock shooting is very poor sport here, and I know of no sportsman who indulges. We have a branch of the Fish and Game Protective Association here, and we hope it will be the means of stopping the underhand work in trapping, etc.—COHANNET.

MICHIGAN ASSOCIATION.—Grand Rapids, Mich., Jan. 3. —*Editor Forest and Stream:*—The annual meeting of the Michigan Sportsmen's Association will be held at Lansing, Mich., on Tuesday, Jan. 18, commencing at 7:30 o'clock P. M. The headquarters of the Association will be at the Hudson House. A full attendance has been requested, as business of interest and importance to the sportsmen of the State will be considered. Clubs, members and individuals are requested to send to the undersigned any information they may possess which will aid the Association in its endeavor to save the game and fish of this State from the rapid destruction now menacing it. The secretaries of all auxiliary clubs are requested to send the names of their officers and the number of their members to the secretary for the information of the Association. Each auxiliary club is entitled to be represented at the annual meeting by five delegates. Individual members, and others interested in the objects of the Association, are earnestly invited to be present.—MARK NORRIS, Secretary, 79 Lyon street.

SAUK CENTRE, Minn., Jan. 2.—Jack rabbits are as thick as "hair on a dog" out on the prairies west of here. A good many deer have been killed this season. Partridge have been brought in by the hundred. It is said that "Bob White" is making his appearance up in this part of Minnesota, but as yet I have failed to see him. There is plenty of snow here, and it bids fair to help us out on the prairie chickens for next season's sport. Have noticed large flocks of them hereabouts.—DELL.

WHERE THEY SHADE THEIR EYES TO SEE A GOOSE.—Amboy, Ill.—This section of country was, a few years ago, one of the finest geese flights in the United States, being situated between the Illinois and Mississippi rivers, and on the borders of the once famous Winnebago Swamp. But now the once familiar *yonk* brings out half the citizens with hands shading eyes to catch a glimpse of a wild goose.—P. S.

NORTH CAROLINA SHOOTING.—Salisbury, N. C., Dec. 19.—Last fall I sent you a short communication and gave your readers some information of our country as a quail shooting country. A number of gentlemen visited this place last winter and returned and spent a month this fall and enjoyed themselves very much; found quail plentiful, occasionally scoring a wild turkey. The Red Irish Kennel Club selected our town as the place for their trials, but were prevented by the heavy fall of snow. The selected grounds cannot be surpassed for quail anywhere in the United States. During the late snow the farmers brought quail in by the hundreds and they went begging on the streets at fifty cents per dozen for fine fat birds. It was a sad sight to see them slaughtered in this way, but the farmer would say that what he brought did not decrease them on his land.—M.

RIFLES AGAIN.

Editor Forest and Stream:

Referring to Mr. Romer's unwarrented and abusive letter in your last issue, would say, that my ignorance of the subject of rifle shooting springs from a lack of education on my part, and his from a lack of education on his part. The denseness of his ignorance is well illustrated by his last communication,

NORRISTOWN, Pa., Jan. 8. E. A. LEOPOLD.

Sea and River Fishing.

Address all communications to the Forest and Stream Pub. Co.

WESTERN NORTH CAROLINA FISHING.

Editor Forest and Stream:

Some time since there appeared in your columns a communication instituting inquiries regarding fishing in western North Carolina. I waited for some resident of the State to reply, and as no response has appeared, I shall briefly give my impressions of that section. Last March I visited Havannah, and on my return I was favored with a severe attack of continued fever, and at one time I was satisfied that I would have to pass in my checks and abandon my favorite amusement of fishing. But a good constitution enabled me to weather the storm, and to recuperate I spent three months in wandering in the mountain region of western North Carolina.

A majority of the streams of that country head in, or flow through, localities where red clay exists, and as a rule they are very muddy. As might be expected from the character of the water, eels, catfish and suckers are the principal fish to be found in the larger streams. During my wanderings I noticed many fish traps, and as a result the more common fish are few and far between. Nearly all the streams heading in the Blue Ridge, Anakies, Black, Smoky and Balsam mountains contain speckled trout, but trout hogs and dynamiters have been operating at so many points, and in such places trout fishing is a "delusion and a snare." At the headwaters of the Yoe, Doe, Watauga and Pigeon rivers fair trout fishing will be found in May and the beginning of June. In July and August trout leave the larger streams and ascend the mountain brooks, and at this time trout hogs from the middle and eastern portion of the State appear in force; and fingerlings are in demand. On many occasions I have seen trout hogs returning after a day's fishing with fingerlings weighing about ten to the pound.

A fisherman accustomed to Northern streams will be disappointed, for as a rule the narrow valleys are densely clothed with rhododendrons and kalmias, and the only mode of fishing the streams is to wade them. Bushes overhang them to such an extent as to seriously interfere with casting. Old fishermen who visit this section use a light Japanese cane rod about twelve feet in length. In some of the streams large-mouthed black bass and pike exist, but owing to the presence of numberless fish traps they are few and far between.

I spent several weeks at Estes' place, near Blowing Rock, in Watauga county. His pond covers seven acres, and is well stocked with trout; but they will not rise to a fly after the middle of June. I tried artificial flies of various kinds, but failed to obtain a rise. The pond is overstocked with minnows, and in consequence I found it useless to use worm, grasshopper, or grub bait. I was forced to use live minnows, and was fairly successful. The smallest trout captured measured 7in., and the largest 16¼in. in length. During the latter part of May and the beginning of June a fly appears; and the sport is said to be excellent if the natural flies are used as bait. About 3 P. M. a chrysalis will rise to the surface; it opens and a brown fly about one inch in length appears. It flutters on the surface of the water for a few minutes, when it rises and settles on the fences and bushes near the pond, and the ensuing morning it takes its departure for the adjoining hills and mountains. During the afternoon parties collect the flies and place them in a suitable box for the ensuing day's fishing. Mr. Estes assured me that the flies are so numerous that the wind blows the light chrysalis to the shore, where they can be collected in quantities. Parties who have fished the pond informed me that the "water is in a perfect boil from trout while the flies are leaving their homes." As described to me, the body of the fly is small, and from about ¾ to 1in. in length; color, light brown with dark brown rings; wings brown, and from ¾ to 1in. in length. Can an artificial fly answering this description be purchased? Many fishermen who visit this locality in May and June would like to obtain a supply.

Estes' place can be reached via Richmond & Danville Railroad to Hickory, in Catawba county; thence by narrow gauge railroad to Lenoir, in Caldwell county; from there by stage over a good road for 23 miles to Blowing Rock. Fare from Hickory to Lenoir 80 cents, from Lenoir to Blowing Rock $2.50, including baggage. Board at Estes' $20 per month.

West from Estes about 12 miles excellent fishing will be found in the Banner, Elk and Watauga rivers, and a mountain stream rising on Grandfather Mountain. Many good trout streams will be met with near the base of Roan Mountain.

I cannot close without referring to one of the most delightful summer resorts in the United States which I found in my wanderings. I refer to Cloudland Hotel, Roan Mountain, Mitchell county. The hotel is located on the top of the mountain, at an elevation of 6,394ft. above sea level, the highest human habitation east of the Rockies. It is 200ft. higher than the White Mountains, N. H., 1,200ft. above Denver, and 4,200ft. higher than the Catskills. At midday during the summer months the thermometer ranges from 53° to 70° Fah., with but slight difference in temperature between day and night. Absence of strong winds is a marked feature. Temperature of the spring water is 45°; soil brown and porous, air aseptic and bracing, sanitation good. The hotel will accommodate about 400 guests; rooms large, beds comfortable, food ample and well cooked; terms, $35 to $40 per month. There is fair trout fishing in streams on the side of the mountain, with opportunities for pedestrian and horseback exercise and good driving. To those who are in search of a temperate, healthy and bracing atmosphere during the summer months, Roan offers attractions nowhere else to be found in the United States. Malaria and insect pests are absent.

From reliable information obtained I am satisfied that the air of Roan affords immediate relief for that distressing complaint, hay fever. From my inquiries and investigations I have reason to believe that the cases of pulmonary diseases adapted to this elevated locality during the summer months are the early catarrhal and quiescent pneumonic group, especially in persons with a moderate degree of anæmia; cases of threatened consumption from hereditary tendency, defective chest formation and capacity, or incomplete recovery from intermittent, remittent and typhoid fevers. This locality seems specially adapted to the treatment of conditions of general debility, whether arising from constitutional tendency, from overwork, or attacks of exhausting diseases. Also in anæmia, malarial cachexia, nervous affections associated with weakness of the circulatory organs, insomnia, neurosthenia and derangement of the digestive organs. Based on extensive opportunities for observation in the United States and a study of the climatic factors of our various health resorts, I am of the opinion that if we consider attractiveness of landscape, altitude, low midday and slight diurnal range of temperature, aseptic air, amount of ozone, purity and coolness of water, diathermancy of the atmosphere, good food and accommodations, absence of malaria and insect pests, coupled with accessibility, Roan Mountain offers inducements to invalids and those seeking a cool and bracing climate not to be found elsewhere in the United States. This point is easily reached by the East Tennessee, Virginia and Georgia Railroad to Johnson City, thence to Cloudland station (where there is a good summer hotel) by the East Tennessee and West North Carolina Railroad, from Cloudland station in comfortable conveyances over a good road to the top of the mountain, a distance of twelve miles. The top of the mountain is bald, and from it the visitors can see into seven States. AL FRESCO.

JACKSONVILLE, Fla., Dec. 30.

THE COMING TOURNAMENT.

A MEETING of the National Rod and Reel Association was held in New York in the laboratory of Mr. E. G. Blackford on Saturday last, President Henry P. Wells in the chair. The business before the meeting was the appointment of committees, and the discussion on rules which should govern the tournament next May, as there were differences of opinion concerning the retention of the old rules, which had grown from experiences derived in former contests. It will be remembered that there was no tournament last year, and the committee of arrangements of 1885 were all reappointed by the President, and Messrs. John A. Roosevelt, William Dunning and M. M. Backus were added. The following sub-committees were appointed: On grounds: Martin B. Brown, Francis Endicott and Hon. Henry P. McGown. On rules, Messrs. John A. Roosevelt, Fred Mather and the Rev. Henry L. Ziegenfuss. On prizes, James L. Vallotton, T. B. Stewart, H. P. McGown and C. G. Levison.

When it came to a discussion of the proposed rules for the contests, it was evident that there was a wider difference of opinion concerning the advisability of certain changes than had been manifested before. It was noticeable that some of the members who cast in the tournament were rather anxious to have hard and fast rules made, which would favor the style of rod or line used by them in the fly-casting contests, or have the weight of sinkers which might be suitable to their respective rods in the bass contests, and the president was very lenient in regard to such attempts at special legislation, which, however, carried no points when submitted to a general vote. We give a summary of the decisions of the meeting concerning a revision of the rules, which, however, are subject to such changes as the committee on rules may approve. No important changes have been suggested until we reach rule seven, which said: "Each contestant will be allowed five minutes to cast for distance and will then stand aside until called in his turn to cast for delicacy and accuracy, when he will be allowed five minutes for this purpose." This allowed a contestant to foul his line as often as he pleased, and do almost anything except, perhaps, to leave the stand to get a lunch, and claim time to be allowed him. The proposed change, given below, we think will not only save time in the class or classes, but will be more satisfactory all around.

In the old Rule 9, the following sentence is recommended to be stricken out: "A contestant may claim time for repairs, which shall be allowed by the judges, or the judges may order the next on the list to cast while repairs are made, in their discretion," as this is provided for under Rule 7.

Rule 10 provides for the judging of points of delicacy and accuracy, so that both judges and contestants will know exactly how these points are to be judged. We doubt, however, the wisdom of the proposed clause which relates to the flies lighting upon the water before the reel line does, as this is not the usual mode of casting, and, as a member of the committee on rules stated at the meeting, that it is more of a trick, which would catch the eye of the non-angling public, but which differs from the general practice of fly-fishers; therefore it is possible that this clause may not be retained.

In black bass casting it has been recommended that the rod should not be less than 6ft. instead of 8 as before, and the restriction to rods weighing less than 7oz. has been removed, as well as the restriction to use only "black bass multiplying reels," and the clause which pertained to clicks, drags, or any other device to control the rendering of the line, except the thumb, has been removed; instead of the longest cast to count, the average of five casts to be considered, and certain changes have been made in the judging of accuracy, by which this point is strictly defined, as well as the point for style.

In the heavy bass casting, rods may not exceed 10ft., instead of 9ft., as heretofore, and no reinforcements by means of a heavier line next the sinker is allowed, it having been claimed that by this means a muscular man could make tremendous casts without danger of parting his line while straightening his sinker, as all the casts in this class must be made from the reel, there being no contest in which the line is cast from a coil at the man's feet, as is done in certain classes in England, that style being practically unused in America. And the rules in both black bass and striped bass casting require that all casts shall be made from the reel, without any specification that they shall be made by the under-hand or over-hand methods. The following are the rules, as suggested by the association to the committee:

PROPOSED RULES FOR THE CONTESTS.

Rule 1. All persons competing for prizes shall pay an entrance fee in each contest as follows: Members, $2; non-members, $5. Membership may be obtained on the grounds from the Secretary.

Rule 2. No one shall be permitted to enter an amateur contest who has ever fished for a living; who has ever been a guide, or has been engaged in either the manufacture or sale of fishing tackle. The judges in the different classes shall appoint a member to see that the tackle is at all times in accordance with the rules and requirements of the Association during the contests. The judges in any particular class, on appeal, shall have power to decide in all matters relating thereto, and their decision shall be final.

Rule 3. No trout rod shall exceed 11ft. 6in. in length, and it shall be used with a single hand.

Rule 4. In single-handed fly-casting any style of reel or line will be allowed, but a leader or casting line of single gut must be used of not less than 8ft. in length, to which three flies, one stretcher and two droppers, shall be attached.

Rule 5. No allowance of distance shall be made for difference in length of rods.

Rule 6. Persons entering these contests shall draw lots to determine the order in which they will cast and will be ready to cast when called by the judges.

Rule 7. Each contestant will be allowed fifteen minutes in which to cast for distance, and will then stand aside until called in his turn to cast for delicacy and accuracy. In casting for distance, each contestant shall inform the judges of the contest when he intends to begin to compete. His time allowance of fifteen minutes shall then begin to run, and shall continue to run without interruption until its expiration, or until the contestant voluntarily withdraws from the stand. Should, however, the contestant's rod break, time to replace the broken joint shall be given him. No allowance of time shall be made to any contestant for any other reason whatever, it being the intent and purpose of this rule that each contestant shall abide by his own accidents, except as hereinbefore specified.

Rule 8. The distance shall be measured by a line with marked buoys stretched on the water; said line to be measured and verified by the judges at least once each day of the casting. A mark shall be made from the stand from which the buoy line shall be measured, and the caster may stand with his toes touching this mark, but may not advance beyond it. Should he step back of it, unless directed so to do by the judges, the loss in distance shall be his.

Rule 9. The stretcher fly must remain at the end of the casting line in all casts. The others are not deemed so important.

Rule 10. Delicacy and accuracy shall be contested and adjudged as follows and at the same time. Each contestant shall be allowed twenty-five casts at an object in or on the water 40ft. distant from him. For the purpose of this tournament absolute delicacy in casting the fly shall be considered to be, casting the fly or flies upon the water with a straight line in such a manner as to disturb its surface to the least possible extent, and so that the fly or flies shall be upon the water before any part of the reel line touches its surface. He who most nearly approaches this shall be adjudged the superior in delicacy. He shall be adjudged to be the superior in accuracy, who on average of all his casts, places his flies nearest to the mark. Touching the mark with either of the three flies used shall be considered a hit, and that of the three flies which fall nearest the mark shall determine the distance of that cast from the mark. Twenty-five points shall be credited to him who is adjudged the superior in delicacy and twenty-five points to him who is adjudged the superior in accuracy. The other contestants shall be awarded lower scores, in accordance with their comparative excellence.

Rule 11. The ultimate scores of the various contestants shall be determined as follows: To the distance in feet each has been adjudged to have cast, shall be added the scores assigned for delicacy and accuracy, and prizes shall be assigned in accordance with this aggregate.

Rule 12. To prevent fouling the measuring line and accidents to spectators in the fly-casting contests, the points of all fly hooks shall be broken off. But such breaks shall only remove the point down to and including the barb.

Rule 13. In the absence of an appointed judge the President or Secretary will fill the vacancy.

Rule 14. Salmon Fly-Casting.—The foregoing rules shall govern, except that the rods shall not exceed 18ft. in length, and may be used with both hands, and that only one fly will be required. The distance to be cast for delicacy and accuracy shall be 70ft.

Rule 15. Black Bass Casting.—All general rules which do not conflict with the following special rules shall govern. No rod shall be less than 6ft. nor more than 10ft. in length, nor more than 10oz. in weight. Any reel may be used, and all casts shall be made from the reel. Lines shall not be of less caliber than No. 6 (letter H), braided silk, or No. 1 sea-grass, or corresponding sizes of other material. The weights of the sinker shall not exceed ½oz., the same to be furnished by the contestant. In casting but a single hand shall be used. Each contestant shall be allowed five casts, the average of them to count, and then will be allowed five minutes to cast for style and accuracy; the latter point to be ascertained by casts made at a stake 60ft. distant from the caster, the judges to give points in accordance with the nearness with which the sinker or the reel-line approaches the said stake. Style or form to be determined by the ease and grace of the caster. The scale of points shall be the same as in fly-casting, viz.: Distance, the average of his casts in feet, style and accuracy, 25 points each.

Rule 16. Heavy Bass Casting.—Rods shall not exceed 10ft. in length; any reel may be used, but the line shall be of linen, No. 9, of at least twelve threads throughout its entire length. The casts shall be made from the reel, with sinkers weighing 2½ ounces. (These will be furnished by the committee.) Each contestant will be allowed five casts. His casts shall be measured, added, and divided by five, and the result shall constitute his score.

THE SIX-INCH TROUT LAW.

Editor Forest and Stream:

I note what "A New York Fisherman" says in your last issue on this question, and will say in reply: Except in small mountain streams, where insect larvæ find little vegetation to feed upon, and are therefore scarce, a trout should reach the length of 6in. in a year and a half, at least. This is presuming a fair supply of food and water enough to swim in. My experience as a fishculturist has been that we cannot get the growth in trout fry kept in the shallow water of a hatching trough that we do in pools of two feet deep. I have this year, in the rearing ponds of the N. Y. Fish Commission, on Long Island, fry of brook trout which were hatched last March and April, some of which are 7in. long, and from a few of the males we have taken milt and impregnated the eggs of larger females with it in November last.

There is no way to tell the age of a wild fish, but I should say that a stream in which trout of three years old do not exceed 6in. was poorly off for trout food or for depth of water to grow in, or both. A trout of 6in. which is three years old is a dwarf, and might never grow larger, for it is a rule that a fish which is stunted in its first few months of life by lack of food will never catch up with its better fed fellows, and this rule applies to all young animals. My personal opinion is that baby trout of 6in. should not be killed, and when I see such

fish served at some hotel on the skirts of the Adirondacks, I decline to be a party to their killing by eating them, even when it is lawful to do so, as it was last year.

Your correspondent does not say what manner of stream it is which may have trout of three years of age which are not of the length named, but as he believes that protection should be furnished trout during the first and second years of their growth he may be safe in returning the fingerlings. He writes like a thoughtful, conscientious man and asks for information from those who are posted in the growth of fish, hence I try to tell him the results of growing trout in confinement and of observations at the brookside. I once stocked a little brook with trout which had contained none of these fish within the memory of those living on it. The fry were planted in May and a year from that time we saw yearlings fully 6in. long in it. Now, as the fish had such a start, I do not doubt that another year's growth would have made them all 8in. long and given them a weight of several ounces. On the contrary I have seen trout that were a year old which were barely 4in. long, but which should reach six, after the second year.

All will agree that fry should be protected up to a certain size, but the size is of course a fair subject for difference of opinions and the old law of New York made it 6in. The idea of protecting them is quite old, for Shakespeare makes Adonis say: "No fisher but the ungrown fry forbears," yet we find that it requires a law in order to compel some fishers to forbear. FRED MATHER.

COLD SPRING HARBOR, N. Y.

THE INTERCOLONIAL RAILWAY OF CANADA, which leads to many of the famous salmon and trout fishing resorts, publishes an illustrated calendar showing a fishing party unloading three big fish, and a bigger one still is not seen but one man is reaching down for it in the canoe.

A BOOK ON FLY-FISHING.

FLY-FISHING AND FLY-MAKING FOR TROUT, etc. By J. Harrington Keene. With plates of the actual material for making flies of every variety, illustrated. New York: O. Judd Co., 1887.

In this little book Mr. Keene has given a great deal of practical information on fly-fishing and fly-making in a small compass, and has boiled down a great deal that might have been extended over more pages. In his chapter on the senses of fishes he records as his opinion that fish cannot hear sounds in air, and in this mooted question we incline to agree with him, always excepting, as he does, those sounds which are accompanied by violent concussions. In the practical essays on fishing and fly-making the author shows his familiarity with the arts. The expert fly-caster will find diagrams of difficult and and unusual movements of both rod and line, some of which may puzzle him to follow, especially in the spey and switch casts, but the novice may receive instructions from the simpler methods. The making of trout flies is not only well illustrated throughout with woodcuts, but also accompanied by two pages of samples of the actual material used in fly-making, such as the different tinsels, silk braids, floss, chenilles, peacock herls and feathers, instead of mere pictures of them. Mr. Keene is a practical fly-tyer, and his instructions in this art seem to be about as perfect as mere type and woodcuts can make them, and if the fly-caster, expert though he be, gets lost in the labryinth illustrating the motion of a rod in the air, the fly-tyer has an easy task. Mr. Keene has been long enough in America to have become familiar with American tackle, which as a rule he gives the preference to, except in the matter of lines, his choice in this being an English made silk line with a copper wire in the center. Taking the book as a whole, it is concise and conveys the impression that it is written by a thoughtful, practical man, who has wasted no ink on theories, but has plunged at once into his subject and disposed of it in the shortest possible manner.

Fisheulture.

SALMON IN THE HUDSON.

[Read before the Eastern New York Game Protective Society.]

ALMOST from the inception in this country of fishculture by artificial means, and as its probabilities and possibilities were discussed by anglers and scientists, the people of Eastern New York have been interested to learn if the Hudson River was ever a natural salmon stream, and if not, could it be made the home of this royal fish by the efforts of State or National government; both being interested and active in repopulating our overfished or fished out waters with fish indigenous to them, and also introducing new fish into waters suitable for their habitation. By a natural salmon stream I mean one in which the salmon regularly each year make their appearance from the sea for the purpose of spawning far up in its headwaters. When, in 1609, Hendrick Hudson, in the Half Moon, sailed up the river that bears his name, he saw what he reported to be a "goodly store of salmon." If such was the case, and it is believed that Hudson was mistaken as to the identity of the fish, there is now no evidence obtainable that salmon ever ascended the river to its headwaters to spawn; in fact I do not understand how it was possible for them to do so any more than now. Cohoes Falls must have shut them out of the Mohawk, and Baker's Falls, on the Hudson, in Washington county, must have debarred them from the upper tributaries of the main river.

These tributaries, Sacandaga, Rock, Cedar, Indian and Boreas rivers, which would furnish the best breeding grounds for salmon if they could be reached, are miles above Baker's Falls. Salmon, when moved by instinct to produce their kind, will overcome obstacles that no other fish can, but there is a limit beyond which they cannot go. The government of Norway caused some experiments to be made to put the leaping powers of the salmon on record, and it was found that some fish jumped over a vertical barrier of 16ft., but the average jump was found to be about 12ft. It is possible that salmon might have spawned in some small feeder, or in the river itself below Baker's Falls, had they made the attempt, for it is within the remembrance of living men that Baker's Falls was once the limit of the upward movement of the shad. In this connection, I yield to the desire to quote from a letter written to me by Mr. Ripley Hitchcock, who takes a deep interest in and who has written very instructively on this subject. He says: "Many of the Restigouche salmon, I am informed on good authority, spawn within a few miles of tide water—in fact, I am told that they spawn all along the river. Not only this, but I am informed of instances of their spawning in brackish water at the head of the tide." I question if such spawning would keep a river stocked, but I can find no evidence, except Hudson's statement, that the Hudson River ever contained salmon, except stragglers or estrays from, perhaps, the Connecticut, which is a natural salmon stream.

Hudson entered the river in September, and neither he nor his crew ascended further than Albany or, possibly, Waterford, and the writer would contend that if the river abounded with salmon at that time, they would in September be miles above Waterford attending to domestic duties, and not where they could be seen by captain or crew of the Half Moon. Solitary salmon have, from time to time, been found in the Hudson, and also in the Delaware, but they availed nothing for profit or sport.

Between 1873 and 1876 the New York State Fish Commission planted 156,000 California salmon in the headwaters of the Hudson and nearly 100,000 in the waters on Long Island. Few, if any, of these fish were ever after heard from, and it is supposed that the waters of the rivers on the Atlantic south of 41 degrees are not sufficiently cold for this Pacific Slope fish. The State of Vermont in 1880 made a small plant of Penobscot salmon fry in the Battenkill, which flows into the Hudson north of Troy, and, if my memory serves me as to date, this plant would account for the salmon taken in the Hudson in 1884. I am told that it is impossible for salmon to return to the planting ground in the Battenkill, because of natural obstruction. Prof. Baird, being satisfied that the Hudson River was not a natural salmon stream by reason of natural and mechanical obstructions which shut the fish off from spawning grounds in headwaters, determined to plant the headwaters with salmon fry—where they would find suitable and abundant food—and if they returned as mature fish through the waters of the lower river, which can scarcely be compared to crystal in purity, the success of the experiment would be assured; for the obstacles which have heretofore prevented fish from ascending to the upper Hudson can now be easily overcome.

I believe that at this very writing Col. Marshall McDonald of the United States Fish Commission, is putting one of the fishways that he invented in an obstruction in the Mohawk River. The McDonald fishway is so perfect in its scientific arrangements that it will take a passive fish over a waterfall whether it cares to go or not. This is fact, not fancy. From the reports of Mr. Fred Mather, who has hatched and planted in the Hudson all the salmon furnished by the United States Fish Commission, I find that there has been shipped to the waters of this river 1,533,700 salmon fry and 150 yearlings. Two lots of fry suffered from lack of ice and there were actually planted as follows:

1882	250,000
1883	245,800
1884	385,700
1885 (and 150 yearlings)	269,300
1886	350,000
Total	1,500,800

At two years of age salmon go down stream to salt water, and two years later return to the place of their birth or babyhood for the purpose of spawning. As the first plant was made in the Hudson in 1882, the first return should be in 1886, and that the planting was successful and that the mature salmon did return is evidenced by three salmon, weighing from 10 to 13lbs. each, being taken, this summer, in the river below the Troy dam. One hundred and twenty thousand of the salmon fry, and all the yearlings mentioned above, were planted by or under the eye of the writer during the years 1884, 1885 and 1886, and have since been watched in their new home with much interest. In October, 1885, at the request of Prof. Baird, I caught a few of the plant of 1884, then about eighteen months old, and forwarded them to Washington. The parr, as the young salmon are called at this age, were from 6 to 8in. long, covered with fine silver scales and dotted with carmine and black. When they go to sea a few months later as smolts, the carmine dots disappear, but the black spots remain and are found on the adult salmon. This summer I did not see in the brook any salmon that I called of the plant of 1884, still there should have been some, as all of one year's hatching do not go to sea at one time, and this is a wise provision of nature. Some salmon grow faster than others, and in one can of yearling fish (all hatched at the same time) I found that they ran in size from 2½in. to about 6in. In July last I sent Mr. Mather specimens of the plant of 1885, and they were almost as large as the eighteen months' fish of the year before. One of the salmon that was caught in 1885 contained ripe milt. I reported in the summer (1886) that all the plant of 1884 seemed to have gone to sea, and undoubtedly the most of them had, but some of the slow growing fish of 1884 probably remained, but could not be distinguished from those of 1885.

Prof. Baird has, by his experiment, shown that salmon planted in the headwaters of the Hudson will endeavor to return there to spawn, and all that seems to be lacking to make the Hudson a salmon river is means for them to get back and laws for their protection. There is now a fishway in the Troy dam, and also one at Fort Miller. Since these fishways were built, there has been a dam built at Mechanicville. Baker's Falls will require a McDonald fishway, and Palmer's Falls also. The first is in Washington county and the latter in Saratoga county. The fishway at Troy, which is a mere chute, was repaired by the superintendent of public works during the past summer. Fort Edward, Sandy Hill, Glens Falls, the feeder dam and Luzerne also have dams that may require the McDonald fishway or simple chutes. Above Luzerne there are no obstructions to the ascent of salmon. At present there is no protection for the sea salmon in this State. The landlocked salmon is protected, but the salar is not mentioned in the statutes. Above the Troy dam the salmon must take its chances under the law (chap. 127, Laws 1884, sec. 23 of Judge Danaher's compilation) that forbids the taking of any fish except with hook and line, but below the dam there is no protection against netting, and it is below the dam that the salmon need protection. This can hardly be considered an oversight on the part of the lawmakers, for up to this time we have had no salmon to protect. Salmon have been planted in Salmon River in the State as well as in the Hudson, and it will be necessary to provide for their protection the coming winter.

A. N. CHENEY.

GLENS FALLS, N. Y.

MICHIGAN NEEDS WARDENS.

Editor Forest and Stream:

Following is a suggestive passage from the message of Cyrus G. Luce, the new governor of Michigan, delivered Jan. 6:

"The extensive coast line so nearly surrounding our State, as well as the great number of small island lakes, render the fishing interest of great importance. It is undeniable that the fish add largely to the food products and thus to the wealth of the State. For the purpose of protecting and propagating this interest the Fish Commission was established. That it has accomplished something in the direction of the purpose for which it was created is apparent. But investigation has led me to believe that the commission ought to be abolished or its powers of usefulness increased. Fish have been planted in great and small waters, too often to be prematurely caught out and destroyed. No adequate provision has been made to guard the investment. In some localities where fish have been planted, while yet small and worthless for food, they have been caught out and used for fertilizing purposes. In order to reap the benefit of the commission, I should recommend that to them be given authority to appoint wardens whose duties it shall be to watch and guard the deposits of fish when made.

"Only a portion of the people, in the very nature of the case, can be benefited by the commission or its operations. In other cases special interests pay the expense of inspection and protection. Salt inspection is paid by the manufacturer, oil inspection by the dealers, and I most earnestly recommend that the fish interest be required to pay the expense incurred in propagation and protection. Under the present law the annual expenses are not far from $15,000. The appointment of wardens will add to this expense, and I trust that the powers of the board will be enlarged, and that provisions be made for placing a charge upon seines sufficient to defray all expenses." F. I.

FISHCULTURE AT BLOOMING GROVE PARK.—The club had on hand Dec. 20 95,000 eggs, of which 70,000 were brook trout, 10,000 brown trout and 15,000 rainbow trout. Some of these eggs were purchased and some were obtained from the stock of breeding trout on hand. No doubt this stock will show up in the fishing scores two or three years hence.

FIXTURES.

DOG SHOWS.

January, 1887.—Bench Show of Poultry and Pet Stock Association, at Adams, Mass. W. F. Davis, Secretary.

Jan. 17 to 21, 1887.—Ohio State Poultry, Pigeon and Pet Stock Association Dog Show, Columbus, O. W. F. Kuell, Superintendent, Columbus, O.

Jan. 18 to 21.—Exhibition under auspices of the National Poultry and Bench Show Association, Gate City Guards Armory, Atlanta, Ga. R. J. Fisher, Secretary.

Feb. 8 to 11.—Southern Massachusetts Poultry Association Bench Show, Fall River. A. R. G. Mosher, Secretary.

March 22 to 25, 1887.—Spring Show of the New Jersey Kennel Club, Newark, N. J. A. C. Wilmerding, Secretary, Bergen Point, N. J.

March 29 to April 1, 1887.—Inaugural Bench Show of Rhode Island Kennel Club, Providence, R. I. N. Seabury, Secretary, Box 1933, Providence.

April 5 to 8, 1887.—Third Annual Show of New England Kennel Club, Boston. F. L. Weston, Secretary, Hotel Boylston, Boston, Mass.

April 12 to 15, 1887.—Thirteenth Annual Dog Show of the Western Pennsylvania Poultry Society, at Pittsburgh, Pa. C. B. Elben, Secretary.

May 3 to 6, 1887.—Eleventh Annual Show of the Westminster Kennel Club, Madison Square Garden, New York. James Mortimer, Superintendent.

FIELD TRIALS.

Feb. 15, 1887.—Inaugural Trials of Tennessee Sportsmen's Association. Entries close Jan. 10. R. M. Dudley, Secretary, No. 84 Broad street, Nashville, Tenn.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **4502.**

EASTERN FIELD TRIALS CLUB.

THE annual meeting of the Eastern Field Trials Club was held at the St. James Hotel on Tuesday evening, Jan. 11. The president, Mr. B. F. Wilson, was absent, and the meeting was called to order by the vice-president, Mr. J. O. Donner. The minutes of the last annual meeting were read and approved. It was voted that future annual meetings of the club be held during the running of the field trials. The report of the treasurer, showing a handsome balance to the credit of the club, was read and approved.

Following is a list of the Board of Governors elected for the ensuing year: Messrs. Elliot Smith, H. E. Hamilton, D. S. Gregory, J. W. Orth, R. C. Cornell, W. A. Coster, D. C. Bergundthal, J. L. Breese, B. F. Wilson, J. Otto Donner, F. R. Hitchcock, J. R. Henrichs, Geo. T. Leach, A. E. Godeffroy and Geo. de F. Grant.

The meeting then adjourned and a meeting of the Board of Governors was at once convened. Mr. R. C. Cornell was called to the chair and the board unanimously re-elected the officers of the past year. President, Mr. B. F. Wilson, Pittsburgh, Pa.; Vice-Presidents, Messrs. J. O. Donner and F. R. Hitchcock, New York; Secretary and Treasurer, Mr. W. A. Coster, Flatbush, L. I.

The minutes of the last meeting were read and approved. Mr. Herbert Merriam, of Weston, Mass., was elected a member, and Messrs. Arthur M. Hunter, New York, and J. N. Cochran, Philadelphia, were proposed for membership. Messrs Donner, Hitchcock and Gregory were appointed a committee to determine the amount of the prizes to be offered in the different stakes at the next trials. The above committee was also instructed to report at the next meeting what changes, if any, are desirable in the running rules, and it was voted that the committee, through the press, invite all who are interested in field trials to make such suggestions in relation to changes in the rules as may seem advisable. All such communications to be addressed to the Chairman, Mr J. O. Donner, 11 West Thirty-eighth street, New York.

THE INDIANA KENNEL CLUB.

WE have received a letter from the secretary of the Indiana Kennel Club, in which he says that the club is in a very prosperous condition. We give below the text of a circular which the club has issued, and we have no doubt that it will meet with a hearty response from the lovers of the dog throughout the State. Following is the circular:

DEAR SIR: During the State Fair held here in October, 1886, the Indiana Kennel Club was organized, its object being to promote the improvement of dogs, dog shows and dog trials. It is also the intention of the club to make an effort to recover any lost or stolen dogs, whose owner has enrolled himself as a member.

It is the belief, and earnest desire, that every person in the State who fancies or owns dogs will join the club.

Your membership is earnestly desired. The membership fee is two dollars, and the annual dues one dollar. This amount is used in defraying the expenses of the club, and as none of the officers receive or charge anything for their services, it is believed this amount will be sufficient to meet all expenses.

Should you decide to become a member, please fill up the annexed blank, and send it to Dr. J. G. Parsons, secretary, who will enroll your name on the club books.

Yours truly, D. C. BERGUNDTHAL, President.

DOG STEALING AT MT. VERNON, N. Y.—New York.—About a month ago a Mr. Greening, of Mt. Vernon, lost a dog. The party in whose possession he was found was arrested and put on trial. It took the jury about five minutes to come to a conclusion that he was guilty and the judge gave him a six months' sentence. A dog of my own in keeping at Mt. Vernon disappeared five days ago, taking his chain with him. The loss was advertised in the local papers and the town posted. Yesterday he appeared at his kennel minus the chain. It is supposed that the party that had him in the meantime was afraid to detain him, in view of the present sentiment on the subject of dog stealing at Mt. Vernon.—H. G. P.

FOX-TERRIER CLUB STAKES.

THE stakes of the American Fox-Terrier Club, announced in our issue of Dec. 2, for which entries closed Jan. 1, have received the following entries:

THE TOMBOY STAKES OF 1887.—For a silver cup presented by the president of the American Fox-Terrier Club, added to a sweepstake of $5 each p. p., for fox-terrier bitches whelped after Jan. 1, 1886, and to be competed for at the spring show of the New Jersey Kennel Club in 1887.

A. BELMONT, JR.—Tiara (Result—Diadem), Daimetta (Bacchanal—Delta), Festive (Bacchanal—Arrow), Verdict (Result—Diadem).

FRED HOEY.—Lemonade (Splauger—Lurette).

JOHN E. THAYER.—Meersbrook Nan (Meersbrook Ross—Meersbrook Model), Lady Mixture (Mixture—Warren Lady), Fraulein Mixture (Mixture—Shame), Belgrave Violet (Belgrave Primrose—Nina).

EDWARD KELLY.—Votary (Bacchanal—Delta).

THE APOLLO STAKES OF 1887.—For a silver cup, presented by the Secretary of the American Fox-Terrier Club, added to a sweepstakes of $5 p.p. for fox-terrier dogs whelped Jan. 1, 1886, and to be competed for at the spring show of the Hartford Kennel Club in 1887.

A. BELMONT, JR.—Mephisto and Faust (Bacchanal—Marguerite).

FRED HOEY.—Luke (Mixture—Lyra).

JOHN E. THAYER.—Shameless Mixture, Sandy Mixture, Sly Mixture and Dandy Mixture (Mixture—Shame).

H. S. ROBBINS.—Bristles (Regent Vox—Fandango).

C. T. BAILEY.—Mt. Toby Mixture (Mixture—Dido).

EDWARD KELLY.—Fiddler (Earl Leycester—Clover Fidget).

H. P. FROTHINGHAM.—Mugwump (Stableford Joe—Marigold).

HOMERRED PUPPY STAKES.—For a silver cup, presented by John E. Thayer, Esq., added to a sweepstakes of $5 p.p. for best fox-terrier puppies, whelped after April 1, 1886, to be competed for at the spring show of the New England Club in Boston, 1887.

A. BELMONT, JR.—Faust (Bacchanal—Marguerite), Festive (Bacchanal—Arrow), Verdict (Result—Diadem), Snoozer (Regent Vox—Saffron).

JOHN E. THAYER.—Lady Mixture (Mixture—Warren Lady), Fraulein Mixture, Shameless Mixture, Sandy Mixture and Dandy Mixture (Mixture—Shame).

H. S. BOBBINS.—Bristles (Regent Vox—Faudango).

EDWARD KELLY.—Votary (Bacchanal—Delta) Fiddler (Earl Leycester—Clover Fidget), unnamed (Shovel—Clover Blossom), unnamed (Earl Leycester—Spite), unnamed (Clover Spice—Priscilla).

E. L. KALBFLEISCH.—Gustav (Bacchanal—Tansy).

G. B. INCHES.—Muddler and Scrap (Mixture—Bunch).

C. RATHBONE.—Orange Tippler and Orange Toper (Bacchanal—Thyme).

L. & W. RUTHERFURD.—Unnamed (Shovel—Violet), unnamed (two) (Splauger—Diana).

THE IRISH SETTER.

Editor Forest and Stream:

Can any of the readers of the FOREST AND STREAM tell me why it is the Irish setter does not get to the front in the field trials? In fact, they rarely get third place. And yet no one can deny his value for "business" in the field. He is a tireless worker, a wide ranger, possesses a good nose, and is generally a first-class retriever from either land or water. These qualities ought to make him a winner at field trials, but he seldom "gets there." I have owned, handled and studied this strain of dogs for ten years, and while not claiming to be an expert by any means, have observed some peculiarities about him which I have observed in no other dog to so great an extent.

The most important of these, and one that proves a serious impediment when hunting in company, is extreme jealousy. I have a bitch which has seen but little field service, yet is under excellent control, and as steady a dog as I ever shot over when out with her alone. Yet, when in company she is quite another animal. Then she is wild, headstrong, and almost unmanageable. If she makes a point and another dog is moving up, she is sure to run in and flush, and perhaps chase the birds. If the other dog makes the point she will dash in ahead and flush. In short, acts as though determined to do all the hunting and find all the game, and extremely jealous of her companion. I should like to inquire of professional handlers and sportsmen who have had considerable experience with this dog, if they have observed this trait. It is as strongly marked in dogs of this strain which have come under my observation as is their red color. May this not be one reason they show so badly in field trials?

The red Irish has always been a favorite of mine, because he combines all the best qualities of other strains as a field dog for the sportsman. His beauty is unquestioned. He can stand heat as well as any pointer and better than any other setter, and cold as well as the latter and better than the former. As a ranger he can do more work and stand it longer than any other dog living. He is a natural retriever, and will plunge into a river of floating ice after a duck or goose with all the spirit of a Chesapeake Bay dog. There is no more stylish dog, and his gameness is proverbial. Their faults, in addition to those spoken of, are an inclination to be headstrong and gunshyness. For this reason I prefer the bitches to dogs—they are much more tractable. But I think this is due more to the fact of a lack of work than natural obstinacy. Some of them are gunshy. I own one at this writing which was extremely gunshy when a pup, but has entirely overcome this fault. So, I presume, this is no more common with the Irish than other strains.

I am pleased to learn that the Irish setter men have organized a club to push my favorite to the front as a field dog, for there is where he surely belongs. TENDERFOOT.

WELLINGTON, Kan., Dec. 27.

THE BEAGLE CLUB.

FOLLOWING is the President's annual report to the Beagle Club: "It is with pleasure and gratification that I submit for your consideration, this, our Third Annual Report. The prosperity and success in accomplishing the objects for which we were organized has been all if not more than the most sanguine of our members anticipated. I am pleased to state that in addition to our prosperity we close the year with a balance in the treasury, a feature which we have been unable to boast of heretofore. The financial condition has been brought about by those of our members who are heartily in accord with the interest and success of the Club, by donating each an amount for that purpose. While it is pleasant for us as members of the Executive Committee to thank each one individually for their contribution, it is equally disagreeable to note the indifference or lack of interest manifested by a few. It is true that our expenses have exceeded the receipts from annual dues, but it must be conceded that every dollar laid out has been of inestimable value in promoting the success of our club. We gave special prizes at nearly all of the bench shows east of the Pacific Slope, and have had the co-operation of all bench show managers, inasmuch as the beagles have been properly classified and the judging has been done in accordance with our standard, and further, in consideration of the efforts of your Executive Committee the judges in most instances have been selected from our own members. If any have doubts as to the beneficial influence which the American English Beagle Club has exercised in educating and teaching the fanciers of the beagle hound as to what he should be, let him recall his observation of this class of dogs as he saw them, say at the time when we were organized, four years ago, and put them in comparison with what he has seen at the same shows during the past year. It needs no arguement to convince the most careless observer that the change is, to say the least, remarkable. Then we saw a few good dogs and many mongrels. Now instead we see a large class of well-bred well-formed and graceful dogs. It is not unreasonable or difficult to infer that this marked change is the direct result of the good influence of our Club, of which we are so justly proud. Let us continue in our present prosperity by all working in harmony, paying our dues promptly, and securing new members, and those that are worthy of our affiliation. I trust it would not be unbecoming for me, as your President, to offer my personal thanks to our Secretary and Treasurer for his untiring ambition and efficient labor, to which we owe so much for our success. The New England Kennel Club have desired us to name (which I have been pleased to do) some of our members from which they can select a judge for beagles, at their show to be held in the spring. They propose to provide very liberally for the beagles, both as regards classes and prizes, and it is very much desired that our club will use its best efforts to make a grand display of beagles at this show. In conclusion I am pleased to state our list of membership contains the name of none except of those in good standing. That we may for the ensuing year elect a good, efficient corps of officers, is the sincere wish of Yours very truly, C. E. NICHOLS, M. D., President, (Jan. 1, 1887.)"

MASTIFF TYPE.

Litera scripta manet.

Editor Forest and Stream:

You will forgive me for again troubling you on this subject, but reading Mr. C. H. Mason, remarks on the mastiff Sylvia in his report on St. Johns dog show in your issue of Oct. 28, I cannot help taking exception at what he writes in reference to Mr. Wade. That Mr. Mason knows what a mastiff should be as well as any man in America is certain, and Mr. Wade has perhaps a touch of *cacoethes scribendi*, and like all enthusiasts, rides his hobby hard, but all lovers of the mastiff owe Mr. Wade a deep debt of gratitude for arguing that "if a mastiff has not good legs and feet he is useless" (*vide* Mr. Thompson's words in History of Mastiff, p. 188).

Mr. Wade's statements may be at times misleading, and occasionally unintentionally incorrect when he writes about English specimens who he only knows about from portraits and reports, but for all that he has opened the eyes of English breeders as well as his own countrymen, that well-grown limbs are requisite to constitute a perfect mastiff as well as a good head. I, for one, trust Mr. Wade will not lay his pen aside, and hope he will resume the discussion of mastiff points whenever he sees his way to expose fallacies. If we authorities are unable to defend the type and characteristics we hold and the awards we make, it serves us right to be cut up by Mr. Wade or any one else who has the courage and ability to attack errors.

My chief object, however, in writing this letter is to reprehend the slight ill feeling I can foresee arising between Mr. Wade and his literary opponents. Now this should not be. In the heat of argument we are all apt to write at times what causes a slight sting, but this should be forgiven and overlooked by good fellows. Messrs. Wade, Watson, Mason and Haldeman are all too good men even to feel vexed with one another owing to their individual cranks, fallacies, fancies or prejudices, for it is only the egotist who sets up never to be mistaken in canine matters.

I have borne the brunt of many a literary kicking in my time and got into several hot disputes, but somehow my literary adversaries have nearly always become subsequently warm personal friends. I am now too much of a paid free lance to feel the smart of literary pricks, and, therefore, as an old hand, would wish to say to Mr. Wade and his opponents: Gentlemen, argue the matter out as much as you like and the editor can afford us space; but let us do it coolly and in all friendliness; let no ill feeling arise; just smother it in your own bosoms, for remember good men, like good mastiffs, are none too plentiful. Cranks and fads are all very well, but friendship is better; and I, for one, write not to crush an opponent, but to convince the majority of my readers.

Mr. Wade will persist in poking at Mt. Sipylus until it falls and perchance unwillingly crushes him. In your issue of Oct. 21 Mr. Wade drags forward the remarks of an unknown reporter in the English *Field* on the mastiff Victor Hugo to support his argument on mastiff type. Now, I have as much contempt as anybody for that organ, whose infallibility I cannot admit, although I have always admired the merits of the paper and ability of its egotistical old editor.

Let me tell Mr. Wade, "*Literæ scriptæ manent*," people cannot get over their own words. By Stonehenge, page 142, I can show, according to the editor of the *Field's* own writing, Victor Hugo, being "without the slightest particle of bulldog appearance, either in skull or expression," is defective and untypical in head, having more the character of the boarhound than the English mastiff. Stonehenge says of the mastiff: "Head of large size, between that of the bloodhound and bulldog in shape. The teeth generally meet, but if anything there is a slight protuberance of the lower jaw."

Now, how can any dog "without the slightest particle of bulldog in appearance, either in skull or expression," have a typical head, according to Stonehenge? the infallible Pope Walsh, editor of the *Field*, whose mere reporters cannot outweigh the edicts of its editor, I presume?

Of Mr. Edgar Hanbury (who reaped such pecuniary advantage by stud fees from the short-faced Rajah) [the big bulldog, as Pope Walsh called him when I placed him over Green's Monarch], Mr. Wade says, "if there is an authority in England it must be he."

Very well, Mr. Wade, we will see what your authority holds, although he has written very little on the subject of mastiff type. However, in 1880, some one asked the simple question, "Should mastiffs be undershot?"

In the *Live Stock Journal* issue of June 18, 1880, there appeared a reply from Mr. Hanbury and also one from myself. Being brief, I quote both *in extenso*, as they will be instructive to American breeders:

"*To the Editor of the Live-Stock Journal:* SIR—In answer to 'C. H.' I unhesitatingly reply that the mastiff should be undershot, which may at once be seen from the following: 1. All dogs used for baiting purposes should be undershot, as it enables them to get a better hold, and also to hold on longer, as they can breathe more freely. 2. Formerly the mastiff was used for bear-baiting as well as for watch purposes. 3. Formerly the mastiff was usually undershot, of which there is abundant proof. Cuvier and other naturalists class the mastiff among the undershot breeds. However, of late years the public, and a few of our modern judges, losing sight of the original uses of the mastiff, have gone in for the 'big yellow dog' stamp, a fine animal to look at, but, like many of the vast dray horses, only fit for show. The undershot jaw is now more difficult to obtain than the overshot. As a judge, I prefer the jaw to be slightly undershot, but not sufficiently so as to interfere with the truncated (*i. e.*, cut off) appearance of the muzzle.—M. B. WYNN, Hon. Sec. of the Mastiff Club.

"P. S.—I think all who act at times as judges of mastiffs who happen to see 'C. H.'s' query, should openly express their views in order that the public may suit themselves whom they will exhibit under."

"SIR—In reply to 'C. A.'s' question about the formation of the lower jaw in mastiffs, allow me to state that, having bred such dogs for nearly thirty years, more have had the projecting than level mouths; indeed where you get the latter the muzzle is invariably pointed, which all admit to be an evident objection. Knowing that nearly all the best mastiffs have now the underhung jaw, I think that this point ought to count for good in a judge's opinion, provided there is nothing so positive as will offend the eye. For instance, I maintain that the shape of Beau's lower lip causes the supposed mistake, rather than the so-termed misshapen jaw, and consequently so grand a dog ought not to be disqualified on that score. As to any strict standard of correctness, in the absence of any definite law, I believe either should be considered right; of the two a moderate undershot jaw, in my opinion, is preferable to a level mouth. You might as well revive the old prejudice and destroy all brindles as eliminate from a litter of whelps any which happen to come into the world with underhung jaws.—EDGAR HANBURY."

Mr. Wade and others will kindly notice Mr. Hanbury stated "a moderate undershot jaw is preferable to a level mouth in his opinion." Now Mr. Hanbury cannot affirm Victor Hugo's long boarhoundlike head (and I opine overshot jaw), is typical or even correct, without eating his own words, and by so doing he would virtually be admitting how he must have misled the public to his own pecuniary advantage in putting Royal to the stud and then awarding prizes so frequently to short-headed specimens, so easily recognizable as the offspring of his own stud dog. Whatever Mr. Edgar Hanbury may have seen in Victor Hugo to reverse the awards of such consistent judges as Messrs. Beaufoy and Taunton, he surely could never contradict and stultify his previous awards by affirming it was the long untypical head of that vast size-possessing specimen that influenced him in the least in the dog's favor.

In reply to Mr. Wade's long letter in your issue of Sept. 30 I may inform him of his error.

The Emperor's dam had a very short muzzle, far shorter than my champion Peeress. Countess transmitted her short muzzle and grand head to my Stanley by Granby, as well as to The Emperor, by The Shaw.

The rest of Mr. Wade's letter I will not touch upon, not wishing to attack a man whose hands are full, although he again quotes from portraits in speaking of the collie Old Cockie, whereas I awarded that specimen first prize at Birmingham in 1873.

Mount Sipylus has now fallen, and I trust Tantalus will not be crushed. With this letter I must close the subject, as I cannot afford the time it occupies to reply to such important questions in settling a national type.

I have just received some interesting particulars concerning a Lyme Hall mastiff named Juno, owned by a clergyman in Cornwall thirty-six years ago. He says she was not red or reddish, but fawn, with black points, with a short head and massive skull, deep chest and very powerful. She was a most faithful and affectionate creature and never challenged anyone who openly rang the door bell, but if they prowled on the premises she forcibly detained them, although without biting. He says she came from Lord Falmouth, who had her from Mr. Legh, of Lyme Hall. Such was the type and disposition of the old English mastiff.

M. B. WYNN.

THE ELMS, Rothley, Lancashire, England.

"THIS WON'T DO."

Editor Forest and Stream:

I beg space in your columns to make a short reply to your editorial of the above caption in your issue of Dec. 30. There are circumstances which provoke a wrong which often is greater than the wrong itself. For instance, the taking of a human life—the greatest of all wrongs—is frequently justifiable, and the slayer is honorably acquitted. I contend the circumstances which caused Mr. Stephenson to have Ben Hill pulled was a greater wrong than the pulling, and he should be honorably acquitted.

Rule 2, National Field Trials Club, says: "If two dogs owned or exhibited by the same person should be drawn to run together, or come together in any successive heat, the second dog shall change places with the next dog in the order of running." This rule was not made because a man could not handle two dogs at one time, but was made expressly to induce one person to enter more than one dog, and to prevent dogs owned or handled by the same person running against such other until the end of the race when all others were run out.

Mr. Stephenson owned Ben Hill and handled Lillian. Mr. Bevan handling Ben Hill did not lessen Mr. Stephenson's interest in him. No one would have been so obtuse (not even the average reporter) but could have seen that Mr. Stephenson could not have been expected to run Bob Gates and Lillian (he handled both but owned neither) against each other in the second series of heats. Yet Mr. Stephenson's interest in Ben Hill (even while he was handled by Mr. Bevan) was greater than both the others combined.

The executive committee certainly could not have given this rule much study when they decided Mr. Stephenson had no interest in his own dog, for it has always been ruled that a man handling one dog had interest enough in it to prevent it from running against any other dogs he handled, therefore they must have decided his interest was in Lillian and he had no interest whatever in Ben Hill because he did not handle him. The executive committee made a grave blunder probably for want of deliberation, possibly by hastily taking the advice of some would-be Solon and forced Mr. Stephenson to cut his own throat, and because he should choose which side he cut you demand the severest punishment be meted out to him. Mr. Stephenson was placed in a very embarrassing situation by their blunder. He knew and every one knows who know Lillian and Ben Hill that she will beat him ninety-nine times in every hundred. Now suppose he had beaten her in this heat, the cry would have been raised at once and probably telegraphed to the four quarters of the globe by some pay-me-handsomely-or-I'll-stab-you-in-the-back reporter that Mr. Stephenson had pulled Lillian to let Ben Hill beat her.

I have known Mr. Stephenson for a number of years, have always known him to be honest, honorable, free and open, scorning anything underhanded, whatever he does he does openly and would always sacrifice himself rather than his friends should have the faintest grounds for suspecting his fidelity. How easily he could have thrown this whole thing on Mr. Bevan. But when Mr. Bevan came to him with great tears trickling down his cheeks saying he thought he had two friends in America who would be true him in his hour of trouble, but both had deserted him and he thought he would have to leave the country. Mr. Stephenson extending him his open hand said, Mr. Bevan you have obeyed my instructions, "I am your friend." He then goes before the handlers' committee and tells them Mr. Bevan is not to blame, that he shoulders the whole responsibility, yet you ask the severest punishment be meted out to a man whom the (unintentional) blunder of the executive committee has placed in this unenviable position, because he comes out openly and acknowledges everything rather than allow any blame to fall on the shoulders of a poor confiding youth, or acts on your sneaking suggestion of losing Ben Hill. Mr. Stephenson knew he was not jeopardizing any one's interested but his one. Ben Hill had beaten only one dog and this one he knows would never be selected to run another heat even if Ben Hill should win first money. When he was forced to run his two entries together he protested, and wanted to withdraw his dogs because he thought the decision unjust but was compelled to run them. He should now demand hi

entrance money and make the executive committee responsible for all this trouble. D. BRYSON.

MEMPHIS, Tenn.

[We had supposed Mr. Bryson to be a person of sufficient intelligence to distinguish between wrong doing in the abstract and wrong doing in the concrete; between the offense and the perpetrator of the offense. We apologize to Mr. Bryson for having in this done him an injustice. We have already stated that Stephenson's motives in the case in question appear to have been "generous rather than base." He prefered to have his friend's dog win rather than his own, but this, like "the flowers that bloom in the spring," has nothing to do with the case. The offense was committed—it makes not a particle of difference by whom—and it should be punished. That Stephenson should bear this punishment no doubt seems hard to himself and his friends, for his position was a difficult one; but, however much we may love the sinner, we must hate the sin still more. We have said before that "in a matter of this kind we have to deal with results, not motives. If a handler be permitted to jocky from good motives, it will be impossible to prevent the same thing being done from bad ones." We do not consider Stephenson at all in this matter. He simply represents the offense. We consider the judges more guilty in the matter than the handler, and if it were possible would rather see them punished than him. But if Stephenson's offense goes unpunished, Smith or Brown or Jones will feel next year that he can do something similar, and how can he be censured then if Stephenson be now permitted to go unblamed. Mr. Bryson's allusions to the comparative merits of the two dogs have, as he no doubt knows, not the slightest bearing on the subject in hand. His insinuations against the reporters, however, deserve notice. He implies that certain reporters have received something valuable for favorable mention of certain dogs. His words as written will bear no other construction. We now call upon Mr. D. Bryson to furnish us the proofs of this charge, assuring him that we will gladly publish them. Let him give all the facts. No honorable man would make such insinuations except on good grounds, and surely Mr. D. Bryson is an honorable man. Let us therefore have all the facts and details, that we may know all about the matter.]

A LARGE ST. BERNARD PUPPY.—Pittsburgh, Dec. 18.—*Editor Forest and Stream:* Believing my St. Bernard puppy Meinard (A.K.R. 4180) to be as large if not larger than any other of his age, I send his measurements. He was whelped March 8, 1886, and weighs 148lbs., standing 30½in. at shoulders, and measuring 80in. from nose to tip of tail. His head is 28in. round the skull, muzzle 15¼in., and his chest girths 40in. His forearm measures 13in., and above the first joint it is 9in. If any one has a larger puppy of the same age I would like to know it.—A. STUCKY.

THE PHILADELPHIA KENNEL CLUB. — General Wayne, Pa., Jan. 6.—*Editor Forest and Stream:* The Philadelphia Kennel Club held their annual meeting Tuesday, Jan. 4, and elected the following officers for 1887: President, E. Comfort; Vice-President, J. M. Fronefield, Jr.; Secretary, Victor M. Haldeman; Treasurer and Delegate to the A. K. C., J. H. Winslow; Executive Committee—C. T. Thompson, Geo. Esherick, J. A. Stovell, A. Glass and I. H. Roberts.—VICTOR M. HALDEMAN, Secretary.

CONSOLIDATION.—The Field Trial Kennels, of Charlotteville, Va., owned by Mr. Edward Dexter, of Boston, Mass., and the Clifton Kennels, owned by Mr. J. H. Phelan, of Jersey City, N. J., have, we are advised, consolidated their interest, although retaining their individuality. Captain McMurdo will attend to the field trial record of the dogs and Mr. Phelan will do his best to bring them to the front on the bench.

A LARGE PUPPY.—*Editor Forest and Stream:* My English mastiff bitch puppy Alpha, by Hero III. out of my Nell, is seven months old to-day and weighs 106lbs. This is the heaviest weight at that age on record in America, and I doubt if it can be beaten in England.—VICTOR M. HALDEMAN.

THE HARTFORD KENNEL CLUB.—Hartford, Conn., Jan. 6.—*Editor Forest and Stream:* The officers of the Hartford Kennel Club for 1887 are: Wm. L. Matson, President; Archibald A. Welch, Vice-President; Abbott C. Collins, Secretary; John D. Parker, Treasurer.—A. C. COLLINS, Secretary.

ETHAN ALLIN SETTERS.—Mr. Ethan Allin informs us that he has disposed of all of his setters, with the exception of two puppies, to Mr. Edward Ingersoll, Fort Benton, Mont.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope. Sets of 200 of any one form, bound for retaining duplicates are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Tricksey. By H. G. Charlesworth, Toronto, Ont., for black cocker spaniel bitch, whelped July 3, 1886, by Obo II. (Obo—Chloe II.) out of Woodstock Lily (Brahmin— ———).

Red Silk. By H. G. Charlesworth, Toronto, Ont., for red cocker spaniel dog, whelped July 4, 1886, by Obo II. (Obo—Chloe II.) out of Woodstock Dinah (imported Tippo—Toronto Jet).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Madge—Scotson. McEwen & Gibson's (Toronto, Ont.) imported collie bitch Madge (Highlander—Hasty) to J. Van Schaick's imported Scotson (Dublin Scot—Flurry II.), Oct. 30.

Gipsey—Sir Obo. L. Pearce's (Toronto, Ont.) cocker spaniel bitch Gipsey (A.K.R. 2894) to H. G. Charlesworth's Sir Obo (Obo II.—Blackie III.), Jan. 7.

Freda—Sir Obo. T. Walsh's (Oakville, Can.) cocker spaniel bitch Freda (A.K.R. 3881) to H. G. Charlesworth's Sir Obo (A.K.R. 3453), Dec. 26.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Patti M. Reserve Kennels' (Cleveland, O.) pointer bitch Patti M. (Donald—Devonshire Lass), Dec. 28, nine (four dogs), by Godeffroy's Croxteth (Bang—Jane).

Morning Star. Chas. York's (Bangor, Me.) English setter bitch Morning Star (Dashing Dan—Daisy Starlight), Dec. 31, five (four dogs), by his Gun (Gladstone—May B.).

Hebe. H. G. Charlesworth's (Toronto, Can.) cocker spaniel bitch Hebe (A.K.R. 3882), Dec. 20, four (one dog), by his Sir Obo (A.K.R. 3459).

Beech Grove Gabrielle. Geo. Jackson's (Beech Grove, Ind.) mastiff bitch Beech Grove Gabrielle (A.K.R. 3371), Dec. 14, ten (four dogs), by his imported Beech Grove Duke.

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Beech Grove Fred. Fawn mastiff dog, whelped July 4, 1886, by Beech Grove Duke (A.K.R. 3370) out of Beech Grove Gabrielle (A.K.R. 3371), by Geo. Jackson, Beech Grove, Ind., to C. Gause, Carthage, Ind.

Beech Grove Madge. Dark stone fawn mastiff bitch, whelped Dec. 3, 1885, by Beech Grove Duke (A.K.R. 3370) out of Beech Grove Gabrielle (A.K.R. 3371), by Beech Grove Farm Kennels, Beech Grove, Ind., to A. W. Sawyer, Sycamore, Ill.

Beech Grove Grover C. Light fawn mastiff dog, whelped July 4, 1886, by Beech Grove Duke (A.K.R. 3370) out of Beech Grove Gabrielle (A.K.R. 3371), by Geo. Jackson, Beech Grove, Ind., to P. K. Jones, Sycamore, Ill.

Beech Grove Annie. Light fawn mastiff bitch, whelped Sept. 11, 1886, by Ashmont Victor (A.K.R. 2830) out of Delph Viva, by Geo. Jackson, Beech Grove, Ind., to R. C. Pate, St. Louis, Mo.

Beech Grove Juliette. Dark fawn mastiff bitch, whelped Sept. 11, 1886, by Ashmont Victor (A.K.R. 2850) out of Delph Viva (A.K.R. 1432), by Geo. Jackson, Beech Grove, Ind., to C. F. Matteson, Canfield, O.

Beech Grove Delphine. Dark fawn mastiff bitch, whelped Sept. 11, 1886, by Ashmont Victor (A.K.R. 2830) out of Delph Viva (A.K.R. 1432), by Geo. Jackson, Beech Grove, Ind., to G. S. Hutchinson, New York.

Beech Grove Norah. Dark fawn mastiff bitch, whelped July 4, 1886, by Beech Grove Duke (A.K.R. 3370) out of Beech Grove Gabrielle (A.K.R. 3371), by Geo. Jackson, Beech Grove, Ind., to A. M. Carr, Salem, O.

Beech Grove Jumbo. Light fawn mastiff dog, whelped July 4, 1886, by Beech Grove Duke (A.K.R. 3370) out of Beech Grove Gabrielle (A.K.R. 3371), by Geo. Jackson, Beech Grove, Ind., to Geo. W. Colwell, Harrisville, Mich.

Beech Grove Patsy. Dark fawn mastiff bitch, whelped July 4, 1886, by Beech Grove Duke (A.K.R. 3370) out of Beech Grove Gabrielle (A.K.R. 3371), by Geo. Jackson, Beech Grove, Ind., to W. H. McCurdy, Cleveland, O.

Beech Grove Ajax. Fawn mastiff dog, whelped July 4, 1886, by Beech Grove Duke (A.K.R. 3370) out of Beech Grove Gabrielle (A.K.R. 3371), by Geo. Jackson, Beech Grove, Ind., to J. B. Hayward, Indianapolis, Ind.

Beech Grove Queen. Light fawn mastiff bitch, whelped July 4, 1886, by Beech Grove Duke (A.K.R. 3370) out of Beech Grove Gabrielle (A.K.R. 3371), by Geo. Jackson, Beech Grove, Ind., to E. R. Brown, Atchison, Kan.

Beech Grove Princess. Light fawn mastiff bitch, whelped July 4, 1886, by Beech Grove Duke (A.K.R. 3370) out of Beech Grove Gabrielle (A.K.R. 3371), by Geo. Jackson, Beech Grove, Ind., to Mrs. Mary Danley, Indianapolis, Ind.

Beech Grove Zeus. Light fawn mastiff dog, whelped July 4, 1886, by Beech Grove Duke (A.K.R. 3370) out of Beech Grove Gabrielle (A.K.R. 3371), by Geo. Jackson, Beech Grove, Ind., to Jos. A. Moore, Indianapolis, Ind.

Beech Grove Kate. Light fawn mastiff bitch, whelped Dec. 3, 1885, by Beech Grove Duke (A.K.R. 2370) out of Beech Grove Gabrielle (A.K.R. 3371), by Geo. Jackson, Beech Grove, Ind., to Wm. Johnson, Indianapolis, Ind.

Beech Grove Duke II. Light fawn mastiff dog, whelped July 4, 1886, by Beech Grove Duke (A.K.R. 3370) out of Beech Grove Gabrielle (A.K.R. 3371), by Geo. Jackson, Beech Grove, Ind., to Miss Sarah M. Davidson, St. Paul, Minn.

Mayflower. White, black and tan beagle bitch, whelped Aug. 11, 1886, by Skipper out of Nellie II., by Wm. W. Silvey, Philadelphia, Pa., to Chas. Fullmer, same place.

Barnum. Liver and white pointer dog, whelped March 9, 1885, by Guess out of Viola, by Wm. W. Silvey, Philadelphia, Pa., to Philip Randolph, same place.

Johnny III. Lemon and white Clumber spaniel dog, whelped Aug. 28, 1886, by Johnny out of Jess, by F. H. F. Mercer, Ottawa, Ont., to ———, Boston, Mass.

Beech Grove Duke (A.K.R. 3370)—Beech Grove Gabrielle (A.K.R. 3371) whelp. Light fawn mastiff dog, whelped July 4, 1886, by Geo. Jackson, Beech Grove, Ind., to J. W. Rogers, Glyndon, Minn.

Rifle and Trap Shooting.

RANGE AND GALLERY.

SAN FRANCISCO, Dec. 26.—The Nationals Shooting Club held their monthly medal shoot at Shell Mound Park to-day. Following are the best records made in the different classes:

Champion Class.

	200yds.	500yds.
Waltham	3545545445—44	5555555535—48—92
Johnson	4445544444—42	4555355454—45—87
Hovey	5545445555—47	3534554335—40—87
Klein	4445555444—44	5455544432—42—86
Robertson	5544444444—42	4545445455—43—85

First Class.

Diers	4444444444—40	4555554453—45—85
Meyer	4454444444—41	3545555435—44—85
Lods	4444444454—42	2535445454—42—83

A match between a team of ten men from the Nationals Shooting Club and a team of ten men from the National Guard of Virginia City, Nev., was shot off in the afternoon. Following is the score of the home team:

Nationals.

	200yds.	500yds.
Kline	4554544455—45	5355454554—44
Johnson	5554444554—45	4455544435—45
Carson	4454454455—44	4555545455—47
Hovey	4445445554—44	3555543455—44
Waltham	4545545445—44	5555555535—48
Meyer	4554544544—44	4344543444—39
Westcott	5553444545—44	5555445555—48
Raye	4435245453—42	4554554555—45
Robertson	4444544444—41	5355455545—46
Diers	3455452544—41	5455252455—48
	434	448—882

The marksmen pride themselves in having made the best aggregate ever scored by a team of ten men at the ranges referred to.

WILMINGTON, Del., Jan. 3.—The weekly shoot of the Wilmington Rifle Club took place at Schuetzen Park this afternoon. Being the first Monday of the month, it was "badge day." The club's gold badge was shot for and won by H. B. Seeds with a fine score. The club has lately been adding improvements to its range. The new double-sliding target, invented by W. A. Bacon, has been put into use, which facilitates the shooting at least 100 per cent. A tight room has been built inside of the old shooting house and fitted up with a stove and benches, where the riflemen can keep warm between shots, which transforms the discomforts of winter shooting into the pleasant pastime of early fall. As to the target tender, "he ha'nt got time to get cold." The following are the scores made out of a possible 100 points, Standard target, 200yds., off-hand:

Badge Match.

H B Seeds	8	10	6	8	7	7	7	8	6	6—73
C Carleton	10	8	3	4	9	7	4	8	6	5—64
S J Newman	5	3	8	7	8	5	4	6	3	6—55
W A Bacon	5	7	3	8	3	6	6	5	3	7—50
J E Newman	7	7	7	4	2	4	3	4	4	5—47
H Simpson	6	4	3	5	6	3	5	6	3	5—46
W O'Connor	3	5	3	5	5	3	7	3	4	5—43
J Scott	5	7	5	3	3	4	2	5	5	4—43

Practice Match.

H B Seeds	9	7	8	5	6—35	H Simpson	10	9	2	3	2—26
J Scott	8	9	9	2	3—31	J E Newman	4	4	4	5	7—24
W A Bacon	6	3	10	4	6—29	S J Newman	5	4	5	9	3—20
W O'Connor	3	5	4	6	8—26	C Carleton	5	3	2	5	4—19

BURLINGTON, Iowa:—Mr. E. W. Bird, of Fairmont, Minn., has been in correspondence with Mr. C. H. Wyman, of this city, for some time relative to a match, and sends this score down with his compliments by way of showing what he can do. He used a .32-cal. Ballard rifle shooting 45 grains of powder and 185 of lead, grooved bullets, no wiping. The shooting was done off-hand at 200yds.:

21	12	20	18	13	17	21	24	23	21—197	74
24	24	21	24	21	16	24	23	20	19—216	86
18	20	23	23	23	23	22	18	22	23—215	83
17	23	20	21	17	22	21	21	17	23—202	76
22	17	19	25	24	21	25	17	21	23—214	82
22	21	19	23	24	22	23	17	16	24—210	84
24	24	21	16	22	23	20	15	18	22—207	80
24	24	22	20	20	20	22	24	18	20—214	83
23	22	24	24	23	22	22	22	25	25—232	96
20	19	10	18	16	18	23	21	19	19—183	69
									2,090	813

The first column of totals is the score made on the German ring target, with 250 possible on each string of ten shots. The second column of totals at the extreme right is the corresponding score on the American target. The ninth string, giving 232 on the German ring target and 96 on the American target, is remarkable. Each one of those ten bullets went inside of a 6in. circle. The whole score is the best on record with such a light rifle. Mr. Bird will probably visit Burlington during the coming summer, and a shoot will be arranged while he is here.

RIFLE NOTE.—The annual meeting of the Massachusetts Rifle Association was held at the Revere House, Boston, on Tuesday evening last.

BOSTON, Jan. 5.—There was a large attendance of riflemen at the range at Walnut Hill to-day. The weather conditions were excellent, and those present were enabled to roll up several good scores. During the day the members competed in two team matches, which were both won by the first team. Following are the scores:

Decimal Off-Hand Match.

W O Burnett, A	10	8	9	8	5	10	10	7	10	7—84
W Charles, A	7	9	10	10	10	8	7	8	6	6—83

GARDNER, Mass., Jan. 7.—Some of the members of the Gardner Rifle Club have recently had two meets at the Hackmatack Range. The new standard American targets were used, distance 200yds., shooting off-hand:

	1st Meet.	2d Meet.
G F Ellsworth	82 87—169	82 80—162
G C Goodale	80 83—163	78 76—154
A Mathers	81 80—161	
C N Edgell	77 79—156	74 70—144
I N Dodge	77 77—154	84 79—163
F E Nichols	75 73—148	66
H C Knowlton	62 79—141	
C L Leland	69 66—135	43 74—117
W E Adams	62 68—130	
Chas Crabtree	63 62—125	72 69—141
G R Warfield		87 78—165
D E Warfield		59 51—110

VIRGINIA CITY, Dec. 26.—The friendly match arranged between the Nevada Rifle Association, of this city, and the National Club, of San Francisco, took place to-day. Each team shot over its own range, 10 shots apiece at the 200 and 500yds. targets, and the result was announced by telegraph. The Nevada team made a total score of 881 points and the Nationals 882, beating their opponents one point. The highest individual score made by the Nevada team was 94 points, while 92 was the highest scored by the Nationals. At the 200yds. target the Nevada team broke all former records with a total score of 447 points, the highest ever made in a shooting contest between opposing teams. The early part of the day was unusually favorable for shooting at the Nevada range, the first four members of the team not scoring under 90 points. Before the match was half over, however, a gale began blowing from the south, which explains the falling off in the scores made by Spargo, Curnow and Wratten, all three of whom are considered good for 90 points under favorable elemental auspices. Below are the scores made by the Nevada team:

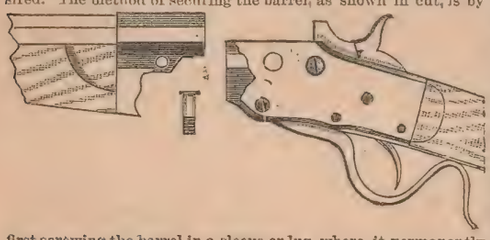
M H Burke	46 48—94	J S Wratten	43 42—85
B J Genesy	48 46—94	J Spargo	45 40—85
J D Cameron	47 44—91	W Vardy	43 40—83
X Stocker	42 48—90	J Ferris	43 40—83
J C Dunlop	44 44—88		
Steve Curnow	46 42—88		881

HAVERHILL (MASS.) RIFLE CLUB.—Jan. 1, Record match.

S E Johnson	10	9	6	9	7	9	6	7	10	8—81
H Tuck	10	8	6	7	8	8	7	9	7	10—80
J F Brown	10	7	10	7	6	7	6	6	9	9—78
J Busfield	7	6	8	6	7	7	7	6	10	5—69
A Edgerly	6	5	9	10	7	6	7	7	4	8—69
F Merrill	8	6	5	6	8	6	5	7	7	5—63
C Bliss	7	7	4	8	4	3	6	7	10	6—62

No. 2.

H Tuck	9	9	9	9	8	8	9	10	8	7—86
S E Johnson	7	10	10	8	7	8	8	8	7	10—83
J Busfield	9	9	8	8	8	6	6	9	9	7—79
A Edgerly	7	7	7	10	7	8	7	8	5	6—73
J F Brown	9	9	8	7	7	4	7	7	9	3—71
C Bliss	4	4	9	4	8	8	6	10	8	10—71
W Worthen	9	8	6	7	5	5	8	8	6	6—68
F Merrill	6	7	8	6	6	6	5	8	6	4—61



Tuck made 9 bullseyes in this match and missed the 10th by only half an inch.

SARATOGA, Jan. 8.—At the last meeting of the Rifle Club the following scores were made on the Massachusetts target at 200yds., off-hand:

W B Gage	11	12	11	10	10	9	12	11	11	11—108
R C Fonda	10	12	11	11	11	9	9	11	9	9—102
W H Gibbs	10	12	12	9	9	9	8	11	10	9— 99
H M Levengston, Jr	9	12	11	6	11	11	10	8	12	9— 99
W Meehan	13	9	10	8	11	10	6	11	10	9— 97

The next shooting day will be Thursday, Jan. 13.

BULLARD DETACHABLE BARRELS.—The Bullard Repeating Arms Company has completed the machinery for the production of the new single shot rifle with detachable barrel for hunting and target practice. This rifle for the present will be made in calibers .22, .32 and 38, for rim and center fire cartridges, as desired. The method of securing the barrel, as shown in cut, is by

first screwing the barrel in a sleeve or lug, where it permanently remains, the frame being cut open in such a manner as to make a dovetail to receive the lug and barrel. The lug slides into the frame and is firmly secured by a screw, as shown. This plan has been thoroughly tested and found to be ample, strong and safe. The company is now finishing their first lot and will soon be prepared to receive orders for the large calibers from .40 to .50. It is the intention to make the rifle with straight stocks unless otherwise ordered. When interchangeable barrels are used they must be both center fire or rim fire, as it is impossible to interchange a rim fire and a center fire in the same frame.

SALEM, MASS., Jan. 8.—There were two shoots on the range at Highland avenue this afternoon. The score for the practice shoot was as follows: W. B. Edmunds, 22; B. W. Wilson, 21; J. H. Smith, 22. Score of the military match for the State medals: Capt. W. M. Ward, 20; Lieut. G. R. Nelson, 20; George A. Lawrence, 21.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

BROOKLYN, L. I., Jan. 6.—At the annual meeting of the Unknown Gun Club the following officers were elected: Henry Knebel, President; John Akhurst, Vice-President; Henry van Staden, Treasurer; J. L. Doyle, Secretary. The prize shoots will be on the second Thursday of each month. Three cash prizes for each shoot are to be taken out of the club funds and to be competed for on the classified plan in addition to four extra prizes to be competed for during the twelve monthly shoots, the four members making the best individual scores in six out of twelve shoots to take the prizes. But a member must compete not less than six times to have a claim. The club also furnishes a gold medal to the member who wins it the oftenest during the year, and he will then become the owner. The club expects a number of additional prizes by the end of the year. The last shoot in December closed the season with a grand supper at C. Dorler's hotel, and the following prizes were presented: Three monthly prizes, $15, were divided among ties. Four extra yearly prizes, $48, to the four who made best individual scores in six out of twelve shoots. Ten additional prizes, $40 in value, to members who tried and did not succeed in the extra yearly prize contest. The names of winners are as follows: Monthly prizes, ties on 6, Henry Knebel, Sr., H. Pope, J. Scheggs, E. Fricke; ties on 5, M. Chichester, Ch. Plate, Wm. Tomford, J. Akhurst, J. Rathjen, F. Pike, H. Houseman; ties on 4, A. Harned, R. Mousees, H. van Staden, D. McQuillan, H. Knebel, Jr. Yearly prizes: I. Hyde 40 out of 42, H. Kuebel, Sr., 37, R. Monsces 37, H. Houseman 36, receiving $12 each. Additional prizes: H. Pope, attending 12 shoots, sole leather gun case; R. Midmer, 11, $5 in gold; J. L. Doyle, 11, box of wine; E. Fricke, 9, two boxes of segars; A. Harned, 9, two boxes; H. van Staden, 9, two boxes; M. Chichester, 8, two boxes; J. Rathjen, 7, fifty bottles of seltzer water; F. Pike and Ch. Plate, 6, case tocacco.—H. K.

DURYEA vs. KENDALL.—A noted gathering of pigeon shots from all parts of Long Island and New Jersey were present at the shooting match between L. Duryea and C. S. Kendall, of the Fountain Gun Club, at the Half-mile Track, Parkville, on Jan. 5. The stake at issue was $1,000, and the conditions for which it was shot under were: Long Island rules, the use of both barrels, 25 single rises, Duryea to stand at 29 and Kendall at 27yds., and 10 double rises, both standing at 21yds. After the money had been deposited with E. Cady, the match was commenced. Duryea started off very well and killed his first 10 birds straight, Kendall missing 2. The latter fell still further in the rear after this, and was 5 birds behind when the singles were finished. Duryea used his second barrel 10 times and had 6 drivers, 2 incomers, 10 right and 7 left quarterers. Kendall shot 11 times with his second and had 6 drivers, 4 incomers, 10 rights and 5 left quarterers. Duryea's 24th bird fell dead just out of bounds. In the doubles Duryea killed both birds in his 2d, 4th, 6th and 8th shots, and finished with a score of 12. Kendall killed both in his 5th and 8th shots, and scored 11, losing the match by 6 birds. He is not satisfied with his defeat, and another match will be probably shot at the next meet of the club. The score is as follows:

Single Rises.

L Duryea, 29yds	1111111111010111101101—20
D S Kendall, 27yds	1111110110101101010011100—15

Double Rises.

L Duryea, 21yds	10 11 10 11 10 11 00 11 10 00—12
C S Kendall, 21yds	10 00 01 01 11 01 01 11 10 10—11

Umpire for L. Duryea, H. McLaughlin; for C. S. Kendall, E. Kady; scorer, W. Ritch; puller, W. Schwarer; referee, C. W. Jones.

The regular shoot of the Fountain Gun Club followed. It was the first shoot of the season and the members had to shoot themselves into their classes for the year. Bondan, as usual, had supplied birds of the very best quality and they gave the shooters plenty of work to stop them. Kendall won the first prize, killing 12 straight; Duryea the second, killing 6 out of 7, and W. J. Stewart the third with 7 out of 11. Out of the 103 birds shot at 75 were killed and 28 escaped. The score is as follows:

A Eddy, 30yds	1111010—5	L Duryea, 28yds	1110111—6
H McLaughlin, 26yds	1101011—5	G L Hayes, 23yds	1111111—7
J DeFrane, 26ds	0101001—3	J Littel, 21yds	000
M Stewart, 26yds	1100111—5	C Jones, 30yds	1111111—7
J Selover, 25yds	1010101—4	J Lake, 23yds	0100010—2
D Kendall, 27yds	1111111—7	J Cherry, 26yds	1111111—7

Ties for first prize: Kendal 11111, Jones 11110, Cherry 10, Jones 110. Third prize: Eddy 0110, Stewart 1101. Referee, B. West.

WASHINGTON HEIGHTS, New York, Jan. 9.—*Editor Forest and Stream:* A sweepstakes match at 8 live birds, two ground traps, 25yds. rise, at grounds of Washington Heights Gun Club, One Hundred and Sixty-eighth street and Twelvth avenue. Day cold, ground covered with snow, birds a strong lot, scores fair. Members of the St. Nicholas Gun Club and of the Algonquin Club were present and participated in the shoot:

E H Fox	1 1½½½ 0 1 1 1—6	Terwilliger	1½1 1 1½0 1 1 1—6
Donnelly	1 1 1 0 1 1 1½—6½	Fountain	1 1 1½0 1 1 1—6½
Disbrow	1 1 1 1½1 1 1—7½	Pryer	1 0 1½½0 0 1½—3½
Tene	1½½1 0 0 1½0 0—2½	Brokaw	1½0 1 1½0 1 0 1—4
Dunseatb	1½½1 0 1 1½1 1—5½	Veitch	0 1 1 0 1 1½1 1—5½
Breiner	1 1 0 1 1 1½—6½	C Davidson	1½0 0 1 1 1 1 1—5½
Snooks	1 1 1½½1 1 1 0 6	Ryerson	1½1 0 1 0 1½1 1—5
Wheelock	1½1 0 1 1½1 1 0—5	P Hunt	1 1 1 0 1½1 1 1—6½
Brower	1 1½1 0 1½0 1 1—5		

Disbrow won, Mail second and ties for third place divided.—COLT HAMMERLESS.

New York, Jan. 10.—The Washington Heights Gun Club challenge to put one of its regular members against Wm. Graham, English champion, for a pigeon shoot, Long Island rules, 25 or 50 birds, for $100. Man and money can be found at Saul's Fort Washington Hotel, One Hundred and Sixty-second street and Tenth avenue.—JOHN R. TERHUNE, Sec.

WORCESTER, Mass., Jan. 7.—The Worcester Sportsmen's Club's first practice shoot of the season, at Coal Mine Brook range, 36 clay-pigeons: G. J. Rugg, 30; C. B. Holden, 27; C. Duane, 25; W. R. Deane, 24; H. W. Webber, 23; E. Welsh, 23; E. Whittaker, 21; Frank Stone, 18.

HAMILTON, Ont., Jan 1.—Following is a record of some shooting contests at Mountain View, Hamilton, on New Year's day:

At 10 Niagara blackbirds:

J Bourne	8	W Pett	4
T Stephens	8	A Smith	4
W Stroud	6	J Smith	4
M Griffiths	6	J Hunter	2

At 5 Niagara blackbirds:

W Stroud	5	J Pett	3
J Bourne	4	A Smith	1
G Reid	4	M Griffiths	1
T Stephens	4		

At 6 live pigeons, 25yds. rise:

H Graham	6	J Smith	4
W Stroud	5	J Pett	3
J Bourne	5	M Griffiths	3
T Stephens	5	A Smith	3
J Cline	4	E Dycer	3

Also at 6 live pigeons, 26yds. rise:

W Stroud	6	H Graham	4
M Griffiths	6	J Smith	3
J Pett	5	J Bourne	3
E Dycer	5	J Cline	3
E Spencer	5	T Stephens	1
A Smith	4		

WELLINGTON, Mass., Jan. 8.—There was a large attendance of gunners at the grounds of the Wellington Gun Club to-day, and some very good scores were made. In the second competition for the gold charms offered by the club, L. Brown won in Class A, E. I. Wardwell in Class B and C. G. Weld in Class C. Following were the winners in the several sweepstake matches: 1. 6 bluerocks—Short first, Gilman and Nichols second, Stanton and Wilson third, Schaefer fourth. 2. 6 clay pigeons—Lewis, Wilson and Schaefer first, Shumway, Wild and Francis second, Wardwell third, Crosby and Adams fourth. 3. 6 bluerocks—Schaefer and Francis first, Wild, Stanton and Short second, Crosby and White third, Wardwell fourth. 4. 6 blackbirds—Swift first, Francis second, Lewis and Schaefer third, Short and Wilson fourth. 5. 6 clay pigeons—Stanton and Schaefer first, Nichols second, Wilson and Sanborn third, Brown fourth. 6. 6 bluerocks—Wilson first, Wardwell second, Crosby and Francis third, Brown, Wild and Nichols fourth. 7. 6 clay pigeons—Schaefer first, Wardwell second, Stanton third. 8. 6 blackbirds—Stanton first, Wardwell second, Nichols third. 9. 6 clay pigeons—Nichols first, Stanton second, Swift third. 10. 6 bluerocks—Swift first, Stanton and Wardwell second, Fuller and Brown third. 11. 6 bluerocks—Wardwell, Stanton, Nichols and Brown first, Schaefer second, Swift, Short and Fuller third.

TORONTO, Jan. 1.—At John Oulcott's place in Eglinton there was a goodly assemblage in the afternoon to take part in the semi-annual handicap shoot of the Owl Gun Club of this city for the Moore challenge cup, a valuable trophy, given by Mr. A. P. Moore, ex-vice-president of the club, to be shot for by members of the club and to be won three times before becoming anyone's personal property. The Owl Gun Club is one of the youngest of the sporting clubs in this city, having been in existence less than a year, but it has made rapid progress and comprises about forty members, the majority of whom are good shots and thorough sportsmen. Its officers are: President, J. R. Humphries; Vice-President, A. Austin; Secretary and Treasurer, C. Unwin; Executive Committee, J. Lalor, J. Wells, F. Mallet and J. Douglass. Mr. A. P. Moore, the donor of the cup, was a prime mover in the club's organization and was the first vice-president. The trophy is valued at $300 and is particularly handsome in design. It has to be shot for every six months, alternately at Peoria blackbirds and live pigeons, until won three times by a member. Saturday was the second competition, the first at blackbirds having been won by Frank Mallett, J. R. Humphreys, president of the club, was the victor. The birds were fairly lively.

Mr. John Sheppard gave satisfaction as referee.

J R Humphreys, 31yds	0111011111111011—12
J Montgomery, 27yds	0111110101111110—11
J Douglas, 27yds	1011011100110111—10
J Jobbitt, 27yds	1111001011011101—10
R McKay	0010100111101111— 9
F Mallett, 27yds	0001100111001111— 8
J Wells, 27yds	0100100011011— 7

The following retired: H. Townson, 27yds., after killing 6 out of 10; W. Smith, 27yds., after killing 4 out of 7; C. Pickering, 31yds., 3 out of 7; C. Rogers, 27yds., 3 out of 7; W. Taylor, 21yds., 3 out of 6; J. C. Unwin, 24yds., 2 out of 5.

There was some good shooting to-day on Ald. Maughan's farm, on the Kingston road, plenty of pigeons having previously been provided. A match at 15 birds each, 26yds. rise, was held, the result being as follows:

Thos Pepler	111111111011111—15
Wm McDowall	111110111111101—13
Ald Maughan	111011110010011—10
F H Gooch	101111110010100—10
H J Maughan	011110110110010— 9
Capt Pillsworth	010101001110101— 8

MATCHING GRAHAM.—Captain A. H. Bogardus, champion wing shot of the world, left New York for his home, Elkhart, Ill., on Saturday, Jan. 8, having failed to get on a match with William Graham, the English pigeon shooter. The Captain at first desired Graham to shoot him 100 birds each, half American and half English rules, for from $1,000 to $5,000 a side, but Graham declined, and then the Captain modified his challenge to make the contest entirely under Hurlingham rules. Still Graham manifested no desire to meet the champion of sixteen years, and the matter has been dropped. Captain Bogardus will stop at Chicago to meet Mr. Andy Meaders, of Nashville, Tenn., who has challenged him for the championship, the stakes being $250 a side, Hurlingham rules, 100 birds each. The Captain will cover Mr. Meaders's forfeit, and within a month will name the time and place of the shoot. This may be in St. Louis and on Feb. 22. The Captain and his four boys, who are also great shots, will be in New York in the early spring.

NEWARK, N. J.—The Caledonian Park Gun Club had its yearly meeting at the headquarters, Caledonia Park, and reorganized for the year 1887. The old officers were unanimously elected as follows: President, E. Flocken; Secretary, M. Ulbricht; Treasurer, C. Reinhard; Referee, Geo. Herrmann; Scorekeeper, Wm. Yaufmann. The club shoots every afternoon at Caledonian Park. Frank Class, one of the best pigeon shooters in this State, will shoot a $100 match with John Leonard, of Morristown, on Thursday, Jan. 13, at 1 o'clock, Kimble avenue, Morristown, 15 birds each, 25yds. rise, American rules. Sweepstakes will follow the match.

BROOKLYN, Dec. 29.—The Glenmore Rod and Gun Club had their final shoot of the season to-day at Dexter Park, East New York. There was a very poor attendance, and the shooting was anything but good. H and T traps, one barrel only, were the conditions. Forbell, the winner of the club prize, was the only one who shot well. He killed seven straight. Two sweepstakes were decided afterwards. Kraft won the first, killing three straight. In the second Forbell took the first, killing three straight.

EMERALD GUN CLUB score of shoot of Dec. 21 (in last issue) had an error as to winner of the fourth prize, the "Oseikei Trophy." This was won in shoot-off by P. J. Keenan and not McHale.—THOMAS CODEY, Sec.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

A SALT WATER MEET.—Southport, Conn.—Regarding a salt water meet next spring, allow me to call attention to Chimon Island, in Norwalk Harbor. It comprises about fifteen acres, has a spring of good water on it, and is one mile from railroad station and the landing dock of the New York daily steamers. It is also convenient to South Norwalk village and to other places where supplies may be obtained. If a meet was held there, a large boarding tent could be obtained with the owner to run it. Concerning canvas canoes, about which inquiry was made lately. If the inquirer will address me, I will be happy to give him any information he may desire, either as to building or purchasing.—R. P. WAKEMAN.

SING SING C. C.—Sing Sing, Jan. 3.—At the regular December monthly meeting of the Shattemuc C. C., held on the 27th inst., the following officers were elected for 1887; Commodore, Col. F. Brandreth; Captain, G. Fisher Secor; Purser, H. M. Carpenter.—H. M. CARPENTER, Purser.

THE ASSOCIATION TROPHY.

Editor Forest and Stream:

A controversy in your columns between two canoe builders can hardly be profitable to you or interesting to your many readers, but inasmuch as you have published a letter from Mr. Joyner, in which he makes pretty free use of my name, I feel, notwithstanding that your statement may be taken for sufficient answer, that I must ask your indulgence and space for a brief reply. Mr. Joyner accuses me of publishing a falsehood in my advertisement, which says "Vesper won international cup race at A. C. A. meet." Did I? At the meeting of the executive committee at Oswego, Nov. 7, 1885, a resolution was passed offering a "trophy" for an international contest, and subscriptions were invited for the fund. You, Mr. Editor, as well as myself and others, were present and subscribed. The committee having the matter in charge purchased a cup, and that cup was ready for immediate delivery to the winner the moment the race was ended. Whether the terms of the race made this a "perpetual challenge cup" or not, have not I, as a builder of the winning canoe, an undoubted right to have my advertisement read as it does? If the committee having charge of that race will kindly answer the question, I will most cheerfully abide their decision. Regarding the race and cup won by Mr. Barney, I was not aware that I had disputed his possession of it, or the builder of his canoe of his "hard earned laurels." I will certainly disclaim any intention of either. In the *Canoeist*, Pecowsic is advertised as winning the "consolation cup race," and in the FOREST AND STREAM as winning the "international match cup race." In his letter Mr. Joyner complains because he cannot have the A. C. A. international cup race also. Perhaps it would "stop a large amount of correspondence from the public not acquainted with the facts in the case" if he would tell them that Pecowsic won but one cup race instead of two or three, and that at the time of the race the said cup had no existence except in the form of a subscription for it presented by "several canoeists."

J. H. RUSHTON.

Editor Forest and Stream:

Why do not you and the *Canoeist* come out square and say Vesper won the A. C. A. trophy and Pecowsic the International Cup, and not go beating around the bush?

Did not Pecowsic win every race she sailed in but the one won by Vesper for the A. C. A. trophy? and she would have had that race if some of her rigging had not parted. Then, did not a number of canoeists subscribe for a cup to be sailed for by the two English visitors and the two leading Americans, to be known as the International Cup, and did not Pecowsic win it in a heavy blow; and did not the cup come to the owner of the Pecowsic with this inscription: International Canoe Race, with date of race and names of canoeists, or of Powell, Stewart, Barney and Gibson, and won by Pecowsic? Eh? Now, Mr. Editor, why is it that either your good paper or *Canoeist* will not or do not admit that Pecowsic won this cup?

Mr. Joyner writes in yours of Jan. 6 in regard to the race, and you say right underneath his letter as follows: "The conditions governing the cup won by Vesper are as follows," and so on. And that the cup won by Pecowsic was a subscription cup presented by several canoeists for a race between the two English visitors and the two leading Americans to be the property of the winner. Now why do not you admit Pecowsic did win the international cup; is it because she is not a lapstreak, but smoothskin? I think there is where the shoe pinches. Then it has been said the Pecowsic was a racing machine. Did she capsize? No, and did not she have room under her decks to stow her five sails and spars, also rudder, deck seat, paddles and blankets, while other famous canoes came to camp with sails and spars lashed on deck. I claim the Pecowsic is as much of a cruiser as any canoe in the A. C. A., and she does not have to carry ballast to keep her right side up, either. Now in conclusion, Mr. Editor, I only ask that you will give us canoeists in the Connecticut valley a square and fair show. C. M. SHEDD.

[The official conditions which we published last week should define the status of the cups without any further comment from us. As to the exact meaning of the conditions only the Committee can settle any dispute. The issue last season in the first race was an international one, but as the A.C.A. Challenge Trophy can be competed for by Americans only if no others are present, it does not seem to fill the conditions of an international cup. The "Subscription" or "Consolation" Cup, as it has been called, was given solely for an international race between the two leading American canoeists and the two English visitors, which should make it an international cup. As we have never seen the Cup, and have never been favored with a cut of it, we could not quote correctly the inscription on it last week. We do not understand our correspondent's allusion to smooth skin vs. lapstreak boats. The FOREST AND STREAM has no interest in defending any special build at the expense of others, but its efforts have been directed for a long time to the improvement of American canoes, and it may fairly claim to have done more in this direction than any other journal or any individual has yet accomplished. We hope next week to publish the lines of Pecowsic, which will give canoeists an opportunity to form their own judgment of her merits.]

REPORT OF AUDITING COMMITTEE.

WE have received the following letter from Commodore Wilkin, inclosing the accompanying report:

To the Members of the American Canoe Association:

GENTLEMEN—For the general information of the members the following report of the Committee on Auditing the Secretary-Treasurer's Accounts, which was appointed at the meeting of the Executive Committee on Nov. 13, 1886, and whose duties were to "carry out the work that the committee of last summer failed for want of time to accomplish," is submitted. The same has been laid before each member of the Executive Committee, and the report has been formally approved and accepted with the thanks of the committee.

I beg to remain, with great respect,
ROBERT J. WILKIN, Commodore.

BROOKLYN, Jan. 8, 1887.

To the Commodore of the American Canoe Association:

We, the undersigned committee appointed according to resolution of the Executive Committee, Nov. 13, 1886, to examine and audit the acounts of the Secretary-Treasurer of the American Canoe Association, beg to report as follows:

We have applied for and obtained books and papers of the Secretary-Treasurer. We have, with the assistance of an expert accountant, made a careful examination of the statements of receipts and expenditures therein entered, from August, 1881, to the present time. These show a balance due to the Association somewhat less than the certified check ($143.28) deposited with us as the balance in hand. The small discrepancy in the Secretary-Treasurer's favor might well have arisen from the extremely crude and confused manner in which the accounts have been kept. Owing to this fact we are quite unable to certify to the completeness of the records. Sufficient accounts have not been kept with each member to give an intelligible presentation of the credits, but there is no appearance of any irregularity beyond those occasioned by the absence of proper system.

We beg to recommend as follows: (1) That individual accounts be opened at once with each member and creditor. (2) That the office of Secretary-Treasurer should be filled only by such members as are known to be methodical in business and books. (3) That the constitution should be so amended as to provide for (*a*) the proper auditing annually of the accounts of the Secretary-Treasurer and publication of the balance sheet; and (*b*) for the free access of members at any time to the books of the Association.

All of which is respectfully submitted.

(Signed) ROBERT W. GIBSON, Chairman.
ROBERT SHAW OLIVER.

ALBANY, N. Y., Dec. 3.

As to the Delaney estate bill, I have conferred with Gen. Oliver and we agree in thinking that it is not in our power to report anything of value in this matter. We were, neither of us, officers at the time the matters charged for were ordered and know nothing of what these orders were or of any other arrangements. It seems to us that the examination required should be (and can only be) done by the officers of the year 1886.

I may add (although it makes little difference) that the bill in question does not appear in the accounts upon which we have reported.

This report is again inclosed; also letter. Very sincerely yours,
(Signed) ROBERT W. GIBSON.

SOUTH BOSTON C. C.—Boston, Jan. 3.—The South Boston C. C. held its second annual meeting and election on Dec. 31, and the following officers were elected: Commodore, J. A. Frizzell; Vice-Commodore, Chas. W. Hird; Secretary, A. M. Hird; Treasurer, Thos. Ackland. The club then discussed plans for building a new club-house, estimates being given by various members. After seeing the new year in the meeting adjourned.—A. M. HIRD, Secretary S. B. C. C.

THE REGATTA PROGRAMME FOR 1887.

NEW YORK, Dec. 20, 1886.

To the Members of the A.C.A.:

GENTLEMEN: The Regatta Committee beg leave to submit for your consideration the accompanying proposed programme of the races for the A. C. A. meet, to take place in August next.

The programme is submitted at this early day in order to give ample time for discussion and for such revision of the same as may appear to be in accordance with the wish of the members of the Association.

Very respectfully yours,
H. STANTON, Chairman,
H. C. ROGERS,
G. M. BARNEY,
} Regatta Committee.

A. C. A. MEET, 1887.

PROGRAMME OF RACES.

To Commence on Monday, August 15.

The first morning race, each day, will start at 9:30 o'clock. The first afternoon race, each day, will start at 2 o'clock.

No. 1. Paddling, Classes II., III., IV., open canoes to be propelled with single blade paddles, 1 mile with a turn.

No. 2. Sailing, novices, Classes A and B. No limit to rig or ballast. Open only to members who never sailed a canoe prior to Sept. 1, 1886. 1½ miles. Start and finish at buoy No. 1. As to starting signal see Clause 5 of Note D.

No. 3. Paddling and sailing combined, Classes A and B. Paddle ½ mile, sail ½ mile, paddle ½ mile, sail ½ mile, paddle ½ mile, sail ½ mile; 3 miles.

No. 4. Sailing, Classes A and B. Sail limited to 75ft.; any ballast; 3 miles, more or less. See Note D.

Or, sail limited to 50ft.; load to weigh at least 100lbs., no part of which shall be under the bottom board. Crew to sit inside. Same distance. Same rules as to course and start. See Notes F and G.

No. 5. Paddling, Class I. This race exempt from "1 man 1 canoe" rule. 1 mile, with a turn.

No. 6. Sailing, "man overboard." While under way, at signal, some object that will float, and at least as large as an ordinary cushion, shall be thrown overboard, aft, out of reach. The same must be recovered and the race continued to the finishing line. ¼ mile.

No. 7. Upset race, Classes II., III. and IV. No special appliance allowed. At signal every canoe must be turned completely over. 200ft.

No. 8. Paddling, Classes II., III. and IV. Load to weigh at least 75lbs. Open canoes to be propelled with single blade paddles. 1 mile with a turn. See Note G.

No. 9. Sailing. Classes A and B. No limit to rig or ballast. 3 miles, more or less. See Note D.

No. 10. Paddling, tandem, Classes II., III. and IV. Open canoes to be propelled with single blade paddles; once round the regular sailing course. 1½ miles.

No. 11. Hurry-scurry race. 100yds. run, 20yds. swim, 200yds. paddle.

No. 12. International sailing race for the Challenge Cup. American contestants to be chosen from the leading men in events Nos. 4 and 9. No limit to rig or ballast. Start from and finish at buoy No. 1, off the dock, and pass all buoys on the port side. 7½ miles. As to startiug signal see Clause 5 of Note D.

No. 13. Club race, sailing canoes and paddling canoes. Open paddling canoes to be propelled with single blade paddles. Once round the regular sailing course. 1½ miles. To start and finish at buoy No. 1 off the dock. See Note E.

No. 14. Consolation sailing race, winners of first or second places in either of the events Nos. 2, 3, 4, 9 or 12 excluded. 1 mile to windward or leeward and return.

No. 15. Cruising canoe and outfit, contesting canoes with outfit to be exhibited in line on shore.

No. 16. Grand review of the entire fleet. This is announced on this programme at the suggestion of the Commodore.

No. 17. Presentation of prizes. To take place at the A. C. A. business meeting.

No. 18. Tournament. See Note H.

No. 19. Pyrotechnics and illuminated procession on the lake.

NOTES.

Note A. As any programme for a fixed day, which includes sailing races, is subject to the risk of being disarranged by a lack of wind, the committee has decided not to have any stated programme for each day, but to announce on the bulletin board, at 8 A. M. each day the races to take place in the forenoon, and at 1 P. M. each day the races to take place in the afternoon, with the hour of starting each race. The first race of each forenoon will start at 9:30 o'clock. The first race each afternoon will start at 2 o'clock.

Note B. All the A. C. A. rules, including the rule requiring sails to be numbered, will be enforced, and no race will be delayed for any contestant, but all races will be started promptly at the hour named, unless postponed by the committee.

Note C. The "all-around record" will be based upon events Nos. 1, 3, 4, 8, 9 and 15, and the highest five on the record will receive prizes.

Note D. The number of entries in two of the sailing races, viz., in the 75ft. sail limit race, and the unlimited race has increased so of late, that in order to avoid confusion and fouls, those races should, if possible, be so managed as to prevent crowding on the first leg of the triangle, and at the turn at the second buoy half a mile from the start. At Grindstoue, 1886, there were 38 starters in the limited race, and 43 in the unlimited. In each race the course from the start to the second buoy was a reach, the wind being on the beam, the result was that the canoes kept close together for the first half mile and constantly blanketed each other, and at the second buoy at the end of the first half mile, the confusion was indescribable and the fouls innumerable, and nothing but the courtesy of the contestants prevented claims of fouls, which if made, it would have been impossible for the Regatta Committee to have decided correctly.

It is likely that in these two races at the coming meet, in August, the entries will be even larger than they were at Grindstone last year, and in the hope of preventing a repetition of this confusion and fouling, the Regatta Committee has decided to start these races in such a way that the first leg of the triangle to be sailed will be a beat to windward, thus scattering the fleet at the beginning of the race.

To accomplish this the following rules have been adopted:

1. The course will be laid out as usual in a triangle with three buoys, each side of the triangle being half a mile. The buoy off the dock to be known as buoy No. 1, over which will fly a red flag. If a person stands on the dock facing buoy No. 1, the buoy to the right will be buoy No. 2, over which will fly a white flag, and the other buoy will be buoy No. 3, over which will fly a blue flag. This course will be divided into two courses, depending on which way the canoes go round, one to be called the "port course," and the other the "starboard course," the "port course" to be the course that would be taken by a canoe which in going round the course passes all buoys on its port side. The "starboard course" to be the course to be taken by a canoe going round the other way and passing all buoys on its starboard side.

For example, if a canoe starts from No. 1 and sails to No. 2 and then to No. 3 and then back to No. 1, it would pass all buoys on its port side and would be sailing over the "port course." On the other hand, if the canoe starts from No. 1 and sails first to No. 3, then to No. 2, and then back to No. 1, it would pass all buoys on its starboard side, and would be sailing over the "starboard course."

Heretofore, all the races have been started from buoy No. 1. Under this plan these two sailing races will be started from the buoy which will make the first leg a beat to windward. For example, suppose the wind was blowing from buoy No. 3 toward buoy No. 2, the start would then be made from buoy No. 2; and the course would be the "port course," that is, the canoes would sail from No. 2 to No. 3, to No. 1 and so on round. Suppose the wind was blowing from No. 1 toward No. 2, then the start would be from No. 2, and the course would be the "starboard course," that is, the canoes would sail from No. 2 to No. 1, to No. 3 and so on round.

3. It will be seen in each case the first leg would be a beat to windward, and the fleet would, consequently, be scattered, and the confusion and fouls avoided.

4. The course to be sailed, and the buoy from which the race will start, will be indicated by two flags on a flagstaff to be placed on the dock. Fifteen minutes before the race is to start, two flags will be run up, the upper flag indicating the course to be sailed, whether the port or starboard course, and the under flag indicating the buoy from which the race is to start. A yellow flag will indicate the "port course," a black flag will indicate the "starboard course." The flag indicating the buoy at which the race will start will correspond in color with the flag on that buoy. For example, if the course to be sailed is the "port course," and the start is to be made from buoy No. 3, the flags shown on the dock flagstaff will be a yellow flag above a blue flag; if the course is to be the "starboard course," and the start from buoy No. 1, the flags shown on the dock flagstaff will be a black flag above a red flag.

5. The Judges' boat will anchor 50ft. outside from the buoy from which the start is to be made, and the start will be over an imaginary line drawn from the Judges' boat to the buoy. Five minutes before the start a pistol will be fired from the Judges' boat, and a red flag displayed on the Judges' boat; one minute before the start a pistol will be fired from the Judges' boat and the red flag taken down, and one minute later, as the starting signal, a pistol will be fired from the Judges' boat and the A. C. A. flag displayed. To prevent any misunderstanding in case the pistol should not go off, the contestants will be guided by the displaying and hauling down of the flags on the Judges' boat. This clause will be applied to all sailing races, but not to the combination race.

6. These two sailing races will finish at buoy No. 1, no matter where they start. At the finish the Judges' boat with a red flag flying, will be anchored twenty-five feet outside from buoy No. 1, and the finish will be over an imaginary line drawn from the Judges' boat to buoy No. 1.

7. By this plan it will be impossible to tell beforehand what the distance of the race will be to within half a mile. The race may be three miles, three and one-half miles or two and one-half miles, depending upon the starting point. For example, if the race starts at buoy No. 1, no matter which course is sailed, the distance (twice round) will be three miles. If the race is started at No. 2 and the course is the "port course," the distance will be two and one-half miles. If the start is from buoy No. 2 and the course is the "starboard course," the distance will be three and one-half miles.

8. It is not claimed that by this plan a true course to windward can be secured on the first leg of the triangle in every wind, but it is believed that in most cases the first course can be laid so as to make it, if not a true course to windward, nearly so.

Note E. The club race will be a sailing and paddling contest between clubs. Sailing canoes, Classes A and B, unlimited rig and ballast; Paddling canoes, Classes II., III. and IV. Open canoes to be propelled with single blade paddle. Clubs to enter as many contestants as they please. Entries to be made by the chief officer of each club contesting, and not by individual members, and all entries to be kept secret up to the start. The distance to be once round the regular course. Paddling canoes to form one fleet and start a few minutes before the sailing fleet. The scores to be made up as follows: Separate scores to be kept of the sailing and paddling fleets, and the scores of the sailors and paddlers of each club to be added together. All who cross the winning line in the first half of the respective fleets will count for their club, the other half will count against their club, totals to be deducted from the former, and the remainder to be the club score. The sailor who crosses the winning line first will count for his club a number equal to one-half the number of all the sailing canoes in the race, unless there be an odd number, in which event he will count for his club a number equal to one-half the sailing contestants, less one; the odd one to be the one coming in in the center of the fleet, and he to count nothing either way. The second sailor who crosses the winning line will count for his club one less than the first, and so on to the sailor who crosses last in the first half of the sailing fleet, and he will count one for his club. The next sailor to cross, if there is an odd number contesting, will count nothing, he being the odd man in the center, and the next, that is the first sailor of the last half of the sailing fleet, will count one against his club, the one after him will count two against his club, and so on down to the last sailor, increasing one each time. The same plan will be pursued as to the paddlers, and from the total winning scores of each club there will be deducted the losing scores, the remainder to be the club score, and the club thus having the highest number of points to be the winner of a banner, and to be known until the next meet as the "Banner Club."

For example, suppose the starters to be:

	Sailing Entries.	Paddling Entries.
Washington Club	2	—
Jefferson Club	3	—
Madison Club	1	—
Adams Club	1	3
Monroe Club	2	2
Jackson Club	1	—
Polk Club	—	1
Taylor Club	1	—
	11	6

Here five sailors will count *for* their clubs and five *against*, and one, being the odd man coming in in the middle, will count for nothing either way; and three paddlers will count *for* their club and three *against*.

Suppose the sailing race ended as follows:

One entry of the Washington Club comes in.....1st
" " " Jefferson " " 2d
" " " Jackson " " 3d
" " " Jefferson " " 4th
" " " Monroe " " 5th
" " " Taylor " " 6th
" " " Madison " " 7th
" " " Monroe " " 8th
" " " Washington " " 9th
" " " Adams " " 10th
" " " Jefferson " " 11th

And the paddling race:

One entry of the Adams Club comes in.....1st
" " " Monroe " " 2d
" " " Adams " " 3d
" " " Polk " " 4th
" " " Adams " " 5th
" " " Monroe " " 6th

The score would be as follows:

Jackson Club—
Plus 3d place sailing 3

Washington Club—
Plus 1st place sailing 5
Minus 9th place sailing 3
— 2

Jefferson Club—
Plus 2d place sailing 4
Plus 4th place sailing 2
— 6
Minus 11th place sailing 5
— 1

Taylor Club—
Odd, center, 6th place sailing 0

Madison Club—
Minus 7th place sailing ..... —1

Polk Club—
Minus 4th place paddling ..... —1

Adams Club—
Plus 1st place paddling 3
Plus 3d place paddling 1
— 4
Minus 5th place paddling 2
Minus 10th place sailing 3
— 6 —2

Note F. Of the record races, two are purely paddling, and two purely sailing. And it is submitted that the object should be to have one of each in racing trim, and one of each in cruising trim. This object is accomplished in the paddling races; viz., in event No. 1 the canoe is in racing trim; in event No. 8 the canoe is in cruising trim. In the sailing races in event No. 9 the canoe is in racing trim; and the question is, should not the canoe in the other sailing race, event No. 4, be in cruising trim? If so, what is cruising trim?

Note G. In events Nos. 4 and 8 where the canoes are required to carry a certain load, the winner must "weigh out" immediately after the race at the landing alongside of the dock. Canoes carrying less than the prescribed weight will be disqualified. Any canoe landing without being weighed out will be disqualified. Canoes, other than winners, should keep afloat until winners are weighed out, as in case of an underweight, the next in order will be called.

Note H. Rules Governing the Tournament.—Contesting canoes shall be formed in two lines, one-half in each, facing each other 50ft. apart. Each canoe shall be manned by a paddler, and defended by a lance-man armed with a padded lance. At signal one canoe shall advance from each line and they shall pass to starboard of each other. As the canoes pass, the lance-men may attack each other with the padded end of the lance. Lance-men shall make no attack except upon their opposing lance-men. The canoes shall be kept under way and on their course. The lance-men shall stand and not crouch; they shall not use their hands for any purpose except to manage their lances. Paddlers shall do no act exce t to manage their canoes. When a lance-man is thrown overboard, his canoe shall retire and the successful canoe shall proceed on its course and take its position in the line opposite that from which it started, and there wait until again called in its order. If neither lance-man is thrown overboard, each canoe shall continue on its course and take its position, and wait as in the case of a successful canoe. A violation of any of these rules shall be a disqualifying foul.

[The above programme has been made out principally as a basis for discussion and suggestion, and the Regatta Committee desire an expression of opinion from all members of the A. C. A. They have proposed several new features in their efforts to make the races still more useful and interesting, and they desire the opinions of those interested in the proposed changes. The general plan of starting, as given in Note A, seems to be an improvement and likely to facilitate the racing, as any fixed programme is liable to be completely overturned by the weather, with much consequent confusion. The change in starting the sailing races promises to obviate largely the crowding which has followed the large entries of late, as on the windward leg the fleet is well scattered and the turning of the first as well as the subsequent buoys will be less liable to cause fouling than when all start for a half mile run and reach the mark well together. The plan of marking the buoys is open to improvement, as a blue or white flag is not as plainly seen as a red one. It has been suggested that all be marked with red flags, and that the start be denoted by the upper flag, to be hoisted on the flagstaff according to some arbitrary system, while a red flag below it shall denote a "port course" or a green one a "starboard course." The club race will, we believe, be approved by all as a most interesting event, and one that will do much to encourage interclub competition and to stimulate each club to make a large showing in camp and put as many men in the races as possible. The plan arranged seems a fair one, but the proposed title "Banner Club" savors of the Sabbath-school and an unlimited capacity for committing texts to memory, cannot a better name be found? Turning to the list of races, the first event is open to serious criticism, as such class is entitled to a race of its own, and it is unfair to match a Class II. boat against a Class IV., and also to use a single blade if the other is faster, easier and in all respects better. The object is to shorten the programme, but this must not be done at the expense of an important class, which would virtually be debarred. The second proposal in Event 4 is a good one, but the usual race should not be sacrificed to it. If entries enough could be had, why not start both classes together, giving a prize for each. A man could elect whether to sail with 75ft. and any ballast, or under the lesser limit, and with little more trouble to the regatta committee the entries would probably be increased and a good chance offered to the less skillful novices. The "man overboard" race will be a very good test of skill in handling and maneuvering, and is an important addition, though the distance seems a little too short. The objection made to Event 1 applies with equal force to 8 and 10, and the result would be that Class IV., if not Class III., would be driven out ultimately, while the first result might be co many entries as to make fouls at the turn inevitable. The comparison of cruising canoes and outfit is interesting and important, and has met with favor where ever tried. We are glad to see it on the programme again. The consolation race also is a good idea, as encouraging the less expert sailors. The tournament, while amusing, can well be spared from the programme in favor of some other contest, as it possesses some elements that may lead to hard feeling among the contestants. On the whole the programme is an excellent one, and promises to make the coming races the most important to canoeists and interesting to spectators that have yet been held.]

CANOES VS. SAILING BOATS.

Editor Forest and Stream:

Messrs. Whitlock and McMurrich compel me to again bother you and your readers about canoes.

Mr. Whitlock's pleasant manner of winding up his letter forbids my wrangling with him over mere matters of opinion, even were I inclined to do so.

The statements made in my last letters published in your paper must stand for facts, "to the best of my knowledge and belief."

It is asked what bearing had the sharpie-Guenn race of last year upon the present question? Simply this: It was a practical lesson on the relative bearing of stability and beam to the speed of small sailing boats. A lesson in the primary department of the school of yachting, and a pleasant method of doubling the amount of money at that time in hand toward buying an international challenge cup for canoes. Surely these narrow canoeists should heartily thank these little 15ft. sharpie for thrashing them so very easily. "Guenn" did call my attention to the fact that his canoe had her dandy reefed, and I did not "call the race off," but simply sailed away home after he had twice hailed and admitted his defeat in the most graceful manner consistent with balancing his narrow canoe.

To Mr. McMurrich allow me to say that, in accordance with its Chinese-like rules, the A. C. A. was debarred from permitting any canoe of, say, 34in. or more beam from competing in a race of the Association. Consequently there was no regular race open to Red Jacket. I was asked by the genial Mr. Stephens if I was willing to enter an outside race which, as I understood him, was open to all boats at Grindstone. He received "Yes" for reply, and then told me to get my boat ready. About five minutes afterward he again appeared and said that not another boat would enter. Comment is not necessary, yet the facts are suggestive. Mr. Stephens can perhaps set the matter straight.

Red Jacket bothered no racing canoe at the meet. Her owner would rather sink her than be guilty of such an unsportsmanlike action; but a deal of incomprehensible and unnecessary shouting at her was indulged in by an extremely lengthy gentleman on the Joharrie steam launch, and I enjoyed several quiet smiles over the noise.

Mr. Whitlock's attempt to define the canoe is very funny. I've been hunting up some authorities, and find that "Webster" states a canoe to be 1. "A boat used by rude nations, etc." (Possibly thus referring to those individuals who write unparliamentary letters for publication.) And, 2. "A boat made of bark or skins, used by savages."

The "American Encyclopædia" says she is "a boat built by savages," and again, "boats of this kind are seen of all sizes," etc.

A canoe sufficiently refined for ranking in the American Canoe Association may fitly be described as a small, narrow machine commonly used in practicing gymnastics, bathing, and drowning young or inexperienced members of the Association.

In conclusion let me say that I am only trying, perhaps in a poor way, to make the sailing canoe a safer, speedier and more comfortable cruiser than she now is. Have no objection to Mr. Whitlock and the rest amusing themselves by capsizing bath tubs, providing they won't get drowned, but it does seem that an honest sportsmanlike spirit would induce them to use their influence in placing the A. C. A. at least on a level with other modern boating fraternities. Mr. Whitlock in his last letter freely admits that for open water sailing wide canoes have certain advantages for comfort. If I can prove that they are also much speedier, all that I am aiming at will have been attained, for nine-tenths of all the canoe sailing done between Bangor and Florida is upon wide, open stretches of water, and nobody paddles from choice when his boat can sail.

So long as canoeists hang 50 and 60lb. centerboards and stow bags of shot in their boats, this prating about the value of extreme lightness is simply humbug.

Notwithstanding Mr. Whitlock's statement to the contrary, Red Jacket's speediest and safest sailing is done with no ballast and only one man aboard. Inexperience alone permits a man to say that a properly designed boat of 15ft.x47in. requires two men to handle her, under any circumstances. THOMAS CLAPHAM.

ROSLYN, L. I., Dec. 25.

Editor Forest and Stream:

In order to give a chance to boats over the A. C. A limits it was decided by the regatta committee to offer a prize for boats and canoes of greater beam with no limit of rig or ballast. It was expected that some of the sneak-boxes, Barnegat cruisers, skiffs and other boats, whose owners took part in the discussion in the FOREST AND STREAM last winter, would be present. The race was not an "outside" race, but a regular event, announced long before in hopes that such boats would enter. When the time arrived for the race I interested myself in hunting up entries and asked Mr. Clapham whether he would sail, to which he replied that he was ready. A canvass of the camp, however, showed that there was not another boat desirous of entering, so the race fell through as any of the canoe races would do under similar circumstances. The boats did not come, and until they do so it seems useless for the A. C. A. to endeavor to class them regularly. Mr. Clapham had stated distinctly that his boat was rigged solely for cruising and that for racing she needed a much larger sail. Such being the case there was no inducement for a canoe to enter against her, as victory for the smaller boat under racing rig would have counted for nothing against the larger one with "cruising rig," and the canoe would have had all to lose and nothing to gain.

W. P. STEPHENS, N. Y. C. C.

Editor Forest and Stream:

A word with you, before I pass the compliments of the season with "S." In your editorial remarks headed "Canoes vs. Sailing Boats," in Dec. 30 number, you ask what would have been done with small boats had it not been for McGregor and Baden-Powell. It seems to me the trouble has been so far that the sailboat men have not been blowing their horn quite as well as the canoeists

(I hope to do my share toward overcoming this difficulty). There are in the vicinity of Philadelphia, on the Delaware River, alone, 1,200 15ft. boats of one type (for the tuck-up is the ducker with a square stern)—as many, I believe, as there are canoes in the Association. Messrs. McGregor and Baden-Powell had the gift of placing their experiences before the public in an entertaing manner, which attracted the attention of a class of young men ready for any new sport which had a spice of danger in its composition. This was the period in which the bicycle attained its popularity, when the constantly increasing wealth of the country began to be felt by the young generation, who were boys when their fathers made their money, during the flush war times. Many of these men were men of leisure and of means, and to them the cruises made were something to be proud of. This feeling displayed itself in the public prints, with the result of a constantly increasing canoe boom. Now, about everything that has been done in a canoe had been done before in boats (to adopt your classification), but as it was the usual thing, no one took the trouble to write the cruises up for the benefit of others. In the spring of 1875, with a friend, I made a cruise in a batteau from Rock Island to Quincy, on the Mississippi River, over 300 miles, and in the fall from St. Joe to Kansas City, on the Missouri River, 150 miles, camping out on the banks. Yet that was such a common thing on the rivers that no one paid the slightest attention to it. Had we only been in a canoe we would have had but half the comfort, but would have published a book and retired on everlasting fame.

Now, Mr. Editor, your department is headed "Canoeing," and I quite agree with you that we wide fellows are trespassers in it. Why not then give us a show in a boating column, where we can pitch into those toothpick fellows to our heart's content. If you can once stir up our gunners and cruisers, who knock around among the bays and inlets, they can tell tales which for interest will outrival anything we are in the habit of hearing.

By the way, why does our worthy secretary not use a canoe on his cruise to Florida? Surely a boat which tows a tender is hardly a canoe. And his partner uses a Philadelphia boat, too.

Now then "S.," that boat you sailed for two years with a keg in it was yours, wasn't it? And you were captain, wasn't you? If then you didn't like the keg why didn't you heave it overboard, and why did you always get a crew that had a liking for the keg? It seems to me you had bad luck with that keg. It is the first time I ever heard of the complaint. Of the hundreds of boats of our size that I have met week after week for years, the few times that I have seen the keg have failed to impress themselves upon my memory. But then perhaps I was not looking for it.

Now come, tell the truth. Did you ever see a keg in a ducker on its one-day cruise? What a nasty customer it must be, and where do you keep it? and how do you prevent its rolling all around the boat? I fear your experience on the river has fallen among an unfortunate part of the fraternity. That there are men who have little respect for themselves among boatman is an undeniable fact (for the same is true among any class of sportsmen) but they are no more noticeable among us than among—well, say canoeists for instance. It would be queer indeed if none were to be found among 2,500 yachtsmen. And the frequent cases of drownings that you say resulted were summed up in 1886 to a total of one life lost, and that by a collision between a schooner yacht and a tuck-up. It has never been whispered, however, that the keg was aboard. No record was kept of the fights. It is hardly the fair thing to cast a slur at a large body of men because of a chance failure among them. But perhaps you have confounded the yachtsmen with the shore parties who camp over night from Five-Mile Point to Fancy Hill; they frequently carry the keg.

I do not know, of course, that the duckers you beat were open ones; but a little bird whispered that once a big black canoe was running down from Gloucester with three duckers in a calm, and when they struck a little breeze and the lumpy water off Timber Creek the canoe lowered away and was content to—paddle. It didn't whisper anything, however, about the semi-professional racer. He must have been very decidedly semi to allow a canoe to beat him.

By the way, that was a terrible tough yarn. You say your canoe was a canvas one. Now, of all materials canvas is, from its nature, the one from which the least speed is to be obtained. This from its rough surface and because it cannot be stretched so as to give the easy, graceful lines of the wooden boat. Yet with this you built a smooth, clinker-built boat (presumably you think it a boat of fair record since you take pride in the achievement). And, again, your canoe is 14.4×32, against the ducker's 15×48, a difference of one-third in displacement, and yet the small boat was fastest. Are all our standards of time allowance to be thus upset? And still, again, your rig was 85sq. ft. in two sails low down and you beat a 96sq. ft. catrig, heretofore supposed to be the speediest of all known rigs, albeit that sometimes a little less top hamper comes handy. And then the semi-professional racer, too! Oh! "S.," it is too much. Let us down a little easier. Call it an open boat with a sail too large for one man to handle with advantage, with the halliards and board too far forward to be reached. And one man, when the boat was rigged for two. Then call the boat an old tub and the captain one of those fellows that like to paddle around alone (an embryo canoeist) and views the races from the end of Allen's Slip, and I grant you could beat him. But, oh! "S.," don't rub it in too deep. Consider our feelings a little.

The reason why I say canoeing is not in favor on the Delaware, you can see for yourself from the list of new boats appended. If you will contrast this with the new canoes it will not be difficult to understand.

We shall be pleased to see a canoe meet on the river, and if the invitation is open to all it is possible that many yachtsmen will be present. But the duckers have a meet every Sunday and are easily found. Why not send me your name and let us have a test of your canoe's speed.

The trouble, "S.," with the canoeists who once owned duckers is that they owned the Camden style, to be found around Cooper's Point—you know where—and a disreputable looking lot they are. I wish you would inquire whether any of them ever owned a new first-class boat before they bought canoes and let me know.

The reason why a canoe is out of place at a ducker meet is that it couldn't get to the camp in time for dinner unless it left before daylight, and wouldn't get back to the slip again before night, and the same cause would prevent any pleasure in it while in camp.

The duckers were out on the first of March last year and on Nov. 27 quite a fleet was out. When does the canoe season begin and end?

Mr. Editor, business has been good in our little burg the past year with the result that many new boats are coming out and the old ones will be sent to Camden to break in canoeists with. Jesse Deputy, who built most of the tuck-ups in the Pennsylvania Y. C., has hied himself to the lower bay in pursuit of health and shekels, so that it is not likely that we will see any of his handiwork in the spring. Tommy Ledyard, who the Southwark boys swear by, has one ducker ordered for Gloucester and two for Mifflin street slip.

Wignall has just completed the five boats for Vanderbilt's new yacht. Rumor whispers that the cost of these five will reach $3,000 on the boat. They were planked with Spanish cedar with mahogany and teak scattered around wherever they would look pretty. He has also finished a 20ft. rowing and sailboat, keel, that looks like a gig for a steam yacht, to replace a similar boat used for the past fifteen years on the lakes; it is for Mr. Lewis, of Lewis Bros. & Co., and a creditable job it is. For fine work none stand higher than Wignall. He is also getting out the frame for a 17ft. gilling skiff.

Nixon is getting out twenty-five skiffs for his own use at Neshaming. Some people would have been satisfied with making a fortune last year but Nixon is going for another one.

Ben Fanner has a 15ft. ducker finished for Wm. Tees, and a 16ft. in frame for Wilmington, he also has a tuck-up in frame for Bossler, who has a reputation founded on new boats. This tuck-up, however, is something out of the ordinary. The Pennsylvania Y. C. limits the sail to 26yds. Bossler thinks they can carry more so he has cut the beam down to 49in. and increased the depth 1in. If the boat does what he expects it will result in increasing the limit to the Southwark measure. Fanner has orders also for three duckers for the Sea Isle Club and two for other parties.

Geo. R. Fanner has orders on hand for four tuck-ups and three duckers, mainly for Alleghany slip men.

Charles Rudolph is reported to have three orders for duckers on hand, but has not yet commenced work.

Blatz has just laid the keel for a 16ft. boat, said to be for Mr. Hamilton Disston, he will be busy the best part of the winter.

Brewer is building a ducker for his own use.

Johnny Rightly and his brother-in-law have two new tuckups nearly completed that will be something worth seeing. They built one last year that was said to be the finest of its kind ever turned out on the river, it was purchased by the fire department and presented to the Chief of the Pittsburg Fire Department.

Nick Sheppard is working mainly on stock, he has about 100 boats of all kinds on hand.

Albertson has the hull of a steam launch on hand, built to order, but the boiler and engine, which has to be furnished by the owners, has been coming all summer and is not yet here. She is a clean modeled job, and ought to be showing her heels on the river now. He has also two fishing boats on hand.

Wiser, at Bridesburg, has finished the canoe I wrote about before, and has orders for three duckers. This was a month ago. I have not seen him since, but suppose he has more orders now.

In Camden, Collins is busy on large work, and Louder is waiting to put fantails on half a dozen square sterns that want to be in the fashion.

PHILADELPHIA, Jan. 3. CHAS. L. WORK.

THE W. C. A. EXECUTIVE COMMITTEE MEETING.

THE Executive Committee of the W. C. A. met in annual session at the Stillman House, Cleveland, O., Jan. 10. A quorum was present—Rear-Com. T. P. Gaddis, Dayton; J. O. Shiras, Secretary, Cincinnati; Wm. Ford, Sandusky; Geo. A. Warder, Springfield, and Messrs. G. Harry Gardner, C. F. Pennewell, O. H. Root, W. E. Lewis and B. M. Gardner, of Cleveland.

Letters and telegrams were read from the four missing officers, Com. Ellard, Cincinnati; Vice-Com. Kitchen, Chicago; C. J. Bousfield, Bay City, Mich.; and C. R. Mellville, Sandusky.

The work having been fully discussed beforehand, the old rules and classification of the W. C. A. were dropped and the revised A. C. A. rules, classification and measurements adopted, and will be published in the new Bulletin (Year Book).

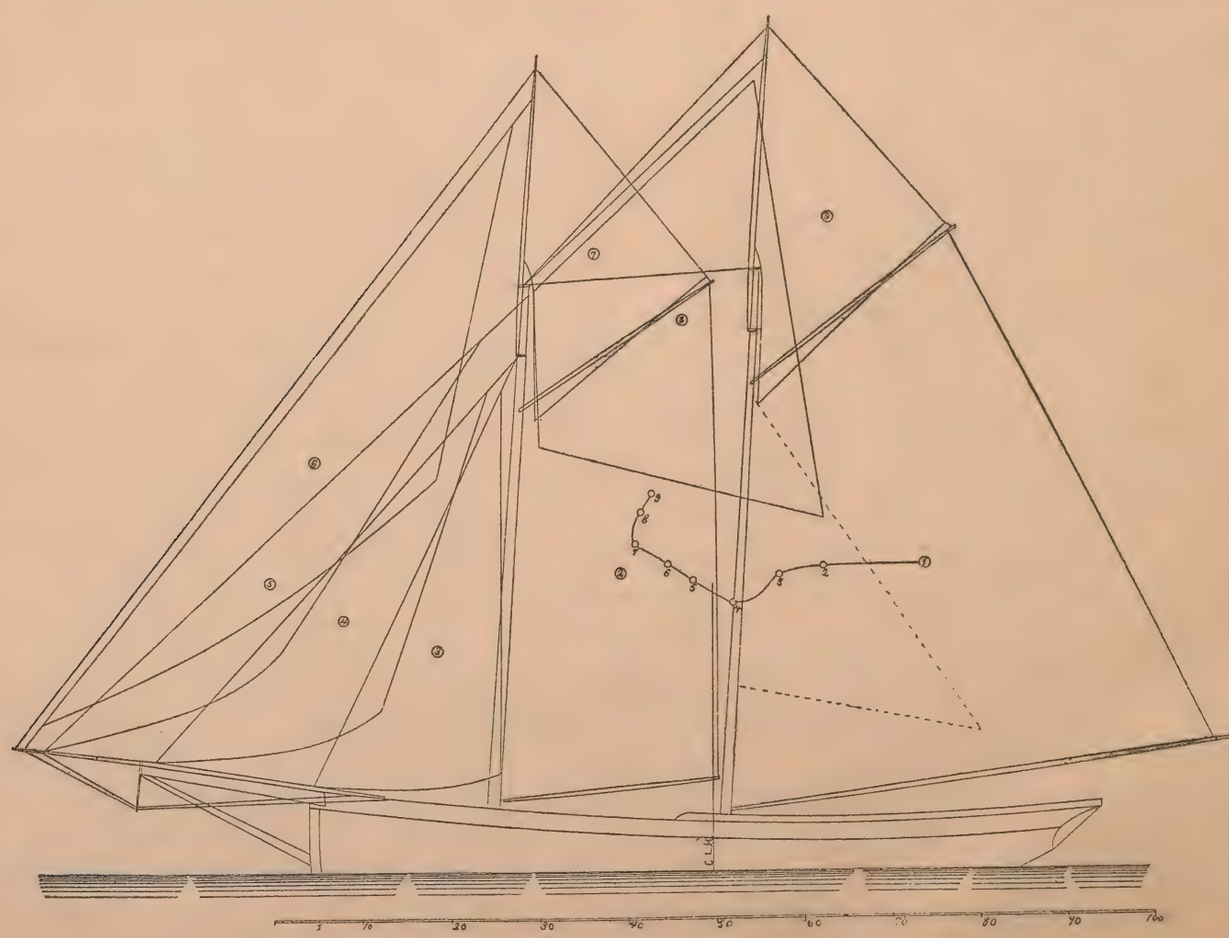
The third annual Bulletin and Prospectus were sketched, and will be published with a map of the Lake Erie Islands, at an early date. Each member will have a copy mailed to his address, and canoeists may obtain same from the secretary, J. O. Shiras, 73 West Third street, Cincinnati, O.

Article first of the By-Laws was changed to read: "Each application for membership shall be accompanied with the sum of one dollar as entrance fee, to be refunded in case of the non-election of the applicant. Each subsequent annual payment shall be one dollar, and shall be payable at the date of the annual meet. If not paid within two months thereafter, etc."

The regatta programme of races will be published at an early date. One novelty will be an "upset" sailing race: "At a signal upset with both sails raised, right canoe and sail across line. No special appliances being allowed within or to cover cockpit."

The ex-Commodore selected Ballast Island, Lake Erie, as the site for the third meet, dates July 18-31, 1887, inclusive.

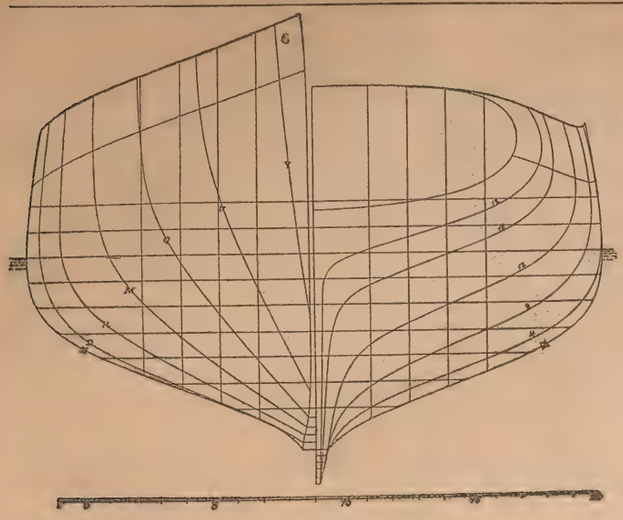
The *American Canoeist* was unanimously made the official organ of the Western Canoe Association, and it was voted that the minutes of this meeting be sent to both the FOREST AND STREAM and the *Canoeist* for publication.



It was moved and carried that recognizing the value of a librarrian to canoeists in general, Mr. C. Bowyer Vaux, 5 Union Square, New York City, be elected as such, and that all records of cruises, maps, waterways, etc., be forwarded and filed at his office.

Messrs. Shiras, Ellard and Stedman were appointed as a committee to select and obtain estimates upon the W. C. A. badge.

A long and animated discussion was held in regard to the ways and means of becoming a branch or division of the A. C. A. It was unanimously decided that could the union be effected it would be of mutual benefit.



The day wound up with a delicious dinner given by the Cleveland C. C. in honor of the visitors, over which they lingered several hours discusssing topics of state, or recallling Ballast Island reminiscences Gaddis convulsed the hearers with "What I don't know about sailing," and Shiras in his happy way explained "The new Pecowsic I'm getting." Pennewell lucidly (?) told "why he did not win the Gardner Cup," and many were the races won "round the table." JABBERWOCK.

FLORIDA.—*Editor Forest and Stream:* There took place off the yacht house, Jacksonville, on Thursday, Dec. 16, the second sailing race in the series for the cup of the Florida C. C., over a three-mile course. On the first stretch it was an exciting contest between Louise and Madeleine for first place; the latter, however, held the lead to the turning buoy, passing it about one length ahead. Louise came about first on the homeward stretch against the tide and soon gained such advantage that the interest centered more particularly in the contest for second place. The result was, First, Louise, C. S. Adams; second, Ida C., R. M. Call; third, Madeleine, B. H. Barnett. The Louise, well-known down East as the Ibis, is a recent valuable addition to our fleet. The club has made two delightful visits to its beloved god-father, Dr. C. A. Neidé, now encamped with his companion, Mr. Andrews, a few miles down the St. Johns and up the Arlington, in a large grove. We consider ourselves most fortunate indeed, in having persuaded those gentlemen to modify their extensive cruise as to be with us on our trip down the waters of the Halifax, Hillsborough and Indian rivers, commencing Jan. 4. The next race in the cup series takes place over the same course on New Years Day.—SECRETARY F. C. C.

SAIL PLAN OF SCHOONER-SMACK "GRAMPUS."—(CURVE OF EFFORT COMPUTED BY D. J. LAWLOR, BOSTON, MASS.)

1. Center of Effort of Mainsail.
2. Center of Effort of Mainsail and Foresail.
3. Center of Effort of all the above and Forestaysail.
4. Center of Effort of all the above and Jib.
5. Center of Effort of all the above and Flying Jib.
6. Center of Effort of all the above and Ballon Jib.
7. Center of Effort of all the above and Foregafftopsail.
8. Center of Effort of all above and Maintopmaststaysail.
9. Center of Effort of all the above and Maingafftopsail.

BODY PLAN SCHOONER-SMACK "GRAMPUS."

Yachting.

THE SCHOONER-SMACK GRAMPUS.

THE interest of most persons in the fish which forms such a large proportion of their daily food extends seldom any further than as to how the particular individual before them at any time, whether the useful but humble cod, the delicately tinted mackerel, the homely herring or the noble salmon, has fared at the hands of the cook. From the rivers of Oregon, from the Atlantic sea coast and from the banks of Newfoundland are gathered a supply of food of all kinds, furnishing at the same time the cheapest sustenance of the poor and some of the rarest dainties that grace the tables of the rich. This supply, however, is so plentiful, so cheap, and so much a matter of course, that few stop to think of its importance as a national industry, of the capital invested, of the thousands it supports, or of the danger, hardship and loss of life which attend it. The history of the American fishing fleet is a most interesting one, involving as it does not only the records of the earliest expeditions to our coasts, the birth and growth of shipbuilding and naval design, but the creation of a most valuable reserve on which to draw in times of war, a large body of trained and hardy seamen largely of native birth, forming in itself the nucleus of a formidable navy.

To follow up this history would be a pleasing task, but space prevents it now; and we can only refer those who would pursue it further to the elaborate paper contained in the Report on the Shipbuilding Industry of the United States compiled by Mr. Henry Hall, Special Agent of the Census Office. The magnitude of the interests involved may be gathered from the following figures from Mr. Hall's report: The number of men employed in 1880 was 131,426; of these 101,684 were fishermen and 29,742 were shoresmen. The number of vessels was 6,605, with a tonnage of 208,297.82 tons, valued at $9,357,282; while the 44,804 boats were worth $2,465,593. The total value invested was $17,987,412. The fleet has grown by slow degrees from rowboats to various small sailing craft and then into sloops and schooners of 50 to 100 tons, the average being about 75 tons. The chief qualification of the earlier schooners was their seagoing power, being safe, strong and sturdy little vessels, well fitted to encounter the severe service exacted of them; but with the development of the trade, and stronger competition, speed came to the front, and between thirty and forty years since the "clipper schooner" drove out the old models. Sharp and clean cut in all directions, and with large rigs, these vessels were far speedier than the old; but they were also less seaworthy, and in this respect they have become worse from year to year, until the annual loss of life on the Banks makes an appalling total.

The evil became so great at last as to attract the attention of some who are engaged in efforts to lessen the dangers of the sailor's life, foremost among whom is Capt. J. W. Collins, of Gloucester, Mass., a practical fisherman, brought up to the life, and now permanently connected with the U. S. Fish Commission, who has labored steadily for a long time to introduce safer models into the fleet. Thoroughly informed in all that relates to fishing and the requirements of the service, and experienced in the design and construction of vessels, Capt. Collins has been able to appeal to the fishermen as one of themselves, and much good has followed his able writings. The schooners have grown deeper and have been improved in many respects, as pointed out by Capt. Collins, but the greatest advance is shown in the new boat designed for the U. S. Fish Commission and built last year at Noank, Conn., under his supervision. The Grampus was built as a model fishing smack, and she is used for practical tests of fishing apparatus, and of the various methods of fishing, as well as for the ordinary service of the Commission in securing specimens, transporting live fish and similar work.

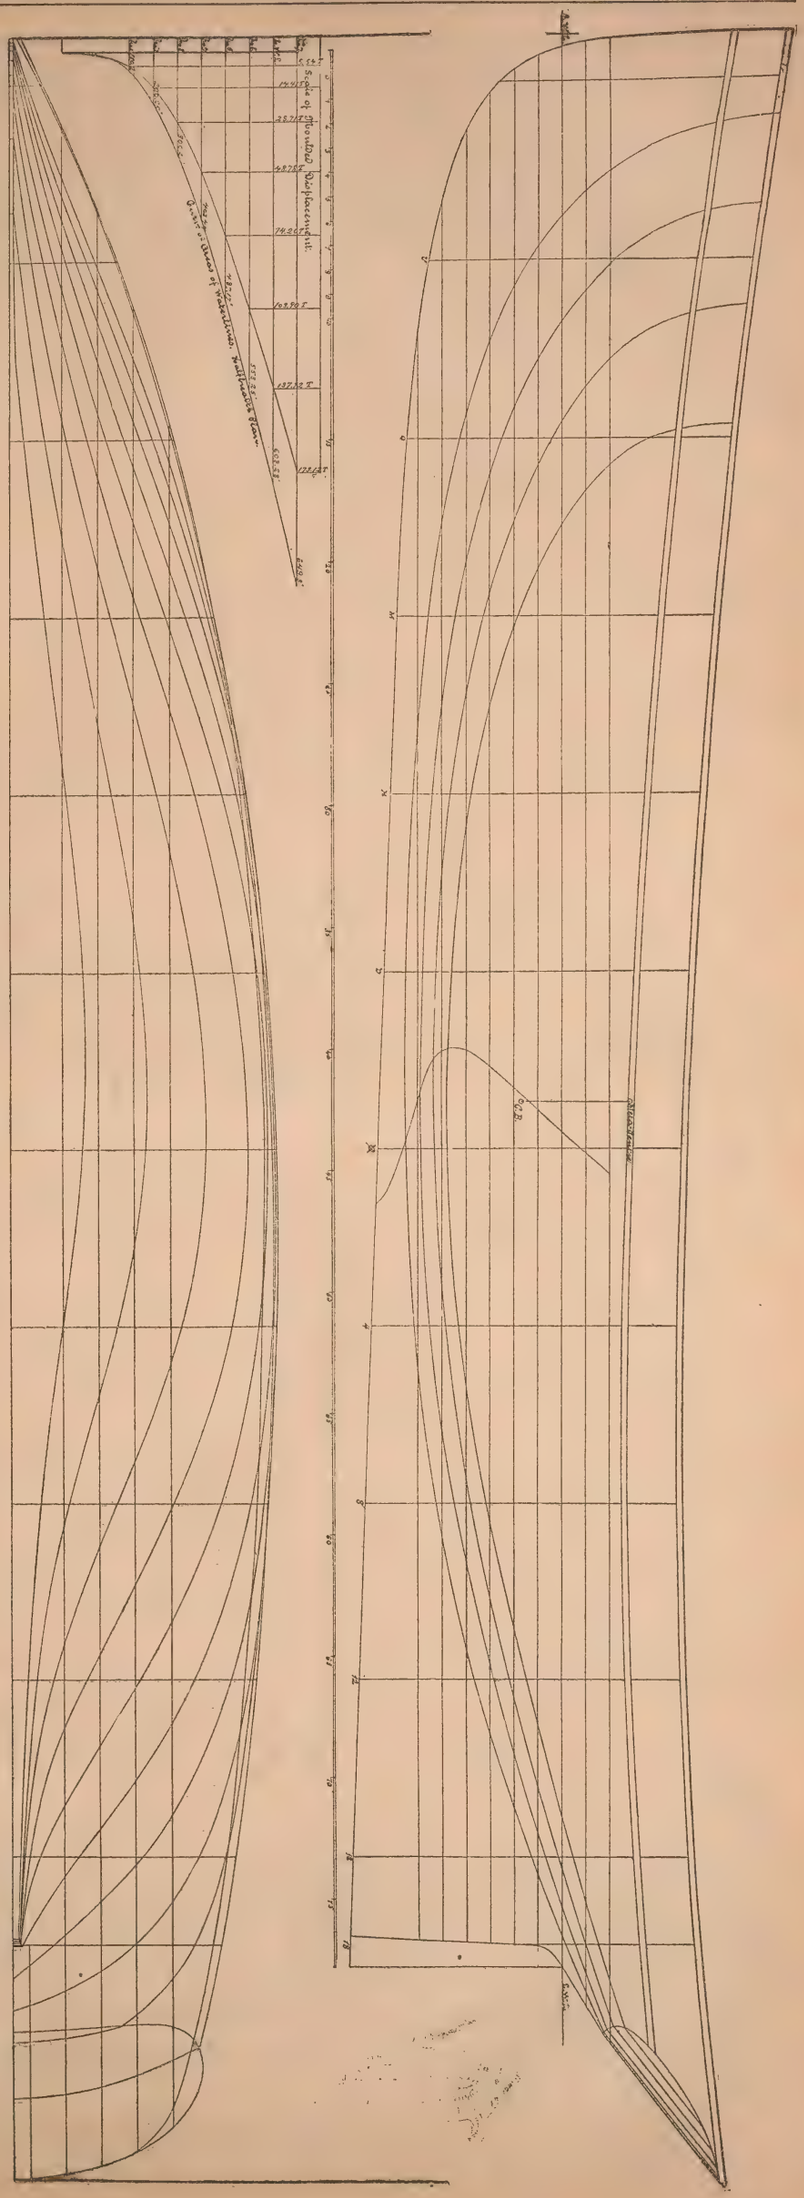
DIMENSIONS AND ELEMENTS OF SCHOONER-SMACK GRAMPUS.

Length, over all		88ft. 5in.
Length, L.W.L.		79ft.
Beam, extreme		22ft. 1in.
Draft, extreme		8ft. 6in.
Least freeboard		2ft. 9in.
Displacement		149 tons.
Midship section, aft fore end L.W.L.		45ft. 3in.
C.B., aft fore end L.W.L.		43ft. 3½in.
C.L.R., aft fore end L.W.L.		45ft. 2in.
C.E., lower sails, aft fore end L.W.L.		47ft. 4in.
C.B., below L.W.L.		1ft. 7½in.
Metacenter above C.B.		4ft. 6in.
Masts—	Fore.	Main.
From fore side stem at L.W.L.	20ft. 7in.	46ft. 8in.
Deck to hounds	52ft. 6in.	57ft.
Masthead	8ft.	7ft. 6in.
Diameter at deck	19in.	19in.
Diameter at hounds	15in.	15in.
Topmast, heel to hounds	32ft. 6in.	34ft. 6in.
Topmast, diameter	9in.	9in.
Booms—		
Length	24ft. 6in.	57ft. 6in.
Diameter	7in.	13in.
Gaffs, length	24ft 9in.	28ft. 6in.
Bowsprit, outboard	19ft.	
Diameter at gammon iron		21in.
Diameter at cap		15in.
Jib-boom, outside of cap	17ft.	

The interior and construction plans of the Grampus will follow next week. The sail plan was calculated by Mr. D. J. Lawlor, of Boston, Mass.

REGATTA AT TARPON SPRINGS.—On Christmas Day a regatta was held at Tarpon Springs, Fla., under the direction of a committee of the citizens composed of Messrs. Payne, Scott, Tessier, Meyer, Blum and Hope. The day was warm, from 70° to 80°, with a light N.E. wind. The summary is as follows:

FIRST CLASS.



Centerboard Sloops.—Course, 8 miles, 4 to windward and return.

	W.L. Length	Start	Finish	Elapsed	Corrected
Vanessa, Vinson	24.01	1 21 15	5 06 00	3 45 00	3 45 00
F Patrick, Mun'lyn	18.06	1 25 15	5 14 15	3 49 00	3 46 00
Tantalus, Boyer	25 00	1 19 00	Time not taken.		

THIRD CLASS.

Open Skiffs.—Course, 4½ miles, triangular.

Julia, Cook	15.04	1 35 00	3 15 00	1 40 00	1 38 00
Lulu, Meyers	16.03	1 35 30	3 27 45	1 52 15	1 51 00
Puritan, Blum	17.06	1 35 00	3 27 30	1 52 30	1 52 30
Little Jim, Turnp'gh	15.04	1 35 30	3 34 30	1 59 00	1 57 00
Vanish, Cupitt	14.11	1 50 00	Time not taken.		

LINES OF SCHOONER-SMACK "GRAMPUS."—DESIGNED BY CAPT. J. W. COLLINS.

THE PLANS OF THE THISTLE.

LAST week the representative of the *Boston Herald* was in New York and exhibited the so-called plans of the Thistle to some of the leading yachtsmen, most of whom testified to a belief in their authenticity. We can only repeat our first assertion that while the drawings may have come from Mr. Watson's office, there is every reason for a belief that they do not, in outline or dimensions, represent the new yacht. We can add, on authority, that up to a very recent date the original drawings had not been outside of Mr. Watson's private room, and the only copy in the yard was in the hands of one trustworthy man. There had been, however, some rough heliograph sketches sent out to several builders as aids in making estimates. To suppose that those interested have taken every precaution to lock up the plans and keep the details confined to two or three persons, and then have given out freely the correct tracings and dimensions is simply ridiculous. The following telegram from Glasgow appeared in the *New York Herald* of Jan. 9:

Some amusement was excited on the Clyde to-day on the arrival of the *Boston Herald* of Dec. 26, containing the working drawings of the Thistle, with specific dimensions, and interviews based on these alleged plans. The question mooted here is, who hoaxed that enterprising newspaper? It is well known on the Clyde that Mr. James Bell, in whose name the challenge appears, has expressed himself strongly that he has bound the designer, Mr. Watson, not to divulge any of the dimensions of the Thistle until the yacht is in frame, when the Board of Trade officials can see her and give the Custom House a certificate of her tonnage. Then only will the official challenge and the yacht's dimenions be sent to New York. Probably these will be sent in March, so that, allowing for the necessary six months' notice, the race can take place in the middle of October. It is not generally known, however, even hereabouts—but it is certainly true—that the Thistle is being built by a syndicate of five men, the principal among whom is Mr. James Coats, Jr., the thread millionaire of Paisley, and the owner of the crack English racing yachts Marjorie and Madge. Hitherto his name has not appeared in print, the reason perhaps being, as some think, that, doing a very large business in America, it might be thought he ought not to oppose America for the Cup. But such a reason is fallacious. Mr. James Bell, as a yachtsman, was almost unheard of even here until the challenge for the Cup was made, but Mr. Coats finding the money and being at the back of the challenge is a guarantee to American yachtsmen that nothing is to be spared to bring back by aid of the Thistle the valued America's Cup.

"'TWAS A FAMOUS VICTORY."—*Editor Forest and Stream:* The undersigned is one of the benighted individuals who has been laboring under the false impression that the owners of Genesta and Galatea put themselves to the trifling expense of a trip across the "pond," with some thought, perhaps slight expectations, of winning glory and renown for themselves, their vessels and their country. To accomplish this with overwhelming success, I believe it necessary that they (Genesta and Galatea) should be somewhere in the vicinity of the home stakeboat about the time the race was finished. That is what I did think. It seems though, like Galatea at the finish, I was "way off," but thanks to "Loyalty," I am informed through the medium of the FOREST AND STREAM that "another year is about to close, and with the last, it shows a victory for the Englishmen, not that they have secured the Cup, for that of itself is of small value, but that they have forced an acknowledgment from us by the acceptance of their ideas, that we were not able, if left to our own resources, independent of help, to successfully cope with them and defend the Cup." From which it would appear that in the pre-arranged programme of our English cousins, the winning of the Cup figured only as a minor detail. What they particularly desired, what their hearts yearned for, what they spent their time and their money for, was the proud distinction of being defeated with their own weapons. Now while this may be very gratifying to the Englishmen, the fact of our having taken such an unfair advantage is necessarily humilitating to all good and true Yankees. Perhaps "Loyalty" can furnish us with more or less authentic proof that Noah, if not a native born, at least showed some Yankee characteristics. Did he lay in, for use of first cabin passengers, an unusual supply of beans? Did he try to palm off on the live stock shoe pegs, sharpened at each end, for oats? If I say we can lay no claim to Noah as a fellow countryman, and we must acknowledge him as the original designer and builder, why then should we presume to build boats of any kind? —YANKEE DOODLE.

KNICKERBOCKER Y. C.—The annual meeting of the K. Y. C. was held on Jan. 5 at the Mount Morris Hotel, Harlem, a large number being present. The following amendments were proposed, but only a few voted in their favor, and neither was carried: To amend Article I. Section 1, to read "The initiation fee shall be $10." The present fee is $20. To eliminate Section 7, of the sailing regulations, with Seawanhaka rule and substitute the following: "Cabin yachts to be measured as per waterline length, with one-third the overhang added thereto." The present rule is sail area. The length and sail area rule has been in use for two seasons and has worked very well in classifying yachts of various types, but it is opposed by a few whose yachts fare badly under it. No rule can be found that will not be hard on some few boats out of a large fleet, and as in the majority of cases the rule was satisfactory the majority voted for its retention. The officers for 1887 were elected as follows: Commodore, G. W. Rosenquest, sloop Mayotta; Vice-Commodore, R. W. Rathbone, cutter Surf; Treasurer, C. W. Lamb; Secretary, A. Varian; Measurer, Charles Coughtrey, cutter Nanita; Fleet Surgeon, Dr. Ringer, sloop Supervisor; Steward, Augustus Wagner, sloop Maggie. The Trustees elected were M. J. Greeley, Chairman; W. Potter, Jr., George T. Charlton, I. Paxon and J. Harris. After the conclusion of the meeting the club adjourned to the large hall below, where tables were laid for nearly ninety members and guests. The dinner was followed by songs and speeches and it was late when the party broke up after a very pleasant evening. The dinner was arranged by Messrs. Thos. I. Miller and W. D. Reed, and to them the success of the experiment is due. The club has not been in the habit of holding an annual dinner, but this occasion clearly proved the importance of such meetings in promoting closer relations among the members and of uniting the club through the winter, and the dinner will probably become a permanent feature of the annual meeting.

THE PROPORTIONS OF THE THISTLE.—It seems to be generally accepted as a fact on this side that Mr. Watson will build a wider boat than heretofore, availing himself of the latitude allowed by the new rule, but there is no evidence thus far that this will be the case. No doubt Thistle will be wider than Galatea, but Mr. Webb has gone further in the large sizes than any other designer, the nearest of the other boats being Irex. The Watson boats, on the other hand, have all been wider in the larger sizes, Vanduara being just 5 beams in length, Marjorie 5.2 beams, and May 5.3 beams. Genesta is 5.4 beams, Irex 5.57, and Galatea 5.8 beams. While Thistle may show a little more beam above water and a rounder side, there is no reason to suppose that she will depart materially from her predecessors.

SEAWANHAKA C. Y. C.—The first meeting of the Seawanhaka C. Y. C. for 1887 was held at Delmonico's on Jan. 10, with Commodore Canfield in the chair. The reports of the Board of Trustees, Secretary and Treasurer were read, showing a very prosperous year for the club. The Trustees reported that the experiment of a club yacht had proved a success, as the Venture had been in commission for five months from May 15, and had been used nearly every day. The Secretary's report showed that, in spite of the resignations presented some time since, the club's membership was as high as ever, and the Treasurer's report showed the finances to be in good condition. The committee on "club-house and future abiding place" reported progress, but the plans they have under consideration are not sufficiently matured to be laid before the club. The special committee on "Revision of the Sailing Regulations" presented a full report, embodying a number of important changes in the sailing rules. The report was ordered printed and laid before the club. Mr. Simond's motion to raise the cost of life membership to $2.50 was adopted. The officers elected for 1887 were: Commodore, A. Cass Canfield; Vice-Commodore, Robert Center; Rear-Commodore, Ralph W. Ellis; Secretary, L. F. d'Orémieulx; Treasurer, W. B. Simonds; Measurer, John Hyslop; Fleet Surgeon, J. W. Roosevelt, M.D.; Fleet Chaplain, Geo. R. Vanderwater, D.D.; Board of Trustees, W. B. Simonds, Wm. Foulke, Jr., J. F. Tams, Wm. W. Tomkins and R. L. Belknap; Sailing Committee, Louis F. Bayard, F. O. De Luze, L. F. d'Orémieulx, J. A. Montant and M. M. Howland; Law Committee, C. W. Wetmore, H. P. Rogers, Sindey Chubb; House Committee, F. O. DeLuze, Chas. H. Leland, H. S. Rokenbaugh.

YACHTS AT THE BAHAMAS.—The British officials at the Bahamas have lately extended to American yachts the same privileges enjoyed by the Royal Yacht Squadron, the act reading as follows: "When any yacht arriving within these islands shall have on board any stores, provisions, liquors, sails or other materials for the use of and belonging to the said vessel, which the owner or master thereof may deem it necessary to land, but with the intention of taking the same on board again, it shall be lawful for the Receiver-General, under such regulations as he may consider necessary with respect thereto relative to entering and clearing the same, to allow such stores, provisions, liquors, sails and other materials to be landed and warenoused, and to be removed and taken from such warehouse for consumption and use on board of such vessel, without the payment of any taxes or charges of any kind whatsoever, anything in any act of Assembly to the contrary notwithstanding." A yacht to be entitled to the foregoing privileges must produce to the chief revenue officer at the port at which she arrives the commission or other document issued by the proper authorities of the foreign nation to which such yacht belongs and under which such vessel is identified and recognized as a yacht of such nation. This concession is due to the efforts of Gen. Perkins when at Nassau last winter.

THE GREAT NEWSPAPER YACHT RACE.—To witness the reckless manner in which the hardy tars of the press have undertaken the dangers and discomforts of an ocean race in midwinter, the enthusiasm with which they sound the praises of ocean yachting, and the promptitude with which they have entered their respective favorites, one would almost believe that they had always favored such rough sport. It is amusing to contrast the sportsmanlike spirit with which they discourse now on the glories of Atlantic racing, and the easy victories in store for American yachts, with the cold reception they gave only a few months since to a *bona fide* challenge for an ocean race. The distance proposed then was only 1,200 miles, but it was too far. Now they have entered the entire keel schooner fleet for a race across to England, another to New York and back, and a fourth trip home, or about 12,000 miles in all. Go slowly, gentlemen, or you may stumble across some takers of these bold offers, who will be no more acceptable than was Lieut. Henn with Galatea last fall.

A YACHT CLUB AT ROCHESTER.—The organization of a yacht club at Rochester, N. Y., was finally effected at a meeting lately held at the Clinton House. The officers elected for 1887 were: Commodore, George H. Newell; Vice-Commodore, Matt Cartwright; Captain, E. M. Walbridge; Secretary, Charles A. Worts; Treasurer, E. Ocumpaugh; Fleet Surgeon, Dr. W. S. Hall; Measurer, J. J. Leary; Directors, H. S. Tomer, W. N. Oothout, George P. Goulding, C. A. Phillips. These officers, except surgeon and measurer, constitute the executive committee of the club. Mr. J. Bietry I as offered a site for a basin on a ten years' lease at a nominal sum. The constitution and by-laws, based on those of the Oswego Y. C., were adopted, and the members, fifty in number, signed the roll. The Executive Committee were empowered to apply for admission to the L. Y. R. A., if they considered it desirable. A sloop, 30x8ft. l.w.l. and 4ft. draft, will be built before spring, and also a cutter, 30x7ft. and 5ft. draft. Several other yachts will be purchased by members.

THE NEW SECOND CLASS BOATS.—The plans of Mr. Iselin's new yacht have been changed lately, and she will be built of steel by Mr. Piepgrass at his new yard at City Island. Her length is 70ft. l. w. l., beam 21ft. and draft 8ft., with lead keel and centerboard, of the same general type, but differing some in detail. Mr. J. H. Maxwell will have a yacht of 69ft. l. w. l. from a model of his own in connection with Mr. John Munm, who will build the yacht at Bay Ridge. Mr. W. Ziegler, owner of the sloop Thistle, will also build for the class, and probably from a Herreshoff model, the boat being also built at Bristol. These three yachts make it certain that there will be plenty of sport in the second class, and the prospects may be still brighter when Thistle's length is made public. The wiseacres are already picking out the winning yacht, and some of them seem to have forgotten that Bedouin is still in the second class.

ICE YACHTING.—The ice yachtsmen are all ready. The chief events of the season thus far have been the running away with an iceboat by two boys, one of whom narrowly escaped drowning, being rescued by a young lady; and a similar accident at Tuxedo, where a lady and gentleman sailed into an air hole, but were fished out. The first race of the year took place on Jan. 7, on the North Shrewsbury, the entries being: First Class—Grover Cleveland, George Coley and Uncle Bob. Second Class—Kittie, Capt. James Doughty, and Zero, Capt. Edward Throckmorton, Grover Cleveland won in her class, time 39min. 52sec., and Kittie in hers, time 40min. 20sec. The course was 12½ miles and wind N.N.E.

NEW YORK Y. C.—The nominations for officers for 1887 are: Commodore, Elbridge T. Gerry; Vice-Commodore, Charles Cooledge Haight; Rear-Commodore, Francis C. Lawrence, Jr.; Secretary, John Bird; Treasurer, F. W. J. Hurst; Fleet Surgeon, Morris J. Asch, M. D.; Measurer, John Hyslop; Regatta Committee, Governor Cortright, Alexander Taylor, Jr., and Stephen Peabody. House Committee, D. Henry Knowlton, E. A. Houghton, H. M. Durant, and James N. Winslow; Committee on Admission, Chester Griswold, John S. Dickerson, Henry C. Ward, Gilbert L. Haight, and George L. Ingraham. The annual meeting will be held on Feb. 4.

A SLOOP YACHT MISSING.—The sloop Dream, which left Beaufort, N. C., on Dec. 31, has not yet arrived at Charleston, and much anxiety is felt for her safety.

A DESIGN FOR A THIRD-CLASS RACER.—Mr. J. Borden, Jr., of the Boston Yacht Agency, has lately made a design for a racer of Clara's class, the dimensions being as follows: Length over all, 67ft.; l.w.l., 52ft.; beam, extreme, 16ft.; l.w.l., 15ft. 6in.; draft, 7ft. 6in.; displacement, 41.03 tons. The design is greatly cut away forward, with a strong rake to keel, the sternpost is plumb, and above water the hull has a clipper stern and a long counter. The sheer is peculiar, being high forward, the lowest point far aft and a quick turn up at counter. The yacht is intended for a good sail area, while the immersed surface has been kept as small as possible.

SANS PEUR.—The Duke of Sutherland's steam yacht arrived at Charleston, S. C., on Jan. 5, and is now awaiting her owner. She was sixteen days from Plymouth, calling at Bermuda, and the passage is reported as stormy throughout. The worst weather was encountered on the three days' run between Bermuda and Charleston, several severe gales being met with, while the jibboom and foretopmast were carried away and the gig was swept overboard. Repairs were made at Charleston and she sailed on Jan. 10 for Fernandina.

BURLINGTON BAY.—Mr. Geo. Webster is building at Hamilton, Ont., a deep sloop, 42ft. load waterline, 11ft. 5in. beam and with 5 tons on keel. The yawl Molly will come out with a new cutter rig. The yachtsmen of Hamilton lately held a debate on the question of cutter vs. sloop, in which the cutter side was victorious, and their claims for safety, more comfort, and equal, if not superior speed, were allowed.

ECLIPSE Y. C.—Officers for 1887: Commodore, Peter Krumlich; Vice-Commodore, D. Shay; Rear-Commodore, T. J. Hume; Secretary, E. A. Dunham; Financial Secretary, W. H. Houghton; Measurer, James Gorton; Steward, Herbert Smith; Sergeant-at-Arms, S. McManus; Regatta Committee, Fred Hammer, Joseph Stroebel, George Mackenzie, E. B. McManus and Lewis McGowan.

LARCHMONT Y. C.—A special meeting of the Larchmont Y. C. was held on Jan. 6, at which it was decided to purchase the Carver estate, near the club grounds at Larchmont, the price being $100,000. The new property will be improved to adapt it to the demands of the club.

THE PROPOSED OCEAN RACE.—No further action has been taken as yet by the Royal Thames Y. C. in regard to their offer of a cup. Mr. Bush's proposal for a race has excited some talk among the schooner men, but no one has yet come forward to join him.

A NAME FOR A CUP DEFENDER.—The name Goat has been suggested for one of the new yachts soon to be built, as that useful and picturesque animal is accustomed to swallow Thistles.

NAMOUNA.—Mr. Bennett's steam yacht is to be at Marseilles by Jan. 15, where her owner will join her for a cruise on the African coast.

MARION WENTWORTH.—This schooner, belonging to the estate of Mr. Thos. W. Pierce, has been purchased by Mr. Lucius H. Smith, of New York.

THE SALVATION NAVY.—The British schooner Vestal, 80×15ft., has been purchased by the Salvation Army for a cruise in the North Sea.

STELLA, steam yacht, of New York, arrived at Charleston Jan. 4. "Nessmuk," so well known to all our readers, is a guest on board.

THE CRUISE OF THE BRUNHILDE.—Mr. J. J. Phelps's schooner has arrived at Valparaiso, Chili, fram San Francisco.

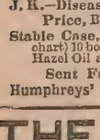
C. G. GREENE, steam yacht, has been sold by Messrs. Field & Young to go to Bermuda. She will fit out at Philadelphia.

NIRVANA.—Gen. Perkins's schooner has left New York for Nassau, N. P., her owner going by steamer to join her.

PILGRIM.—The statement of the sale of Dr. Winslow's Pilgrim was incorrect, as she is still for sale.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**



DELL, Sauk Centre, Minn.—A white partridge was shot near this town last fall; is not this an uncommon bird? Ans. Albinoes cannot be said to be common among any birds. The FOREST AND STREAM has contained records of several albino grouse.

A. S. R., Windsor, N. C.—I send you a sparrow; will you be kind enough to tell me if it is an English sparrow. I claim that it is not, as they have been here for a number of years and do not increase, and therefore are not English, as the English birds increase very rapidly. Ans. The bird is a young male English sparrow (*Passer domesticus*).

The sparrow is indeed a British institution, and a supporter of the British arms too—not in the way that the lion and unicorn may be, but in this, that he follows our armies into every field. Wherever our conquering camps are pitched there the sparrow takes possession of foreign soil. He flies with our battalions, as the eagle did with the legions, perched on our flagstaff and chirps his satisfaction in a full-fed, matter-of-fact sort of way that is strongly national. Zululand now knows him and he is familiar in the Soudan; he is at home among the mulberries in the Candahar bazaar and out on the peach-dotted plains before Cabul. Nor is it only the commissariat wagons of war that he follows, for he goes abroad a symbol of civilization and the commercial conquests of peace. Following "the course of empire westward," the British sparrow has invaded America. Five years ago it had spread as far as Omaha, on the skirt of the great prairies, and sailing round the Horn in our merchant vessels had occupied San Francisco on the Pacific and spread eastward to Salt Lake City. I looked out for it in my travels and made notes of it, and I found then that there was a strip some thousand miles wide running north and south, which the sparrow had not crossed. But by this time he is probably over it, pecking his food in Cheyenne, and traveling by the Union Pacific across the levels of the Platte.—*Correspondence Good Words.*

HALE'S HONEY OF HOREHOUND AND TAR softens the cough, relieves the windpipe and bronchial tubes of mucus, tones the lungs and the membranes of the throat, and restores to the organs of respiration their natural strength and vigor. PIKE'S TOOTHACHE DROPS cure in one minute.—*Adv.*

Canoe and Camp Cookery.
By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 96 pages. Price $1.00.

To Whom It May Concern.

THE MARLIN FIRE ARMS CO.

New Haven, Conn., January 10, 1887.

Some weeks ago we wrote to our customers advising them not to sell Winchester ammunition for .32, .38 and .40-caliber Marlin Rifles, for the reason that the cartridges made by the Winchester Repeating Arms Co. in these sizes were not properly constructed. Under date of December 10th, 1886, the Winchester Co. issued a printed circular to the public, making some remarks to which we deem a reply necessary.

To begin at the beginning: The first Marlin Rifles which we made were .45-caliber, and intended to take the United States Government regulation cartridge. We were soon satisfied that the large primer used in the Government cartridge was not the proper one for a Magazine Rifle, and we induced both the U. M. C. and the Winchester Companies to furnish ammunition for our rifles using small primers. These .45-caliber cartridges are still made in that manner (See page 63 of the Winchester Catalogue, dated October, 1886).

Shortly after this we brought out the .40-60, an entirely new size, ammunition for which was made by both Companies, also with a small primer at our request and from our gauges Some time after that, we called on the Winchester Co. with a model and gauge for the .38-55 cartridge; after examining the model cartridge and having noticed that it was made with a small primer and flat pointed ball, one of the officers of the Winchester Co., who was present, remarked that we were evidently intending to use this cartridge for a magazine gun. We affirmed that this was our intention, and a further remark by this said officer, saying that this was the proper way to get up a cartridge for that purpose. We introduce this incident to show that the Winchester Co. fully understood the point at issue. The .38-55 cartridge as well as the .32-40, which latter we brought out at the same time, were also made just like the .40-60 and .45-70 had been, *with a small primer*. These cartridges are so advertised in their Catalogue of November, 1885, page 66. A significant fact in this connection is that the .40-60 Winchester cartridge (which was made to compete with our .40-60) was then and is *now* made with a small primer. We claim that ammunition for Repeating Rifles, where the cartridges follow each other consecutively in a tube, should in all cases have SMALL primers to insure perfect safety, as when large primers are used, there is more or less liability, if the weapon be severely jolted, to an explosion of one or more cartridges in the magazine, because the bullet of one cartridge abuts against the primer of the next. If small primers are used, the apex of the bullet will not touch the primer but come against the solid head of the shell, thus insuring perfect safety in that respect. We guarantee the Marlin Rifle to be PERFECTLY SAFE, and therefore insist on small primers as the only proper ones.

In the matter of the Army Trials to which their circular refers, and in which they claim that the Board tested large primers with entirely satisfactory results, the Report of the Board shows that an exhaustive test was made on this point, and that large primer cartridges twice exploded in the magazine, thus proving that our objections to ammunition so made are well taken.

Some months ago we began to get complaints of missfires. These complaints continued to come in from all parts of the country, parties usually claiming that the cause must be some defect in the Arm. We investigated and found in each case ammunition of the Winchester make had been used, and then for the first time we discovered that they had altered the cartridges .32-40, .38-55 and .40-60, and substituted large primers; we also found that the primer pockets had been made nearly 1-32 of an inch too deep, so that the first blow sent the primer deeper into the pocket, and it required another blow to explode it. We were much annoyed, had been put to considerable expense, and as a large amount of the Winchester make of Marlin cartridges were on the market distributed all over the country, it would have been serious for us to allow the matter to go any further. We called twice on the Winchester Co. to have the matter remedied, but received no satisfaction, and when we found, on the issue of their Catalogue of October, 1886, that they did not intend to accede to our request to go back to the original style of Marlin cartridges, which had been made from models and gauges furnished by us, we concluded the only way to protect ourselves and prevent our Arms being condemned and driven out of the market by faulty ammunition, was to take the same course that the Winchester Company claim they had to take with regard to their own arms, and guarantee our rifles only when used with ammunition *properly constructed.*

We do not question the ability of the Winchester Co. to make good ammunition, as we have had abundant proof that they can do so, but what we claim, is, that this particular ammunition is not properly made for the purpose it is intended for. We are not makers of ammunition, and it is for our interest that any and all makes of cartridges can be used in our Arms. If the Winchester Co. will see fit to go back to first principles, we shall take pleasure in advising the use of their cartridges for Marlin Rifles equally with those of other manufacturers.

One other point: In the Winchester Circular a fling is made at the quality of our Arms. The best comment to be offered upon this point is, that, with the prices of our Rifles about 20 per cent. higher than the Winchester, the sale during 1886 has INCREASED 35 PER CENT. over any previous year, and we have never been obliged to meet their prices to do all the trade our facilities would permit.

We do not like controversies, and regret the necessity of this circular; but we desire to have the matter put in its true light, and to keep our goods properly and favorably before the public.

Respectfully yours,

The Marlin Fire Arms Co.

A WORD IN SEASON.

Readers old and new of the FOREST AND STREAM may be pleased to know that the paper is now at the close of 1886 enjoying the support of a wider circle of friends than a any former period in its history. This is an interesting fact, for it proves, with the bes possible demonstration of success, the sound sense of the theory long ago adopted by editors and publishers, and steadfastly adhered to, that there is room in this country for a journal treating the subjects embraced by our departments, and depending for its suppor wholly upon what have been accepted by the conductors of the FOREST AND STREAM as legitimate journalistic methods. In other words, we have kept faith with subscribers by devoting our reading columns exclusively to honest reading matter, and have not given up our pages to extended paid puffs of railroad routes clumsily disguised as accounts of sportsmen's travel, nor alluring descriptions of wonderful agricultural regions, all paid by the column. The conviction that a sportsman's journal for sportsmen could be conducted without resorting to such questionable makeshift expedients have proved quite correct.

The tone and high character of the journal, as one fit for sportsmen to receive into their homes, will be jealously maintained. As there is nothing in the recreations of field and stream inconsistent with the highest type of manhood, so, the editors are convinced, there should be in a journal like the FOREST AND STREAM nothing to offend good taste.

The FOREST AND STREAM will be, in the future as in the past, thoroughly representative of the best field sportsmanship of America. It will maintain its position as the chosen exponent of those who seek recreation with gun or rod, rifle, canoe or yacht. Its character will be scrupulously preserved, and readers in 1887 may expect a rich fund of sporting sketches and stories, suggestions, bright sayings, prompt, reliable news, and interesting discussions. Angler, shooter, dog breeder, canoeist and yachtsman, may be assured that whatever is of interest in these respective fields in 1887 will find its way into the columns of the FOREST AND STREAM.

The Sportsman Tourist

columns are filled with bright sketches of travel, camp life and adventure, the reflected experience of a host of outers.

Natural History.

Papers descriptive of bird life, chapters of animal biography, notes on the ways of field, forest and water creatures as observed by sportmen, anglers and naturalists, make up these pages. The special work of the past year has been the establishment of the Audubon Society for the Protection of Birds, begun in February, and having now a membership approaching 20,000.

Angling and Shooting.

Time was when a single journal sufficed in this country for adequate discussion of all the heterogenous pastimes and practices dubbed sport. That time has long since passed away. Some of the sports have been outgrown or put under a ban, others have developed to such a degree that each class requires a special organ. The particular fields chosen by the FOREST AND STREAM are those of angling and shooting. The pages given up to these topics are rich with the freshest, brightest, most wholesome, entertaining and valuable open air literature of the day. They have the sunlight and woodsy odor of the haunts of game and fish; they picture nature as seen by sportsman and angler. One has not long to read the FOREST AND STREAM before learning its attitude with respect to game and fish protection. The editors believe in conserving, by all legitimate methods, the game of fields and woods, and the fish of brook, river and lake, not for the exclusive benefit of any class or classes, but for the public. They are earnest, consistent and determined advocates of strict protection in the legal close season, and in restricting the taking of game both as to season and methods, so that the benefits of these natural resources may be evenly distributed.

The Kennel.

This department has kept even pace with the growth of the interest of breeding field and pet dogs. Reports of trials and shows are usually given in the FOREST AND STREAM in advance of other publications, and being prepared by competent writers their intelligent criticisms are of practical utility. This journal is not hampered by personal animosities. It has no judges to "kill." It does not decide a dog's merit by asking who the owner is. It treats all kennel subjects without fear, favor or ulterior motives, and in consequence enjoys a degree of public confidence and esteem denied to such as stagger beneath the incubus of malice and flounder in the bogs of ignorance.

Rifle and Trap Shooting

records scores of meetings and matches, discussions of topics pertaining to the butt, gallery and trap. Secretaries of gun and rifle clubs are invited to send their scores for publication.

Canoeing.

This country is a land of magnificent water courses, and Americans are just beginning to appreciate the canoe as a means of enjoying the delectable charms of river and lake, and bay and canal. The men who are making fortunes by making canoes know best how rapidly the ranks of canoeists are multiplying. Novices and old hands will find in the FOREST AND STREAM canoeing columns, in charge of a practical canoeist, accounts of cruises, lines of new craft, and hints and helps and suggestions without number. Closely allied is

Yachting,

in which the FOREST AND STREAM is the only competent, all-the-year-round, intelligent exponent. Our reports of races are full, prompt and accurate. The numerous illustrations of lines of new yachts make an invaluable record of the development of yacht building.

Weekly, $4 per year; $2 for six months.

Forest and Stream Pub. Co., 39 Park Row.

Wanted.

Grand Bon-Secours Kennels.

Near Péruwelz (Hainault), Belgium.

ESTABLISHED IN 1865.

Property of Mr. Aug. Tondreau Loiseau, BANKER AT PÉRUWELZ.

These kennels enjoy a wide-spread fame, and hundreds of sportsmen of the highest authority in the doggy world can bear witness to the scrupulous good faith which governs their operations, and the remarkable merit of many of the dogs which have gone out from them since 1865. The collection consists exclusively of English sporting dogs. Besides a splendid collection of English stud and field dogs—Laverack, Gordon and Irish setters, large and small pointers, Clumber, Sussex, Norfolk and black spaniels, large curly or wavy-coated retrievers, all of the most noted blood—which are employed for breeding and whose young are offered to the public, these kennels always have for sale a large number of other English dogs, warranted to be of pure and noble blood, handsome and good, of full pedigree, thoroughly trained to obey, to charge at the uplifted hand, and to retrieve perfectly all kinds of game.

The kennels are constantly open to visitors.

Adult and trained dogs can be shipped at Antwerp (Belgium) destined for the principal ports of the two Americas.

St. Bernard Pups.

For Sale—Grand pups by Merchant Prince and other noted dogs, rough and smooth-coated; also English pug pups from best strains. Prices always moderate. Address with stamp ESSEX KENNELS, Andover, Mass. dec9,tf

ANSWERS TO CORRESPONDENTS.

GODWIN'S HALLUCINATIONS.

THERE is some reason to believe that the blindness of the State Game Protector whose district includes the great markets of New York city is not a physical defect, but partakes of the nature of mental obliquity. Godwin does not permit the game dealers of this city to defy the laws because he cannot see the game they unlawfully display, but because he is incapable of the mental processes which take place in the brain of an ordinary official when he runs against open violations of law. When Godwin confronts a ruffed grouse hanging up in market after the season has closed, there may be the physical process of seeing, but the subsequent events give no indication that the protector's brain has performed its proper functions in the matter.

The only other hypothesis to account for this officer's delinquency is to assume that he is the victim of certain unfortunate hallucinations. The first of these is that the game law is a joke, enacted as a bit of horse-play at Albany, not to be interpreted as serious, and under no circumstances to be enforced as other laws are enforced. This is the view he presumably held for the first thirteen days of January with respect to the ruffed grouse statute. On Jan. 14 this notice appeared in the daily papers:

> I desire to call the attention of marketmen and others interested in the subject to the fact that, by a law passed by the New York State Legislature of 1886 (section 36, chapter 194, Laws 1886) the offering for sale or having in possession of any ruffed grouse, commonly called partridges, or pinnated grouse, commonly called prairie chickens, is prohibited after Dec. 31. As this law changes the time for possession and sale of these birds from what it has been heretofore, and is not generally understood by the public, I think it proper that I should give notice that I shall enforce the law.—J. H. GODWIN, Jr., State Game Protector for the Second District.

From this it may be inferred that Godwin has the hallucination that if the law actually does mean something the way to punish violators is to come out in print fourteen days behindhand and announce "I think it proper that I should give notice that I shall enforce the law." This is surely bad enough and absurd enough. As a hostler to rush frantically to shut the barn door after the horse is out, Godwin would be a tremendous success. Another of the protector's ridiculous notions is that by these proclamations in print he frightens the dealers and makes of himself a terrible fellow in their eyes.

One more of this bombastic official's hallucinations is that he is earning his salary. The citizens of the State may have some interest to know whether he succeeds in drawing his pay for January. Unless the public money is intentionally to be frittered away on officials who wink at violation of laws they are sworn to enforce, it is time for Godwin's place to be filled by some one else.

WHAT PROTECTION MAY DO.

IT is well understood that animals which are protected from their natural enemies tend to increase in numbers very rapidly. Striking examples of this are the wild cattle and horses of South America and of portions of our own West. This very rapid increase of wild and domestic animals is not only a most important fact in natural history, but is of extreme interest to the sportsman as well. It shows just what might result if any large territory should be set apart and our own native wild animals should be free from the attacks of man, their only important enemy. It shows what ought to, and will, take place in the Yellowstone National Park, if only it be properly protected.

All the wild cattle and horses, which at the beginning of the present century thronged the plains of South America, came from the few pairs first brought over by the Spaniards, and their remarkable increase was due to the absence of natural enemies and the favorable conditions to their surroundings.

Humboldt in his travels states on the authority of Azzara that in the latter part of the last century there were believed to exist on the plains of Buenos Ayres 12,000,000, cows and 3,000,000 horses, without including the unbranded animals, which would add largely to this number. M. Depons in the *Quarterly Review*, has calculated that on the plains between the Orinoco and Lake Maracaybo there roam at large 1,200,000 cattle, 180,000 horses and 90,000 mules. The cattle ranges of our own West tell a similar story to-day.

In all these cases the animals have no enemy to fear, except man, and the country is admirably adapted to the demands of their life.

But it is not only the large animals that tend to increase if preserved from their natural enemies. Our smaller mammals and our game birds feel equally the benefits of rigid protection. We have in mind now a farm on Long Island on which the owner looks after his quail with the most sedulous care, and the results of his efforts have been such as to richly repay him. He writes of this as follows: "They increase very fast. For instance, when I stopped all shooting and trespassing on my premises two years ago, there were about twenty birds on the 400 acres. The following fall I killed sixty birds and left enough for seed. This fall and winter I have bagged one hundred and sixty-one birds, and there are fifty pairs on the place now. If all goes well, at this rate, what a lot I will have next year. If they do sometimes raise two broods, why I will have a thousand birds to shoot at next fall."

This is what one man has done on his farm of 400 acres. On a larger area the results might not be so satisfactory, yet with proper protection against poaching and with due care and feeding during the winter, the quail can be made to feel that they are at home, and will remain and increase in numbers with startling rapidity.

If a number of adjoining land owners should pursue this course, they would always have the very best of shooting for themselves, or what to some men would be more important, could lease the shooting privileges of their land for a good round sum. Long Island is the natural home of the quail, and all that the birds need there is proper care and protection.

Almost the same thing would take place in the case of the ruffed grouse. This is a bird of very local habits, and except during its wanderings in the early autumn, rarely strays far from the piece of woods in which it was reared and though it travels about more or less during September and October, it is almost sure to return to its home when, the frosty weather comes.

Our ducks and wildfowl generally seem to remember from year to year grounds on which they are exempt from disturbance, and congregate in such places in spring and fall in great numbers. We believe that there is no game bird or animal which will not amply repay by its increase any intelligent and continued effort made for its protection.

This is a lesson that the sportsman may well lay to heart before it is too late.

SNAP SHOTS.

THE trial of James M. McFarland in the Supreme Court of Washington county, at Machias, Me., has been concluded. McFarland was a companion of Graves, the deer hounder, when Graves killed the two wardens, Niles and Hill; and was charged with having been accessory after the fact to the murder. The jury acquitted him. Such a verdict may be accepted as giving evidence of a decided change in local public sentiment respecting the killing of game officers by lawless ruffians. As our correspondent "Special" intimates, there is among certain classes a feeling that Graves and McFarland were only taking game which belonged to them by a method which was legitimate because it suited them to employ it, and in killing game wardens citizens are only defending themselves in the exercise of a natural right. In due course of time it will be in order for the assassin Graves to return to the bosom of his family and receive the sympathy of friends and neighbors for hardships undergone during his exile.

Among the grotesque communications which have from time to time been received at this office is one which came from a firm of attorneys in Maine, intimating that unless the FOREST AND STREAM produced certain manuscript relating to the notorious "Shacker Band," of Wesley, Me., there would be trouble ahead. The remarks in this journal, reflecting on Maine poachers who burn barns and cows and behead horses in their stables at midnight, had wounded the sensitive natures of the Wesley people. It will be remembered that Dr. Sam. B. Hunter, of Machias, was half-way sued for libel by these people, the plaintiffs failing to put in an appearance when the time came for trying the suit. A sequel to all this is the sentence of the incendiary deer dogger, Devereaux Fenlason, to twelve years at hard labor in the State prison, for having fired game warden Munson's barn at Wesley, with intent to burn the dwelling also.

State "Game Protector" Whitaker, of Southampton, did not arrive in Brooklyn on the thirteen-days schedule time last week. Owing to a heavy storm he was late. Then in default of having his badge or other ordinary means of identification, he was practically powerless to cope with the illicit grouse dealers, who, with tongue in cheek, were inclined to deride him. The Long Island "game protector" is an amiable old gentleman, by his friends much esteemed for his social qualities, but quite unfit to discharge the duties of his office except to regularly draw the salary. Some one who can do it without hurting his feelings ought to try to show him how graceful it would be for him to resign and give another man a chance not only to draw the salary but to do something toward earning it.

The Eastern New York Fish and Game Protective Association has appointed a committe to doctor up the game law. It is to be hoped that the Association will instruct its delegates so that it will not again be necessary to repudiate them, as was largely done last winter when Dr. Ward gave out his misleading deer hounding effusion and tried to make the Association responsible for its peculiar character. "We, the people of England," proclaimed the three tailors of Tooley street. "We, the Eastern Association," said Dr. Ward. It is time to have done with altering good laws into bad ones to suit the selfishness of cliques within cliques.

A Lynn, Mass., young lady wore a feather-bedecked hat out in a rain-storm the other day. The rain trickled from the hat down on to her face, taking with it some of the arsenic used for curing the bird skins. At last accounts she was expected to recover. There is a moral in this, but women will never give up bird-skin decoration from fear of arsenical poisoning; they will brave everything for fashion, no matter how unreasonable and heathenish the style may be.

The poison alarmists are not likely to have much influence on feather wearers; nor is it any more probable that the worm alarmists will materially affect the people who eat spring ducks. Spring shooting will no doubt be abolished, and that before very long, but this will not be brought about by sensational alarms of the danger of eating game because it is in spring infested with internal parasites. The abolition of spring shooting is a common sense move and it can be accomplished by common sense measures.

HEADWATERS OF THE SISSIBOO.

"With happy memories of the past summer, he joins together the three pieces of his fly-rod at home, when the scenes of last season's sport are wrapped in snow and ice, and renews the glad feelings of long summer days."

SO writes Mr. Norris, and as I now put up my carefully oiled rods, and overhaul my fly-book, memories of the past steal over me. Here, sadly worn by voracious teeth, is the identical fly that lured so many of the big trout of the Sissiboo to their death. But I had better tell you the whole story of my wanderings along the headwaters of that stream.

One bright afternoon in September I find myself on board the train of the Western Counties' Railroad at Digby, Novia Scotia, ticketed for North Range, a station eleven miles distant. Near to that place I am to put up at the house of my friend and guide, who, on the morrow, is to conduct me to one of the wildest regions of the province, the lakes that form the Sissiboo River.

To one accustomed to first-class roads, the Western Counties' is a novelty. The train progresses with a kind of go-as-you-please motion, but always pleases to go slowly, except when nearing a station it puts on such a spurt as to carry it past that point a hundred yards or more. When the train, after many shocks and much groaning, backs up, the conductor, swelling with importance and adipose, leaps to the platform amid the admiring glances of the assembled few. Happy the man he deigns to greet.

But everything has an end, and we are at North Range at last. My rod and gun cases are safely stowed on the wood cart of an obliging farmer going in my direction. We soon reach a high point in the road, from which can be seen to the rear St. Mary's Bay flashing in the rays of the setting sun, and in front and to the left, Porter's Lake, two miles long and half as wide, glittering like a jewel in its forest setting of firs. On the west side of this lake my host, Ben Como, has a snug farm, at the gate of which I find him awaiting my coming.

After a hearty supper, which bears witness to the culinary skill of his good wife, he takes me to see a trout lake, deep hidden in the woods, its waters clear as crystal.

The dusk gathers apace as we walk homeward and a huge owl flaps his wings close to our heads, then seating himself on the lower limb of a dead hemlock, calmly dodges the missiles hurled at him, all the while peering down at us with great uncanny eyes.

At home again, all our traps are put in readiness for an early start on the morrow, and we are soon in oblivion.

Four o'clock the next morning finds us on our way, Como with his trusty ax, revolver and part of the grub, I with my gun, rod, blanket and the remainder of our provisions packed in my creel. Our road, a very rough one, lies for six miles through burnt timberland and the rest, about 9 miles, through growing wood; a heavy fog hangs thick and protects us from the heat of the sun.

On the way we pass over the Northeast branch of the Sissiboo and some distance further on the outlet of Uniacke Lake, then strike into the forest. The road from Uniacke is impassable for vehicles, except sleds drawn by oxens. In swamps that we pass we see a number of moose paths, in which the prints of the great dew-claw and spreading toes are filled with muddy water, showing that a monster bull has recently passed. Now and then a flock of partridges are surprised by our coming, and at the report of my gun leave several of their number in our hands.

At three o'clock we reach our destination for the night, a good log camp near Fifth Lake. Como taking the gun and I my rod, start for the stream, the lake's outlet, which, some thirty yards in width, for a mile or more tumbles over and among great granite rocks. We scarcely reach the stream before there issues from the underbrush of the further shore the woe-be-gone figure of an Indian boy of thirteen or fourteen years, bawling at the top of his voice, "Mister, I be lost! I be lost!" Cheered by our assurances of protection, he jumps nimbly from rock to rock until he joins us, and we draw from him a most sorrowful tale. He says that he came in with a party of Frenchmen to take care of the oxen while they cut marsh grass at the upper end of the lake; that soon after they left him he lost his way and has had nothing to eat for more than three days but dry bread. What has become of the Frenchmen he does not know. Further questioning reveals many discrepancies in his story, and my companion, whose acquaintance with the half-breeds is more extended than my own, at once sets the boy down as a colossal liar. "The Indians," says he, "lie fast enough, but where to the Mic Mac is added a tincture of French blood, the result is an imagination rare and spicy." A good big "chaw" from my plug of smoking tobacco has such a soothing effect on the boy that he says, "I guess me go back now and look to de oxes." So we devote ourselves to the stream.

One could not easily imagine a finer place for trout, but my casting is rewarded by only a dozen small fish, and as the sun is getting low, we make our way back to camp, shooting by the way four more partridges.

How hungry we feel, and what a glorious supper of trout and partridges we have! Then heaping the green birch logs on the fire we talk and smoke until, tired with our long walk, we lie back on our boughs of fragrant hemlock, turn our homespun covered toes to the fire, and fall asleep.

The next morning we follow the trail, back through the woods, for two miles to where another path leads off to Fourth Lake, and, before entering it, throw ourselves upon the soft moss to rest and shift our packs. Soon the sound of voices is borne to our ears, and the crunch of oxen through the brush. It proves to be the party of Frenchmen coming out and with them our lost boy. Como, who knows the whole party, soon makes me acquainted with them, and then the true story of the boy comes to light. He had been with them but a day when he met us, having come in with a Frenchman on the evening previous to our arrival, but during the absence of the men had managed to consume a large quantity of substantial food, together with eight pounds of brown sugar. "Oh! he be a sweet one," said Joe, the spokesman of the party, "dat serve him right to cut him open, so dat de bears lick him insides out." But the boy protested with tears that "de oxes" had broken into the camp and eaten the sugar.

Joe, by the way, is a character—part French and part negro—he has the vivacity of the former and the drollery of the latter. We are much amused by his account of a moose hunt in which he had taken an active part two years before.

"You see," said he, "Mr. Blank to Yarmouth, he like to call de moose, so he get two Injuns to call, and me and Andy to tote de dunnage. Well, we go away back de Fifth Lake where de moose signs plenty, dere dey leave me. Mr. Blank and Andy and de Injuns go way and leave me to watch the dunnage. Dey aint gone far; de Injuns call. Andy and Mr. Blank lay low. Pretty soon, bumby, way off'n de distance, de bull moose holler. Mighty Moses! he am a comin' fro de bush, his horns agoin agin de trees, ker-blim, ker-blam, ker-blim, ker-blam. T'aint no fire, and oh my chillim how lonesome I git! *Den* I git skeered. So skeered dassent look up. When I looks up all de bushes seem dey moose horns. 'Joe,' says I, 'mooses am gittin too thick.' I skinned up a tree. Bang, goes a rifle, and de monstrus beast falls nearly agin de tree I in. Oh, how I bless dat tree, I fairly hug it. Up comes Andy and Mr. Blank and cut de moose throat. 'Joe,' yells dey, 'Joe,' but I sees de critter kick so I lay still. Mr. Blank hear me comin down, and how Andy and he laugh; den dey commence for to cut de tree down. Den I begs off. You don't never get me goin' callin' agin. Moose horns comin fro' de bush am de most devilishest noise what you ever hear."

Bidding Joe and his friends good day, we strike out for Fourth Lake. Our intention is to follow this lake and its outlet to Third Lake, and proceed in the same way to Second and Grand; at the latter we know a logging crew to be at work.

These lakes are from 1½ to 3 miles in length. Between each of them there are rapids half a mile or more in length, where the water swirls over and among great boulders of granite, resting now and then for a moment in a foam-flecked pool, only to issue forth again and dash its amber flood over a fall into the boiling basin below. We labor under a great disadvantage in having no canoe with which to cross the lakes. Along Fourth Lake we find the traveling very difficult; in fact it is to me the most wearisome day of the whole trip, and though we walk only about seven miles, it takes us the greater part of the day to do it, so that when the outlet is reached we conclude to camp for the night.

Como's ax is swung with good effect, and soon we are lying upon our hemlock beds, under the brush lean-to, a roaring fire of white birch in front of us, and my blanket at our heads to keep off the wind.

To-morrow I shall have enough fishing to delight my heart, my companion says. Soon that time comes which those who have experienced it can never forget—the time when you lie back and look out on the wall of blackness beyond the fire, the white trunk of the dead tree opposite to the camp reflecting the light gleams out of the darkness, while the leaves of the beech tree overhead rustle crisply under the influence of the rising heat; from the distance comes the murmur of the river rushing over the rocks, or the wild cry of the loon on the neighboring lake. Gradually a haze creeps over your eyes, the leaves form weird, fantastic shapes, grow less distinct, disappear, and you are asleep.

At the first approach of dawn, our breakfast eaten, we make our way to the river. The rocks afford good stations from which to cast. My companion seats himself on the bank and watches, meanwhile, my movements with expectant air. He has all along predicted that he would show me a trout that would break my rod, I suppose, by the way he looks, he is praying earnestly for that trout now. Various kinds of flies are tried, but the fish rise sluggishly or do not heed them. Then I remembered the parting advice of an experienced angler of Digby, "anything with blue in it is good." The advice was not wasted, for on the morning of my start I tied some flies according to his directions. I change for these. There must be trout in this pool or nowhere. My flies drop into the foam and the stretcher is sucked in by a good half-pounder. He is hardly landed before a great red-bellied fellow flops himself out of water for a floating leaf. "Good shot!" cries Como; and I have him fast. In this current he seems to weigh ten pounds. The struggle is short and decisive, but the rod conquers. I lead him carefully in to Como, who stoops down and tries his best to grasp the slippery body now gasping hard and weakly moving its fins, but his troutship makes one final effort and slips through his grasp. Ah, why did we bring no landing net!

But all trout do not escape from us in this way, for we go down stream, taking them in almost every pool. Then comes the long tramp round Third Lake, the outlet of which is at last reached. While my companion makes camp I try my luck at the stream and soon discover, by the way the trout rise, that sport awaits me on the morrow.

To-night the sky looks threatening and the wind in fitful gusts soughs through the pines, giving every indication of a coming storm. I greatly dread rain, because it would not only spoil the fishing, but would also cause us much discomfort in passing through the woods. Morning, however, dawns without rain, though the clouds look heavy and ready to drop at any moment. We are soon at the river again, repeating yesterday's performances. A long line of rocks stretching across the entire width of the stream where it enters Second Lake, affords good footing and enables one to cast far out upon the lake.

Some large fish reward our efforts here, and after lunch is eaten, we fill the creel with cleaned fish and string the rest on well twisted withes and continue our tramp.

And now the rain that has held off for so long comes down in a lively shower and we wade through the long brakes that drip with moisture; every bush performs the office of a shower bath and wets us to the skin. My blanket, strapped to the top of my creel, becomes saturated and seems to weigh a ton; but we plod on and about noon arrive at the outlet. The stream between Second and Grand lakes is much shorter and deeper than we found it before.

The rain has now ceased, and while Como cuts some small trees to make a bridge for our crossing, I put together my rod and add two dozen fish more to our strings. The passage is made in safety, and from the other shore we see in the dim distance, far down the lake, a lumber brow about which men and patient oxen are toiling. We work our way toward it, crossing the outlet on a decaying dam, once used to drive the logs down the Sissiboo to Weymouth Mills.

We find the loggers kind and hospitable, as all the people in this region are. They soon put us on the road to their camp, where we stop for some time to rest and dry our clothes. Then, after having imbibed some hot tea, we once more shoulder our packs and struggle manfully onward.

Forty pounds of trout in addition to our other burdens make no light load, but after a long tramp the white houses of the French settlement appear in the distance, and we pluck up courage and press on. At 9 o'clock, tired and footsore, but feeling well repaid for our exertions, we arrive at Como's.

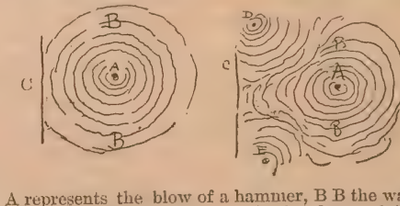
The next day, rested in body, my creel close packed with trout weighing from ¾lbs. to 1¼lbs. each, I take the train again at North Range, eager to show and distribute my spoils among expectant friends in Digby.

If our time had not been so limited we should have made the trip in a different manner. The right way would be to go in with an ox team and sled, upon which the canoes and traps could be stowed. The log house at Fifth Lake could be used as headquarters from which short excursions could be made by canoe or on foot to the surrounding lakes.

I never before saw so many partridges, nor such large ones, full grown and fat, their crops almost bursting with small acorns and beech nuts. I shot all we could use in the woods and carry home without going out of my way for them.

With a good dog one could do wonders, not to speak of the possibilities of bears and moose in season, signs of which we saw in abundance. P. B. V.

TRAVELS IN BOON GAH ARRAHBIGGEE.



FROM THE DIARY OF JOSEPH GOATER.

EDITED BY F. H. TEMPLE BELLEW.

[Continued from Page 483.]

EARLY on the day of our proposed attack I caused my attendants to plant a number of strong stakes, in the form of a letter V, opposite the end of a certain peninsula of shrubbery, where we had several times noticed the blazing eyes of the enigmatical monster. These stakes I had doubly braced, and, where possible, additionally strengthened by means of guys attached to trees. From post to post I extended my gobwich nets, crossing and recrossing them with stout ropes of that same wonderfully tenacious material.

Arrived at the spot, I stationed my men with the Khi-goorta on one side of the neck of the peninsula, with instructions to discharge a bomb at a given signal from myself, near the apex of the letter V. The two warriors I posted on the other side of the neck, armed with their knee Khi-goortas, several small bombs and some hand torches. Enjoining them all not to make the slightest sound, I took up my own post under cover of a large tree, rifle in hand, with Poptee at my elbow bearing two more. The night was very still, and as I stood there, with all my nerves strained to their utmost tension, every sound seemed magnified a hundredfold. Though why I should fall into the habit of using the word *seemed* in this connection I hardly can tell, since I well know that sounds *are* greater when the atmosphere is still than when it is in commotion. Though I should rather say that a given cause will produce a greater sound when the air is undisturbed by counteracting waves produced by other causes than when these counteracting waves exist. Sound being merely the action of waves of air on the drum of the ear, we will assume A to be a given cause, the blow of a hammer, let us say, and I will illustrate it by this diagram:

A represents the blow of a hammer, B B the waves of air produced by this blow, C is the drum of the ear upon which these waves fall. Now, we will suppose A, in the second diagram, to be still the blow of the hammer, B B the waves, and C the ear; but here is D, the drone of an insect, and E, the cracking of a branch. Each of these causes produce their own set of waves, which, meeting the waves from A, check or divert them, thereby lessening their impetus and consequently the force with which they strike the drum of the ear; and as sound is merely the force of the air waves acting on the nerves of the ear, the sound not only seems, but actually is less.

I was indulging in just this reverie on the cause and effect of sound when I was suddenly brought back to myself, and the machinery stopped inside my ribs with a thud, by the sight of two huge eyes glaring at me out of the thorny underbrush not seventy-five feet off. I had taken up my position so that when the creature should make its charge it would find itself headed off by the nets (if it did not burst through them) and skirting along for an outlet of escape give me a good shoulder shot. I did not dare risking a forehead shot, not knowing how the animal might be defended in that direction. The question now was whether the posts and netting would resist the charge were it to take it into his head to make one. I confess it was an anxious moment, but firmly grasping my Reilly No. 10, and motioning to Poptee to be ready with the other guns, I gave the prearranged signal, which to avoid exposing my position by any sound, was done by the very simple method of pulling a string of about 100yds. in length that communicated with the big toe of one of the Khi-goorta men. A second later and I heard the rattle of the springs of the catapult and caught a glimpse of the flaring torch of the bomb as it passed between the limbs of the trees, but no explosion followed; the cartridge had evidently failed me as far as explosion by concussion was concerned. I knew it would take a minute or more to discharge another shell, but I could hear them already hard at work bracing down the Khi-goorta. In the mean time, to my terrible vexation, the flaring eyes

had disappeared. I was destined to lose my game after all, and I most unreasonably anathematized the Khi-goorta men for I did not know precisely what, but for things in general. I could now plainly hear the scrambling retreat of my quarry, which, thanks to the thorny bush, I was glad to observe seemed not very rapid, but the sounds were getting more and more indistinct, indicating that it was making good its escape, when suddenly came a good royal bang of an explosion, and in an instant the woods were lighted up with blazing bits of my combustible bombs; then the scrambling of the animal or animals—there seemed to be more than one now—were renewed, and in a different direction.

Presently bang! bang! went two explosions from the smaller bombs on the other side of the peninsula—my warriors had evidently engaged something. I could hear their shouts as well as those of the Khi-goorta men. Then came another big explosion, and more blazing fragments among the trees, whose upper branches were beautifully festooned with the flaring fibers of the Kerry berry. Where a few moments before all had been still and black now all was noise and light. The numerous tenants of the trees above and the bushes below were wild with fever and excitement, the shrieking and fluttering of endless birds, the chattering and scampering of lemurs, pod-rabbits, bager-guys, with all manner of other small quadrupeds, while even the great big blousy insects woke up to add their drone to the general confusion. All the while my men were shouting and yelling, and at intervals contributing a big or little explosion to the universal hubbub. I kept my eyes closely riveted on the woods, ready for the big game which I felt satisfied must be driven back by the fire and noise from their legitimate line of retreat; and I was not mistaken. In a few minutes a pair of the fiery eyes came bursting out of the undergrowth, and, what I scarcely desired, followed quickly by another pair. Had there been only a single pair, I should have waited to give him a shoulder shot, but being two, I must run the risk of disabling one before the second had time to come on. I threw my rifle to my shoulder like a flash and fired straight between his eyes. I took a good aim; the object was large and not far off, and it was impossible that I could have missed it. But no effect seemed to follow my discharge; both animals came right on, charging straight for me. I held back my hand for a second rifle. Keeping my eyes fixed on the other approaching eyes I could see nothing else; but no responsive gun met my anxious grasp. I turned round impatiently to Toptee, gnashing my teeth with rage and mortification. The rascal was gone! I verily believe I could have killed him at that moment. And what was worse, my guns were gone too. The baleful eyes were close upon me. I still had the posts and stout gobwich between me and the monsters. The question was whether this barrier could stand the shock. If it gave way—what then? Did I but know the nature of the animal I might form some plan of retreat. In those few seconds I must have cursed the faithless Toptee a thousand times. The recreant scoundrel, to leave me at the mercy of an unknown enemy! Just then a ray of hope came to me—thirty feet off I espied one of my guns lying in the grass, where the cowardly Toptee had dropped it in his flight. If I could only reach this in time, I might, I thought, have a chance for my life, but the brutes were already close upon the netting. However, there was no time for deliberation. I gave the bound of an antelope, and the next instant lay dazed and bruised and all unconscious on the ground. I had caught my upper lip against one of the guys I had provided for strengthening my trap, and lay a bruised and senseless mass among the grass and leaves.

KERRY CISO.

In a case of this kind we never keep any record of time. I was probably only a few seconds in this prone position. When I came to myself I was on my feet, I had grasped the derelict rifle and was standing at bay. The first sound that I became conscious of was something like the bleeting of sheep and I could see two pair of eyes now close together following the line of the netting toward the front of the V. I followed them, cautiously resolved not to waste a single shot in such an emergency. My eyes had now become somewhat familiar with the dim light and I discerned two objects of about the size of Newfoundland dogs nosing along the netting and bleating as they went. At last they got fairly wedged in the fork of my trap, and I discovered two ungainly creatures trying to force their noses through the meshes and trembling all over in abject terror. A more helpless, harmless couple of animals I never beheld in my life. They were built on the clumsy model of dromedaries, of the size of goats and with the innocent face of sheep. The eyes that had so alarmed us all were projected from their sockets at the end of a kind of prehensile or retractile arrangement, surrounded with downy fur in place of eyelashes, and each provided with a luminous crescent over the top emitting a light similar to that of South American fire-flies.

The recreant Toptee, who came shambling back the most abject picture of humiliation I ever beheld, had no difficulty in leading them home to our encampment, where we readily domesticated the affectionate creatures, making them not the least attractive feature of our menage. Though their eyes on ordinary occasions lay bedded in their sockets, they could be projected at the end of the proboscis organ to a distance of at least 15in. It can be easily understood why my shots produced no effect. I had fired between the horns and consequently over the head of the animal.

Thus ended our first grand battue with our hunters, warriors and implements of war and chase. If it were not attended with any great bloodshed or glory, beyond a swelled lip and an inflamed nose on my part, it had at least served to test the efficiency of the Khi-goorta and the Kerry-berry Goorta bomb, a piece of knowledge destined to be of considerable service to us in our later adventures.

THE AUDUBON MAGAZINE, which will be begun next month, will devote much attention to bird life and natural history. Specimen copies will be sent on receipt of six nts; the subscription price is fifty cents per annum.

AVIAN TUBERCULOSIS

IN THE RUFFED GROUSE.

THIS is in medicine the age of germs. In the pathology of almost every disease we are searching for some germ or micro-organism as a causative agent. These investigations have been productive. Dr. Koch, the great German pathologist, has given us the tubercle bacillus, and more recently the cholera germ. Dr. Obermeyer has contributed the spirillum of relapsing fever, and we are still looking for the gonococcus, syphilococcus, typhoid and typhus germs.

Of all these minute organisms the bacillus of tuberculosis is by far the most common, the most important, and the one most readily demonstrated. A tubercle consists of a non-vascular grayish nodule, about the size of a pin's head. These nodules, wherever found, act as irritants, causing a low or high grade of inflammation, and as they occur in immense numbers, the disease called tuberculosis is almost invariably fatal. The starting point of these nodules is the small oval or rod-shaped microscopic organism called a bacillus. This bacillus is taken into the body in great numbers by the food or drink (diseased cow's milk may be the medium), and when by the process of absorption they reach the blood, they are, of course, diffused to all parts of the animal system. If they reach the lungs and remain there, the animal develops pulmonary tuberculosis, which leads soon to this form of consumption.

Thus it is seen that tuberculosis is an acute infectious disease.

In the October number of the *Journal of Comparative Medicine and Surgery*, Dr. J. Bland Sutton describes at length his researches into the causation and pathology of avian tuberculosis, from material and cases obtained from the Zoological Gardens, in London, England, and from one or two epidemics also in England. He proves that the disease is exceedingly common. He analyzes the causes of death in one thousand birds of various species.

He finds that the disease, developed *per se*, occurs only in gallinaceous birds—barnyard fowls, pigeons, grouse and partridges in confinement—also in fruit and vegetable feeders. Occasionally birds of prey were infected. Fish-eating birds seem to be exempt, also water fowl in general.

In the case of the birds of prey, the presumption is very strong that the disease was contracted by devouring the diseased flesh of grain-eating birds. Dr. Sutton cites an interesting case where the infection was directly traceable to the food. It was the case of one of the large snakes at the "Zoo," which was constantly fed on fowls, pigeons and ducks. The tuberculous nodules and bacilli were identical with those found in man. The liver was the seat of disease in this case. Dr. Sutton is also convinced that the warty excrescences seen on the feet and toes of cage birds, especially parrots, birds that spend much of the time in the bottom of the cage, generally known as bird gout, is nothing more than a local manifestation of this disease. Inoculation of animals, both birds and mammals, with tuberculous material, sputum, etc., from man, has been repeatedly accomplished, the symptoms and pathology not differing from those in man. More recently the inoculation of mammals from birds has been tried with success; rabbits and Guinea pigs being particularly susceptible.

The conclusions arrived at by Sutton are that tuberculosis in birds is not developed by infection from man, as held by Nocard, but is due to the formation and multiplication of this tubercle bacillus in congenial soil, namely the mixture which is so often found in barnyards, aviaries, cages, etc., decomposing excrementitious matter, grain, feathers, soil and so on, with a certain amount of moisture. The immature or latent bacilli are swallowed, and in the heat of the small intestine they find the temperature (104° F.) suited to their development. Absorption into the blood follows, and the organs nearest to the alimentary canal suffer first. The germs are followed through the coats of the blood vessels by the white corpuscles from the blood, the white blood cells envelop the bacilli, and in this way nature tries to stop their ravages. So the tubercle is formed. As the tubercle grows older, the center becomes cheesy and white, indicating death, the outside of the nodule continuing in an active state, the white cells trying to swallow or kill off the bacilli. Meanwhile the organ in which the fight is progressing suffers, and we have some of the various tuberculous troubles of the liver, lungs, kidneys, peritoneum, etc.

On Dec. 23 last I received from Mr. J. B. Battelle, of Toledo, Ohio, the body of a fine specimen of a male ruffed grouse (*Bonasa umbellus*) with the following history. The bird came to him from Wisconsin, and had been in confinement six weeks, and up to within 36 hours of its death it seemed in fair health. Mr. B. had three of these birds confined in one inclosure, 4ft. wide by 28ft. long, the coop having been occupied two months previously by some other birds. He stated that it had been disinfected and the ground raked over, that the birds were fed from a wooden trough, and watered from a tin vessel, and that the place was kept as clean as circumstances would permit. The two remaining birds, hens, were at this time apparently perfectly well. Post mortem examination showed the following condition: Bird well nourished, weighing 18oz. The organs showing acute disease were the lower part of the small intestines near the cæca, the liver, and probably the spleen, though the post mortem changes were so advanced that it was difficult to determine this. The gut was tied together in this region by peritoneal adhesions, which, however, were readily stripped apart. From the outside could be seen numbers of yellowish points or nodules, which were hard and resistant to pressure. Upon slitting the gut, the nodules seemed to be located in the submucous coat. A very few scattered nodules were found beneath the peritoneal covering of the liver. Under the microscope these bodies proved to be tubercles with the characteristic cheesy broken down center, surrounded by the giant, or aggregated, white cells, and in and around these, the colonies of bacilli. The diagnosis of tuberculous peritonitis was made.

I wrote to Mr. Battelle, stating my diagnosis and belief that the two hen birds would shortly succumb, and requested that they be sent to me as soon as possible after death. On Dec. 30 I received the second bird, a hen. She had likewise died after a twenty-four hours' sickness. Examination showed the same appearances in general, but the tuberculous matter had not developed into true tubercles, but lay attached to the mucous and submucous coats in the same region, exactly resembling what Sutton describes as occurring in very acute cases, "irregular, craggy-looking masses of a yellowish white color." This bird was not in as good condition as the first. The gut was matted, and adhesions were present. The third bird died on Jan. 7 with the same symptoms, but unfortunately was not sent to me. These three specimens represented a wide geographical distribution. The cock came from Wisconsin; the hens, one from Michigan and one from New York.

The conclusions from these facts seem to be that some birds are more susceptible to the tubercle poison than others. These grouse had every attention given them but undoubtedly became infected from the soil of their cages. The raking up of the ground may have contributed to this. Quail appear to be less susceptible, for they live and thrive in captivity when the hygienic surroundings are decidedly bad. At the same time I think that further investigation will show that the mortality among captive quail is due principally to this disease. The question whether, as Nocard holds, birds of the barnyard become infected from the sputum of tuberculous patients, or man from eating the flesh of diseased birds, is still *sub judice*. It has been proved that tuberculosis has occurred from drinking the milk of tuberculous cows. It may be suggested that the floors of aviaries, whether of soil or sand, and the cage itself, as far as practicable, be disinfected semi-weekly with Platt's chlorides, copperas, or some other disinfectant. This can readily be done with a small sprinkler. The subject is of great interest and importance.

MIGRATING LARKS.

AS we have now entered upon the close season for fin and feather, with guns and rods carefully laid away in anticipation of a future outing, when the proper time shall have arrived, it is well to review the past year or years, and recall circumstances of either pleasure or hardship we may have passed through, or any facts we may have learned in science or natural history.

When invited last fall to join a party bound for Maryland's eastern shore, for geese and ducks, I said yes, you may count me in, for if I do not shoot a gun, nor wet a line, I am sure of having a pleasant time, and shall receive a positive benefit from the trip. Thus it has ever been, and the rougher the experience—if safely passed—the greater the satisfaction in rehearsing it to the stayers at home.

While decoying in the early part of November on an island in the broad bay, north of the Isle of Wight, great numbers of birds were seen in the near distance, constantly rising and settling after a short flight.

The first impression was, that they were quail—the partridge of the South. But a more careful observation proved them to be meadow larks (*Sturnella magna*), whose flight somewhat resembles that of the quail.

The number was so great that the question was, "Where did all these larks come from?" The size of the island and the nature of the soil negatived the idea that they were raised there.

While in the same blind the next day the question settled itself, and in this way: A single lark came near and alighted on a dry bush and in plain sight. After looking in every direction he commenced a shrill call, quite unlike the usual note of the lark, which was repeated vigorously; and as there were neither geese nor ducks awing, my attention was given to the lark.

Soon a companion bird came and dropped into the weeds near the caller, then another and another, then by scores and hundreds, till apparently every lark on the island had responded in person and settled among the reeds and bushes, but except the caller not a bird was to be seen and not a note heard. This continued a short time when the leader, after two or three sharp ringing notes, spread his wings for flight, and was immediately followed by the entire flock in a southerly direction and across the broad waters of the bay. From that hour not a lark was seen or heard on the island. Doubtless these birds were reared further north, and had made this island a resting place in their long flight to a winter's home in a warmer clime. The name of the island was not learned, but doubtless many of the readers of the FOREST AND

STREAM have visited it; for at certain seasons, and with the right kind of weather, there are few better localities for geese and ducks on the Atlantic coast.

Some two days later, twenty miles further south, a similar flock of larks was seen in a pasture field, but whether a portion of the flock seen on the island or another, is uncertain.

This occurrence brought to mind a somewhat similar scene witnessed some years since while decoying on one of the Thousand Islands in the St. Lawrence River. It was perhaps a little after sunset, when attention was called to a black cloud approaching us, which soon proved to be numbers of blackbirds, winging their way to their nightly roosting place. Before settling they performed several evolutions, whirling in tortuous circles up and down, when suddenly a third or fourth part broke off, and selected a roost some 200yds. distant from the main flock, which had also settled in its roost.

Such screaming and chattering as arose from either roost is beyond description, for "the prancing pawing of the eight tiny red deer" of good Santa Claus was nothing to this babel of confusion.

Occasionally a few birds would pass from one roost to the other, and soon a stream of deserters left the smaller flock for the larger, and continued to increase in numbers till all had joined the main army. Soon after the last arrival the hubbub ceased, and quiet reigned throughout the roost, except an occasional note to welcome a belated bird. J. H. D.

POUGHKEEPSIE, N. Y.

MOTHER CARE.

MANY years since, while camped on the shores of a lovely little lake in western Minnesota, I saw one of those pleasing pictures that only occasionally catch the eye of the wanderer among nature's secret hiding places. It was a beautiful morning in August, still and fair, and as I wandered alone along the rush-lined bank I saw, some five or six rods from the shore, an old female dip-diver, or "hell-diver," with her four or five little ones taking breakfast. Stooping down behind the vegetation, I crept along until nearly opposite them, when I stopped, and peering carefully over the tops of the rushes stood silently enjoying the pretty sight for half an hour. The little ones, looking like miniature balls of down, sat contentedly on the glassy surface, waiting patiently upon the labors of the industrious little mother as she dived to the bottom in some 5ft. of water, and coming to the surface with food in her mouth sat perfectly still while the little ones swam up and took the food from her bill. What it was she was feeding them I was not quite near enough to see.

This went on for some time, she working very steadily, until, apparently becoming tired, she sat quietly resting on the water. One of the little ones now swam up to her, and after some little effort crawled up on her back, and cuddling himself up like a kitten on a hearth, sat contentedly down to rest.

A prettier sight I never saw.

Five minutes passed, when again the little mother lowered her head, and with one of those graceful dives by which this bird disappears without leaving a ripple on the surface of the water, vanished again from sight, leaving the little fellow sitting quietly, without the tremor of a muscle, above the spot where she went down.

At another time, while walking alone through a pine forest, I saw a red squirrel on the ground to my left front, some 50yds. distant, running toward a pine tree directly in front of me. It was apparently carrying a pine cone in its mouth, but coming nearer it appeared to be a huge excrescence upon the neck of the little animal. When, however, it sprang up the tree, 30ft. in front of me, I saw that it was a young squirrel clinging round the neck of its mother, with its tail spread along her back.

Running up the tree some 30ft., the mother squirrel with her right forepaw unloosened the little one's grip from her neck, and when he had fastened himself firmly to a small limb, she ran swiftly down toward where I stood at the foot of the tree watching the cunning performance, and coming within 10ft. of me, chattered her little wrath squarely in my face.

I wonder if other readers of FOREST AND STREAM have seen similar sights? To me they were both entirely new and vastly entertaining. UNCLE FULLER.

THETIS, Washington Ter.

WILD GEESE VAGARIES.—Cleveland, O., Dec. 30.—While quietly warming myself by the fire a few moments ago, I was surprised to hear the well-known honk, honk of the wild goose from out of doors, and well over head. Rushing out, what was my surprise at seeing twenty-three Canada geese going over at a slow gait toward the lake (Erie), and then slowly winging their way along the shore until lost to sight in the northeast. They were flying as though searching for a suitable lighting place, and so low that the white on the throat was plainly visible. We have had steady cold winter weather since the first inst., deep snow on the ground, every river, stream, pond, and marsh frozen solid, the lake covered with ice as far as the eye can reach from shore. Where did they come from and where are they going this time of the year?—DR. E. STERLING.

HABITS OF THE BLUE GROUSE.—Cache Creek, B. C.—*Editor Forest and Stream:* In certain sections of the country—Vancouver Island, for example—the cock blue grouse, when calling in the spring, will almost invariably be found perched high up on some fir tree, and very rarely on the ground; while in other sections—east of the Cascades, for instance—the order is reversed, nearly all of the calling being done while the birds are on the ground, a call from a tree being an exception. I would be glad to receive some information as to the reasons of this marked difference, for though sundry causes have suggested themselves to my mind, they are not entirely satisfactory.—R. M. C.

SNOWY OWLS.—Swanton, Vt., Jan. 12.—Five have been captured in our town this winter. Is it not very remarkable that so many of these birds are about this part of the country this winter? I have been hunting more or less for the last forty years all through our section and never yet saw a snowy white owl in the woods. Is this a sign that we are to have Arctic weather in future?—N. D.

Game Bag and Gun.

A DAY WITH THE CORDELIA CLUB.

I HAD received two letters from friends at Bouldin Island in answer to inquiries respecting the shooting. One said: "The rainstorm has driven the ducks all away; not one where last week there were ten thousand." The other said: "Shooting very poor. A few English snipe around. If you insist on coming I will do what I can to make it pleasant for you." In spite of these discouragements, the next day at 2:45 P. M. I was within a few yards of the Stockton boat, on my way to Bouldin Island, when I met Cap, smiling and happy as ever. "Hello, Andy, where are you going?" "To Bouldin Island," I replied. "Well now, you are not going to Bouldin Island at all; you are just going up to Cordelia with Charley and me." I can hardly tell why, but I refused, point blank, at first, but finally compromised by agreeing to go and see them off on their boat, which leaves in a few minutes. But when Charley comes along—at the very last moment, as he always does, but never too late—I am fully persuaded and go with the majority.

On the boat (Oakland ferry) we meet our friend W. C. Jones, of Collinsville, formerly of the Fish Commission, but lately returned from the Arctic regions, where he has been to locate a salmon cannery for a San Francisco firm. Before leaving us, at his destination, Benicia, he entertains us with accounts of his adventures at the far North. Leaving Benicia we glide swiftly along beside the glassy bay and soon reach Teal station, where the train makes a momentary halt and we make a long step down and wait for the big ugly thing, which seems to crowd everything else off into the marsh to go clanking and thundering away. Then we become aware of the presence of a pleasant-faced young man, who is introduced to us as Fred, who possesses himself of our gun and packages and we follow him down a flight of steps to the skiff. Getting aboard, Cap and Fred take the oars, and after a few minutes' row we shoot under the railroad bridge and up by a chicken ranch, where the burly proprietor sits in a huge wooden chair in his back kitchen door smoking the pipe of peace and contemplating his flocks. Then on up the Cordelia and Frank Horn sloughs with a flood tide, a three miles pull, till the yacht Whitewing is reached, moored to both banks, as she fairly fills the narrow slough at this point. Some of my readers may remember in my article in Vol. XXVI., No. 8, the long pull before daylight from the railroad bridge, where the yacht then lay, up to this point. The boys have since much improved on that arrangement by towing the yacht, not without herculean labor, up the slough to the immediate neighborhood of their ponds, and we are now right in the home of the ducks and geese and we can hear their conversation going on all around us and, as Charley says, no better place could be found to study the call notes of different birds. But it is getting chilly and we will go aboard. Up the side, round into the awning-covered standing room and down into the roomy and cheerful cabin; brilliantly lighted, and with the guns of the members of the club artistically arranged on each side and, most attractive of all, a smoking hot dinner awaiting us, it seems a veritable hunter's snuggery. Then Charley shows us the state-rooms, four in all, fitted with every comfort and convenience, with beds so luxurious that I begin to wonder how I can "turn out" of one of them at 5 o'clock the next morning. Then we go to dinner, well cooked and admirably served by neat and trim little Japanese George, after which, over coffee and cigarettes we talk over our hunting trips of the past nine years, enjoying all the details as each calls to mind some incident forgotten by the rest—how A. came in from a hard morning's work on his first ducking trip flushed with success and with a game strap full of mudhens; poor boy, how we hated to have to tell him that they were not good ducks. How B. had joined us, after we had been several days on a trip, and dined, with great apparent relish, on the only canvasback killed up to that time. How F. fired twice at a wooden decoy and then wondered "what ailed the blamed duck." How W. lost his duckboat and bearings at the same time and had to wade back a mile through the ponds to the yacht. How T. had his decoys stolen from him while asleep in a blind. And so the evening wears away. Cap has gone to sleep and is gently "driving his pigs," and Charley and I tumble into bed, first waking Cap, who succeeds in getting to bed before us, so as not to have to put out the lights, and in a few moments silence reigns. No thunder of freight trains roaring over our heads at dead of night, as on former trips. We are awakened by the tinkling of a little bell (no racket of alarm clocks on this excursion) and rise refreshed, and dress by the cheerful coal fire, the jokes and laughter and good fellowship being taken up where we left off last night.

An appetizing breakfast of ham and eggs, hot biscuits and coffee comes next, and then we insert ourselves, with more or less difficulty, into the long gum boots. Until within a few years it seemed to make no difference with me whether I wore long boots or not, for I invariably got wet through before the first night, but lately I have given up the monopoly of that business to younger men. Some men seem never to get wet; I never knew Charley to fall into a hole but once and then he fell into the coalhole on the yacht Lolita and I believe he was entirely submerged.

Outside the yacht, how cold and damp and disagreeable it is. Only a gleam of daylight shows in the east as I step into the duckboat, in which I find my gun and bucket of shells, and I pole and paddle along through ditches and small ponds until Charley, just ahead, says, "Here is your pond, Andy;" and I recognize my old friend of several years ago, the Judd Pond, considered, I believe, one of the best on the marsh. My decoys are already out, and I have nothing to do but draw my boat into a well-built blind. A few moments in my concealment convinces me that the sport to-day will be tame, for there is hardly any flight of birds; a few teal coming in singly and at long intervals, a small flock of traveling ducks high up out of gunshot, are the only ones seen. The recent rains have driven the birds away, just as reported at Bouldin. The morning is calm and very unfavorable. (And right here before I fire a shot, I must explain to any reader who is expecting me to make a big bag, not to wait another minute, but to go right over to the next pond, the Peninsula, where he will find Charley, who is a good shot. As for the "Critic," who wrote to the FOREST AND STREAM a few months ago and who wanted nothing but hard, bare facts and who was so unmercifully criticized by other critics, I know he is not following me.) Daylight is now coming, I score a miss with my first shot. At my second a teal flutters down with a broken wing and disappears in the tules—much worse than a miss. Then a spoonbill comes dodging in and drops dead on the pond. Then two teal in succession stop in their swift flight and fall among the decoys. Then after a long rest a drake sprigtail flies swiftly, high overhead, so high that I think I cannot possibly hit him, but I try, however, aiming well ahead, and he lets go everything and comes down, but is not killed dead, for he is swimming away, when Fred comes and succeeds in capturing him.

Now the sun shows a sullen and dissipated eye through a rift in the watery clouds, as if he disapproved of this hunting business. Mount Diablo, too, has hidden himself in a blue blanket of cloud. He and Tamalpais were out all last night on a "high old time," and now Diablo won't be seen again till his head is clearer.

One more teal falls a victim to his curiosity and the supply of ducks seems exhausted. Fred comes into the blind with me and we chat a while and I find him very intelligent and pleasant. He is a native of that country which many years ago sent us Jenny Lind; and he has only lately come from New York, where he was employed on one of the big yachts. We soon hear Charley and Cap coming and Fred goes out and picks up my few ducks and the decoys. "Well, boys, how many birds have you?" "Only nine." So I am not so badly beaten after all. We leave the boats and strike out on foot for the yacht, half a mile distant.

After lunch, at Cap's suggestion, Fred and I prospect some mallard holes not far away, but they are dry, the tide being out. On further, we carefully approach the Southwest Pond and, I see a single teal feeding near the middle. I fire and the little fellow flattens out, but at the report a fine drake mallard jumps up quacking, with his bright plumage glistening. At the report of my left barrel he drops beside the teal, requiring another shot, however, to make him keep quiet. Now how to get these birds is the problem, as the water is four feet deep and the mud an unknown quantity. At last we go away to another pond, where I wing a sprigtail, which falls in the tules. Fred, who is a splendid retriever, finds it after much patient waiting and listening. We go back and find our mallard has come ashore with the supposed teal, which turns out to be a diver and worthless. Then we go back to the Judd and wait for the evening flight, which at last comes with a rush after it has become too late to shoot. I kill three teal, however, and at last there comes overhead a bird so large that I can plainly see him, I fire and he comes down with a gratifying splash, and picking him up I find I have another drake mallard. Cap and Charley now come along with fifteen ducks, nearly all teal. I am badly beaten, but then they had Cap's splendid setter Gyp to help them and probably did not lose a single cripple in the darkness, as I know I must have done. We push on for the yacht, and how cheerful we find her warm, bright cabin. There are no delicate appetites around the dinner table to-night. Everything eatable seems to "go right to the spot." Poor Gyp with her expressive eyes seems to say, as she peeps down into the cabin, "I wonder if they have not almost finished."

We do not sit up late nor tell many yarns to-night. As soon as in bed we sleep as only tired men can, and at the call to breakfast there is not much hurry, but a decided disposition to dally over the coffee. Charley goes to the Little John, a pond quite near, but soon gets discouraged and goes sculling up Frank Horn slough with Fred, returning at noon with twenty-six ducks, teal being in a majority. Cap and I go to the mallard holes and put in a few decoys. At last Cap gets impatient, goes prospecting and drops a mallard; and during his absence I get one also. We are naturally "all broken up" when we get back and see Charley's birds, which with those killed yesterday bring his score up to fifty. I have killed a dozen, just the number I wanted, and am perfectly satisfied. After lunch we get together our game and guns and taking the skiff are soon bowling along down between the muddy, dripping banks of Frank Horn slough with the fast ebbing tide. Coming into the Cordelia we pass a mallard, roosting up under a shelving bank and looking as if asleep. Backing water we come near her, when she wakes up and by great apparent effort flutters feebly away, just clearing the opposite bank. It seems that some hunters in this vicinity have (ignorantly, we will hope) dumped a lot of barley, which had not been cleaned and still retained the beard, into the ponds, and the ducks feeding upon it had been strangled and had been found dead or dying in large numbers on the marshes. The duck just seen was probably suffering from this cause, as she did not appear to be wounded. Passing the chicken ranch we soon come to the railroad and Teal station, where we place our baggage in readiness for the train, now due in a few minutes. The station we find filled with sacks, a few containing clean wheat, many others with dirty, half-cleaned barley, sweepings of a warehouse apparently. But what excites our curiosity is a large number of sacks of beans, and we speculate a great deal on the use for which they are intended, but at last the mystery is solved. A member of a shooting club near here having been told that "Boston ducks" were coming in large numbers, and taking advantage of the cut in overland rates, had conceived the brilliant idea of baiting the ponds with beans, hoping to entrap some of the new comers.

But here comes our train, and after hasty hand-shakes and good-byes with Cap and Fred, we are once more aboard the ill-smelling train and in due time reach Sixteenth street station, where Charley finds his carriage awaiting him, and a moment later I am alone, though in a crowd of strangers, with my mind filled with pleasant recollections of two happy days spent with my friends.

ANDY.

SAN FRANCISCO, California.

SHOOTING ON A LONG ISLAND FARM.—We know of a farm of 700 acres on the Great South Bay on which the shooting can be leased by a club or individual for a term of years. The farm is not far from Islip, and covers good snipe and upland shooting. On the place is a large farm house which would also be leased, and might be fitted up as headquarters for the persons taking the shooting. Further particulars may be had on application by letter to this office.

THE MAINE GAME LAW.

THE poacher dies hard, especially if he has the hotel and summer resort interest to back him. This was probably never more forcibly illustrated than it is likely to be before the Maine Legislature this winter. That body is now in full working order and a majority of its members are probably partially aware of the importance of the measures they will have in hand—important to the sportsmen of the country. They will be called upon both to strengthen the laws for the protection of fish and game in by far the most important Eastern State in which fish and game are left, and at a single sweep to wipe out the whole list of such laws. Be it said, to the shame of any civilized State in the Union, a petition for the wholesale abolition of these laws is actually in circulation. It is backed up by the notion that a wicked murder has grown out of the action of two "free sons of the soil" attempting to assert their rights and to take, "by whatsoever means they saw fit," that which belonged to them as much as to any other men or class of men in the State; that the so-styled Fish and Game Commission has sided with the stranger and the visitor from abroad against the people of the State: and for this reason the petitioners would pray that the Commission be abolished. Such nonsense will hardly be granted a second thought in that Legislature, but it shows that the Commission has ignorance and jealousy to contend with, as well as the desire to kill out of season. But the Committee on Fisheries and Game is understood to be friendly to the Commission and to their work, almost to a man. The recommendations of the Governor in his message were that

"The laws for the preservation and increase of fish and game in the State should be rigidly enforced, and if necessary, additional provisions should be enacted. * * * The laws already enacted are valuable and beneficent in their effect. * * * The opposition to these laws and the determination to violate them led to a deplorable crime in the county of Washington, in November last, but I trust such an occurrence will stimulate and not discourage the enforcement of the law. * * * It is important to have a proper public sentiment on this question. Those who oppose these laws, and insist on fishing and hunting in unlawful ways, are as those would be who, with a famine impending, should insist on devouring the seed corn. Unless these laws be rigidly maintained there is danger that we shall ultimately have no fish in our waters and no game in our forests."

But the Governor has met some opposition by reason of these views—some opposition from the element in that State that desires to kill when and how it pleases, regardless of consequences. They claim that he is on the side of the Commission altogether. This is wickedness that is remarkably pleasing to us all who believe in fish and game protection. Would that there were more Governors of States just like him.

The hotel interest is more likely to get some show of attention on this fish and game subject before the Maine Legislature than almost any other. This is because it will be represented by such as profess to be reasonable men, and in a number of cases men of some wealth and influence. They will come before the committee of the Legislature professing great friendship for the game and fish laws, and before they get through it will appear that they are friendly in just so far as the laws do not pretend to prohibit their guests from hunting and fishing at any and all seasons. One noted hotel man, located at the entrance to one of Maine's best lake regions, with logic more or less profound, suggests that the laws be so amended as to prevent discrimination against the people of the State, and thereby lessen the liability of the recurrence of bloody encounters like the one in Washington county last fall. Yes, Mr. —— (the FOREST AND STREAM ought to give his name, that everybody might know his principles), make a law that people shall stay at home, lest they be robbed and murdered if they presume to leave their own doors. Then this sound reasoner, with views of his own, would have the game and fish laws so amended as to induce a large influx of sportsmen and visitors, while tending to increase the game and fish in question, and at the same time cause the growth of good feeling between the people of the State and the sportsmen from the outside. Was there ever anything more logical and reasonable? Make our laws come to such a nature that police officers and sheriffs shall be the bosom friends of thieves and murderers, and at the same time so fix the statutes that there shall be property enough around loose for the thieves to steal and feeble old men and women enough around for them to murder, and then make it so that all the time there shall be an increase of property, and, best of all, a plenty of peace and harmony. His town should send that man to the Legislature for one term and then to the insane asylum.

This hotelkeeper would have the open season for moose, deer and caribou "extended back," as he puts it, so as to include both September and August, since these are the best months in all the year for the visiting sportsmen. He might have added, and consequently that is the way to build up a hotel business. Then he would have the fish laws so amended as to allow each sportsman to send to his friends 20lbs., or less, of the 50lbs. he is allowed to take along with himself when he goes home. Our reasoner thinks so much is due to people who pay into the State $100 per head for large game and $10 per pound for trout. Then he puts in, probably with an aside, that no better advertisement of Maine as "the sportsman's paradise" could be circulated than these specimens of giant fish and game. True! True! Too true! It is a wonder that nobody ever thought of this before! But how about the Boston marketman, Mr. —— (again I am tempted to tell your name, but you would gain a little notoriety in that way, and that suits you and is a help to the hotel business), if every sportsman is allowed to send out 20lbs. of trout, wouldn't every marketman in Boston have friends a plenty in the trout regions? Wouldn't the marketmen get all the trout and salmon they desired out of Maine under such a law? Every sportsman could send out 20lbs. of trout! In the name of all that is reasonable, how many sportsmen, even in the best waters that Maine boasts, obtain 20lbs. of trout? Such a law would be just as good as no law at all for the prevention of market fishing and hunting. In the words of Commissioner Stillwell: "An absolute non-transportation law is all that can ever save Maine her fish and game!"

This is an important winter to the State of Maine, as well as to the entire fish and game interest of the country. If her laws are strengthened with stronger penalties, so that the good work in the preservation of her fish and game, so admirably begun, can go on: if a sufficient sum of money is appropriated so that these laws may be enforced, according to the recommendations of a sensible Governor and a Commission that has attracted the attention of the world, then Maine becomes the true sportsman's paradise, more in reality than on the cover of a guide book. But the non-hounding law of New York was broken down last winter, and if any of the strong features of the Maine game laws are to share the same fate this witner, then the hope of the sportsmen, beyond a year or two at the longest, is done. Under such circumstances, my kit of fishing tackle is for sale for a song. My shotgun and rifle will be good for old iron. It might cost me a few sly tears to part with them, but if the market-hunter and the poacher is to conquer, then let the plumes I wore with so much pleasure, but which would no longer be of the least use in the world, pass out of my sight. Under such circumstances the FOREST AND STREAM, that we have all enjoyed so much, would be a useless publication, except as a record of what has been done, for there would be no game to hunt or fish to take; and to read its pages, once bright and cheering, would cause a pang, a twinge of sorrow.

Good readers of the FOREST AND STREAM, I am not in the least disheartened, but it distresses me to hear men reason as above. That men will be so selfish and short-sighted concerning that which is dearest to us all. That a few dollars in the hotel business should make a man see black for white and white for black. That the desire of being considered a finished sportsman should make a man so earnest to send a few pounds of fish out to his friends, that never, under the best of conditions, can reach that friend in shape to be appreciated. That the love of killing something should make the August tourists willing to shoot the doe with suckling fawns. That even the President of the United States should consent to have a deer driven into the water by dogs, in order that he might in that way shoot that which he never could in any other way hope to cope with. But the chances for fish and game in Maine were never better, in spite of all the damnable proclivities of human nature, some of the best of legislation is bound to grow out of the agitation of the subject this winter. Then, seeing the good results, other States will follow, if they wake up before it is too late.

SPECIAL.

SWAN ISLAND.

THE Swan Island grounds are perhaps the best duck shooting preserve in North Carolina, if not in the world. The preserve is located on the easterly side of Currituck Sound, between the sound and the ocean. It is several miles in extent, and has an area of about 6,000 acres of marsh and shoal lands. Through this vast extent of marsh run countless little creeks and bayous, in which grow a profusion of the succulent widgeon grass and wild celery, the natural food of the different kinds of wild ducks with which the place abounds. The club house is situated upon Swan Island, which contains about forty acres of arable land. The soil is very productive, requiring no fertilizer to produce a large yield of any and all kinds of the cereals and vegetables to which the climate is adapted. The club house and the houses for the use of the tenant who tills the farm and takes care of the property in the summer season and the buildings occupied by the employees in winter, together with the numerous boat, decoy and game houses and other outbuildings, form quite a settlement. The building are plain and unassuming, and are painted in Newport brown, olive green and English red. The club house proper is on a slight eminence, with lawn sloping to the water's edge, and on Sundays, when everything is quiet, ducks, geese and swans in great numbers feed contentedly in the little bay in front of the house, within easy range from the broad piazzas. The view from the house at such times presents a picture which once seen is never forgotten. The principal reason why the Swan Island club grounds are so much better shooting grounds than others in Currituck is because the club own the shoals and land under water which surround their marshes, and consequently are enabled more effectually to protect them from the incursions of trespassers.

Currituck Sound and its estuaries are the natural and favorite winter resort of most of the different species of wildfowl, and with careful legislation to afford them proper protection, it would continue to remain so for a good many years to come. The different clubs and the native gunners should work together (for their interests in this matter are identical) to secure the passage and rigid enforcement of proper protective game laws which would be mutually beneficial. And this should be done at once, or I fear that in the near future club men as well as natives will have to solace themselves with the sad refrain, "It might have been." The club people stand ready at any and all times to aid the natives in promoting any scheme tending to the better protection of the birds—for better protection means more sport for the club people and more money for the native gunners. The resident gunners should be more than willing; they ought to be extremely anxious to co-operate with the clubs in securing the passage of healthy and proper protective laws, for the reason that the club people confine themselves strictly and almost exclusively to marsh shooting, and consequently kill comparatively few of the most valuable species of birds, such as canvasback, redhead, etc.; but leave them for the profit and emolument of the native or resident gunners.

The club men at all times wish to, and do show a proper regard and respect for the rights and privileges of the natives, and in return they claim reciprocal treatment.

The game laws of North Carolina, so far as they relate to duck shooting, are a "delusion and a snare," and practically amount to nothing, as they allow ducks to be shot at all seasons for "domestic consumption." The result of this very convenient provision is, that early in the season, when the weather is warm and birds will not bear shipment, thousands of them are wantonly slaughtered and thrown away. The laws of New York and of most of the other States provide a heavy penalty for killing, or having in possession after the same has been killed, any duck, goose, brant, etc., between certain dates. The result is that during the operation of this "stay law" ducks are not killed. A code of this kind is what is needed in North Carolina to-day, and were it enacted and enforced the people would have cause to bless the day of its accomplishment.

The Swan Island Club is a syndicate of gentlemen from New York and Boston, formed for the purpose of shooting game purely for pleasure. They give away all the game killed except what is consumed at the club. Of the original syndicate who formed the organization two have since died, Henry Guild, President of the People's National Bank of Boston, and D. L. Suydam, of New York, a gentleman of the old school and one of the pioneer sportsmen of Currituck. The present members of the club are named below. The president is Wm. Sohier, of Boston, lawyer by profession, an old habitué of Currituck. Wm. Minot, Sr., lawyer, of Boston, although past the meridian of life, is an enthusiastic sportsman. Wm. Minot, Jr., a lawyer of Boston; by a careful study of the habits of the different kinds of game birds and a killing way he has of holding his gun, he is enabled to show plethoric bags. James C. Carter, President of the Bar Association of New York; John M. Forbes, of Boston, well known as a successful railroad man, and is the owner of several fast yachts. Col. Wm. H. Forbes, President of the Bell Telephone Co. Dr. Wm. S. Bigelow, of Boston, is now in Japan holding official position under that government, but retains his interest and membership in the club and occasionally runs over from the Antipodes to spend a few weeks at Swan Island and enjoy his favorite pastime of duck shooting. Dudley L. Pickman, of Boston, besides his interest in the Swan Island Club, is the owner of an island of several hundred acres between Currituck Sound and Back Bay, part of which is heavily timbered, and he intends to stock it with deer, quail and pheasants, and make it into a shooting preserve. William S. Peele, of Boston. Dr. John Bryant, of Boston, a retired physician, owner of yacht Shadow, and one of the syndicate that built the Puritan. Moses Williams, a lawyer of Boston, of eminent ability and a very enthusiastic sportsman. Dr. Arthur Cabot, of Boston. James Norris, New York, a lawyer. Chas. E. Perkins, President of the C. B. & Q. R. R.

A. H. PENNY.

DEAD RIVER REGION.

Editor Forest and Stream:

Have just returned from a short trip to the Dead River region, (Chain of Ponds) Maine, to the territory to be operated by the Megantic Fish and Game Club, where in company with a friend we spent the week between Christmas and New Years.

I have never before seen such numerous signs of game. Deer are increasing wonderfully. In walking from Arnold Pond to Crosby Pond, a deer had laid over night since the last snow (four days before). We did not have the pleasure of shooting any, although we started several, on account of the snow being too deep, with a crust, which made it too noisy for still-hunting.

Six caribou were killed there the week before, a few days before the last rain and snow storm. The snow varied in depth from one foot on the mountains, to two feet in the valleys; and unless the club commence operations at once there will be a great slaughter of deer and moose during the crust-hunting season, as this season will be a disastrous one on account of the deep snow already. A habitant told me I had come a couple of months too early, and if I would come out in March he would take me where I could kill a dozen deer every day, with an axe. This is the place where the 2700lbs. of hindquarters of venison was taken out and shipped via Kingfield, Me., in April, 1885, and despite this great drain the deer are actually increasing.

We experienced 38 below zero, and were obliged to discard caribou steaks for bacon, beans and molasses in order to supply sufficient caloric to withstand the severe cold. Lumbermen stated that it was the coldest snap they had had in the region for six years.

We had some fishing through the ice for lake trout in Lake Megantic with tolerable success, but it was worth your life to stay outside the "kiosh" over ten minutes. One poor misguided *Salmo fontinalis* of one and a half pounds weight, forgetting that it was against the laws to be caught in the Province of Quebec before January 1st (the law being off his relative, the lake trout or landlocked salmon on December 1st) took our bait and was landed; as it lacked just two days of the open season for his kind, we were forced to confiscate him and bring him to a warmer climate.

HEBER BISHOP.

BOSTON, Jan. 5.

VIRGINIA GAME NOTES.

LEXINGTON, Va., Jan. 11.—Our shooting season for all kinds of game approaches its end, the closed season for game in this county beginning on Jan. 15 of each year and terminating Oct. 15. The game law of Virginia is an anomalous abortion. Some of the counties in the State have no game law whatever, being exempt by special act of Legislature; others have a closed season ranging from different dates to different dates, and others, of which this county is one, being subject to the law mentioned above. Why our sapient lawmakers cannot, in their wisdom, frame a law which will apply to all, is a matter far beyond the comprehension of your correspondent.

As the season has advanced and the snow and sleet cover the earth, numbers of our sportsmen have been detained by the cold and wind from pursuing the sport and the birds have had some respite.

Some bags have been made, however, generally small, a few fair and fewer large. Last week one of our sportsmen bagged a white quail. Your correspondent has not seen it, but from a description of it by the person who stuffed the bird, it seems to be perfectly white, with the exception of a few small bluish spots upon the larger wing feathers. This, I learn from the "oldest inhabitants," is the second white quail bagged in this county within the last half century.

Some weeks ago this section was visited by a deep snow, and the pot-hunters took advantage of it to murder (no other word will cover the ground) hundreds of quail. I learn that in an adjacent town two hundred were offered for sale in a single day, by men who did not and had never owned a dog. The case was the same with us, though not so many are slain. Surely some legislative action should be taken to prevent this wholesale massacre.

It affords me pleasure to indorse most heartily the position taken by your paper with regard to the recent field trials. No matter what motive may actuate the owner of a dog in such matters, the judges should see that each dog has a fair and equal chance.

T. M. S.

PROVINCE OF QUEBEC FISH AND GAME CLUB.—Montreal, Jan. 13.—The officers for 1887 are: President, F. H. Rintoul; Vice-president, Selkirk Cross; Secretary-Treasurer, J. Nelson; Committee, H. W. Atwater, G. B. Goodacre, G. Ahern, H. R. Ives, H. Stearns, James Slessor, H. R. King, Dr. Brainard, R. Mackay, A. N. Shewan, W. A. Parker, L. Huot, L. A. Boyer, S. H. Matthews.

"THE HOUND OF THE PLAINS."

TO the January number of the *Popular Science Monthly* Mr. Ernest Ingersoll contributes an article on the coyote entitled "The Hound of the Plains." Mr. Ingersoll is a clever and skillful maker of literary crazy-quilts. He displays cultivated taste in his selection of materials and not less remarkable ingenuity in piecing his patchwork into a many-colored and brilliant whole, so deftly put together that the quotation marks (which in literary crazy-quilts answer to stitches) cannot be detected by the closest scrutiny. "The Hound of the Plains" is a well-made sample of literary work of this class. It is instructive, entertaining and comprehensive. We note only one omission in Mr. Ingersoll's paragraph on the different names of the coyote; he has neglected to say that the creature is sometimes called "the thief of the plains," because of a way it has of appropriating as its own things that do not belong to it.

The following passages are taken from Mr. Ingersoll's article in the *Popular Science Monthly*, January, 1887, pages 362-63, and from a sketch by our well-known contributor "Jacobstaff," published twelve years ago in the FOREST AND STREAM, March 18, 1875, pages 82-3. The "deadly parallel column" is employed for reasons which are obvious:

E. Ingersoll, in Popular Science Monthly, Jan. 1886.

Word would be sent out, instructing the different villages concerned to elect their captains and furnish their quota of willing gunners in the ring that was to concentrate upon a point indicated by a tall flag-staff far out in the prairie.

These rings were, sometimes, twenty or thirty miles in diameter, and it took an early start and rapid travelling to close up in time. The captains, on horseback, ride back and forth, keeping the line in order, watching that everything is driven before it.

After marching for a few miles, the different parties begin to come in sight of one another, all converging toward the central point.

Glimpses of fleeing game, very likely including deer, or a wolf or two, are seen; and the orders "Hurry up! hurry up!" are more frequently heard. Finally the flag can be seen, and a little later the line of the opposite side of the circle comes into view. Now all nerves are strung to the highest pitch. There is a constant fusilade of shots as the thickening grouse soar up and backward over the line, or foxes and hares scud away from the shouting and yelling gunners. The captains, suddenly riding at top-speed to one side, shout, "Close up! close up! The deer will break!" Before it can be well done, a small band, following their leader like sheep, dart toward a vacant space in the rank of men. Half the deer get away in safety, but a few fall under the ready rifles, and one, stabbed by a bayonet, carries it and the gun twenty rods before dropping dead.

Soon word is passed to stop firing, for the circle is becoming dangerously contracted. Already one man has a bullet in his leg, and a captain's horse has been shot under him.

Thus, in silence, the ring concentrates toward the flagstaff, which stands on the edge of a bowl-like depression. As the rim is attained, what a sight greets the eyes of the eager circle! With lolling tongues and staring eyes, a dozen tawny wolves are rushing up and down the shallow pit, seeking some chance of escape. But no mercy exists for the sneaking lamb-stealers. "Give it to them!" comes the order, and a hundred rifles pour instant death among the corraled victims.

Then follow target matches, trials of strength, races, and plentiful gingerbread, apple-turnovers, cider and metheglin.

"Jacobstaff," in the Forest and Stream, March 18, 1875.

Word had been sent out several days before to the different towns and villages scattered over the country to elect their captains for the grand hunt, to form their portion of the ring that was to close up to a certain center indicated by a flag or a tall staff far out on the prairie.

These rings are sometimes twenty and thirty miles in diameter, and it takes an early start, with rapid traveling, to close up in time. The different captains, on fleet horses, ride back and forth keeping the line in order, and as they close up they drive everything before them.

After a smart tramp of a few miles, we began to see scattering parties on our right and left, that gradually grew more numerous, until an almost unbroken line was formed on both sides, all heading toward a distant point. * * *

Shots were heard every now and then along the line as the grouse, as they whirred up from the tall grass, or a fox scudded off in the distance. Then we had glimpses of larger game disappearing over the knolls of the rolling prairie, and word ran along the line that several deer were ahead; then a wolf or two was signaled, and the excitement increased. The orders came along more frequently—"hurry up, hurry up." With hearts beating wildly, and nerves strung to the highest pitch, we came in view of the flag, and then of the advancing portion of the other side of the circle far in the distance.

We could see the affrighted animals—deer, wolves and foxes—hurrying hither and thither, while hundreds of grouse were charging back over our heads. Shots were following thick and fast, the excitement growing more intense as the shouts and yells along the line grew more hoarse and vigorous. The captains, riding as for life, shouted "close up, close up; the deer will break in a minute." And so they did. Here they come, as a dozen charged down on a broken spot in the line. Like sheep, they all came following their leader. Several were killed, but the most of them went by like a whirlwind, bounding clear over our heads. One fell some twenty rods back of the line, carrying with him a musket, to which was attached a bayonet.

As we approached nearer, word came along the line to cease firing, as it was becoming dangerous. It was astonishing to me that during so much reckless excitement more casualties do not occur. This time we got off with one man having a bullet in his leg, and another had his horse shot from under him.

On one side, to the left of the flagstaff for some distance, was a slough, or at least a large indentation in the prairie. This was the center. We were ordered not to fire another shot until word should be given, when we should have closed up to the rim of this bowl on the plain, something like a quarter of a mile in diameter. As we got over the knoll, and looked across at the other side of excited faces, and then down below, what a sight was before us! A dozen or more tawny, dirty, lank-looking creatures rushed here and there in wild confusion, and with lolling tongues and protruding eyes sought in vain to escape; but no mercy was shown to the cowardly lamb-stealers. Soon the word came, "Give it to them," and a hundred guns belched forth their contents at the panting victims.

Then commenced the greetings and hearty hand shakes among the boys, and cheers for this and that hero who had distinguished himself in the hunt. A wagon drove on the ground from some mysterious quarter, having as cargo a barrel of metheglin (honey whiskey), and another loaded with beer, pies, and huge cakes of gingerbread. * * * After shooting the flag down, which seemed always to be the first thing, targets were put up and the off-hand shooters tried their hands, or rings were formed here and there, and famous wrestlers essayed to win new laurels or succumb to better men. The boys were out for a day's sport, and they had it, for all was jollity and genuine enjoyment.

GROUSE AND THE SNOW CRUST.

WATERVILLE, Me., Jan. 17.—*Editor Forest and Stream:* On December 18 we had lying on the ground in this vicinity about fifteen inches of light snow. On that day there was a further fall of a few inches, but at about two hours after sunset the snow changed to sleet and rain, the mercury, however, remaining just below freezing point. In the morning the snow was covered by a hard ice-like crust, half an inch thick, and strong enough to bear the weight of a heavy dog—very nearly the worst crust that I ever saw. As it had not begun to form until two hours or more after dark, every grouse in the woods must have been caught, and with eighteen inches of light snow under him that could afford him no foothold in any effort of engineering that he might undertake to lift the heavy sheet of ice over his head, the conditions of escape seemed about as difficult as they could well be made. I had no opportunity to get into the woods until the following Saturday, Dec. 25. There had been no further snowfall in the interval nor any softening of the weather until the day and night just preceding when there had occurred a thaw and heavy rain settling the snow and making an end of the crust. I saw no grouse, but in the half hour's tramp found plenty of indications that the birds had somehow, as usual, proved equal to the emergency, and had cut or drilled their way out. There were fresh tracks, evidence of recent roosts in trees since the forming of the crust, and other "signs" in abundance. Also, a few days later, my brother in another piece of woods saw five grouse, all "budding" in one tree. I conclude that the ice storm is a less formidable danger for the grouse than has been supposed. KENNEBEC.

WILD CELERY.—Mr. Benj. M. Everhart, of West Chester, Pa., has given the *Local News* some notes on wild celery, the favorite food of the canvasback: "This plant, like many others, has a variety of local names. Some of the most common which I now call to mind are tape grass, from the tape-like appearance of the long leaves; channel weed, as it frequently grows in channels where the water flows, not swiftly; eel grass, this name arises, it is said, by Dr. Darlington (*Flora cestrica*), 'from the habit which eels have of hiding under the leaves which are usually procumbently floating under the water's surface.' The appellation 'wild celery'—a local term applied, I think, only by gunners and watermen at Havre-de-Grace and vicinity—is, I consider, like many vulgar synonyms, a misnomer, as this plant is in no particular related to celery, which by botanists is known as *Apium*. 'Wild celery,' or as it is more generally known in this vicinity as 'eel grass,' is not confined to the region from which your specimen was obtained. It is found in the Brandywine Creek growing in slow running water. The scientific name of the plant is *Vallisneria spiralis* (Linn.) the generic name being given in honor of Antonio Vallisneri, an Italian botanist; the specific *spiralis* is applied in consequence of the fact that the fertile stalk in its development assumes a spiral form. It is a remarkable dicœcious, herbaceous plant on account of its mode of fertilization. It grows entirely under water, has long radical grass-like leaves from 1 to 3ft. long and from ¼ to ⅜in. wide. The female flowers float on the surface at the end of long thread-like spiral scapes, which curiously contract and lengthen with the rise and fall of the water. The male flowers have very short stems or scapes, from which the flowers break off and rise to the surface, to fertilize with their pollen the attached, floating female flowers. The leaves of this plant form an exceedingly beautiful object for microscopic study, the extreme tenuity and transparency of their cellular tissue allowing the observer to watch the movement of the fluid contents of the cells."

BEAR DOGS.—Salem, Mass.—I began to hunt bears in 1863 in northern Maine. My first bear dogs were a black and tan hound and a dog that probably had some hound and some bull mixed with other blood. He was a good fighter, but would not follow a bear far into the dense, dark swamps. I have found better dogs since. I have a brother living in Roxbury, Maine, which is a good bear country. He has caught thirty-three bears so far. Being desirous of having a good pack of dogs that would stop a bear anywhere, I have expended several hundreds of dollars, trying all kinds of dogs. First we tried hounds; one, old Major, sits by my side now as I write. His ears are 22in. across. He is a splendid representative of the old New Hampshire stock of foxhounds. He is a veteran retired from the field, having come in from the front, to live at rest and take comfort here in eating and sleeping, and often sending along the streets a terrible howl, which is music to my ears. He has the marks of action, having a foreleg well marked by a bear trap. I have all told some eight dogs. I have corresponded with old bear hunters in the Southwest, West and the Rocky Mountains. The mastiff blood crossed with a hound was said to be ahead of all others, so I tried it and have two of that cross, one a trained and experienced dog, the other a year old dog about 24in. high, and as fine a dog as one ever saw. He is white, a color said to be decidedly best, as a bear is afraid of a white dog. The first dog of that breed I found not only ready to take hold of a bear, but would land on their backs after being knocked over by their paws. No money would buy that dog. I will give $100 for a mate for him. The white dog has never seen a bear yet; and is hardly old enough until another fall, as a dog has not the courage while a pup that he will have afterward.—BRUIN.

EASTERN NEW YORK ASSOCIATION.—The officers for 1887 of the Eastern New York Fish and Game Protective Association are: President, Dr. Samual B. Ward; First Vice-President, A. N. Cheney, Glens Falls; Second Vice-President, G. E. Vincent, Catskill; Secretary, W. W. Byington, Albany; Treasurer, J. H. Quinby, Albany; Counsel, F. M. Danaher, Albany. Executive Committee, W. W. Hill, Chairman, Albany; Robert Lenox Banks, Albany; W. F. Beutler, Albany; Frank R. Wright, Albany; J. H. Manning, Albany; Henry L. Smith, Albany; J. L. Van Valkenburgh, Albany; J. Ten Eyck, Albany; Dayton Ball, Albany; Wm. R. Winchell, Albany; Watts T. Loomis, Little Falls; Geo. Witbeck, Nassau; Jas. Shanahan, Tribes Hill; D. P. McQueen, Schenectady; Dr. Lewis Balch, Albany; Henry A. Strong, Cohoes; Lansing Hotaling, Albany; Dr. Hermad Bendell, Albany; L. B. Pike, Saratoga Springs.

QUAIL IN MAINE.—The Portland *Argus* of late date gave these interesting particulars of the quail on Cape Elizabeth: "There are now about twenty quail to be seen daily in the vicinity of the Two Lights, Cape Elizabeth. Quail have also been seen in several other towns in the county during the past fall and early winter. It would certainly be a good practice for those living where these quails are located to throw out food for them, such as cracked wheat, screenings, or sweepings from the barn floors, as this will naturally increase the quantity of bird game for another year. We learn from a reliable source that 300 quail, now being kept in quarters at the Cape, will be liberated in this vicinity the coming spring. If this is done it will greatly tend to make quail shooting around here as good as it is in the West. We understand that these quail hatch two broods in one season, and that as the younger of the broods do not become full grown until late in the fall, the present legislators will be asked to pass a law protecting them from the gunners during every month in the year except November. These are the real 'Bob White' quail. In 1882 F. H. Farnham liberated at Woodfords a few pairs of quail that he had bought in Boston. During the past season over one hundred quail have been seen in various parts of this county, and many regard them as the offspring of those liberated by Mr. Farnham. It is a well known fact that foxes in the course of the year kill more birds than the gunners, and the Legislature would do a good thing by placing a bounty on the head of these pests to the peace of the farmer's poultry as well as to the wild birds. The quail at the cape have stood the cold weather nicely thus far, being carefully fed and looked after by M. A. Hanna, the popular keeper of the Two Lights, who is thoroughly posted in regard to the habits of all the game birds of this latitude."

EXPLOSIVE BULLETS.—American Powder Mills, Boston, Mass., Jan. 12.—*Editor Forest and Stream:* "Mark West" asks for testimony on the subject of explosive bullets. We have in our office three cross sections of a 4x4in. pine scantling, into which three bullets had been fired, using a Winchester .45-cal. shell with explosive bullets. In one the cap (.22 long shell) in bullet was charged with gunpowder, and in the other two the cap was filled with No. 2 XX Ætna dynamite (50 per cent. nitro-glycerine) the shell loaded with 70 grains coarse "Dead Shot" powder and a thick felt wad between powder and bullet for safety in firing the dynamite projectile. The range was 50yds., and while the rending effect in center of post (or scantling) was considerable with the powder explosive bullet, it was many times greater in the other two cases, where a dynamite explosive bullet was used. The specimens show the terrible effect the latter bullet has when exploding in the object fired at, and also that it exploded more quickly than the former after striking, not having entered the wood so far, and tearing the large hole full size almost from the surface, while the powder-charged bullet entered the wood about an inch before exploding, leaving the hole for that distance only the bullet's size. For further facts, should your correspondent desire them, we regret we have forgotten the name of the experimenter, and have no note of it, but he was in business in this city, living, we think, out of town; and seeing this statement may respond. We give only his evidence and our own observation of the results as above described.—F. A. ADAMS.

ORITANI SNOWSHOE CLUB.—On Wednesday of last week a number of members of the Oritani Snowshoe Club met at the Erie depot equipped with snowshoes and dressed in their picturesque uniform. Taking the N. J. & N. Y. train to Hackensack, which place was soon reached, they were entertained by their president, Mr. J. M. Fairchild, Jr., and by their secretary, Mr. W. Holberton. By 3 P.M. they were off for a tramp in the wilds of New Jersey, headed by a well laden toboggan with supplies for the inner man. In single file they made their way over the glistening fields, through the woods and swamps and finally in a wild out-of-the-way nook, called a halt and made a glorious fire. A stream near by furnished the water for the camp kettle. The toboggan was unpacked, and with appetites sharpened by their long tramp, the club enjoyed a hearty supper, followed by a camp-fire smoke, enlivened by song and story, to say nothing of the excellent tea brewed by the secretary. The president succeeded in taking several fine photographs of the scene, and the members returned in time to take the evening train back to the city. The snowshoeing was excellent and to the city members particularly the affair was one long to be remembered.—H.

THE INDEFINABLE CHARM.—As the years go by we learn to value things in which we have found all qualities are good. So FOREST AND STREAM, which contributes much to the placid enjoyment of the sportsman, whether he fishes and shoots in reality, or only identifies himself with those who do, and teach him or recall the pleasure on river and lake, the changing atmospheres, the hushed music of the woods, the glorious sunrise full of a day's great expectations, the painted sunsets filling the manly heart with quiet satisfaction over a well spent day or life. The weight and numbers of creel and bag are the incidental, often the accidental part. It is the unweighed, uncounted indefinable something suggested which fills and thrills the spirit, for which I am grateful. And as the three score years come nigh, as the eye loses its quick perceptions and the responsive hand its cunning, I shall yet more and more enjoy the tales which others write and others read for me, of FOREST AND STREAM.—JUNIATA.

COOT.—I am afraid "Cooter" has a wrong impression of my intention concerning his coot. I did not try to give an unfavorable impression concerning his coot, but only to faithfully represent my coot. If his coot is identical with my coot, then I would fain believe both coots are a bad lot and I decline to go in co-hoots with "sich," but you, Messrs. Editors, have decided that his coot is not my coot, which I am glad to hear, for I should be loth to believe that "Cooter" would enjoy killing birds as tame and worthless (as I have found them in Florida and California) as my coots. Thanking "Cooter" for his kind invitation to come and help shoot his coot, which I should very much like to do, I will, for the present, coot.—O. O. S.

MASSACHUSETTS ASSOCIATION.—The 12th annual election of the Massachusetts Fish and Game Protective Association was held last week, President Edward A. Samuels presiding over the 50 or 60 members assembled. The treasurer's report showed that the association during the past year received: From new membership, $125; from annual assessments, $436; from donations and subscriptions, $600; also that an available balance of about $200 was on hand for the purpose of prosecuting infractions of the fish and game laws. Officers were elected as follows: President, Edward A. Samuels; Vice-Presidents, Hon. Dan'l Needham, Walter M. Brackett, Charles Whittier, John T. Settson, H. H. Kimball, Walton C. Taft, Horace T. Rockwell; Treasurer, Frederick R. Shattuck; Secretary, Henry J. Thayer; Librarian, John Fottler, Jr.; Executive Committee, Hon. Chas. L. Woodbury, Warren Hapgood, William S. Hills, Charles W. Stevens, John P. Woodbury, Ivers W. Adams, John Fottler, Jr., Benj. F. Nichols, Henry C. Litchfield, George W. Wiggin, Benj. C. Clark, Isaac Y. Chubbuck; Membership Committee, Henry J. Thayer, Edw. E. Small, George Mixter.

BOSTON, Mass., Jan. 17.—In the Charlestown Municipal Court this morning, before Judge Bragg, John W. Mitchell plead guilty to having in possession golden-winged woodpeckers and cardinal grosbeaks contrary to law, and was fined $20. It is rumored, upon good authority, that the Massachusetts Fish and Game Protective Association, which made this prosecution, is intending to make similar prosecutions against the proprietors of certain bird stores, which make a practice of catching and keeping for sale many of our beautiful and useful song birds, such as orioles, tanagers, robins and indigo birds. The association deserves great credit for the numerous cases it has investigated and prosecuted during the past year, and those interested in its actions are in hope that its work will not be confined to the preservation of our native song birds alone, but that it will (if such is not at present the case) endeavor to ascertain why certain restaurants still have on their bills of fare (or furnish secretly) partridge out of season.

DO QUAIL FOLLOW SETTLERS?—Doland, Spink Co., Dakota, Jan. 11.—*Editor Forest and Stream:* It has been reported to me that several flocks of quail have been seen in Spink county lately, the first that we have ever heard of. Do they follow the settlers as the pinnated grouse does? Can any of your readers answer this? It is very cold here now, 54° below zero. There are only three buildings in this place (Verdon, some miles from Doland), and no game of any kind at this time of year except jack rabbits.—J. L. R. [Quail are believed to follow settlements. They have done so further south, and no doubt many of our readers can give instances of this.]

GIVEN OVER TO MATHEMATICS.—Charlestown, N. H.—Add my approval to the "Criticisms of the Critic," which your other correspondents have favored you with. My own pen has been cramped for so many years with calculations on mechanics and mathematics, that it does not assume the delightful flow of description with which "Piseco" and "Wawayanda," "Kingfisher" and "Sam Lovell" grace your columns, but I can read and enjoy, if I cannot write, and my favorite paper, without some of these graphic illustrations of the beauty of nature, and its various developments, would be as the old saying is, "like the play of 'Hamlet' with the Royal Dane left out."—VON W.

BROOKLYN GUN CLUB.—The annual meeting of the Brooklyn Gun Club was held Jan. 11. The following officers were elected: President, Henry F. Aten, M. D.; Vice-President, John L. Hill; Secretary, John E. McEwan; Treasurer, I. C. Monroe. Executive Committee, Gustave Walter, James M. Bloomfield, Samuel F. Prentiss. Trustees, Hon. Calvin E. Pratt, Freling H. Smith. The membership is limited to forty. There are no vacancies. The club own two trout ponds and the shooting over about 7,000 acres of land. About 500 quail were killed by the members on the club grounds this last season.—JOHN E. MCEWAN.

NORTH CAROLINA QUAIL GROUNDS.—A recent visit with gun and dog to the Piedmont section of North Carolina, convinces me that there is the veritable Eden for the quail hunter, and I would not go amiss in claiming for the fields adjacent to High Point preëminence. Here annually gather the members of the Eastern Field Trials Club, and here the sportsman more intent upon business and a full bag, may go with the full assurance that he will find the flocks afield. To bag forty a day is not uncommon for those who have staunch legs and steady aim.—C. H.

THE NEW YORK GAME LAW will probably undergo extensive amending this season. The Eastern New York Game and Fish Protective Association has appointed a committee, consisting of Dr. S. B. Ward, Gen. R. L. Banks and W. W. Hill, to confer upon the subject with a committee of the New York City Society, consisting of Messrs. Chas. E. Whitehead, Benj. L. Ludington and A. Wagstaff. The St. Lawrence and the Lake George societies have been invited to join in the work. A bill has been introduced at Albany forbidding the killing of wildfowl in April.

INDIAN TERRITORY.—The law forbidding trespass on the Indian Territory has been enforced of late, and many St. Louis sportsmen have been compelled to forego their customary excursions. The *Missouri Republican* reports: Congressman Glover recently made special application for a permit for one of our best St. Louis sportsmen, and was answered yesterday by wire as follows: "Hon. John M. Glover: Section 1,237, Revised Statutes, prohibits hunting in Indian Territory. I have uniformly refused all applications for that purpose.—J. D. C. ADAMS, Commissioner."

AN OYSTER ON THE WING.—Our correspondent "Old Gunner," of Atlanticville, of Long Island, relates that he once had the odd luck to shoot an oyster on the wing. The flying fish was taking passage with a yellowleg and a [illegible] Island the Great South Bay bound for Shinnecock. from t[illegible] hey we[illegible]

TENNESSEE.—Mr. H. E. Jones, of Nashville, president of the Tennessee Sportsman's Association, has appointed the following gentlemen as a committee to prepare and submit to the Legislature a bill for the protection of the game and fish of the State from wanton destruction, as follows: J. M. Dickinson, C. D. Berry and J. P. Helms, of Nashville; F. I. Stone, of Chattanooga, and Dr. A. J. Campbell, of Knoxville.

A TRANS-CONTINENTAL CHEER.—Thetis, Stevens county, W. T., Jan. 3.—*Editor Forest and Stream:* Allow me to thank you for the entertainment derived from your superb Christmas issue. Hurrah! for the FOREST AND STREAM.—UNCLE FULLER.

A NEW ENGLAND FOX HUNT.

AT 4 o'clock on a misty morning in November, I got into my buggy at Portsmouth, N. H., and drove seventeen miles to the town of Berwick, Me., where I had promised to meet a couple of famous hunters for an old-time New England fox hunt. The two hours and a quarter drive through the dark, night was decidedly tedious, and the mist often thickened into rain, which came down to such an extent as to make the prospects for a successful chase anything but promising. This was not an auspicious beginning, but, when upon arriving at the rendezvous, Joe, a typical Maine fox hunter, and the one upon whom we chiefly relied for a start, shook his head gloomily and remarked that "the' wan't no use foxing in a flood," my courage descended to the heels of my rubber boots. However, I had no idea of giving up a hunt after having driven so far through the rain for that purpose, and Mr. M., the other member of the hunt, coming bravely to my assistance, we soon had Joe and his dogs under way for the Plains. Now the plains are a number of old fields interspersed between pine thickets and alder swamps, about four miles from Berwick village, our starting point, and are renowned for the number of foxes which burrow and hide there by day and descend upon the neighboring chickens at night. We walked rapidly through the mist, and when nearing the old fields a fox track was discovered in the sand, and the dogs, Mr. M.'s noble old Bruno, and his two sons, Skinner and Keyser, Joe's property, were turned loose. The track proved an old one, and though the old dog, with the eager assistance of the youngsters, carried it across fields and through swamps for over a mile, it was quite evident that it would be useless to pursue it further, so the dogs were called off.

After a brief consultation we tramped off to a range of wooded hills a couple of miles distant, considered good fox ground, and turned the dogs loose again. We waited anxiously in the now pattering rain for a gladdening note from the hounds; but though they worked diligently no scent was struck, and noon found us wet, hungry and decidedly out of spirits. A council of war was now held, while we disposed of our scanty lunch, and it was determined to try Newcomb's Woods, a cover about a mile away, and should that fail us to give up the hunt and seek the fireside to warm our benumbed fingers and dry our wet clothes. We were soon trudging toward Newcomb's, and as we approached the woods Joe informed us that it was good fox ground and that he had "cut down a slew on 'em in it."

We had hardly stationed ourselves on the old wood roads known to be good runways, with the dogs working with that feverish quickness which denotes a warm scent in the air, when Bruno mounted a small knoll just in front of us and burst forth in a stentorian bay that made the welkin ring and sent a thrill of wild delight through every fiber of our drenched and dejected bodies. That bay meant game, game near at hand, and when the youngsters chimed in and the pack started off in full cry at a tearing gait, we knew it was up and going for dear life. But what was it? The start had been made in the middle of a rabbit swamp, and we knew that the old dog, after working until afternoon and failing to start a fox, would take to rabbiting in sheer desperation, for he must run something. The suspense, however, was short-lived, for the chase, though at first straight away from us, was soon directed toward us, and the rattling pace of the dogs would bring them upon us in a few moments. Suddenly a tuft of red fur was seen among the blackberry bushes, and the next instant a noble old fox bounded into the wood road, and started toward us. In a twinkling a loud report blended with the music of the savage pack, and reynard tumbled over on the moss; but he was a plucky fellow, and springing to his feet, dashed around the corner of the road on three legs, followed by another charge of BBs. As his brush disappeared behind the hemlock boughs, the dogs with foaming mouths and savage cry burst into the road, and for an instant were at fault where the fox had doubled; but the strong scent of fox and blood was fatal for poor reynard, and scarcely a minute later the cry of the pack was hushed, and we hurried to the ground to find the fox gasping his life away under the cruel teeth of the infuriated dogs. He was a fine fellow, and though the chase only lasted a half hour, gave us as spirited and exciting a run as I have ever participated in.

We had tramped for six hours in the rain, and over many miles of rough ground, but the reward of that brilliant thirty-minute run, with its exciting and satisfactory termination, doubly repaid us. Upon returning to my team I threw the handsome skin under the buggy seat, and drove the seventeen miles back home, through the rain and gathering night, filled with that glad content that the successful huntsman alone can experience. FOXCRAFT.

PORTSMOUTH, N. H.

PASSAIC COUNTY ASSOCIATION.

ANNUAL report of the secretary and treasurer of the Passaic County Fish and Game Protective Association for 1886 gives the following account of work done:

The year which has elapsed since my last annual report has not been as busy as its predecessor, but there was less reason for activity, the lawless element in our midst having been convinced that they cannot violate the law with impunity as in previous years. A few prosecutions and a determination on our part to protect the fish and game in Passaic county put a stop to most of the violations of the law.

The most important prosecutions since my last annual report have been the proceedings instituted against the violators of the law at Greenwood Lake. The guides and others at this lake violated the law whenever they saw convenient; they could not do this very well during the open season for there were too many eyes watching them. No sooner, however, did the season close than fish were taken out of the lake in all manner of ways. After considerable diligent inquiry and the preparation of testimony ten complaints were made, and the result was ten convictions, two of the cases being abandoned on account of lack of evidence to convict. Those who were convicted either pleaded poverty or that it was their first offense. In order not to show any unjust discrimination all were let go on the payment of $10, a part of the costs, all having promised to sin no more in the future and to assist the Association in the enforcement of the laws. Subsequent experience has shown that these promises were not idle. The most unpleasant feature of these prosecutions was that two of the guilty persons were gamekeepers in the employ of Cooper & Hewitt; they were paid to guard the property of their employers; they certainly have no respect for that of the public. In addition to these prosecutions there were a number of minor ones, which were reported at the meetings of the Association and to which no particular reference is called for here.

As, however, this report is to cover the months of November and December of last year—for which no report has as yet been presented—it is but proper that I should go more into detail as to the proceedings during these two months. In addition to several complaints which were investigated and abandoned on account of lack of evidence, complaints were made against Josiah Ricker, Smith Ricker and Abraham Beatty, for shooting rabbits out of season. The complaints were made on the testimony of a farmer, but it subsequently appeared that the complaints had been made out of spite and that there was little evidence to substantiate them. The prosecutions were accordingly abandoned. John Hofgesang was arrested for killing three quail out of season, but it was his first offense and he was allowed to go on payment of costs. Three Italians were arrested for killing song and insectivorous birds. The officers of the Association were led to believe that this offense had been committed frequently in the past, and considerable time and money had been expended in attempting to bring the offenders to justice. The three Italians were convicted and fined $5 and costs, they claiming that it was their first offense. Like other violators of the law they imagined that game laws were passed only to be broken at pleasure, and they refused to pay their costs and fines. A few hours sojourn in the county jail brought them to terms and they paid up, after passing a resolution never to violate the law again.

The Association this year did not expend any more money in the distribution of quail. Over a hundred dollars was expended in this way during the previous season, and there is still a balance of $10.77 to the credit of this fund. The result of distributing quail has been most gratifying, the birds having done well and there being far more of them now than there have been for years.

During the year the Association considered the introduction of alewives into Greenwood Lake and other waters of this county, but the opposition to it among the members of the Association and among those who had fished Greenwood Lake was nearly unanimous, many being of the belief that the alewives would increase to such a degree as to overstock the lake and deteriorate the fishing. It was accordingly abandoned.

Among other improvements contemplated was the erection and maintenance of a screen at the outlet of Greenwood Lake, it being apparent that thousands of fish get out of the lake in this way every season, and are lost to the angler, as the fish are washed into the Morris Canal and through it into the ocean. Investigations showed that this project could not be properly carried out except at the outlay of considerable money—more than the Association had at its command. As comparatively few of the members of the Association visited Greenwood Lake it was resolved to call on the Greenwood Lake Club for assistance. It was argued that the men of means belonging to the club ought to be willing to contribute their share toward protecting the lake and improving it. An attempt was made to increase the membership of the Association by soliciting members of the Greenwood Lake Club to join; the result was that six joined—certainly a very small proportion. This was certainly disappointing and the result was that the screen project was laid on the table, where it still rests.

The Association did not apply during the past year for any legislation, as none was needed. In the previous years a number of laws had been passed at the request of the Association, and it was found that the laws worked about as well as might be expected from such a mixed up mess as constitute the fish and game laws of New Jersey. It has been suggested that a commission ought to be appointed to revise and codify the laws of the State, and some steps in this direction have been taken. This would probably prove of considerable advantage if the commission were properly appointed, and the assistance of the Association can doubtless be counted upon.

According to my last annual report there was on hand at the time the sum of $50.62; since that time the Association has received $50.75 as fees and $85.80 as its share of the fines imposed on convicted offenders. The expenses according to vouchers submitted at the various meetings amounted to $147.52 during the year, leaving $19.65 in the treasury at present. There is a considerable sum due from members for dues, but little attempt has been made to collect this, as there was no call for funds. Now that the treasury is low with several projects under consideration which will call for the outlay of funds, it is hoped that members in arrears will pay up as promptly as possible.

The Association at present has 66 members, 13 having been added during the year, one having died and two resigned.

CHARLES A. SHRINER, Secretary and Treasurer.

FOREST AND STREAM BOOKS.

THE December *Magazine of American History* says of Hallock's "Our New Alaska:" "Mr. Hallock has written of Alaska with the specific purpose of pointing out its visible resources, and to assist their development. He is a practical writer and a practical thinker, and returns from the tour of southeastern Alaska imbued with the firm conviction that important industries are at once available there for immediate profit. He would have the members of our national Congress see the advantage, as well as the duty of providing proper protection for the people of Alaska, and grant them representation through a chosen delegate. His hopes for the future of this far-off territory are highly colored, and it is refreshing to meet with an author of such marked ability and sound foresight who can, through his own personal observation, produce and illumine a work with so bright an outlook. 'The time is close at hand,' he says, 'when Alaska's mighty forests will yield their treasures, her mines will open out their richness, her seas will give of their abundance, and all her quiet coves will be converted into busy harbors. Already the vibrations of the pending boom begin to agitate the air. Letters of inquiry from intending settlers come from every section. Official departments are getting down to systematic work. New industries have been established within the present year. Capital will no longer be withheld grudgingly from enterprises waiting to be developed.' Mr. Hallock shows how greatly Alaska has been misjudged, and its scope and fitness for agriculture and stock raising misunderstood. The wheat region alone might feed the world. He does not think it worth while to push inland until the opportunities are utilized for development on the coast. 'Population,' he says, 'will penetrate into the interior as soon as economic industries are fairly introduced along the seaboard.' Mr. Hallock's book is one destined to perform an important and much needed service to our country, and deserves the most careful study. It should go hand in hand with Mr. Elliott's work, as each supplements the other in many important particulars."

The Augusta (Me.) *Home Farm* says of "The Forest Waters the Farm:" "Rev. S. W. Powell has published a translation of a little work from the French on the subject of the value of woodlands as reservoirs for water storage for the uses of the farm. It is a sort of primer in the form of a dialogue between a peasant and a teacher, in which the relations of agriculture to forestry are set forth in a spirited and convincing manner. It is an argument for the planting of trees and the protection of forests already standing, which has quite as much force for certain sections of our country as it has for those portions of France where the steep hillside forests have been cut off. The keynote of the little pamphlet may be gathered from these sentences taken from different pages: 'The forest on the mountain stores the soil on the hillside, and makes the spring in the valley. Where the earth is in danger from water plant a sapling. The roots hold the water, the water makes grass, grass makes flocks, flocks make manure, manure makes grain.'"

"Good morning, Mr. Dobbs." "Good morning, Congressman." "Did you get the 4,000 young shad I ordered the Fish Commissioner to send you?" "Yes." "I suppose you've stocked your brook. They were very fine." "Fine! Tender as a chicken." "Tender? Didn't you put them in the pond to hatch?" "Not much; we ate them!"—*Chicago Ledger.*

Several months ago the readers of the *Sun* may have noticed the statement that during a violent wind storm a bird was driven into the *Sun* office in an exhausted condition. The bird was secured and placed in the wicker basket that contained the remains of short-footed poetical effusions and long-legged communications. The stranger was a singular bird, with a russet feather gown trimmed with white at the tip, and a mellow red beneath his wings. His eye was brilliant in the extreme, and courage was reflected in the poise and carriage of his head. Not many hours had passed until he knew each member of the staff, and had left his imprint on the fingers of those who had caressed him. The bird was given to a gentleman to rear, and he was christened with the storm drops on his brow "The Storm King." So he is now known, and every day develops his fondness for the winds, rains and storms. In quiet weather he is calm, but before the coming and after a storm has begun he is wild with excitement and rapidly sends forth the notes of a curious song, more warlike than sweet.—*Baltimore Sun.*

The most entertaining series of camping out articles which we have read this year, was published lately in that excellent journal of outdoor life, the FOREST AND STREAM. It was entitled "Sam Lovel's Camps," and for quiet humor, racy description and literary finish would be hard to equaled. We hope to see further contributions from the same pen.—*Whitewater (Wis.) Register.*

Sea and River Fishing.

Address all communications to the Forest and Stream Pub. Co.

THE NEW YORK TROUT LAW.

Editor Forest and Stream:

The question of the boundary line between the two divisions of the State in which the opening of the trout season shall be April first and May first respectively, is one requiring some consideration. The difficulty, of course, is to determine the best line. We are here about six miles south of the New York Central, and eighteen miles south of the Erie Canal. We are also seven miles from Spring Creek, on which are located the State hatching house and Annin's hatching establishment; and upon the Oatka or Allen's Creek, into which Spring Creek flows eight miles below us. At Annin's the fishing is good during April, the trout rising freely to the fly, as I presume they would even in March, as the creek is open all winter and is not raised by the spring rains or the thawing of the snow to a sufficient extent to interfere with the fishing for more than a day or so. The Oatka, which still contains a few trout, can not be fished usually until the first or middle of May on account of the high water. South of us, in the southern part of Wyoming county, the land is some 800 feet higher than here and the season nearly three weeks later. The streams are not so much affected by high water in the spring, however, so the time for fishing might be said to open there May 1st, few fish being taken in April, though this year proved an exception in spite of the law, many fish being taken in the unusually warm weather of April by the natives, who were generally ignorant of the fact that the season did not open until May.

The difference in altitude seems to have full as much influence in this part of the State as the difference in latitude. C.

Editor Forest and Stream:

The writer has felt impelled to take exception to law requiring the 6in. measurement of trout, much to his sorrow. During the past few years the two day trips to the backwoods, on trouting bent, have yielded nothing to bring away. I only love to fish the riffles, wading down along the leafy avenue where the sunshine and shadows dance, and where the bird songs can be heard, and have found, after rigid application of rule measurement, that 6-in. trout do not frequent such riffles. Others may go to the stagnant beaver meadow pools and secure the fathers of trout, haunting the bank of a favored spot for hours, but I cannot so fish. If the measurement were 5½in. I could have trophies to carry away in fair quantity; if it were 5in., an abundance. While it seems a small point to struggle for, I would that the law could fix upon 5½in. If it is deemed sufficient to come down to 5in. I know of several fishermen (not what I deem "hog" fishermen) who would be much gratified. It seems to me so useless and cruel to "go a fishin'," and throw back after mutilation so many trout to secure from three to five that measure 6in., that I think I will not go hereafter under a 6-in. law. Do not consider me wholly depraved. I have for several years used earnest efforts in stocking streams in this vicinity, and will continue so to do if protection for two years can be afforded by law. Trout the third year, in June, will not measure 6in. Hope you may insert the article. ANGLER.

WATERTOWN, N. Y.

Editor Forest and Stream:

Northern New Yorkers and Adirondack inhabitants don't believe in your dividing lines for laws. It mixes up things. No sir! Have one law for the State at large and serve all alike. As "too many cooks spoil the broth," so too many laws produce technicalities which allow violators to escape. DELTA.

ADIRONDACKS, Jan. 12.

We understand that the six-inch trout bill has been already introduced by Mr. Coggeshall.

THE MENHADEN STEAMERS.

Editor Forest and Stream:

My old friend, kinsman, and fellow angler, Isaac McLellan, having made in a Long Island paper an ingenious plea in behalf of those modern destroyers of fish, the menhaden steamers, perhaps you will allow me a few words in reply.

The assertion that "the wide ocean is the free, grand pasture of the fish, where they collect in myriads," may be correct, but hard to prove since they are not seen there by man, and it is the opinion of many naturalists that mid-ocean is a lifeless waste of water. The experience of the writer in long sea voyages confirms this view. Mr. McLellan argues that as the number of fishes destroyed by man's devices are greatly exceeded by the amount devoured by rapacious fishes, that therefore the first cause is unimportant. In other words, that as the bluefish, according to the estimate of Professor Baird, devour ten thousand million fish every day, that therefore the menhaden companies should be allowed to consume many other millions. The first destruction being caused by a law of nature, which cannot be set aside; the second by the rapacious greed of man. These animal destroyers have always been at work, and the balance of ocean life, like that on the land, has been preserved until interfered with by human agency.

Twenty years ago the great plains of the West were so covered with herds of bison, that railroad travel was often disturbed by them. All but a few scattered bands have been in this period destroyed—slaughtered for their hides—the carcasses being left to rot on the ground. Twenty years ago salmon so abounded on the coasts of Oregon and Washington Territory, that it was thought no impression could ever be made on them by the arts of man. Canning houses were established, everything was captured, and now the supply is so reduced that the industry must be removed to Alaska, to be followed by the same destruction there. To come nearer home—Mr. McLellan can remember, when fifty years ago in his native Boston, a boat could leave Long Wharf in the morning and return before dark loaded with codfish and haddock, taken six miles from the city. The market fishermen of to-day have to go outside the capes of the bay. In 1886, the writer came in from sea through a fleet of 300 to 400 mackerel schooners in Massachusetts Bay, whose catch for the season in those waters were some 400,000 barrels. Now the fishermen of the Bay towns have to go to Canadian waters for a fare, exposed to the insolent outrages of the officials of the Dominion, which the administration seems powerless to prevent, or too timid to resent. Some years ago the writer spent two summers in Newport, R. I., and used to go out twice a week with the handline fishermen. Two men in a boat could at that time take from 100 to 200lbs. of tautog, scup, seabass or striped bass in a day, and make good wages. At present, as I am informed, these fish are so scarce in those waters that few men remain in the handline business. The young and middle-aged men go West, and those too old to remove are poor at home. This change is attributed by those interested to trap and pound nets set along the shores, and to the operations of fishing steamers, which capture everything near the surface, and hundreds of industrious men are thrown out of employment to fill the pockets of a few capitalists.

So it goes everywhere. On the Great Lakes, where in 1851 110,000 barrels of whitefish and trout were packed and sold in the Western States, besides the large fresh daily needs of the Lake cities, unlimited fishing with nets, seines, traps and pounds, have so depleted those waters that it is often difficult to supply the markets with fresh fish.

As to the value and importance of the guano industry, the economic aspects of converting valuable food into fertilizers, seems to be about on a par with that Western industry which wastes a thousand pounds of good buffalo meat to get a hide worth five dollars. No doubt, as urged by the defenders of the fishing steamers, there is a large capital inserted in the business, but if that business can be shown to be an injury to the community it will have to go. The direct effect of these steamers upon the valuable bottom fishes, like the cod, haddock and halibut, may be trifling, but by destroying or driving away their natural food, the menhaden and herring, there is danger of the former being led to abandon our shores.

These fisheries that are so rapidly disappearing have an important national value as nurseries of seamen. The fishermen of New England had from the earliest times a world wide reputation for skillful and bold seamanship. Our small but brilliant navy in the war of 1812 was chiefly manned from the fishing towns of Massachusetts and Rhode Island, and the frigate Constitution, which in that war performed the unrivalled exploit of capturing in single combat three British frigates and a sloop of war, had a crew of Marblehead and Cape Ann fishermen, and it was a common saying in the navy, that that crew were able to go into action without officers, such was their intelligence and seamanship. Supposing our merchant marine and our navy to be reconstructed, where are such crews to be found? Even in the war between the States our navy was in most parts manned by foreigners.

No great nation ever before had such a great inheritance as ours, in coast line, in navigable waters, in fisheries, in forests, in game, and in rich lands. Some of these resources remain unimproved, others are being rapidly exhausted by the rapacity of the few and the indifference of the many. S. C. CLARKE.

MARIETTA, Georgia, January, 1887.

A FISH TALE.

THE London *Fishing Gazette* has a very humorous picture with the above title which depicts our correspondent Mr. A. N. Cheney turning away from the recital of a "big one" by his friend Mr. Wm. D. Cleveland, who with smiling face and elevated hands is showing the size of a salmon he lost. The scene was Clenden Brook, on the upper Hudson, which has been recently stocked with salmon by the U. S. Fish Commission. They had been taking a few parrs to send to Prof. Baird, when Mr. Cleveland said: "I was unfortunate in losing the largest salmon that rose to me, otherwise I have greatly enjoyed catching these little fellows."

"How large was the one you lost?"

"About so long"—holding up his hands quite two feet apart.

"Why, man alive! the oldest salmon in the stream are but little more than yearlings, and they cannot by the most marvellous growth exceed 8 or 9in.; those we have taken are barely 7in., and they are of full size."

"Is there anything else in the stream?"

"Yes, chubs; and if you raised a fish as long as you have indicated, it must have been a chub."

"Did I say it was a salmon that I lost?"

"Yes, you said it was a salmon."

"Then I will adhere to what I said."

LANDLOCKED SALMON.—Chicago, Ill., Jan. 5.—*Editor Forest and Stream:* The landlocked salmon does not exist in Lake Superior, as you very correctly remark in your comments upon the query of L. H. Smith; but I cannot agree with the assertion that it only exists outside of the State of Maine where planted. Some of the liveliest sport I ever enjoyed with rod and fly was catching landlocked salmon in Kootenai Lake, British Columbia, where this rare and gamy fish is found in great abundance and where it grows to immense size. Out of a catch of half a hundred in one day's fishing I selected seven that aggregated 110lbs. in weight. The fish bears a close resemblance to the Columbia River salmon, with the same full, rich color, and is, beyond any question, exactly what its name indicates—a landlocked salmon.—I. N. PEYTON. [We made a slip of the pen, or of the memory, in our first reply to Mr. Smith, and we are interested to see how quickly our many wide-awake contributors criticise it. Mr. Charles Hallock and "Monatiquot" are both correct in their remarks, and we knew that the "wininnish" was the landlocked salmon, and had no intention of declaring it to be a distinct species. In the East we use the term "landlocked salmon" for the *Salmo salar*, var. *sebago*. This fish, in fact the Atlantic salmon (*S. salar*), does not exist on the Western coast, and, therefore, it must be some other species which Mr. Peyton finds called landlocked salmon in British Columbia, possibly the *S. purpuratus* or the *S. gairdneri*.]

THOS. H. CHUBB, Post Mills, Vt., publishes a new and extensive illustrated catalogue of his new angling goods. It will be useful to intending outfitters. The presswork is by Hiram Atkins, of Montpelier.

LAKE TROUT AND SISCOWET.—Strathroy, Ont.—*Editor Forest and Stream:* Perhaps in my note which appears in your issue of Dec. 3, I made a mistake in calling the trout of Lake Superior landlocked salmon. There are two kinds there, the lake trout, commonly called salmon-trout, and a fish very similar and quite as large; he is commonly called up there, red trout. He is very much like the salmon (*Salmo salar*); his flesh is pink, and I think on the table equal to his salt water cousin. What I want to know is the proper name of this fish, and will he take the fly.—L. H. SMITH. [The only trouts known to exist in Lake Superior are *S. fontinalis*, or brook trout; *S. namaycush*, variously called lake trout, Mackinaw trout and salmon trout; and the *S. siscowet*, sometimes called siscowet salmon. It is possible that the last named fish is the one to which our correspondent refers. They will all take the fly, but the two latter species go into such deep water during the angling season that they do not usually rise to flies, either they do not see them or do not care to go up through the warm water after them. We have taken lake trout with the fly in shallow waters soon after the ice had left the lake, but a few days afterward they had left for the cooler waters of the deeper parts. We do not think they will rise to the fly in summer.]

MR. FRANCIS FRANCIS.—Our English exchanges chronicle the death of the well-known angler and author, Mr. Francis Francis, at his home at Twickenham on the day before Christmas. Mr. Francis had been the angling editor of the London *Field* from 1856 until the summer of 1883, when a paralytic stroke caused him to resign labor. In 1863 he published "Fish Culture, a Practical Guide to the Breeding and Rearing of Fish," a work still consulted and quoted from, Mr. Francis being at that time the director of fishculture to the Acclimatization Society of Great Britain. He attained wider fame by his "Book on Angling," first published in 1867, and which ran through five editions, the last appearing in 1880. He also wrote many other books, tales and stories, as well as a few novels. In private life he was highly esteemed, and was a man with hosts of friends. Not only as an angler and an author was he distinguished, but he was also an authority on horticulture and flowers, an artist, an athlete, and a lover of outdoor sports. Mr. Francis was sixty-four years of age and leaves a widow, three sons and three daughters.

MATTAWA FISH AND GAME CLUB.—This new club of Montreal, Can., has leased a tract of country in the Mattawa district. The preserve contains twenty-five square miles of heavily wooded country, broken up with a series of small lakes, in which are abundance of trout. These lakes are natural ponds and are wooded to the water's edge. On the property the club have two guides and all the paraphernalia for winter or summer sport. They propose building a small hunting lodge and in the meantime have a tent, which serves the same purpose. They propose giving a grand house warming in June. The members are, Messrs. M. S. and G. E. Blaiklock, G. Ross, Smeaton White, R. Greenshields, C. McEachran and R. A. Allen.

VIRGINIA.—Lexington, Jan. 11.—During the past season large numbers of black bass were captured by the disciples of Izaak, who follow the sport of fishing in this section. Since the introduction of bass into our waters, some fifteen years ago, they have increased greatly in numbers and have afforded fine sport, but they have driven out or devoured many of the native fish, notably the silver perch, large numbers of which were formerly caught in the waters of the James River.—T. M. S.

THE ADIRONDACKS.—Bartlett's Hotel, well known for the past thirty years, situated on the portage between Upper Saranac Lake and Round Lake, has changed proprietorship. Mr. Bartlett has retired, leasing the property for five years to Mr. George Fowler, who takes possession March 1 next. Excellent sleighing here and cold weather. —R.

HALE'S HONEY OF HOREHOUND AND TAR softens the cough, relieves the windpipe and bronchial tubes of mucus, tones the lungs and the membranes of the throat, and restores to the organs of respiration their natural strength and vigor. PIKE'S TOOTHACHE DROPS cure in one minute.—*Adv.*

LOBSTER PROTECTION.

[From Report of the Massachusetts Fish and Game Commissioners for 1886.]

THE rapid decrease in the number and size of the lobster, notwithstanding that the law has been fairly and in some cases vigorously enforced, has created a strong feeling in favor of a closed season.

Lobsters 10½in. long, if they breed at all, are not sufficiently mature to cast any considerable amount of spawn. The 10½in. law, while it regulates the lobster to a marketable size, does not provide for any increase in number. A good many arrests have been made, developing the fact that there is sufficient interest in the unlawful traffic to raise funds to carry one case to the Supreme Court on points of law, where it is now pending. Whatever may be the decision of the court, some change in the law increasing the size, and making a closed season for one or two months, is absolutely necessary, if we are to protect this valuable crustacean. It is a simple common-sense matter in which the Legislature should not allow any prejudice or local interest to interfere to prevent the passege of a law which will be for the public good.

Mr. F. R. Shattuck, of Boston, has given much attention to the enforcement of the law, and his report is herewith submitted in full. If all the deputies had been as active as he has been, the traffic in short lobsters would have been speedily ended.

For the information of those who are interested in the preservation of fish, game, and insectivorous birds, we would state that Chap. 91, Sect. 3, Public Statutes, gives the right to the Commissioners to appoint deputies to enforce all laws protecting them. It is desirable to have such deputies in different parts of the State; but as there is at present only a small appropriation that can be used to pay such deputies, the work necessarily must be to a considerable extent a labor of love. It was under this authority that Mr. Shattuck's vigorous work was accomplished.

Mr. Shattuck reports: "Since my appointment as deputy on lobsters, June 19, 1885, I have sought in a measure to fulfil

the duties pertaining to the office, with what result I hereby submit.

"To my surprise, I found the lobster had no friends; on the contrary, many enemies. The supply was handled as though inexhaustible, although the decreasing size, weight and numbers, plainly told the tale of a rapid extinction. A lobster weighing 4lbs. was the exception and several barrels would be ransacked before one could be found. To be sure now and then a very large one would be found, but they were of rare occurrence.

"The lobster is of slow growth and has many natural enemies besides man, and, as stated by our best naturalists, is five years in arriving at the procreative age, and is then barely 10½in. in length—the minimum of size. If this 10½in. law could be rigidly enforced, together with a close season of six weeks (the same as Maine has on its statutes) say from Aug. 15 until Oct. 1, we might again find the lobster comparatively plentiful along our coast. During the time mentioned for a close season the lobster is shedding his shell and recovering from the consequent exhaustion; is very much like a moulting fowl; unfit for food, sick and of little commercial value. I think the majority of the dealers are in favor of a close season, but what part of the year that season should be is a mooted question with them.

"The value of the lobster commercially considered is about $300,000 in Boston alone annually, and about $75,000 in the State outside of Boston—say, $375,000 in the Commonwealth. This suggests that the crustacean is of consequence enough for some special protection. Furthermore, should the wanton destruction of the past few years continue, there will be but few remaining to protect, and within ten years this once cheap, ready-to-hand cooked dish of the poor man, can only be had at a high price and brought from a distance beyond this Commenwealth, obtainable only as a luxury. I would suggest the legal length of the lobster be made 11in., for the lobster of 10½in., weighing say three-quarters of a pound, will upon shedding its shell that season increase in most instances to the length of 11½ to 12in.—sometimes more—and almost double its weight. Most of the spawning lobsters are 11in. and over in length, very few as short as 10½in.; one more season would almost double the lobster individually and give a larger number for spawning purposes.

"I think the inclination of the fishermen is for observance of the laws, but so long as they are enforced by no one it is perfectly natural they should become careless, bold and finally defiant. The past year through my instrumentality there have been twelve arrests for non-observance of the laws and all brought to trial. Two pled guilty (one to two offenses) and paid their fines; nine were found guilty after trials in the lower court, and appealing to the upper court, one then paid fine rather than stand trial. Another case was won and has gone to the Supreme Court on questions of law; the other cases being continued, awaiting final decision in this case.

"I would suggest the convening of Commissioners from all the New England States to formulate uniform laws for the protection of the lobster along our entire coasts, and a concerted action for the enforcement of laws so enacted. Until this is done we shall see this valuable crustacean, gradually in some places, rapidly in others, pass from our tables and sight, but never from the memory of those who appreciate them as they should be appreciated."

U. S. COMMISSION, FISH AND FISHERIES,
WASHINGTON, Dec. 4, 1873.

Messrs. Stilwell and Stanley, Fish Commissioners of Maine:

GENTLEMEN: My attention has been especially directed the past season to the subject of the lobsters on the New England coast, and I have received from numerous parties the assurance that unless something be done to regulate this branch of industry, it will before long become practically worthless. I have been told by many reliable persons, that not only has the size greatly diminished, but that the numbers taken are much fewer than formerly. In view of the extension of the lobster fisheries within a few years past, principally for the purpose of canning, this result was not unexpected, although it seems to have come at an earlier period than was anticipated.

With a view of securing for you the most reliable information in regard to this species, I beg to append herewith a paper written at my request by Mr. Sidney I. Smith, of Yale College, New Haven, who is our best specialist in reference to the American crustaceans and who speaks quite by authority in all that he states.

It is for yourself to judge how far the reasoning therein presented will render special legislation expedient for the State of Maine.

At present there appears to be no possible remedy beyond that of restricting the catch for a greater or less period of time, and unless this be done it is most probable that the diminution will continue at an alarming rate.

The most simple law would be one absolutely prohibiting for a certain time the capture of lobsters, whether for immediate sale or for canning, making the penalty sufficiently severe to deter those who may be so inclined from violating it. If the months of July and August were named as this period of prohibition, it would go far to secure the needed protection, perhaps cover the most critical portion of the spawning season.

It is not sufficient simply to protect the female or those that have eggs, but the prohibition of capture should extend to both sexes.

Very respectfully,
SPENCER F. BAIRD, Fish Commissioner.

NOTE ON THE LOBSTER, BY PROF. S. I. SMITH.

The American lobster is found upon the Atlantic coast, from New Jersey to Labrador, and yet almost nothing has been published in regard to its traits and local distribution. It lives upon rocky, gravelly and sandy bottom, from low water down to twenty or thirty fathoms and perhaps deeper, but not probably at great depths. It feeds upon any kind of animal matter, either fresh or decaying, which it can discover.

In Long Island Sound the lobster fishing begins late in March or early in April, and continues till late in the fall, although the greater part are taken in May and June. On the coast of northern Massachusetts and Maine, when the winter supply comes, they may be taken nearly all the year round. Capt. N. E. Atwood, writing in 1886, says they do not come into shallow water about Provincetown, Mass., till June, and remain till October, when they disappear from near the shore. He also says that north of Cape Cod the male lobsters are more abundant than the female, while south of the Cape the reverse is true. As far however, as I have myself observed along Long Island Sound and Vineyard Sound, at Portland and Eastport, Me., the sexes are taken in about equal numbers. As this is a question of considerable interest, it may be remarked that the sexes can be readily distinguished by the little appendages upon the under side of first ring of the tail. These are stout, stiff, horny and grooved on the inside toward the tips in the male, while in the female they are smaller, slender, soft and flexible; moreover, the genital orifices in the male are on the inside of the basal joint of each of the hind pair of body legs, while in the females they are situated in similar places upon the third pair, or hinder of the pincher-like legs.

In attempting to suggest means for preventing the exhaustion of the lobster fisheries, the time of spawning and the development of the young become matters of great importance. The time at which the females carry eggs varies very much on different parts of the coast, being later and later as we go further north. South of Cape Cod, in Long Island and Vineyard Sounds, they are found carrying eggs from the first of April till late in June. At Portland, Me., they were carrying eggs till the middle of August, while in the Bay of Fundy they are found with eggs from midsummer till September. More exact information on this point is very desirable, although this is enough to show that the period of carrying eggs covers the time during which a great part of the lobsters are taken for the market.

Soon after the hatching, the young leave their parent and live for a considerable period a very different life from the adult. At first they are not more than a third of an inch long, and have scarcely any resemblance to a lobster. They are furnished with long swimming branches to the legs and swim about freely in the water, living most of the time near the surface of the water, like many kinds of free swimming shrimps. With each change of the skin they become more and more lobster like, until when a little more than half an inch long they appear like veritable little lobsters, but still have the free-swimming habits of the earlier stages. During this period, which must be several weeks, they are constantly exposed to the attacks of fishes and all sorts of marine animals, while they themselves pursue and feed upon still smaller fry. Any attempt to rear great numbers through these stages in confined areas would probably prove unsuccessful, as the young at this time require a great amount of pure sea-water and peculiar food, found only where minute, free-swimming animals congregate.

After they become a few inches long, the growth of lobsters is very slow. They increase in size only at the times of shedding the shell, which probably takes place only once a year for those of ordinary size, and the increase at each of these changes is very small, as may be seen by comparing the size of the cast shell with the lobster a few days after leaving it. In lobsters of very large size the shell is not always changed even as often as once a year.

How early they begin to breed is somewhat uncertain. Females not more than half a pound in weight are, however, found carrying eggs, but in these small females the eggs are comparatively few in number. The average weight of lobsters sold in New Haven market is about two pounds.

It will readily be seen that any close time which should cover the entire period of spawning would stop the lobster fishing during the height of the season, when nearly all the profit is derived from the business. During the hottest weather of midsummer, vast numbers die while being marketed. Preventing their capture at this time would undoubtedly, after a few years, have a marked effect upon the supply during other parts of the season.

[From Report of the Maine Commissioners of Fisheries and Game, 1886.]

The lobster is an important branch of the Maine fisheries. There are in this State some forty lobster and sardine canning factories. Of this number about two-thirds can lobsters and one-third can lobsters and sardines. Only about one-half of the lobster factories did any canning the past season. It takes about five or six of the small lobsters from 9in. or less to make one can. It is seldom that the factories can any lobsters over 9in. long, as those 10½in. in length are shipped to Portland, Boston and New York.

I have been unable to ascertain the number of lobsters canned. It is a very large omount, and a large number of small lobsters are used for that purpose.

The following notes from the experiments by Prof. Richard Rathburn of the Smithsonian Institute will prove of interest in connection with this subject. The experiments were begun in 1886 and form part of the work of the United States Fish Commission. They are at present incomplete, but advance sheets were kindly furnished the Commissioners.

"All the States interested in the lobster fishery, excepting New Jersey, whose fishery is small, have enacted protective laws; but, either because these laws are inadequate or are not properly enforced, they have failed to stop the decrease, though they may have checked it more or less. As a result, the fishery is falling off in the United States, and we are even now dependent, to a greater or less extent, on the British Provinces for the supplies of our larger markets. The same trouble exists in Europe, where the lobster fishery is, of course, of much older date than in this country, and where it has been controlled by legislation for many years. Many elaborate reports have been published upon the European fishery by experts appointed to investigate its condition and needs, but they are apparently at as much loss there as we are here regarding the methods and benefits of protection. In Norway, which country possesses the most important European fishery, they have, as a last resort, sought relief through the aid of artificial lobster culture, and experiments to that end have been carried on for several years. In the United States, where the methods of fisheculture are best understood and have been most productive of beneficial results, it is natural to suppose that the same course would have been often suggested, and such has really been the case. None of the trials up to this year have, however, been made according to the most approved methods of fish propagation, and insufficient means for carrying on any such practical experiments with respect to salt-water species of fish have alone prevented the Fish Commission from engaging in this work before."

It would be impossible, within the limits of this paper, to cite even a portion of the evidence bearing upon the decrease of lobsters which has been collected, but following are a few of the remarks with which this subject is introduced in the report referred to:

"An illustration of the rapidity with which the lobsters of a small area may be caught up, is furnished by a salt-water inlet on the coast of Maine, in which lobsters were at one time very abundant. The basin opens directly into the sea, and is sufficiently large to have afforded a remunerative fishery to several lobstermen. Two years' time was sufficient to reduce the supply of lobsters to such an extent that fishing became unprofitable. After an interval of about five years they again became abundant, and the supply was once more exhausted. Had this inlet not been so situated that it readily received supplies from without, it is probable that it would have required a much longer time to become replenished. On the coast of Maine the evidences of decrease are very strong, especially as regards the shallower areas, but the rapid extension of the grounds into comparatively deep water has made the actual decrease less apparent. The rocky bottoms of Maine are also supposed to afford the lobsters greater protection than the sandy ones to the south, and in many places the traps cannot be set as closely together, nor is it probable that the lobsters in such localities move about as much in search of food.

"The greatest decrease has occurred within the past fifteen or twenty years or since the establishment of numerous canneries and of the perfected methods of transporting fresh lobsters to all parts of the country. The demand being so much greater than the supply, there are no restrictions on the amount of the catch beyond those imposed by the State laws or resulting from the scarcity of lobsters. Fish are among the greatest enemies of the lobster, and cod are known to consume enormous quantities; but nature has provided against their extinction by such means, and it is man alone who has disturbed the balance.

"The above remarks were based mainly upon the fishery investigations of 1880, since which evidences of continued decrease have been constantly received. About a year ago, a prominent Boston dealer wrote that he was receiving large quantities of lobsters from Nova Scotia, as the Maine fishery was totally inadequate to supply the demand, the amount obtained from the State having been less than in previous years.

"One of the strongest evidences of decrease in abundance is afforded by the continuous decrease in the average size of the lobsters sent to the markets. The exact amount of this decrease is not determinable, as no records bearing upon this subject were made prior to 1880, but the fact was granted by the fishermen and canners, even in those regions where a perceptible decrease in numbers was not admitted. The average weight of the lobsters marketed in most places in 1880 was estimated to be about 2lbs. each. A New Haven correspondent stated that the average length of the lobsters sold in the markets in that place was about 10½in., and the average weight about 2lbs., against an average length of about 13in. and an average weight of about 3½lbs. twenty years ago. In Boston the market lobsters ranged but little above the limit in size permitted by the State laws, and that seems to be the case nearly everywhere. In Portland, Maine, the average length of the lobsters marketed in 1880 was about 10½in., and in Boston 11 to 11½in., while in New York city the range in size was from 10½ to 15in.

The facts above stated apply only to the larger distributing centers, where custom had prescribed the minimum limit in size of the lobsters marketed, before protective laws were enacted. At that time there was an abundance of large lobsters, and the smaller individuals were regarded as of little account for the fresh trade. They have, however, been used for a long time by the canneries on the coast of Maine, by the fishermen as bait, and to supply local demands. The quantity of lobsters consumed, measuring less than ten inches in length, is, therefore, very great, and on some portions of the Maine coast the canneries make use of only those that are too small for the fresh-market trade. In fact, the greater proportion of the lobsters now canned are less than ten inches long. From these statements it will be seen that there is a steady demand for lobsters of all sizes, and that but a limited protection is afforded either by laws or custom.

"Lobsters are found with spawn attached to the abdomen during the entire year. This fact is recorded of both the American and the European species, but the length of time they are carried before hatching and the limits of the hatching season are not precisely known. As regards the European crayfish, a fresh-water crustacean closely related to the lobster, Professor Huxley states: 'The process of development is very slow, as it occupies the whole winter. In late springtime or early summer, the young burst the thin shell of the egg, and, when they are hatched, present a general resemblance to their parents. This is very unlike what takes place in crabs and lobsters, in which the young leave the egg in a condition very different from the parent, and undergo a remarkable metamorphosis before they attain their proper form.'

"The smackmen of the southern New England coast claim that the eggs hatch in the wells of their smacks in the greatest abundance, from some time in May until late in July, but that at other seasons they have never seen any embryo lobsters, although the smack trade in lobsters is kept up during nearly the entire year. During the season mentioned, the surface of the water in the wells of the smacks often becomes perfectly alive with the young, and they may be scooped up by the hundreds of thousands. This evidence is tolerably conclusive as to the duration of the principal hatching season, and determines the period when experimental work in artificial propagation can best be undertaken. The fact that a few of the eggs contained in the jars at the Wood's Holl station of the Fish Commission hatched during November of this year indicates, however, that some hatching may take place at other seasons, as the conditions under which the eggs were kept were perfectly normal, the water being of about the same temperature as that of the harbor outside. Hatching is supposed to begin somewhat later further north.

"The writer was at first inclined to believe that the hatching continued to a considerable extent through the entire year, basing his conclusions upon the fact that, during the months of August and September last, eggs were found in various stages of development, from the freshly laid and totally opaque ones to others in which the dark greenish yelk sack occupied scarcely more than one-half of the area of the egg, the remainder being transparent and clearly showing the structure of the embryo. Some of these eggs, preserved in the hatching jars, were carefully examined from day to day, and, although they exhibited a certain amount of progress, development was slow. It finally became evident that the development of the eggs was being retarded by some cause, presumably the lower temperature of the water, and this result, coupled with the statements of the fishermen, that embryos are seen only in May, June and July, makes it probable that the hatching of lobster eggs at other seasons is only an accidental or occasional occurrence. It is also not at all improbable that the young hatched during cold weather perish soon after leaving the egg."

Professor John A. Rider, formerly of the United States Fish Commission, writes under date of Nov. 4, 1886:

"In a period extending over about one hundred days the young lobsters grow from a length of ⅛in. to one of 1⅜in. In making this growth the young lobsters moult not less than nine times, the earlier moults coming much closer together than the later ones. The interval of time probably becomes still greater during the later months. I think it probable that after reaching a length of nine inches, the lobster moults but once a year.

"I have never seen a lobster under 9in. with eggs attached that I can remember. If the old lobsters were to moult oftener than once a year the result would be that the eggs would be cast off with the shell.

"That this is not the case is, I think, sufficiently proved by the fact that the eggs are carried on the swimmerets."

Much has been said about the shrinkage of lobsters after boiling. Having made a large number of measurements to test this point, in the presence of witnesses, I am convinced that a hard-shell lobster, such as used by the canning factories, will not shrink at all by boiling. The last test was May 1, 1886, in Thomaston, and resulted as follows:

	Live Lobsters.	After Boiling 20 Minutes.	After Cooling 12 Hours.
No. 1.....	11 ⅛ inches.	11 ⅛ inches.	11 ⅛ inches.
No. 2.....	10 ⅝ "	10 ⅝ "	10 ⅝ "
No. 3.....	12 1-32 "	12 1-32 "	12 3-32 "
No. 4.....	12 "	12 "	12 "
No. 5.....	11 ¼ "	11 ¼ "	11 ¼ "
No. 6.....	11 7-16 "	11 7-16 "	11 7-16 "
No. 7.....	11 1-16 "	11 1-16 "	11 1-16 "
No. 8.....	11 ⅛ "	11 ⅛ "	11 ⅛ "
No. 9.....	10 25-32 "	10 25-32 "	10 25-32 "
No. 10.....	10 11-32 "	10 11-32 "	10 11-32 "
No. 11.....	10 9-16 "	10 9-16 "	10 9-16 "
No. 12.....	10 23-32 "	10 23-32 "	10 23-32 "
No. 13.....	10 21-32 "	10 21-32 "	10 21-32 "

It will be seen by the above measurements that none of them shrink by boiling and four of them gained a fraction.

Mr. Arthur Brown, of North Haven, who has been in the business of canning lobsters for many years, measured in the spring of 1885, fifty young lobsters just 9in. long when alive. After boiling them the proper time measured them again and found that they did not shrink at all by boiling. I know of many other similar experiments with similar results.

Chapter 40, section 21, Revised Statutes, reads as follows: "It is unlawful to fish for, catch, buy, sell, expose for sale, or possess between the first day of October and the fifteenth day of the following August, any female lobster in spawn or with eggs attached, or any young lobster less than 10½in. in length, measuring from head to tail extended, exclusive of claws or feelers, and such lobsters when caught shall be liberated alive at the risk and cost of the party taking them, under a penaly of one dollar for each lobster so caught, bought, sold, exposed for sale, or in possession not so liberated. Provided, however, that from the first day of April to the fifteenth day of July it shall be lawful to fish for, catch, buy, sell, expose for sale, or possess for canning and all other purposes, any lobsters less than 9in. in length, measured as

aforesaid, but not including female lobsters in spawn or with eggs attached."

It will be seen by the above section that the law makes no distinction between a live lobster or one that has been boiled. Such being the law it makes no difference whether the lobster is still alive or dead if found in possession; the party having it in possession is violating the laws.

If the law is to be practicable in its application the time of measurement cannot be limited. When lobsters are found in possession while alive the invariable claim is that the possessor intends to liberate them, and if he does this while there is a vital spark left in them the law has been complied with. When found boiled the possessor says, "Hands off, you have no right to touch a lobster after he breathes his last!" He is then entitled to rest in peace. Now what did the Legislature intend, when they declared that lobsters of a prohibited length should not be bought, sold, exposed for sale, or had in possession? Did they mean to limit the time to the life of the lobster? Would it not be just as consistent to say that a female lobster after boiling did not come within the prohibition? Few lobsters are exposed for sale before boiling. If they cannot be measured after boiling then the penalty for illegal possession cannot be enforced. There are no rules laid down to be followed in measuring which contemplate contraction or extension in the process of boiling. If this law is to be enforced officers charged with its enforcement must have the right to take the prohibited lobsters, illegally held, while living or after they are boiled, and proper measurements made at either time must be considered sufficient. The statute should receive such construction that its provisions can be enforced.

This was certainly the intention of the originators of the law, as will be shown by the following letter from the Hon. John H. Kimball, chairman of the Fish Committee when the law was passed:

BATH, Maine, Oct. 30, 1886.

To the Editors of the Lewistown Journal:

Certain crustaceans are known commercially and scientifically as lobsters and by no other name, whether alive in their salt-water homes or on the marble slab of the fish dealer, boiled and ready for the table. In either condition they are known only as lobsters.

The Revised Statutes recognize no difference between living and dead lobsters, and the same rule applies to all fish where a limit is given as to size, in the laws enacted for their protection.

The having in possession a herring for canning purposes, less than eight inches in length, or a trout less than five inches, or a salmon less than nine inches long, is a violation of the law, and the possessor is liable to a penalty. In the enactment of these laws there was no distinction made between living or dead fish or lobsters. A great deal has been written and said about the lobster law, and the attorneys of prosecuted parties have endeavored to befog the court with the idea that a boiled lobster is not a lobster within the meaning of the statute, and claim that the length of the lobster when alive in the trap is to be the true measure. I know of no objection to that if each lobster is provided with a duly authenticated certificate that it was of legal length when caught.

But all these arguments seem puerile and nonsensical, beside the plain reading of the law.

In the framing of that law, the best legal talent in the Legislature was consulted. Nothing was left to conjecture or inference, but the intent and meaning was put into pure, undiluted Anglo Saxon, so that it should be plain and intelligible, even to the weakest intellects.

Now, unless the Supreme Court shall decide that a boiled lobster is not a lobster, then there can be no doubt as to the construction of the law. I have no fear of such a result.

I have been asked, as Chairman of the Committee on Fisheries during the last two sessions of the Legistature, to state the views and intentions of the committees in the enactment of the lobster law. Those committees were as intelligent and competent to perform their duties as any in the Legislature, and there was no difference of opinion as to the intent and meaning of the law, that whatever condition the lobster may be in, alive or boiled, the length is to be taken when the illegal act is detected. Otherwise the law would be an absurdity.

How is a man to prove that the identical ten-inch boiled lobster which he offers for sale, measured ten and one-half or eleven inches when alive? Even if it were possible to so prove, which it is not, he would still be liable to the penalty, for the law expressly says that it is unlawful to have such a lobster in possession, and makes no provision for any exception whatever.

I think, however, that this question of shrinkage in boiling has been conclusively settled by the experiments made by Shore Fish Commissioner Counce, and which demonstrate beyond dispute that a sound lobster suitable for food does not shrink in boiling. J. H. KIMBALL.

This question of shrinkage was raised in the very first case, State against Josiah Burnham, of St. George, for having 445 lobsters in possession less than nine inches long, May 23, 1885, and he was fined. Case appealed and carried to law court, and up to this time the decision has not been reported.

In almost every case since, this same point of shrinkage has been raised and the cases carried up to law term, so that but little has been received by the fish wardens for fines on this account.

It is hoped that this question will soon be decided, for if this question of shrinkage is allowed, the law is not of much account, for most of the lobsters offered for sale are first boiled.

To settle this question, I would respectfully ask that the law should be so amended and changed that it shall be unlawful to fish for, catch, buy, sell, expose for sale, or possess, at any time, lobsters less than ten and one-half (10½) inches in length, measured alive or after boiling, from the end of the bone of the nose to the end of the bone of the middle flipper—exclusive of fringe; the lobsters to be extended full length when measured. That there shall be no close time; that all owners of lobster cars shall have their full names carved, painted or branded upon the top of all cars in legible letters, not less than three quarters of an inch in length and the name shall be *prima facie* evidence of ownership; and any cars found in use without such name thereon shall, together with its contents, be seized and declared forfeited to the officers making such seizure, unless a claimant appears for the same within twenty days and proves ownership and pays all expenses attending said seizure.

I would recommend that the word "*young*" should be stricken out of chapter 40, section 21, sixth line; and a few other slight changes in various provisions will greatly facilitate the practical enforcement of the law. The attention of the next Legislature should be called to these matters, and the present laws relieved of all uncertainties.

What is wanted, says the FOREST AND STREAM, is a uniform law that shall bring Rhode Island and Connecticut into line with Maine and Massachusetts, in this good work. It adds: "It is worthy of note that all along the Maine and Massachusetts coasts, at least, the fishermen evince a willingness and even a desire to see the short lobster law enforced. All they ask is that it be made general. They know that it is better to give the lobsters time to grow; but if undersized ones are to be caught, each fisherman feels as though it was a duty to his pocket that he got his share."

It has been noticed that lobsters of a much larger size are now coming into market.

POLICIES in the Travelers, of Hartford, are good for their face; $1,000 means $1,000, not a small fraction of it.—*Adv.*

March 29 to April 1, 1887.—Inaugural Bench Show of Rhode Island Kennel Club, Providence, R. I. N. Seabury, Secretary, Box 1333, Providence.

April 5 to 8, 1887.—Third Annual Show of New England Kennel Club, Boston. F. L. Weston, Secretary, Hotel Boylston, Boston, Mass.

April 12 to 15, 1887.—Thirteenth Annual Dog Show of the Western Pennsylvania Poultry Society, at Pittsburgh, Pa. C. B. Elbon, Secretary.

May 3 to 6, 1887.—Eleventh Annual Show of the Westminster Kennel Club, Madison Square Garden, New York. James Mortimer, Superintendent.

FIELD TRIALS.

Feb. 15, 1887.—Inaugural Trials of Tennessee Sportsmen's Association. Entries close Jan. 10. R. M. Dudley, Secretary, No. 84 Broad street, Nashville, Tenn.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **4502.**

THE PACIFIC COAST FIELD TRIALS.

THE fourth annual trials of the Pacific Coast Field Trial Club took place Dec. 13, at Hanford, Fresno county, a small village 300 miles southeast of San Francisco. The grounds on which the running took place were located about ten miles from the village on King's River. They were level as a billiard table and covered with a rank growth of weeds and grass, affording fine cover for birds, but rather too thick for successful working of dogs. The birds were plentiful but extremely wild. The attendance was much better than last year, though not so good as expected. The Annual Citrus Fair, of Northern California, commencing on the same day as the trials, and the near approach of the holidays prevented many from attending who would otherwise have been there.

The judges were Mr. Fred A. Taft, Hon. D. M. Pyle, and Mr. Frank Satterthwaite, in place of Mr. R. T. Vandervoort, who was selected but could not attend. The Derby was to have been run first, but only two dogs entered for that stake were present, and as it was thought that others were on their way, and would eventually arrive, it was concluded to run the All-Aged Stake first. Of the ten entries for the stake seven were present and were drawn to run as follows:

Mountain Boy against Janet.
Dashing Money against Lassie.
Tom Pinch against Royal Duke II.
Sweetheart a bye.

At 1 o'clock on Monday, Dec. 13, members of the Club, judges and visitors, proceeded to the grounds in carriages, where they were met by Mr. Lillis, the manager and part owner of the ranch on which the trials were to take place, together with a number of other gentlemen. Following the lead of an attache of the ranch to a point about a mile from the house, a bevy of birds were found and the second brace drawn were put down, the running of the first brace having been deferred in consequence of the owner of one of the dogs not having yet arrived.

MOUNTAIN BOY AND JANET.

At 2:40 P.M. Wm. Schreiber's lemon and white pointer dog Mountain Boy (Grouse—Nell), handled by Geo. T. Allender, and the California Kennel's blue belton English setter bitch Janet (Count Noble—Dashing Novice), handled by her owner Judge Chas. N. Post, were cast off in a heavy cover of weeds and grass. Following an irrigating canal two or three hundred yards without finding birds, handlers were ordered to work towards a fence on the left; after crossing Boy going down wind flushed a small bevy. Allender shot and killed, both dogs steady to shot; Boy ordered to retrieve flushed another; several birds now got up wild and crossed back to the field just left; Boy finally retrieved his bird in good style. Following the direction the birds had gone Janet, casting off to left, wheeled and pointed in very pretty style, Boy coming down wind refused to back, passed between her and the bird, swung around and drew up abreast of Janet and pointed, when the bird flushed. Post shot and missed, both dogs steady to shot, Janet moving on cautiously, pinned another; Boy brought up, backed indifferently; bird flushed; Allender shot and missed. Moving on a few yards, Janet spotted another. Boy not up to back; bird flushed; Allender shot and killed; Boy ordered to retrieve, went to where the bird fell, drew and pointed; moving on sprang and caught a winged bird which he retrieved alive; bird was killed and thrown out for Janet to retrieve; after some delay in finding, bird was retrieved nicely. Moving on 50yds. Janet pointed again; bird flushed, Post shot and missed. Moving on, Boy flushed a single and dropped to order. Post flushed a single shot and missed; Janet cast off to right and flushed two birds, swinging around over same ground and getting the wind pointed again; bird flushed immediately; moving on Janet drew to a point, but discovering her error, went on; Boy going down wind wheeled, drew back a few feet and pointed in fine style; Janet ordered up to back when birds flushed wild; Allender shot and missed; a single bird then got up in front of Allender which he killed; Boy, to order, retrieved in good style; moving on Boy drew to a point, discovered his error, and went on. Considerable ground was now drawn blank, dogs were ordered up, and after 20 minutes consultation by judges, were put down again. Moving on a few yards judges flushed a single; going on a little further both dogs flushed; Boy swinging around to left began drawing on game, but was called off by Allender. Moving on Boy flushed a single; Janet then repeated the same thing. Birds were running and dogs unable to locate them; ordered up and heat awarded to Janet. In style and ranging they were about equal, in pace and quartering Janet had much the best of it. The lateness of the hour prevented the running of another heat, and a general stampede was made for Hanford.

TUESDAY.

The morning was cold and frosty but the genial rays of the sun soon dissipated the frost and ere long every vestige of moisture that remained. The ground was reached by 9 o'clock and a bevy of birds having been located, the first brace drawn were called.

LASSIE AND DASHING MONEY.

At 9:55 William Schreiber's lemon and white pointer bitch Lassie (Grouse—Nell), handled by Geo. F. Allender, and J. B. Martin's orange and white English setter dog Dashing Money (Dashing Monarch—Armida), handled by Mr. Foster, were put down in very heavy cover of rank weeds and grass. Going forward, Foster flushed a bird, shot and killed. Dashing Money broke shot but stopped to order. Dash was then ordered to retrieve; while hunting for his bird he flushed another which Allender shot and killed. Lassie was ordered to retrieve the last bird which she did in good style. Dash failed to find his bird which had been only winged. Moving on Dash flushed another, then drawing a few feet further pointed. Lassie was brought up and backed to order when Dash moved on. No bird found. Going forward, Allender flushed a single, shot and killed and Lassie retrieved in good style. Moving on Dash roaded a bevy in fine style for 50 or 60 yards and pointed just as the birds rose. A few yards further on Foster flushed a single, shot and killed. Dash broke shot and retrieved, Lassie sweeping around to left pointed just as the bird flushed, steady to wing. Moving on Dash pointed, Lassie brought up to back, did so indifferently, to order. Allender then flushed a single, shot and killed, Lassie retrieved well to order. Dash moving on pointed, discovered his error and went on. Dogs were then ordered up and heat awarded to Lassie, down 30 minutes. Lassie had the best of it all the way through. Dashing Money was badly handicapped by his extreme cautiousness, restricting his range to within a few yards of his handler, and greatly reducing his pace. Both dogs have appeared in previous field trials and been thoroughly described and their merits discussed.

TOM PINCH AND ROYAL DUKE II.

At 10:30 A. M. J. G. Edwards's black, white and tan English setter dog Royal Duke II. (Regent—Dolly), handled by his owner, and J. Martin Barney's lemon and white pointer dog Tom Pinch (Tom—Beulah), handled by Geo. T. Allender, were put down where the last brace finished. Royal Duke cut out the running and kept his pace to the finish, despite the great heat, which at times was quite oppressive, but he ran without judgment and was often beyond the hearing as well as the control of his handler. Though Tom started at a rattling pace it soon became apparent that he was not able to maintain it; his interest, as well as his energy soon flagged and the claim that he was out of condition was too apparent to be questioned. Tom made a wide cast to the right and pointed, but discovered his error and moved on. Considerable ground was now drawn blank. Finally a portion of a bevy was seen to flush some distance ahead. Proceeding to the spot Allender flushed a single, shot and killed and Tom retrieved after pointing the bird in good style. Moving on Tom drew to a point, but no bird was found. Royal Duke, casting off to the right, pointed, but the bird flushed immediately. Moving on some distance Tom drew to a point. Duke, brought up to back, pointed before seeing the other dog, then moved on and refused to back. Allender, ordered to flush, found no bird, but a bird was subsequently flushed within a few yards of where the point was made. Dogs were now ordered up and taken to water, some 300yds. distant, returning after twenty minutes, were put down again. Moving on to where a bird had been marked down, dogs failed to locate it before it flushed. Allender shot and killed and Tom retrieved nicely. Duke moving on pointed. Tom brought up backed in good style. Both dogs then moved on, when a hare was seen to leave the spot where the point was made. The hour of noon having arrived and being convenient to water and shade, running was suspended and lunch despatched. Crossing the canal and going about two miles a bevy of birds was found and dogs put down. Tom immediately drew to a point. Birds flushed, both dogs steady. Moving on Duke pointed in fine style, Tom backing grandly. Birds flushed, Edwards shot and missed, Duke moving on down wind flushed a single. Edwards shot and killed, and Duke retrieved handsomely. Tom, swinging around to the right, drew to a point, but the bird, pressed too closely, flushed. Several birds were then flushed in succession by both dogs, owing partly to the extreme heat and the fact that the birds were restless and would not lie to the dogs. After some further ineffectual effort to find with about the same result the dogs were ordered up and the heat awarded to Tom Pinch. Down one hour and fifty-five minutes. In pace and ranging Royal Duke excelled the pointer; in quartering, style, obedience and staunchness on point Tom was far superior.

Second Series.

Sweetheart having the bye and Janet having won the first heat in the last series, the two would have met in this heat but for the fact that both dogs belonged and were handled by the same party. Sweetheart was therefore put down with the winner of the second heat, Lassie.

SWEETHEART AND LASSIE.

At 2:25 P. M. the California Kennels' blue belton Lewellyn setter bitch Sweetheart (Count Noble—Dashing Novice) handled by Judge C. N. Post, and Lassie were put down where the last heat was finished. Sweetheart is a beautiful bitch of medium size, very fast and stylish in motion, making wide casts and quartering her ground with great uniformity, has an excellent nose and is game to the last. The dogs were worked back and forth over the ground previously gone over by the last brace. Sweetheart casting to the right dropped to a point, Lassie not up to back, bird flushed but not shot at, 'Heart steady to wing. The dogs were taken up, and after proceeding about three miles were put down again in some timber in much better cover than yet found. Moving on Lassie drew to a point, moved on, and cautiously feeling for the scent, established a beautiful point on a single; bird flushed some distance ahead. 'Heart going down wind wheeled to a point but moved on, and a little further on flushed a single, Lassie going down wind drew back on the scent and pointed in fine style, 'Heart brought up backed staunchly, bird flushed, not shot at, both dogs steady to wing. Moving on down wind 'Heart flushed a single, swinging around to the wind dropped to a very staunch point. Lassie brought up backed; Post flushed and killed; 'Heart retrieved in good style. It was now quite late, and the dogs were ordered up and all returned to Hanford.

WEDNESDAY.

The morning was cold and foggy, promising a better day for the dogs, but by 10 o'clock the fog had entirely disappeared and the sun shone out uncomfortably warm. At 10:25 Sweetheart and Lassie were put down in fairly good cover to finish the heat of yesterday. A bevy of birds had been marked down, and moving on in the direction of their flight Sweetheart dropped to a point. Lassie brought up, backed, but flushed behind 'Heart. Post shot and missed. Following on, a number of birds rose in front of Allender, who shot and killed, and Lassie retrieved well to order. Moving on, Post flushed a single, shot and missed, 'Heart, making a wide cast to right, dropped to a very staunch point, Lassie not up to back. Post shot and missed, 'Heart steady to shot. Dogs were now ordered up and heat awarded to Sweetheart. Down two hours and thirty minutes.

TOM PINCH AND JANET.

At 11:20 Tom Pinch and Janet were put down where the last brace finished. Tom, moving on, immediately drew to a point. Janet coming up, refused to back. Allender flushed, both dogs steady to wing. Moving on, Tom pointed. No bird found. Allender claimed a bird flushed from the point. Decision withheld. Janet, swinging around to the right, pointed. Tom, brought up, backed. No bird found. Moving on, Tom pointed. Just then a bird flushed in front of Post, who shot, and Tom's bird flushed before judges could get up. A few yards further on Janet pointed a single in beautiful style. Tom backed grandly. Post shot

and missed. Tom then roaded some 50yds. and established a beautiful point on a single, but flushed. Not shot at. Steady to wing. Moving on, Tom pointed, then moved on. Judges following, flushed the bird. Post, to order, shot and killed. Janet, ordered to retrieve, brought the bird in handsomely. Swinging around to right, Janet drew back and pinned a bird in nice style. Tom, brought up, backed inimitably. After the crowd had come up, as usual, and enjoyed the scene, bird was flushed. Post shot and killed. Janet, to order, retrieved well. At 12:40 P. M. dogs were ordered up and heat awarded to Tom. Down one hour and twenty minutes.

Tie for First Place.

TOM PINCH AND SWEETHEART.

At 1:45 P. M., after a bountiful lunch had been dispatched, a start was made for new grounds, and at 2:30 a bevy of birds was located and the above brace put down to run the deciding heat for first prize. The day was getting cooler with a pleasant breeze from the west. The dogs started off at a clipping gait, which they maintained throughout the heat. Proceeding in the direction of the birds Tom drew to a point, discovered his error and moved on. Heart, working cautiously, pointed, drew on and pointed stanchly. Tom not up to back, bird flushed but not shot at. Proceeding a little further both dogs flushed at about the same time. Moving on Tom pointed a bird that flushed immediately. Birds were running and would not lie to the dogs. Casting off to right Tom wheeled to a point when the bird flushed wild. Tom broke in but stopped to order. Moving on Heart pointed, drew on and bird flushed. Tom going down wind drew back a few feet and pointed; bird flushed wild. Despairing of getting any satisfactory work on these birds, they were left, and after some search another bevy was found, and at 3:30 the dogs were cast off and worked in the direction of the birds. Heart going down wind flushed a single, casting off to left she suddenly wheeled and dropped to a very stanch point. Tom, brought up, backed in grand style, birds flushed, not shot at, both dogs steady to wing. Moving on a few yards Tom pointed. Heart, brought up, backed stanchly; no bird found. Casting off to the right Tom jumped into a beautiful point. Allender flushed and killed. Tom, ordered to retrieve, brought the bird in alive, being only winged. Moving on Tom drew to a point, discovered his error and moved on. Considerable ground was now drawn blank and at 4:10 the dogs were ordered up and heat and first prize awarded to Sweetheart. Down one hour and fifty minutes.

THURSDAY.

The morning opened cold and foggy, and the ride to the grounds was by no means comfortable, but it was amply compensated for by a cooler day and a better condition for the scent to lie.

Tie for Second Place.

TOM PINCH AND LASSIE.

Lassie having been selected to run against Tom Pinch for second prize, the brace were put down at 9:50 near where a bevy of birds had been located. Lassie, casting off to right, flushed a bird, Allender shot and killed. Tom ordered to retrieve roaded some distance, pointed, and drawing a few yards further caught a winged bird which he retrieved very nicely. The birds being wild and the cover unsatisfactory, the dogs were ordered up and, proceeding about three miles, they were put down again on a fresh bevy in excellent ground for working the dogs. Tom, casting off to right, pointed a rabbit, swinging to left he jumped into a beautiful point on a single, when the bird rose wild. Moving on a number of birds flushed, Lassie casting to right down wind flushed several birds, Tom advancing with great caution established a beautiful point. Lassie brought up backed to order, but the bird had run. Lassie casting off to left pointed. Tom brought up backed in his usual style, Allender flushed and killed. Lassie, sent to retrieve, flushed a single, advanced a few feet, pointed and then retrieved handsomely. Moving on Lassie wheeled to a point; bird flushed wild. The ground was now drawn for some distance without finding. Turning back Allender flushed two outlying birds. Lassie making a rapid cast to right, suddenly wheeled and pinned a bird in fine style. Tom brought up made one of his characteristic backs, Allneder flushed and killed. Lassie sent to retrieve drew to a point, moved on a few few feet, located her bird and retrieved it in fine style. At 11:50 dogs were ordered up and the heat awarded to Lassie. Down one hour and five minutes. The final heat of the trials between Tom Pinch and Dashing Money for third prize was postponed till after the running of the Derby to allow Tom a chance to get his wind.

Tie for Third Place.

The Derby having been quickly disposed of, the dogs that were to run the last heat of the All-Aged Stake and of the trials were brought to the score.

TOM PINCH AND DASHING MONEY.

At 4 P. M. Tom Pinch, handled by Allender, and Dashing Money, handled by Foster, were put down where the last heat was finished. A few birds having been previously located, the dogs were worked toward them. Allender flushed a single, shot and killed. Tom, to order, retrieved well. Swinging off to the left, Dash roaded a bevy some 50 or 60yds., when just as he established his point the birds rose some distance ahead. Foster shot and killed, when Dash broke in and retrieved. Moving on, Tom pointed. Dash, brought up, backed staunchly. Tom moved on. Judges, following after, flushed the bird. Proceeding cautiously, Dash drew to a point. Tom, brought up, backed. No bird found. Casting off to the left, Tom pinned a single bird in elegant style. Dash not up to back. Allender shot and killed. Tom retrieved handsomely. Turning back 20yds., Tom drew to a point, when the bird flushed. Steady to wing. Swinging around to right, Dash flushed a single. Moving on, Tom pointed. Dash, brought up, backed. No bird found. Moving on some 50yds., Dash drew to a point. Tom, brought up, backed, drew on and backed staunchly. No bird found. It was evident that the birds were running, and it being late, there was little prospect of their being brought to cover. At 4:40 the dogs were ordered up and the heat and third prize awarded to Tom Pinch.

Following is the

SUMMARY.

HANFORD, Cal., Dec. 13.—Fourth annual field trials, All Aged Stake, open to all setter sand pointers owned or bred on the Pacific coast. Purse entrance money; 1st prize, 50 per cent.; 2d prize, 30 per cent.; 3d prize, 20 per cent. $20 entrance. Closed Dec. 1, 1886, with ten entries, of which seven came to the score and were run as follows:

First Series.

Wm. Schreiber's lemon and white pointer bitch Lassie (Prince—Forest Lilly), *beat*

J. B. Martin's orange and white English setter dog Dashing Money (Dashing Monarch—Armida).

California Kennel's blue belton English setter bitch Janet (Count Noble—Dashing Novice), *beat*

Wm. Schreiber's lemon and white pointer dog Mountain Boy (Grouse—Nell).

J. Martin Barney's lemon and white pointer dog Tom Pinch (Tom—Beulah), *beat*

J. G. Edward's black, white and tan English setter dog Royal Duke II. (Regent—Dolly).

California Kennel's blue belton English setter bitch Sweetheart (Count Noble—Dashing Novice), *a bye.*

Second Series.

Sweetheart beat Lassie.

Tom Pinch beat Janet.

Tie for First Place.

Sweetheart beat Tom Pinch and won first prize.

Tie for Second Place.

Lassie beat Tom Pinch and won second prize.

Tie for Third Place.

Tom Pinch beat Dashing Money and won third prize.

THE DERBY.

At 12 o'clock Mr. Chas. Kaeding's blue belton English setter dog Shot (Regent—Fannie) and Mr. E. W. Briggs's lemon and white pointer Climax (Bang Bang—Bellona), both handled by Allender, were put down where the last brace finished. After drawing considerable ground blank, it was decided to lunch and then proceed in search of a fresh lot of birds. After beating about for an hour or more, a few birds were discovered at the edge of some timbers, and at 2:45 the dogs were put down and worked toward them. Allender made the first find by flushing a single, which he shot and killed. Shot, ordered to retrieve, brought the bird to hand nicely. Running at a rapid pace along a fence, Climax wheeled and drew back to a point just as the birds flushed, then swinging out to the left, flushed a single in some sun flowers; steady to wing. Crossing a fence at the edge of a hop patch, Allender flushed a single, shot, and bird dropped but could not be retrieved. Drawing the ground for some time without finding, the dogs were ordered up and heat and first prize awarded to Shot.

Shot is a beautiful blue belton, rather under size, with a compact body and massive head, plenty of style in motion and fast enough to suit the most critical, and gives promise of becoming a grand field dog. Climax does not impress one favorably at first sight, his nose being rather short and inclined to turn up, but nevertheless that may be a merit rather than a fault, but in the field and in motion he is very attractive; his stylish upheaded way of going, his rapid pace and perfect independence and business-like way of cutting out his work and keeping at it, are remarkable and pleasing in a dog so young. In pace and ranging they were about equal, if anthing the pointer had the best of it. In quartering and style in motion the pointer excelled. There was no opportunity to judge of their merits on pointing, as no point was established by either.

SUMMARY.

Fourth annual Derby, open to all setter and pointer puppies whelped on or after Jan. 1, 1885. Purse, entrance money, first prize 50 per cent., second prize 30 per cent., third prize 20 per cent.; $5 forfeit and $15 addditional to start. Closed May 1, 1886, with eleven entries, of which but two came to the score, namely:

Chas. Kaeding's blue belton English setter dog Shot (Regent—Fannie), whelped April 20, *beat*

Mr. E. W. Briggs's lemon and white pointer dog Climax (Bang Bang—Bellona), whelped April 14.

Shot won first.

Climax won second.

THE BEN HILL—LILLIAN HEAT.

WE have as yet received no communication from Mr. D. Bryson in relation to his insinuations published last week regarding the integrity of reporters, but presume that he will immediately give us an opportunity to lay before the public the facts upon which his insinuations were based. It must, of course, be understood by every one that Mr. Bryson's insinuations amounted to charges of so serious a nature that they must be either substantiated or withdrawn; the public will demand one thing or the other, and will not be content with anything less.

Editor Forest and Stream:

Mr. Bryson, of Memphis, Tenn., is recognized by all who know him as being an honorable gentleman, and he no doubt believes he is doing the cause of justice a service by his defense of Mr. Stephenson in the matter of pulling in the Ben Hill—Lillian heat at the recent trials at Grand Junction. As this matter has gone to the press for consideration by the friends of Mr. Stephenson, and no doubt with his knowledge and consent, I feel at liberty to ask Mr. Bryson whether it is true or not that Mr. Stephenson did not pay the entrance money of Ben Hill, whether he did not get another gentleman to do so with the agreement that Ben Hill's winnings should go to the man who paid the entrance. We wish also to ask Mr. Bryson whether Mr. Stephenson stated to the judges in the field (at the time the protest was entered by Mr. Rose) that he (Stephenson) was interested in the winnings of Lillian, and he (Stephenson), therefore, was to that extent her owner; and if he did so state and claim, why should not the man who paid for the entrance of Ben Hill for his winnings, be considered, to the same extent, Ben Hill's owner, so far as that heat was concerned? And did Mr. Stephenson state at the Handlers' meeting, as reported, "that he entered Ben Hill merely for the purpose of showing that he was broken and a good dog, although he did not think him good enough to win." If he thought so and so stated, why should he let another pay his money for entering a dog "not good enough to win," and further, did Mr. Stephenson say at the Handlers' meeting, "I offered as a matter of friendship to take her (Lillian), prepare her and handle her in the trials; I would not be benefited a dollar in her winnings." If Mr. Stephenson claimed at the time the protest was made in the field that he owned Lillian to the extent of being interested in her winnings, and then stated, as alleged, at the Handlers' meeting, he had no interest in her winnings; which statement is correct, and how shall we reconcile the two statements? Besides, is it true that Stephenson went to a house the day the heat was run for the first place between Bob Gates and Daisy F., during lunch, and kept the judges and Mr. Rose waiting an hour; and is it true that Bob Gates was with him by the fire? Is it true or not true that a man whom Mr. Bryson knows, gave a certain other man one or more revolvers and told him to be ready in case of an emergency, at the adjourned meeting of the National Field Trials Club? If this is true, should such a person belong to the club? What relation was one of the judges to Mr. Stephenson, and did this judge decide the place for first money in the Derby? Some of these questions we believe should be answered in the affirmative. If so, might not the Executive Committee have become acquainted with the facts and been influenced in the interest of justice and fair play to act as they did? I have not read the rule referred to, except in Mr. Bryson's letter. What was the rule for? Its purposes and spirit should be considered. I did not attend the meeting at Grand Junction, but I have heard every one of these points discussed by gentlemen who were there, and ask the questions in good faith, so that the whole facts may be brought out and correct information promulgated. I wish to say that I have no personal acquaintance with Mr. Stephenson, never saw him and have no personal feelings in the matter at all, but, as Mr. Bryson has undertaken to represent the case in the press, it is but fair that he answer my questions, whether he knows anything about the matters inquired into personally or whether he heard any rumors concerning any of them. INQUISITIVE.

KNOXVILLE, Tenn., Jan. 15.

DOGS ARE PROPERTY.

FRANKFORT, Jan. 8.—The Court of Appeals to-day, in the case of the Commonwealth vs. George Hazlewood, of Woodford county, rendered a decision of great interest to owners of dogs, who are anxious to have their animals recognized in law as property. It is of importance because it is the first case of the kind that has ever reached the Appellate Court, and the opinion will govern hereafter the rulings of lower courts, especially in such cases as that of Unz vs. Oswald, in which the German mastiffs were sold in Louisville recently under execution for debt, and in which Judge Field held that dogs were property, and the sale therefore valid.

Hazlewood was indicted by the grand jury of his county in April, 1884, for unlawfully and feloniously carrying away a dog belonging to Warren Viley. The defendant demurred to the indictment on the ground that dogs were not a subject of larceny, and the lower court sustained the demurrer. The Attorney-General in his brief on the appeal says that:

"Dogs are assessed and a tax collected on them (supplement to Revised Statutes, page 189). This is entirely inconsistent with the view that they are among the things *feræ naturæ*. Our law certainly would not tax things the right of property in and enjoyment of which it did not recognize. The statute therefore that imposes a tax on dogs necessarily says that they are property. * * There is no reason that might be given for considering any other domestic animal the subject of property that would not apply with equal force to dogs. * * They afford amusement, service and protection, and are often the subject of sale and profit. Again, our statutes should hold a man responsible for any damage his dog may do to the property of others (General Statutes, 179)."

Judge Holt, in the opinion of the Court, says:

"The only question presented by this appeal is whether under the law of this State a dog can be the subject of larceny. Undoubtedly the rule was otherwise at common law. By it larceny could be committed of such domestic animals as cattle and sheep, and of such domestic fowls as hens and ducks, because they serve for food, and were, as Lord Hale says, 'under propriety.'"

"This was true also as to beasts or birds *feræ naturæ*, when made tame, if they served for food, such as deer and pheasants, provided the thief knew them to have been reclaimed. Larceny, however, could not be committed of some things in which the owner even had a lawful property and for an injury to which he could maintain trespass, as mastiffs and spaniels, by reason, as the common law writers said, of the business of their nature; nor of some animals wild by nature, but rendered domestic, as foxes and bears, because they served for pleasure and not for food.

Blackstone says: "As to those animals that do not serve for food, and which, therefore, the law holds to have no intrinsic value, as dogs of all sorts, and other creatures kept for whim and pleasure, though a man may have a base property therein, and maintain a civil action for loss of them, yet they are not of such estimation as that the crime of stealing them amounts to larceny."—4 Bl. Com. 236. Coke, Hale and the other common law writers are to the same effect.

It seems difficult to give a sound reason for the old rule, in view of the indisputable fact that many dogs are esteemed of great value and justly so considered. It was adopted, however, when following the Draconian law, grand larceny was punishable with death; and upon the ground, perhaps, that a dog could have no determinate value. This, however, in this day is not true; nor is it necessary to hold that a dog is of so base a nature that he cannot be the subject of larceny in order to save the life of a man.

Property is clothed with value by the laws of society and public opinion. In a state of nature property does not exist. What one, then, retains and uses, depends upon his powers. When, however, he enters into society, objects become property, because they are impressed by its usages with certain qualities, among which is the right of the owner to their exclusive use and the power to dispose of them. If it be true that whether an object be property depends upon the usage or notion of society, then surely it has impressed upon the dog all the attributes of property. The master is entitled to the exclusive use and vested with an absolute power of disposition, while the present public estimate of this faithful and useful animal, coupled with the recognition of him as property in various ways by our statutory laws, forbids the assumption that he can not be the subject of larceny, because of a supposed base nature.

If it be the object of the criminal law to protect the citizen in that which is useful and valuable, as well as punish one who, for *lucri causa*, takes it from him, then we fail to see any sound reason why this animal, so varied in its species and so valuable and useful to man, should not be protected by the law. It is domestic in its nature; it guards the property of its master; it serves as a companion; it assists the drover in the management of his stock, and renders itself useful by way of amusement, service and protection. We should be slow, however, to dissent from the ancient common law rule so long established and so universally concurred in by common law writers in the absence of statutory abrogation of it. Our statute provides for the punishment of "persons guilty of the larceny of goods and chattels." Gen. Stat., 383. The term "chattel" is a broad one. Bouvier, in his law dictionary, says that "chattel is a term including all kinds of property, except the freehold and things which are parcel of it."

The question now rises whether our law so far recognizes a dog as property as to bring him within the meaning of this term. If so, then he may be the subject of larceny. By an act of our Legislature of January 31, 1865, dogs were made liable to assessment and taxation; the tax arising therefrom not to be expended in paying for sheep killed by them or injuries done by them, but to become a part of the common school fund. Myers' Supplement, 189. The form of taxbook given in the General Statutes provides for this assessment. General Statutes, 717. It seems to us that the imposition of a tax on them necessarily recognizes them as property; otherwise, the law taxes them and yet fails to recognize the right of ownership.

In 2 Wharton's Crim. Law, sec. 1,755, it is said that as to all other animals which do not serve for food, such as dogs and ferrets, though tame and salable, or other creatures kept for whim and pleasure, stealing these does not amount to larceny at common law. *It is otherwise, however, when they are taxed.*

Our statute makes a man liable for damage done by his dog, thus recognizing that a dog has an owner and that the thing owned is property. It expressly speaks of "the owner" and provides how, under certain circumstances, he may be deprived of him. For every evil purpose, not only our statutes, but the decisions of our courts, recognize a dog as property. The owner may sue in trespass for an injury to him, or bring replevin or trover for his conversion; and no stronger reasons exist for holding, as has been done, that canary birds, or tame pigeons, or bees, may be the subject of larceny, than those relating to dogs.

These views are supported by the cases of the People vs. Maloney, 1 Parker's Crim. Rep. 593; the State vs. Brown, 9 Baxter 53, and the People vs. Campbell, 4 Parker's Crim. Rep. 386.

Before one can be convicted of stealing a dog, the value must be shown. It can not well be urged that there is danger of persons being confined in the penitentiary for stealing "mongrel whelps of a low degree," because under our statute, before one can be so punished, it must be proved that the stolen property was worth $10 or over.

We have not reached the conclusion above indicated in forgetfulness of the act of the last Legislature, approved

May 17, 1886, providing that upon the listing of a dog with the County Clerk, and the payment of a tax as therein provided, he should, for one year from that time, be considered personal property for all purposes as fully as any other kind of personal property: but, in our opinion, he was already personal property under the law of this State, and that the ancient common law rule had, in effect, been abrogated.

Judgment reversed, with directions to overrule the demurrer to the indictment, and for further proceedings consistent with this opinion."

From the last paragraph or two it may be seen that the effect of the opinion also renders void the purposes of the act of the late Legislature in reference to a recognition through tax paid to County Clerks of property in dogs, for the reason that dogs are already property without a compliance with that law.—*Louisville Courier-Journal.*

COLLIE SWEEPSTAKES.

PHILADELPHIA, Jan. 15.—I take pleasure in announcing that we have made arrangements to hold our first annual collie sweepstakes, in connection with the New Jersey Kennel Club, at their show, to be held at Newark, N. J., commencing March 22, 1887. It also gives me pleasure to state that we have completed negotiations with S. T. Mercier, Esq. so well known in the collie world, to judge all collie classes at that show. Too much importance cannot be placed on this announcement by our American breeders, for it will give them the long-desired opportunity of having their dogs judged in accordance with the English standard by an English breeder. We trust that all lovers of the collie will appreciate our efforts to secure Mr. Mercier by sending to the N. J. K. C. the largest possible number of entries. Four hundred and fifty dollars in prizes will be divided among the sweepstakes entries.

I also desire to make the following announcement: The American Collie Club will open a Stud Dog Sweepstakes for a prize of $25 offered by the A. C. C., added to a sweepstakes of the amount of each entry's stud fee, to be decided at the Westminster Kennel Club's show in May, 1887. Entries for the stakes close same time as the show's entries, and dogs must be entered also at the show, in regular classes, specifying on entry blank that they are to compete for the stake. All entries received are subject to the following conditions: Open to stud dogs that have been born in the United States or Canada or imported on or before Jan. 1, 1887, and owned by members of the club. They will be judged by not less than three of their get out of more than one bitch, the qualities of the dog himself not to be considered, but he must be present and entered at the show. The entry fee to the stakes to be paid the treasurer of the Collie Club at time of making entry. Owners must guarantee not to advance their stud fee during 1887 over the several amounts at which they are entered until the dog has served a complement of ten bitches.

GEO. A. SMITH, Sec. and Treas.

DEATH OF DR. JARVIS'S ROSE.—*Editor Forest and Stream:* I am sorry to have to write you of the death of my old red bitch Rose. She was bred by Cecil Moore, the breeder of champion Palmerston, and was a daughter of Palmerston and Flora. She was selected and purchased for me by J. S. Skidmore, of Nantwich, England, and was a well-known prize winner in Ireland, England and in this country, but it is as a brood bitch that she was especially famous, as she has thrown to Elcho the grandest lot of winners ever produced by any Irish bitch in America. She was the dam of four field trial winners, sixteen first and champion, and two second prize bench show winners; nearly a hundred prizes won by her sons and daughters is certainly a great record. Rose was one of that famous quintette of setters which for several years swept the prize lists over the ocean. The others were O'Brien's Kate and Kitty, and McHaffie's Mina and Bella. When in condition Rose was a remarkably handsome bitch, and as intelligent and loving as she was handsome. We all miss her, but none more than old Elcho. They thought the world of each other.—MONT CLARE.

DEATH OF BIRDO.—Mr. W. H. Pierce has had the misfortune to lose, by death, the Irish setter dog Birdo, purchased by him in November from Mr. A. E. Smith, of High Point, N. C. Mr. Pierce is doubly unfortunate, as he had well-founded hopes that Birdo would prove a valuable addition to his kennel for breeding purposes. We had the pleasure upon several occasions of shooting over Birdo previous to the field trials at High Point, and pronounced him the best Irish setter that we had seen afield. In a letter informing us of his loss, Mr. Pierce says: "I regret exceedingly to inform you that Birdo died on Jan. 10 of pneumonia. He did some wonderful work for me the last days I hunted him, and I cannot find words to express how bad I feel over his loss. He was not only a dog of rare field merit, but was also very companionable and possessed intelligence almost human."

LARGEST MASTIFF PUPPY.—Fair Haven, Jan. 17.—*Editor Forest and Stream:* I saw in last week's number a communication from Mr. Halderman, giving the weight of a puppy 7 months old weighing 106lbs., and his questioning that there was never one in England or America equaling that weight. I can give the weight of six from one litter at 7 months that each weighed more than that. Now I own Boss's Zulu (A.K.R. 4044); his weight at 3mos. 48lbs., 4mos. 70lbs., 5mos. 97½lbs., 6mos. 116½lbs., at 7mos. 132lbs. His length 78in., height 28½in., girth 38in. Boss's Zulu was sired by J. L. Winchell's Boss, dam Venus IV. Below is my address, and any one wishing to see him can call on CHAS. R. ALLEN.

DOG FURNISHINGS.—We have received from the Medford Fancy Goods Co. a new and extensive catalogue of their dog collars, cat collars and general dog furnishings. The catalogue is chiefly interesting because it indicates the growth of what may almost be called a new business. There were dog collars before the Medford Company went into their manufacture, but the trade has been so extended and developed that it may be said to have been founded in this country by the Medford people.

BESSIE'S PEDIGREE.—Boston, Mass., Jan. 6.—*Editor Forest and Stream:* In your issue of December 31, Mr. P. Tenney, of Haverhill, wishes to know what authority I have for disputing Bessie's pedigree which he claims is Mingo—Fausta II. Mr. W. B. Wells, of Chatham, Ont., states that he is the owner of Mingo, and that the pedigree claimed for Bessie is false, and this is my authority, as Mr. Well's statement has never been disputed.—J. W. BROWN.

FAITHFUL UNTO DEATH.—Dec. 26.—Mr. Sam Miller's fine black setter dog Alto was killed yesterday under peculiar circumstances. The dog was out hunting near the railroad, and in crossing it came to a stand on the track just as the train was approaching. He held his point steadily despite the calls made to him and the train ran over and killed him.—J. T. W.

POINTER CHALLENGE.—Portland, Me., Jan. 10.—*Editor Forest and Stream*—I will match my young pointer Beau of Portland (A.K.R. 3124) to run against any pointer not over fifteen months of age, in this country. If any gentleman owns a youngster that he would like to run against Beau, I should be pleased to hear from him.—FRED F. HARRIS.

THE AMERICAN KENNEL REGISTER.—The steady growth of the *American Kennel Register* is a very satisfactory indication that when the Forest and Stream Publishing Company began the publication of the A. K. R. it supplied something that was really needed. The constantly increasing list of subscribers is an evidence of the progress which the *Register* is making in public esteem, and the growing list of entries shows that a Register number is coming to be highly valued. For January the *Register* has over one hundred entries, as against ninety-two in January, 1886, seventy-nine in January, 1885 and seventy-five in 1884. There seems to be every prospect that the total number of entries for 1887 will be far in excess of any previous year.

NERVOUS LACTATION.—Skye terrier bitch, 6 years old, has never been with male, during the last three years has been in heat several times, and at regular intervals of about four months has had the mammary glands fill with milk. At this period the animal has made her nest, selected an india-rubber ball (the same ball each time from among a number of others), and nursed it for several days, when the lactation ceased. Each lactation was accompanied by an acute gastritis requiring treatment, the last attack, gastro duodenitis, ended fatally. The autopsy showed a liver in advanced stage of fatty degeneration and sclerosis.—*Journal of Comparative Medicine and Surgery.*

THE DEERHOUND CHALLENGE CUP.—*Editor Forest and Stream:* Is the Deerhound Challenge Cup, which was offered by a gentleman of New York, and only won once, to be offered for competition at our spring shows? Information relative to the matter will greatly oblige—DEERHOUND. [Will the gentleman who offered the cup impart the desired information.]

A LARGER PUPPY—Columbia, Pa., Jan. 17.—*Editor Forest and Stream:* My English mastiff dog puppy Adonis (A.K.R. 3917), full brother to the bitch Alpha, weighs 124lbs. and is just seven months old. This, I think, is the heaviest weight of that age on record in America, and I doubt if it can be beaten in England.—WM. H. FENDRICH.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Mickey Free. By Floyd Vail, Jersey City, N. J., for red Irish setter dog, whelped Nov. 10, 1886, by Mac (Rory O'More, Jr., A.K.R. 427—Annie Boleyn, A.K.R. 611) out of Duchess of Erin (Mali's Duke—Lady Erin).

Anna Laura. By John Campbell, Port Andrew, for liver and white pointer bitch, whelped Dec. 20, 1886, by Detroit Kennel Club's Fleet (Bodine—Ruby Croxteth) out of Queen Fan (King Phillip—Lady Fan).

Fleet, Jr., Don, Rock, Fred, Clip and Mont. By John Campbell, Port Andrew, for liver and white pointer dog puppies, whelped Dec. 20, 1886, by Detroit Kennel Club's Bodine (Ruby Croxteth—Fleet) out of Queen Fan (King Phillip—Lady Fan).

Clingstone. By Reserve Kennels, Cleveland, O., for black, white and tan English setter dog, whelped Aug. 9, 1886, by Dan Gladstone (Gladstone—Sue) out of Maggie L. (Luke—Zephyr).

Temptation. By Wm. T. McAlees, Philadelphia, Pa., for white, black and tan fox-terrier bitch, whelped July 9, 1886, by Mixture (A.K.R. 2697) out of Warren Lady (A.K.R. 2701).

Rose Laverack (A.K.R. 4444). By F. C. Syles, Jr., Pawtucket, R. I., for lemon and white Laverack setter bitch, whelped July 2, 1886, by Prince Napoleon (A.K.R. 2671) out of Belle of Bryn Mawr (A.K.R. 2651).

Duke Royal. By F. E. Clark, Bridgeport, Conn., for pointer dog, whelped Oct. 10, 1886, by Ned out of Daisy Bird (A.K.R. 2136).

Naso Kennel. By C. J. Peshall, Jersey City, N. J., for his kennel of pointers.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Jipsey—Treasure. Detroit Kennel Club's (Detroit, Mich.) English pug bitch Jipsey (Don Juan—Foxey) to Englehardt's Treasure (A.K.R. 4472), Jan. 2.

Murtle—Paul Gladstone. Jerry Cockrel's (Memphis, Tenn.) English setter bitch Murtle (Druid—Star) to Memphis & Avent Kennels' Paul Gladstone (Gladstone—Lavalette), Dec. 4.

Countess Speed—Roderigo. Hayward & Nesbitt's (St. Joseph, Mo.) English setter bitch Countess Speed (Gladstone— ——) to Memphis & Avent Kennels' Roderigo (Count Noble—Twin Maud), Dec. 1.

Bessie B.—Paul Gladstone. J. I. Case, Jr.'s (Racine, Wis.) English setter bitch Bessie B. to Memphis & Avent Kennels' Paul Gladstone (Gladstone—Lavalette), Nov. 28.

Dixie—Roderigo. Memphis & Avent Kennels' (Memphis and Hickory Valley, Tenn.) English setter bitch Dixie (Dashing Berwin—Magnolia) to their Roderigo (Count Noble—Twin Maud), Nov. 26.

Blaze—Paul Gladstone. E. W. Clark, Jr.'s (Philadelphia, Pa.) English setter bitch Blaze (Count Noble—Rosilind) to Memphis & Avent Kennel's Paul Gladstone (Gladstone—Lavalette), Nov. 24.

Lady Flossey—Roderigo. F. Stephinson's English setter bitch Lady Flossey to Memphis & Avent Kennels' Roderigo (Count Noble—Twin Maud), Nov. 20.

Modesty—Paul Gladstone. A. H. Moore's (Philadelphia, Pa.) English setter bitch Modesty to Memphis & Avent Kennels' Paul Gladstone (Gladstone—Lavalette), Nov. 20.

Blossom—Paul Gladstone. W. B. Gates's (Memphis, Tenn.) English setter bitch Blossom to Memphis & Avent Kennels' Paul Gladstone (Gladstone—Lavalette), Oct. 31.

Nannie Gladstone—Roderigo. P. H. & D. Bryson's (Memphis, Tenn.) English setter bitch Nannie Gladstone (Gladstone—Sue) to Memphis & Avent Kennels' Roderigo (Count Noble—Twin Maud), Nov. 9.

Littian—Roderigo. P. H. & D. Bryson's (Memphis, Tenn.) English setter bitch Littian (Gladstone—Sue) to Memphis & Avent Kennels' Roderigo (Count Noble—Twin Maud), Oct. 30.

Bo Peep—Roderigo. Wm. Bowles's (Memphis, Tenn.) English setter bitch Bo Peep (Gladstone—Juno) to Memphis & Avent Kennels' Roderigo (Count Noble—Twin Maud), Oct. 10.

Belle Gladstone—Roderigo. S. Cullen's (Alexandra, La.) English setter bitch Belle Gladstone (Gladstone— ——) to Memphis & Avent Kennels' Roderigo (Count Noble—Twin Maud), Oct. 7.

Donna J.—Paul Gladstone. J. W. Jones's (Memphis, Tenn.) English setter bitch Donna J. (Belton—Bramble) to Memphis & Avent Kennels' Paul Gladstone (Gladstone—Lavalette), Oct. 6.

Maud—Roderigo. B. Crane's (Chicago, Ill.) English setter bitch Maud to Memphis & Avent Kennels' Roderigo (Count Noble—Twin Maud), Oct. 5.

Juno A.—Roderigo. Memphis & Avent Kennels' (Memphis and Hickory Valley, Tenn.) English setter bitch Juno A. (Druid—Ruby) to their Roderigo (Count Noble—Twin Maud), Oct. 5.

Sue Gladstone—Roderigo. Memphis & Avent Kennels' (Memphis, Tenn.) English setter bitch Sue Gladstone (Gladstone—Sue) to their Roderigo (Count Noble—Twin Maud), Sept. 17.

Muriel (late Black-Eyed Susan)—Dashing Rover. E. Dexter's (Buzzard's Bay, Mass.) English setter bitch Muriel (late Black-Eyed Susan) (Ben Hill—Zoe W.) to his Dashing Rover (Dash II.—Norna), Dec. 22.

Ranee—Dashing Rover. E. Dexter's (Buzzard's Bay, Mass.) English setter bitch Ranee (A.K.R. 2189) to his Dashing Rover (Dash II.—Norna), Jan. 8.

Bess—Ilford Caution. J. L. Winchell's (Fair Haven, Vt.) mastiff bitch Bess to E. H. Moore's Ilford Caution, Dec. 17.

Brenda II.—Ilford Caution. E. H. Moore's (Melrose, Mass). mastiff bitch Brenda to his Ilford Caution, Dec. 21.

Belle Valentine—Merchant Prince. Coffin, Zimmer & Co.'s (Glen's Falls, N. Y.) St. Bernard bitch Belle Valentine to E. H. Moore's Merchant Prince, Nov. 13.

Miranda—Merchant Prince. E. H. Moore's (Melrose, Mass.), St. Bernard bitch Miranda to his Merchant Prince, Dec. 10.

Bernie V.—Merchant Prince. E. H. Moore's (Melrose, Mass.) St. Bernard bitch Bernie V. to his Merchant Prince, Dec. 22.

Sapho—Merchant Prince. Dr. Sawtelle's (Malden, Mass.) St. Bernard bitch Sapho to E. H. Moore's Merchant Prince, Jan. 13.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Bertie. Fred Bollett's (Brooklyn, N.Y.) pointer bitch Berti (Rab—Bellona), by F. R. Hitchcock's Tammany (Tory—Moonstone).

Madge. McEwen & Gibson's (Toronto, Ont.) collie bitch Madge (Highlander—Hasty), Jan. 1, five (two dogs), by J. Van Schaick's Scotson (Dublin Scot—Florry II.).

Molly. Dudley Holbrook's (Sing Sing, N. Y.) mastiff bitch Molly (A.K.R. 3379), Dec. 30, nine (five dogs), by Dwight Holbrook's Rego (A.K.R. 1341).

Ashmont-Nora. Dwight Holbrook's (Clinton, Conn.) red Irish bitch Ashmont Nora (A.K.R. 2875), Jan. 3, nine (five dogs), by W. H. Pierce's Glencho.

Flash. Detroit Kennel Club's (Detroit, Mich.) fox-terrier Flash (Trojan—Fannie), Jan. 8, seven (three dogs), by Wheaton's Barney (Sir Peter II.—Fawn).

Morning Star. Chas. York's (Bangor, Me.) English setter bitch Morning Star (Dashing Dan—Daisey Starlight), Dec. 31, five (four dogs), by his Gun (Gladstone—May B.).

Hazel. Marmaduke Richardson's (New York) Irish setter bitch Hazel (Elcho—Rose), Dec. 25, eight (six dogs), by W. H. Pierce's Glencho (Elcho—Norcen).

Joste. Wm. Housman's (Boston, Mass.) St. Bernard bitch Josie, Jan. 7, twelve (ten dogs), by E. H. Moore's Merchant Prince.

Hectress. J. H. Long's (Boston, Mass.) St. Bernard bitch Hectress, Jan. 11, eight (five dogs), by E. H. Moore's Merchant Prince.

Sweet Brier. W. T. Payne's (New York) pointer bitch Sweet Brier (A.K.R. 2748), Jan. 14, three (two dogs), by H. H. Kane's Lord Palmer (Donald II.—Lady Bang).

Puss. A. Perrin's (Cambridge, Mass.) bull-terrier bitch Puss (A.K.R. 4484), Dec. 6, one dog, by S. W. Newman's Young Royal Prince (A.K.R. 2102).

Judy. White Mountain Kennels' (Littleton, N. H.) bull-terrier bitch Judy (A.K.R. 3319), Dec. 14, two (one dog), by their Jack (Ventor—Blossom).

Luckystone. Westminster Kennel Club's (Babylon, L. I.) pointer bitch Luckystone (Tory—Moonstone), Jan. 7, six (three dogs), by their Naso of Kippen (Naso V.—Maggie).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Ilford Connaught. Fawn mastiff dog, whelped July 11, 1885, by Ilford Caution out of Brenda II., by E. H. Moore, Melrose, Mass., to E. A. Buckingham, Boston, Mass.

Caution—Brenda II. whelp. Fawn mastiff dog, whelped July 11, 1886, by E. H. Moore, Melrose, Mass., to F. G. Janson, Quincy, Ill.

Ilford Prince. Fawn mastiff dog, whelped Oct. 3, 1886, by Caution out of Bona, by E. H. Moore, Melrose, Mass., to A. Bonnell, Jr., New York.

Madam. Orange and white St. Bernard bitch, whelped Sept. 18, by Prince out of Nun, by E. H. Moore, Melrose, Mass., to J. H. Sutcliffe, Louisville, Ky.

Ilford Queen. Fawn mastiff bitch, whelped May 6, 1886, by Caution out of Countess, by E. H. Moore, Melrose, Mass., to Wm. E. Ramsey, Saginaw City, Mich.

Gretchen. Orange and white St. Bernard bitch, whelped Sept. 18, 1886, by Prince out of Nun, by E. H. Moore, Melrose, Mass., to J. S. Coxey, Massillon, O.

Noble Caution. Fawn mastiff dog, whelped Oct. 3, 1886, by Caution out of Bona, by E. H. Moore, Melrose, Mass., to James R. Trissler, Lancaster, Pa.

Bayonne Prince. Orange and white St. Bernard dog, whelped July 10, 1886, by Prince out of Miranda, by E. H. Moore, Melrose, Mass., to D. F. Allgood, Trion Factory, Ga.

Caution—Bona whelp. Fawn mastiff dog, whelped Oct. 3, 1886, by E. H. Moore, Melrose, Mass., to Dr. Daniel Macmartin, Amsterdam, N. Y.

Caution—Bona whelp. Fawn mastiff dog, whelped Oct. 3, by E. H. Moore, Melrose, Mass., to Geo. A. Peters, Columbus, O.

Mixture (A.K.R. 2697)—Warren Lady (A.K.R. 2701) whelp. White, black and tan fox-terrier bitch, whelped July 9, 1886, by Wm. T. McAlees, Philadelphia, Pa., to Alfred Heald, Lancaster, Mass.

Mixture (A.K.R. 2697)—Warren Lady (A.K.R. 2701) whelp. White, black and tan fox-terrier bitch, whelped July 9, 1886, by Wm. T. McAlees, Philadelphia, Pa., to Barclay H. Warburton, Philadelphia, Pa.

Mixture (A.K.R. 2697)—Warren Lady (A.K.R. 2701) whelp. White, black and tan fox-terrier dog, whelped July 9, 1886, by Wm. T. McAlees, Philadelphia, Pa., to Samuel Rea, Montgomery county, Pa.

Jack—Judy (A.K.R. 3319) whelp. Brindle bull-terrier dog, whelped Dec. 16, 1886, by White Mountain Kennel, Littleton, N. H., to Henry Merritt, Littleton, N. H.

PRESENTATIONS.

Clingstone. Black, white and tan English setter dog, whelped Aug. 9, 1886, by Dan Gladstone (Gladstone—Sue) out of Maggie R. (Luke—Zephyr), by D. Bryson, Memphis, Tenn., to C. M. Munhall, Cleveland, O.

DEATHS.

Birdo. Red Irish setter dog, age and pedigree not given, owned by W. H. Pierce, Peekskill, N. Y., Jan. 10, from pneumonia.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

E. B., Boston.—Is there any remedy for a dog shedding his hair? I have a setter, heavy-coated, which I groom daily, but never seem to lessen the amount of hair that he casts from his coat. Ans. Groom once daily and give five drops of Fowler's solution of arsenic three times daily in food. Stop after three weeks.

M. W. H., Floyd.—Pointer has affection of the head and ears: keeps scratching head and ears continually and ears and head matterates. Ans. The dog has canker of the ears. Get a wash made as follows: Of bromo chloral and of laudanum each 1dr., of water 1oz. Mix. Drop a little in ears night and morning after cleansing and drying.

C. P., Montclair, N. J.—I have a bull-terrier puppy six months old which is nearly stone deaf. Have had him four months, and he never had canker or other ear trouble that I know of. His ears seem to be somewhat dirty. Is it likely that there is an accumulation of wax? What remedy would you advise? Ans. Get an ear syringe and syringe the ears night and morning with borax, warm water and glycerine. Ten grains of borax to the ounce of water and glycerine.

QUANNAPOWITT, Philadelphia, Pa.—Black cocker spaniel bitch (4yrs. old) continually scratching and biting herself, and has made a raw sore on one leg and one on back; skin is peeling and scurfing off somewhat, and coat is thin and poor. She is very ravenous for meat and tries to pick up every old piece of meat in the street, but she has never been fed very much meat. She has a habit of scratching about and crawling about one's feet and legs. Ans. 1. Give little or no meat. Purge with castor oil or epsom salts. Give five drops Fowler's solution of arsenic morning and evening in the food. If any sores exist dress with balsam of Peru ointment. 2. She is not in condition to breed. 3. Is by Zulu out of Sweep. 4. Won high com. at show mentioned.

I. E. B., Huntington, L. I.—A six month puppy has skin disease. When I first noticed it the skin commenced to get red, then she scratched herself and the hair came out all over her between her forelegs, her head and neck, and on her stomach pimples, which filled with matter then seemed to dry up and large scabs came off. When she shakes herself the hair and a dry dust and little scabs fly off. She is commencing to get red all over now and has some fever, not as much as she had. Ans. Sponge the surface of the body gently in a warm room with solution of carbolic acid (a teaspoonful to a quart of water), give five drops of Fowler's solution of arsenic in the food night and morning. If there are running sores dress them with balsam of Peru ointment. Keep the bowels free and feed very little meat.

B., Concord, Mass.—My Irish setter dog is 1½ years old. His new coat seemed to stop growing before attaining its full length, and is now all coming out. No eruption of the skin, but it is dry and scurfy, hair is not bright and shining; has good appetite, is fed on boiled Indian meal, is in good health and spirits, but is perhaps rather thin in flesh. Have never seen him pass any worms; has had some fleas, but not a great many. Had the red mange about six or eight months ago, which I cured with a carbolic wash and Fowler's solution of arsenic as you recommended; he has had no sign of it since. He sleeps on pine shavings. Ans. Give your dog a teaspoonful of castor oil morning and evening for three days. Give five drops of Fowler's solution twice daily in the food. Keep this up for three weeks and then stop for ten days and commence again.

FIRE INSURANCE.—In a circular issued by the Home Insurance Company, whose advertisement appears in another column, some interesting facts are given with regard to the destruction of homes by fire during the year 1885. It appears that during this year dwelling-house property valued at $13,140,990 was destroyed in the United States, or more than a million dollars worth of homes was thus wiped out of existence during each month of the year. The Home Insurance Company's diagram gives the thirty-six principal causes of fires. Of these, defective flues are the third and incendiarism the next. This means, of course, that poor construction and crime cause more fires than anything else. The lesson taught by this diagram should not be lost on the public.

Rifle and Trap Shooting.

RANGE AND GALLERY.

ANNUAL RIFLE MEETINGS.

THE fifteenth annual meeting of the National Rifle Association was held at the armory of the 22d Regiment, N. G., S. N. Y., in Fourteenth street, between Sixth and Seventh avenues, on Tuesday, Jan. 11, at 8 o'clock P. M. Gen. Wingate presided, and in his address laid great stress upon the disadvantage which Creedmoor labored under without anything like adequate railroad facilities. The meeting was harmonious and the routine business was quickly disposed of. The quorum of the Board of Directors was reduced to 6 and of the annual member meeting to 20. J. H. Brown, Major L. B. Bell, Capt. L. C. Bruce, Col. Geo. L. Fox and and Major Edw. Duffy were elected directors for three years and Col. C. E. Bridge for one year.

Secretary John S. Shepherd presented his annual report saying:

The annual meeting of the life members was held at the armory of the 22d Regiment on Tuesday, Jan. 12, 1886, when the following named members were re-elected directors for the term of three years, viz.: Cols. John and R. C. Ward, Maj. Shorkley, Col. Storey and Lieut. Zalinski.

The reorganization of the board of directors took place at a special meeting held on Jan. 19, when Gen. Wingate was elected president and the secretary and treasurer were re-elected.

Three of our directors, Messrs. Bridge, Eagle and Kendall, have resigned and two new directors, namely, Messrs. Bruce and Bell, have been elected during the year.

The Board has held nine meetings since my last report, and on five other occasions meetings were called, but no quorum was present.

The present office in Temple Court having proved in every way satisfactory, the lease of the same was renewed for one year.

The lease of the ground at Creedmoor, known as the new or west range, having expired, the land was re-leased by the Association for two years at the annual rental of $250.

At the meeting held on the first Tuesday in March, it was decided to extend an invitation to the N. R. A. of Great Britain to send a team of eight riflemen to this country to shoot a match in September against a team of National Guardsmen.

I quote from the Secretary's letter received in reply as follows: "The Council of the National Rifle Association regret that they find it impossible to send a team to America this year."

In view of the existing state of affairs I do not think it advisable to take any steps toward arranging for an International match during the coming season.

The annual Fall Meeting was commenced on September 13 and lasted six days; the attendance was not as large as we had hoped for and the expenses, including prizes, exceeded the receipts by about $550, notwithstanding the fact that the prize list had been reduced some $400, as compared with the previous year.

I am pleased to be able to report an increased interest in the semi-monthly matches which are patronized almost exclusively by members of the National Guard; the last match, which was shot on election day, was participated in by over 450 competitors representing every organization in the First and Second Brigades, with but a single exception. The net profit in these matches was over $1,700, being an increase of $350 over that of the year previous.

In conclusion, I wish to congratulate the Association on the improved condition of the Treasury, the report of the Treasurer showing a balance on hand of $1,932.75 as against some $700 cash assets a year ago.

I have also to acknowledge the receipt from Mr. J. H. Steward, of London, optician of the Association, of the annual prize he has presented for many years in succession, and also of the other prizes from Messrs. Benedict Bros., Tiffany & Co., Oliver & Bloomfield, Merwin & Hulbert, Col. Jones and Major Shorkley.

TREASURER'S REPORT.

Total	$7,706 72	Total	$7,706 72

MANCHESTER, Jan. 12.—The new prize match of the Bullard Repeating Arms Company, and excellent weather, all served to call together a good attendance at the Manchester Rifle range today, and from 2 o'clock until 4:30 there were almost constant reports from the firearms, and on the whole the score of 711 rolled up may be considered a fair criterion of the skill of local riflemen at the present time. They are steadily improving, however, and should be able to aggregate 725 at the February match. The practice shooting is first given, then follows that in the new prize event, and last that of the team.

Creedmoor target practice match, possible 35:

C D Palmer	5	5	5	5	5	4	5	34
J Brown	5	3	4	4	5	4	4	29
J A Parker	4	5	4	4	3	4	4	28

Decimal prize match, possible 100:

E C Paul	7	10	9	9	8	9	9	4	9	9—83

HAVERHILL, Mass., Rifle Club.—Annual election of officers: J. P. Brown, President; S. E. Johnson, Vice-President; F. Merrill, A. Edgerly, C. Bliss, Executive Committee; J. P. M. Green, Secretary and Treasurer. The club is in a flourishing condition. January 1 a handicap prize match was started, to run three months. Prize and record match, January 15:

H E Tuck	10	10	7	7	7	9	10	8	7	6—81
A Edgerly	8	9	9	4	8	7	9	9	5	9—78
S E Johnson	8	6	9	10	6	9	7	6	6	8—75
J F. Brown	10	4	9	6	10	6	10	6	4	9—74
C Bliss	5	8	5	7	4	9	8	9	7	0—62
L Jackson	7	3	4	7	5	8	7	5	7	6—59

WILMINGTON, Jan. 10.—In spite of the intense cold and high wind, there was a good turnout of the Wilmington Rifle Club at their weekly shooting this afternoon. The stormy wind which blew in puffs was very unfavorabl for good shooting, but the cabin and stove lately put up by the club were fully appreciated by the members. The scores are as follows, out of possible 100 points on Standard target at 200 yards off-hand:

C. Heinel, Sr	8	7	3	9	4	9	5	8	6	8—67
W. H. Haines	4	7	6	7	10	9	8	4	5	6—66
H. B. Seeds	7	6	8	7	6	4	5	6	4	4—57
W. A. Bacon	5	10	3	2	4	4	5	8	9	2—52
J. E. Newman	4	1	5	7	6	6	7	3	7	6—52
S. J. Newman	4	2	3	4	7	7	6	3	5	5—46
J. D. Seeds	10	5	8	4	5	0	5	3	1	5—46
J. Scott	2	5	5	6	8	0	5	5	3	5—44
W. O'Connor	5	2	4	7	3	5	5	4	6	2—43
C. Carleton	4	4	4	4	5	2	6	4	4	4—41
H. Simpson	2	6	6	1	6	4	2	7	2	4—40
C. Frederick	4	2	5	2	2	1	3	4	2	7—32

BOSTON, Jan. 15.—The rifle matches at Walnut Hill were well attended to-day, the weather conditions, especially during the practice team match, were poor, the snow obscuring the targets. During the week the Bullard match was shot and the scores are given below, together with the best scores made to-day:

Decimal Off-hand Match.

C E Berry, A	8	7	10	9	10	9	10	6	9	10—88
J B Fellows, D	8	8	8	10	8	10	10	10	6	7—85

The annual meeting of the club was held Friday evening, when officers were chosen as follows: President, Col. S. M. Decker; Vice-Presidents, Wm. Fisher and E. F. Richardson; Secretary, O. M. Jewell; Treasurer, A. W. Howland; Finance Committee, Lewis Saunders, E. F. Richardson and L. G. Holt; Range Committee, W. Fisher, A. W. Howland and O. M. Jewell; Prize and Team Match Committee, S. M. Decker, E. F. Richardson and M. W. Daulton; Board of Directors, S. M. Decker, W. Fisher, E. F. Richardson, O. M. Jewell, Melvin Beal, M. W. Daulton, Lewis Saunders, L. G. Holt and A. W. Howland.

MANCHESTER, N. H., Jan. 9.—A rifle match, two men on a side, between A. B. Dodge and C. D. Palmer of this city, and T. F. Cartwright and O. H. Horr of Springfield, Mass., was shot this evening. Mr. Palmer was extremely unfortunate in being interrupted shortly after commencing by an alarm of fire, to which he had to respond, and afterward, on commencing firing again, another alarm called him away just as he concluded his 90th shot. The conditions were off-hand, distance 50ft., Creedmoor target, with a bulls-eye ⅝in. in diameter, each man to fire 100 shots, highest possible score, 500. The record made by the Manchester riflemen is appended:

Dodge.....5555555555555555555455544445554555555554445545555
5555554545555555555455455455555455555555544555455—478
Palmer.....5545555555455555555455455555555555554545545555534
4355555555545545555545555455555555555544555545145—474

Total for both 952. It will be observed that Mr. Dodge started in with a run of 19 bullseyes.

TOPEKA RIFLE CLUB.—Topeka, Kan., Jan. 12.—A strong wind from 8 o'clock made a change of 3 points on the wind gauge. The gold badge, owned by the club, is to become the personal property of the member making the highest aggregate in four months, beginning Jan. 1, 1887:

First Score.

G E Morrison	5	7	9	10	10	7	8	10	8	7—81

W B McDowell	10	9	10	9	11	8	10	12	0	11—99	
W H Hettel	10	11	12	8	11	8	7	9	9	9—94	
E A Mohrsteadt	12	10	10	11	6	12	8	8	9	4—90	
J Sieminskie	6	9	8	6	6	10	9	10	12	10—86	

The club, which was organized but six weeks ago, has now a membership of 25, and is rapidly taking in more. The medal shoots are held every Wednesday evening at the Laclede gallery, and thoroughly enjoyed by all.

WILMINGTON, Del., Jan. 12.—During this week, in every part of the United States and Canada, teams from the various rifle clubs and military companies are taking part in match No. 1 of the Bullard Repeating Arms Company. The prize offered is a fine repeating rifle of that company's make, and the team making the highest score will be the winner. All teams have the privilege of choosing any day this week for shooting, and the Wilmington Club, finding the weather suitable, chose this afternoon. The conditions of the match were: Ten men in each team, 10 shots each, 200yds. off-hand. The scores were as follows out of individual possible 100 points and team possible 1,000:

C Heinel, Sr	9	7	8	8	7	6	6	5	10	7—73
H B Seeds	8	4	9	9	3	8	5	6	8	7—67
R Miller	6	6	6	5	6	7	8	5	7	9—63
J Manz	8	6	3	6	7	7	4	7	3	9—60
W H Haines	5	5	6	10	7	4	5	4	6	6—57
W F Seeds	8	6	6	4	5	6	7	3	3	7—55
E M Clark	5	4	5	5	6	3	7	6	6	7—54
W O'Connor	4	5	5	4	6	7	6	5	4	4—53
W A Bacon	7	3	8	4	7	3	5	3	7	5—52
J E Newman	6	3	4	6	4	5	5	6	5	6—50—584

SPRINGFIELD, Mass., Jan. 12.—The Springfield City Guard's team shot their score in the competition for the Bullard Repeating Arms Company's prizes to-day. The referee was James A. Kimball, the vice-president of the Rod and Gun rifle club, and he attended to his duties faithfully and the rules were strictly followed. The scorer was Howard P. Merrill, the official scorer of the Rod and Gun rifle club. The day was admirable for rifle shooting, and all of the conditions were favorable. The result of the shooting is creditable, and it is doubtful if any company of Massachusetts militia can produce a team of ten men that can compare with this team at the butt. The scores are:

City Guard Rifle Team.

Pvt. M. W. Bull	10	6	6	7	9	9	4	6	6—69	
Creedmoor count	5	4	4	4	5	5	4	4	4—43	
Lieut. H. McDonald	8	4	10	7	8	5	3	6	10	5—66

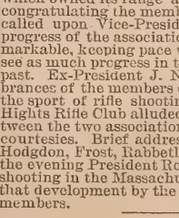
Pvt. T. T. Cartwright	4	3	7	10	6	9	4	7	9	5—64
Creedmoor	4	3	4	5	4	5	4	4	5	4—42
Pvt. Sydney Bowers	8	7	5	6	6	6	9	5	5	6—63
Creedmoor	5	4	4	4	4	5	5	4	4	4—42
Pvt. E. T. Stevens	5	3	5	7	5	7	3	8	6	10—59
Creedmoor	4	3	4	4	4	4	3	5	4	5—40
Sergt. J. A. Sterling	8	4	4	5	5	9	6	4	5	7—57
Creedmoor	5	4	4	4	5	5	4	4	4	4—42
Pvt. W. E. Hosmer	3	7	8	4	5	5	5	5	6	0—48
Creedmoor	3	4	5	4	4	4	4	4	4	0—36
Sergt. J. C. Morgan	3	8	7	3	3	3	6	8	0	5—46
Creedmoor	3	5	4	3	3	3	4	5	0	4—34
Pvt. W. H. Daggett	4	7	4	6	3	4	3	5	5	3—44
Creedmoor	4	4	4	4	3	4	3	4	4	3—37
Capt. F. G. Southmayd	4	3	4	4	4	3	4	5	4	6—43
Creedmoor	4	3	4	4	4	3	4	4	4	4—38

The first score of each man shows the actual count on the target on which the match was scored for the Bullard contest. The second score shows the count on the Creedmoor target. The rules of the match provide that teams using military rifles be allowed 50 points, which, added to the total of 559 made by the team, gives them 609 for their score. All of the team used the Springfield rifle, some with open sights and some with new Buffington sights.



Jan. 15.—The Rod and Gun rifle club did some very even and creditable work with the rifle at Lake Lockout range this afternoon when their team of 10 men shot in competition for the Bullard prizes. The conditions were not unfavorable in regard to light and wind and the light snow was not troublesome. The scores were: H. Engle, 75; T. B. Wilson, 72; O. W. Horr, 71; C. J. Gassuer, 70; F. R. Bull, 69; Z. C. Talbot, 69; L. H. Mayott, 68; H. K. Cole, 66; H. T. Hare, 66; J. A. Wilson, 64; total, 684.

MANCHESTER, N. H., Jan. 13.—This evening six Manchester riflemen shot a team match with six riflemen of Springfield, Mass., the shooting being done in a gallery, distance 50 feet, firing off-hand and upon a Creedmore target, the bullseye being two-thirds of an inch in size. Each man was allowed 20 shots, and out of a possible 600 the Manchester representatives made the remarkably fine total of 570. The scores were as follows:

D Flanders	5555555555	5455455555—97
W M Boothby	5555455554	5545455555—96
C D Palmer	5555555545	5555554445—96
A B Dodge	5555545545	5555455555—96
H A Burns	5455545554	5555545555—96
H A Herrick	4555555544	5545455555—95—570

The targets upon which the shooting is done were forwarded to Springfield and constitute in themselves vouchers for the correctness of the score. The Springfield riflemen will also reciprocate by forwarding their targets.

ELONGATED BULLETS.—Wells, Vermont.—*Editor Forest and Stream:* Inclosed you will find two bullets of .38cal. 255 grains patched, that I shot 100yds. at a piece of cardboard stuck up in a snow drift. The bullets, you will see, are drawn apart or lengthened out, while the marks on the bullets show that this was done after the ball left the gun. I would like to have you explain how it was done, as the bullet did not hit anything but the carboard and snow bank. After shooting I went out to the target, and finding the snow was hard I thought I would find out how far the bullets went into the snow, and on digging out the bullets I found these two. The shooting was done in February, 1885.—A. W.

BOSTON, Jan. 11.—The annual meeting and dinner of the Massachusetts Rifle Association was held last evening at the Revere House, about 80 members in attendance. At the business meeting, at which President H. T. Rockwell occupied the chair, the annual reports of the various officers showed the association to be in an excellent condition, financially and numerically, with over $1,000 in the treasury. These officers were elected: Vice-Presidents, Salem Wilder, C. W. Hinman; Secretary, H. S. Harris; Treasurer, George R. Russell; Directors, C. C. Foster, C. W. Hinman, N. F. Tufts, E. J. Wardwell, O. R. Dickey, J. P. Bates, J. S. Sawyer, J. B. Fellows, N. C. Nash, F. J. Rabbeth, H. T. Rockwell, D. L. Chase, Geo. R. Russell, H. S. Harris, J. E. Leach.

At the dinner which followed, President Rockwell and the officers sat at the head of the tables. After the dinner the President called attention to the fact that, at the end of 26 years the association found itself the only owner of the land in the country which owned its range and had its head entirely out of water, congratulating the members on its standing and position. He first called upon Vice-President Salem Wilder, who also made the progress of the association his theme; this he declared to be remarkable, keeping pace with that in rifle shooting; he hoped to see as much progress in the next ten years as there had been in the past. Ex-President J. N. Frye spoke pleasantly of his remembrances of the members of the association, and of his devotion to the sport of rifle shooting. Secretary Parsons of the Arlington Rifle Club alluded to the pleasant relations existing between the two associations, and hoped for many interchanges of courtesies. Brief addresses were also made by Messrs. Dimick, Hodgdon, Frost, Rabbeth, Tidsbury, Sawyer and others. During the evening President Rockwell spoke of the development of rifle shooting in the Massachusetts militia, and of the part played in that development by the Massachusetts Rifle Association and its members.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

CORONADO CLUB, San Diego, Cal., Jan. 1.—The initial shoot of the Coronado Gun club, Coronado Beach, San Diego Bay. The club had fine grounds to shoot on and enjoyed a splendid meet. Clubs of different states were represented by shooters, Colorado being especially favored by Mr. McLachlin and L. D. Mercer, the first making the only clean score on Macomber targets. He used a beautiful little 16-gauge hammerless Scott & Sons gun and did some fine shooting considering the fact that he had never shot at the trap before. Match at 10 Peoria blackbirds and 15 Macombers, for five prizes which aggregated $25, were won by: Seebold, 1st; Francis, 2d, McLachlin, 3d; W. Hinman, 4th; B. C. Hinman, 5th. Score: H. Seebold, 17; W. Francis, 16; McLachlin, 15; W. C. Hinman, 12; B. C. Hinman, 11; A. B. Pearson, 10; G. A. Merritt, 10; D. B. Hinman, 10; Frank Ecker, 8; Geo. Bidwell, 7; B. Barnes, 6; Bresse, 6; W. Dunning, 5.

Match at 6 Peoria blackbirds and 4 Macombers: Francis, 6; Bidwell, 6; Merritt, 6; McLachlin, 6; Pearson, 5; Seebold, 5; Barnes; 5; W. Hinman, 5; Bresse, 5; Ecker, 5; D. B. Hinman, 4; Mercer, 2, B. C. Hinman, 2.

The ties were shot off as follows, 1st tie: Francis, 1 1 0—2; Merritt, 0 0 1—1; McLachlin, 0 0 0—0. Ties for 2d: Seebold, 0 0 0—0; Pearson, 1 1 0—2; Hinman, 1 1 1—3.

NATIONAL GUN ASSOCIATION.

COVINGTON, Ky., January 11.—*Editor Forest and Stream:* In pursuance to a formal call for the meeting of the stockholders of the National Gun Association, the regular annual meeting of the same was held to-day at 3 P. M. at the office of the County Clerk of Covington, Ky. There were present J. E. Bloom, Alphonso A. Carmichael with proxy of C. Tatham, of New York City, P. F. Robinson with proxy of Al. Bandle, of Cincinnati, O. Also present by proxy given to J. E. Bloom, of Cincinnati, O., Messrs. Matt. R. Freeman, N. B. Wheeler, John C. Jones, A. Onderdonk, F. S. Johnson, F. C. Etheridge, R. F. Lawton, T. B. Blackshear and F. C. Johnson, of Macon, Ga.; W. H. Vincent, Orwell, Vt.; Chas. Tatham, New York City; G. W. Watson, Sacramento, Cal.; B. R. Buffham, Texas; Washington A. Coster, Flatbush, L. I.; E. A. Crawford, Tallahassee, Fla.; A. C. Goodrich, S. H. Kaufman, Cincinnati, O.; Ligowsky Clay-Pigeon Co., Cincinnati, O.; E. A. Sharretts and C. R. Pue, Baltimore, Md.; G. F. Titus, G. E. Reading, H. B. Whitney, F. W. Siefert, A. E. Woodham, J. C. Fleming, J. H. Gates and J. C. Palmer, Hartford, Conn.; E. S. Holmes, J. Von Lengerke, New York City, Al. Bandle, Cincinnati, O.

Upon motion of R. F. Robinson, seconded by Carmichael, J. E. Bloom was elected chairman and Alphonso A. Carmichael secretary of the meeting. Upon motions duly made and seconded the following resolutions were adopted unanimously: Resolved, That the following be elected as directors for the ensuing year; Board of Directors—Dr. L. E. Russell, Springfield, O.; C. M. Stark, Winchester, Mass.; Von Lengerke, New York City; Washington A. Coster, Flatbush, L. I.; Wm. G. Cooper, Savannah, Ga.; C. A. Crawford, Tallahassee, Fla.; Matt. R. Freeman, W. W. Parker, F. C. Etheridge, Macon, Ga. Resolved, That in the non-acceptance of any of the above directors, H. F. Robinson, of Cincinnati, O., be and is hereby elected director in place of the first of such indicating their non-acceptance. Resolved, That we recommend the appointment of the same board of executive committee for the ensuing year with headquarters at Macon, Ga.

There being no further business, adjourned *sine die.*

J. E. BLOOM, Chairman. ALPHONSO A. CARMICHAEL, Sec.

LA SALLE, N. Y.—Matches on the occasion of opening the Niagara River Shooting Club's house. A more comfortable and convenient club house cannot be found this side of New York city, and the boys turned out in good numbers and enjoyed a most pleasant day's sport.

No. 1.—6 blue rocks:

E Moody	110011—4	B Talma	111011—5
S Kellogg	110010—3	Atwater	000110—2
Case	111010—4	Harvey	111110—5
G Moody	111111—6	Jinne	111001—4
Lansing	011010—3	Gombert	111100—4

Second divided, Jinne third, fourth divided.

No. 2.—9 bats:

E Moody	111101111— 8	Atwater	111110111— 8
Kellogg	110111111— 8	Harvey	111010010—11

F Ferris	3	7—10	Wick	9	7—16
O Topf	10	6—16	W E Harmon	3	5— 8
Jack	6	6—12	F C Mustin	9	10—19
W Bing	5	9—14	G Good	8	7—15
J Schatzman	6	6—12	H Powers	7	6—13
J E Miller	9	10—19	Paul	8	8—16
Bemis	7	10—17	Swing	5	18—13
F Krug	5	9—14	Westency	8	7—15
H Ahlers	6	6—12	Williamson	5	4— 9
J Kaufman	7	7—14	C F Droste	4	9—13
F Shaw	6	8—14	McPhee	8	8—16
Al Bandle	7	7—14	Whittock	7	8—15

Tie on 19: Miller 11111 11101—9; Mustin 11011 11111—9. Second tie: Miller 11111 11111—Mustin 11111 11110—9. Miller wins diamond medal. In sweepstake shoot Miller, Bemis and Mustin tied on 10 straight and divided; Premier 2nd; Swing and Maynard 3rd.—CLIMAX.

MEDFORD, Mass., Jan. 15.—The weekly amount of powder and shot were consumed at the Wellington Gun Club grounds to-day with the following result: 1. Six blackbirds—Shumway and Wardwell first, Wilson second, Sanborn and Henry third. 2. Six clay-pigeons—Wardwell first, Wilson and Henry second, Sanborn third. 3. Six blackbirds—Shumway first, Sanborn and Snow second, Ames third. 4. Six clay-pigeons—Wardwell and Wilson first, Sanborn second, Shumway third. 5. Six blackbirds—Wardwell first, Wilson and Sanborn second, Shumway third. 6. Six blackbirds—Wardwell first, Stanton second, Short and Swift third, Snow fourth. 7. Six clay-pigeons—Wilson first, Short second, Ames third. 8. Ten clay-pigeons, for badges—Wardwell first, Moore, Warren and Sanborn second, Wilson third, Short fourth, Wardwell A badge, Moore B badge, Wilson C badge. 9. Six blackbirds—Shumway first, Snow and Short second, Wardwell third, Sanborn fourth. 10. Six clay-pigeons—Wardwell first, Swift second, Moore third, Brown fourth. 11. Three pair blackbirds—Wardwell and Shumway first, Snow second, Brown third, Adams fourth. 12. Six clay-pigeons—Wardwell first, Stanton and Sanborn second, Shumway third. 13. Six blackbirds—Shumway and Wardwell first, Sanborn and Stanton second, Swift third. 14. Six clay-pigeons—Wardwell and Snow first, Brown second, Baxter third. 15. Six bluebirds—Wardwell first, Stanton second, Swift and Colt third. 16. Three pairs bluebirds—Wardwell first, Shumway second, Swift, Snow and Stanton third.

EUREKA CLUB, New York, Jan. 6.—The first shoot of the season of 1887 by the Eureka Gun Club of New York, at their grounds, Secaucus, N. J., Jan. 5, was attended by only a few of the members, it being a very stormy day, alternating with snow and rain. Match at 10 bluerocks, 21 yds.:

Kelly	1011011011—7	Quick	1100110110—6
Ficken	0100110110—5	Strope	0110011101—6
Smultz	0011001011—5		

Quick took 2nd, Strope 3rd. Match at 10 clay birds:

Kelly	1001110111—7	Quick	0011010001—4
Ficken	1011011110—6	Strope	1011111111—9
Smultz	1001011111—7		

Match at 10 bluerocks:

Kelly	0001101110—5	Quick	1011011111—8
Ficken	1011100010—5	Strope	0001111011—6
Smultz	1100111011—7		

Match at 10 American clays:

Kelly	1001101100—6	Quick	0111001110—6
Ficken	1101111100—7	Strope	0001101101—5
Smultz	0111011011—7		

Ficken 1st, Smultz 2nd, Quick 3d.

Kelly	10010—2	Quick	10010—2
Ficken	01110—3	Strope	11110—4
Smultz	00101—2		

Kelly took 3d.

This club was organized in October, and is now on a solid and satisfactory basis with a good lot of wide awake members. President, Frank Ring; Vice-President, J. H. Ficken; Secretary and Treasurer, Ezra D. Strope.

BROOKLYN, Jan. 12.—The half-mile track at Parkville to-day had its snowy mantle pretty well disturbed by the members and friends of the Coney Island Rod and Gun Club. It was the regular shoot and attracted a very good attendance. Fourteen members competed for the club prizes and nine shot in a subsequent sweepstake. Under Sheriff McLaughlin, the president of the club; J. Shevlin, Judge Courtney and others well known competed. In the club shoot J. Shevlin and H. Monsees divided the first prize. L. Duryea used his second barrel once and won the second prize. The fourth prize was divided between McLaughlin and R. Monsees. The club sweepstakes, the use of both barrels, which followed, was divided between Defrane, Lake and McLaughlin. Out of 150 birds shot at 105 were killed and 45 escaped.

Monsees, 21yds	0 1 1 1 1 1 1—6	Courtney, 21yds	0 1 1 1 0 1½—4½
J Shevlin, 21yds	1 1 1 1 1 1 0—6	M'Laughlin, 25y	0 0 1 1 0 1 1—4
L Duryea, 29yds	1½ 1 1 0 1 1—5½	Monsees, 27yds	0 0 1 1 1½ 0½—4
Defrane, 26yds	0 1 1 0 1½ 1—4½	C Wickes, 27yds	0 1 0½ 1 1 0—3½
J Smith, 28yds	1½ 1 1 0 0 1 1—4½	F Lanzer, 21yds	1 0 0½ 1 1 0—3½
Schwartz, 27yds	1 0 1 0 1 1½—4½	Herreshof, 26y	0 0 0 0 1 1½—2½
J G Lake, 21yds	1 0 0 1 1½ 1—4½	W Hayes, 24yds	0 1 0 1 0 0—2

Ties for third prize: 26yds., J. C. Defrane..111—3; 28yds., J. Smith..100—1; 27ds., A. Schwartz..011—2; 21yds., J. Lake..110—2; 31yds., J. Courtney..110—2.

Sweepstake.

J C Defrane, 26yds	1111—4	J Shevlin, 24yds	1110—3
J E Lake, 21yds	1111—4	H Monsees, 21yds	1110—3
H McLaughlin, 25yds	1111—4	A Schwartz, 27yds	1100—2
L Duryea, 29yds	1110—3	J Leaycraft, 25yds	0000—0
A Smith, 25yds	1110—3		

BROOKLYN, Jan. 13.—Regular monthly shoot of the Unknown Gun Club, six live birds each. R. Monsees won the gold medal for the first time, beating C. Platt one bird in the shoot off, but they divided the first prize. There were fifteen ties for second and third prizes, but there being no birds to shoat off, it was agreed to let the club have the benefit of the prizes. H. and T. traps, one barrel, gun below the elbow:

C Platt, 24yds	6	J Cahill, 21yds	4
R Monsees, 23yds	6	H Pope, 24yds	4
M Mather, 23yds	6	Knebel, Sr., 25yds	4
R Midmer, 23yds	5	J Arhurst, 23yds	4
J Bohling, 25yds	5	A Hass, 23yds	3
W Tomford, 25yds	5	D McQuillan, 24yds	3
L Boyle, 21yds	5	G Smith, 25yds	3
J Rathjen, 24yds	5	J Schwack	3
H Knebel, Jr., 22yds	5	E Dricke, 24yds	2
J Schroder, 25yds	5	J Blohm, 24yds	1
A Harned, 23yds	4	R Stillwell, 23yds	1
M Chichester, 25yds	4	H Van Studen, 23yds	0
W Lemken, 25yds	4		

FLEMINGTON, N. J., Jan. 15.—It would be impossible to find a worse day for a shoot than the Flemington Gun Club had for their semi-monthly shoot to-day; the ground was covered with slush 6in. deep and the wind blew a gale all the afternoon and it was very cold and disagreeable. Match at 10 bats and 10 clay-pigeons, 20yds. rise:

Hyde	1100111111—8	1111011111— 9—17	
A Shepherd	0110110111—7	1011111010— 7—14

PROPOSED NEW JERSEY ASSOCIATION.—Flemington, N. J., Jan. 17.—*Editor Forest and Stream:* Believing that for the benefit of the sportsmen and trap shooters of New Jersey there should be an association, to be known as the New Jersey State Sportsmen's Association, it is proposed to hold a meeting at the American House, in Trenton, N. J., April 19, at 7 P. M., for the purpose of forming an association for the protection of game birds and fish, and for the promotion of shotgun wing-shooting throughout the State. All sportsmen and trap shooters in the State are invited to attend. For further information address, W. A. Cotter, G. E. Reading or S. N. Reed, Flemington. Those proposing to be present should notify the said committe on or before April 1.—S. E. Reading.

ESSEX ASSOCIATION.—The Essex County (N. J.) Gun Association held its first meeting in the tournament Tuesday, at Erb's grounds, Newark, N. J., five men on a side, 20 pigeons each, National Gun Club rules. All of the five clubs in the Association were represented, and the first match was won by the South Side Gun Club, of Newark, with a score of 52 out of 100. The Mountain Gun Club, of Orange, came second with 48; the East Orange Gun Club and Nimrods, of Newark, tied for third place with 37 each, and the Mountain Sides, of Orange, came last with 18. The poorness of the shooting may be accounted for by the cold, strong wind. After the match a sweepstakes was shot off, in which 12 entered at 3 birds each. W. Graham, the English wing-shot, and C. Hedden divided first money, killing four straight. O. Yeomans and A. Manitz divided second, killing three each.

MASS. RIFLE ASSOCIATION.—Second competition for gold badge in the Macomber badge shoot (O. R. Dickey present owner), will be held at Walnut Hill Range, Wednesday, January 26th. The days events include: 1. 6 clay pigeons; 2. 6 Macombers; 3. 6 bats; 4. 3 pair of clay pigeons; 5. 6 Macombers; 6. 10 clay pigeons; 7. 6 bats; 8. 3 pair clay pigeons; 9. Badge match, 10 Macombers, optional sweep; 10. 6 clay pigeons, straightaway; 11. 25 clay pigeons; 12. 6 bats, straightaway; 13. 3 pair bats.

TORONTO, Jan. 11.—The second annual meeting of the Owl Gun Club was held at the club's new rooms, King street, east, this evening. There was a large attendance of members and much enthusiasm was manifested over the flattering prospects of the club. A number of new members were elected. The following officers were elected: President, J. R. Humphreys, Vice-President, T. Lalor; Sec.-Treas., J. C. Unwin; Executive Committee—J. R. Wells, A. J. Tymon, A. R. Lockhart, W. McDowell and F. Mallett.

MIDDLESEX GUN CLUB.—The first annual tournament will be held at Dunellen, N. J., Feb. 21 to 25. General sweepstakes shooting at artificial targets and live birds. For particulars address W. W. Mulford, Plainfield, N. J.

Canoeing.

FLORIDA C. C.—Jacksonville, Fla., Jan. 8.—The annual races of the Florida C. C. took place on New Year's day, Dr. C. A. Neidé being judge. Sailing race, Class B, two prizes: First, Madeleine, B. H. Barnett; second, Ida C., R. M. Call. Sailing race, Class A, one prize: First, Enola, V. H. Hubbell. Paddling race, one prize: First, Ida C., R. M. Call. Madeleine was also declared winner of the third race of the semi-monthly series for the silver cup. At the election of officers thereafter held, the following were re-elected for the ensuing year: Captain, Bion H. Barnett; Mate, R. M. Call; Secretary and Treasurer, A. Wm. Cockrell, Jr.; Executive Committee, Mate, Secretary and C. S. Adams. The club flag is a white pelican on blue ground, in shape a pointed burgee, in size 4 x 6ft. Instead of it, however, a canoe is to have a smaller black pelican, the club totem in the peak of the mainsail.—SECRETARY F. C. C.

WESTERN CANOEISTS AND THE A. C. A.

Editor Forest and Stream:

Now that the W. C. A.'s relations with the A. C. A. is being discussed, will you allow an explanation on a point or two of seeming error in your remarks following "No. 76 W. C. A.'s" communication, and also some additional history not generally known by our Eastern brothers, from one who helped organize the A. C. A. in 1880 and worked in its interest through its early days until it reached a safe anchorage, through the careful pilotage of such old heads as Commodores Alden and Longworth and skippers Bishop, Stephens, Vaux, Whitlock, Ellard, Wulsin and others; and who in after years, recognizing the strength of this association among the Eastern and East Canadian canoeists, concluded that it would be folly for the comparatively few Western members to cherish a hope of a Western meet under the management of the A. C. A., turned his thoughts to the possibility of a Western meet, and had made it a subject of discussion at one of the Saturday night meetings of our club, when soon after a letter was received from a member of the Cleveland C. C. proposing a Western meet, and giving as his reason the distance to travel and inconvenience in reaching Grindstone by Western men. This was in 1884, in the month of October or November, some time before the suggestion in the FOREST AND STREAM of a Western branch of the A. C. A. From this on the Cleveland C. C. pushed the matter, taking all the responsibility, doing all the work, which finally made a success of the meet and formed the W. A. C. A.

The name Western American Canoe Association was given, believing that as soon as the A.C.A. meet was held, that a satisfactory arrangement could be made whereby we could become a branch, and it was so arranged that the name could be changed at any time by inserting the word "branch" or division. There was no intention of proclaiming by this act our independence, but only to provide, within our reach, as to expense and time, a meeting place for Western canoeists. We were informed by one of our Eastern friends, who joined us at this our first meet, that it was suggested and seemed to be generally in favor among the A.C.A. members, that branches be formed to accommodate the different sections, and officers for the association be elected by delegates from the branches, and that the A.C.A. become the head from which all rules, laws, etc., governing camps, races, boats, rigs, etc., emanate, as explained in Article 3, in the constitution, as the "object of the Association." As it was talked of then the A.C.A. annual meet was to be discontinued, leaving this branch of the sport to the "divisions," and that they (the divisions) be assessed the expenses (per member) of the A.C.A.

These expenses to consist of postage, printing, advertising and clerical expenses necessary to address circulars, annual books, etc. This plan, although not worked out in detail, seemed to us Western canoeists to meet the case, and we requested our Eastern friend to represent our case at the A. C. A. meet to be held the following week at Grindstone. That he did so, and faithfully, too, we are well assured, for he is too good a fellow to accept a trust and not discharge it truly, but that is the last we heard of this subject officially until the executive committee meeting of the A. C. A., when the plan for the formation of the Divisions was published in the FOREST AND STREAM. About this time we learned, unofficially, but through a channel that could not err, that if we wished to become a branch of the A. C. A. we must "surrender unconditionally." Now, we had made no revolt, the majority of our members belonged to the A. C. A., we organized simply to provide a meet and camp, where Western canoeists of limited time and funds could attend and enjoy the sport, and the meaning implied in "unconditional surrender" placed us in such a position, and does yet, that it would be impossible to form a Western branch of the A. C. A. out of the W. C. A. The majority of our members, when the W. C. A. was organized, had belonged to the A. C. A. in 1880, 1881 and 1882, the years when the hard work of placing the A. C. A. on a firm footing fell, and we naturally feel an interest in the A. C. A. and want to see it continue as the head of all canoeing interest in America, and when the time comes the W. C. A. will not be found lacking in its loyalty to the old flag if we are met in the true spirit which should govern all canoeists. If there is any other reason that "is now pretty well known" than what is herein stated, let it come out and no longer remain a secret under some one's pea jacket, for if there be a "skeleton in our closet" it is not known to the members of the W. C. A.

No. 5 W. C. A.

[The messenger of the Western canoeists presented to the executive committee of the A.C.A. the report prepared by the secretary of the W. A. C. A., in whose hands all the negotiations were intrusted, which report expressed a "willingness to reorganize the A.C.A." In intrusting the report to the chosen messenger the Secretary added verbally that the only terms on which any union was possible were that the A. C. A. should first dissolve its organization, after which the W. A. C. A. would be willing to consider the subject of a reorganization. He declared emphatically that no negotiations were possible between the W. A. C. A. and the A. C. A. as a body. This statement was made by the secretary and chosen representative of the Western canoeists, acting for them in the negotiations, and while it was not put in writing by him, it was impressed most emphatically on the bearer of the letter to the A. C. A. in several lengthy conversations. The latter considered it his duty to include it in his report, the more so as it was confirmed by the tenor of the two letters he bore. The executive committee of the A. C. A., in referring to the list of members, found that this demand for dissolution of the Association was made on behalf of less than five members out of a total of over 700; and such being the case they declined to accede to it. If their secretary did not correctly present the views of the Western canoeists, then they must find fault with him and not with the A.C.A. The feeling at Ballard Island in 1885 was largely in favor of a union with the A. C. A., but the secretary and a very few others strongly opposed such a course, favoring an independent association.]

PECOWSIC.

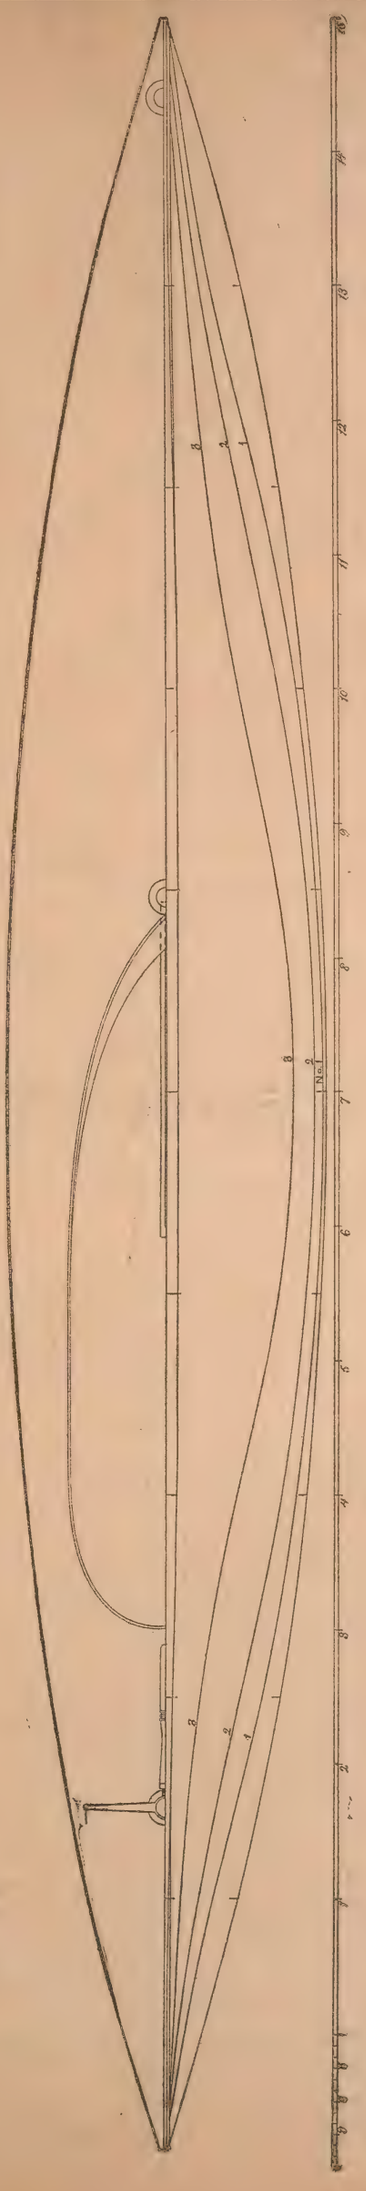
PERHAPS the greatest pleasure that comes to most owners of boats is not so much in actually possessing the fastest craft of all, as in the continual effort to gain that desired end by surpassing the similar efforts of others; a competition that is often more exciting and engrossing than the final test by which in a few hours the results of this labor are proved to be satisfactory or the reverse. It often happens that the development of the highest capabilities of a yacht is the work of several seasons of careful and painstaking effort, and of many changes and experiments; work that calls into play all the inventive faculties and reasoning powers, but that ultimately brings a far higher reward when success is attained than do the briefer and less intellectual struggles of the regatta course. It is from this point of view that the canoe, looked on contemptuously by many as a mere toy, and unworthy of serious notice, commends itself to a large number of intelligent men as a fitting subject for their study. Where the first cost of a yacht may range from ten to thirty thousand dollars, and the cost of any changes are in proportion, there are comparatively few who are able to follow the sport to its fullest extent; but in the canoe, while the cost of boat, outfit, and a season's racing will not exceed two or three hundred dollars, the interest is no less intense, the competition is as keen, and the rewards are great in proportion. In no other sailboat, perhaps, is there so much room for ingenuity and invention. The small size of the boat and the amount of work her crew of one must do makes it necessary that everything should be arranged to the best advantage, while the strong competition between the various craft, both in home and distant races, is a constant stimulus toward improvement in model, rig and fittings. Every one familiar with the leading canoes will recognize the fact that each testifies not only to her owner's skill as a sailor but also as a designer, rigger and inventor, and that each boat, while all are alike to the casual observer, possesses a marked individuality of its own.

From this point of view no less than from the prominence which he has lately attained, the canoeing experience of Mr. E. H. Barney of the Springfield C. C., is a most interesting and instructive one. Taking up canoeing as a novice, at an age when most men have given up such sports, he has in less than three years won a most enviable place among the leaders of the sport. Mr. Barney began his canoeing early in 1884 with a lateen rigged canoe of good model and fitted in the best style of the leading builders; but a short trial served to show many points that were capable of improvement. The rudder, fitted in the usual manner, was not perfect by any means and soon gave place to an original method of his own that is no less admirable for its effectiveness than for its simplicity and mechanical perfection. With this came a new deck tiller, a rudder yoke that could not foul the mizzen sheet, the "fishtail" rudder and many smaller details. A little experience brought changes in sails, rigging and centerboard, until this novice was soon looked upon as one of the leaders in the field of canoe inventions. His first boat was soon discarded for a better, and this in turn made way for a third, until the fifth, the well-known Pecowsic, was purchased last year.

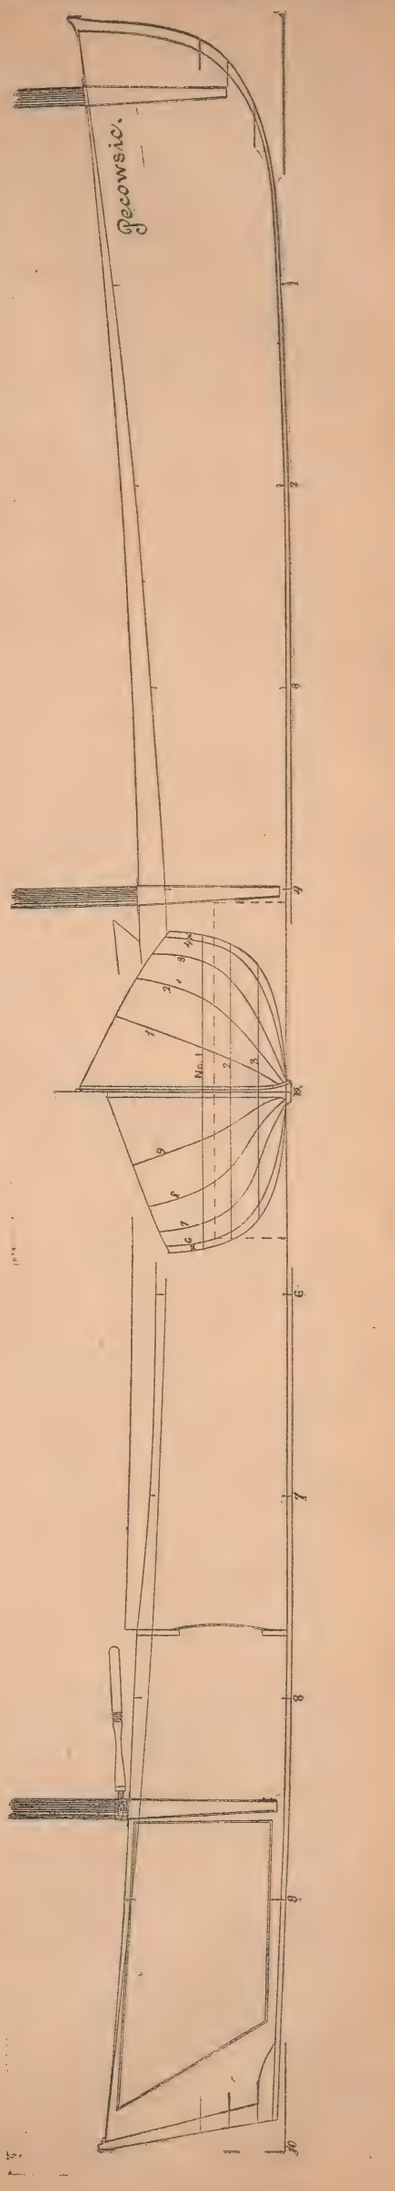
Three of these canoes have borne the name Pecowsic, the one here illustrated being the third; and this, like its predecessor, was built for Mr. Barney by F. Joyner, of Glens Falls, N. Y. The model was made by the builder to Mr. Barney's order, and the method of construction, the smooth-skin lap, shown in the FOREST AND STREAM of Oct. 30, 1886, is the same as Mr. Joyner has em-

ployed so successfully for some time. The general arrangements, the positions of masts, board, etc., as well as the entire rig, were planned by Mr. Barney. The accompanying lines were very carefully taken from a small drawing, and the full-sized outlines of the moulds, furnished by Mr. Joyner; but some fairing was necessary to put the drawing in its present shape. The midship section shows far less deadrise than an inspection of the boat itself would indicate, the cutting away of the ends giving an idea of a sharp V section, quite different from what the drawing shows. The bulk of the hull is small, and its internal capacity limited, though it is claimed that there is ample room for cruising outfit, and that the boat is well adapted for general work. There is but one bulkhead just abaft the well, closed with one of Joyner's circular hatches. The fore end of the boat is entirely open, to permit of the stowage of spars and sails. The board is a sheet of thin brass only 30in. long but rising high above the top of the low trunk, shown by the dotted lines in the sheer plan; before the meet the board was shifted 10in. forward of the position shown. The well is short and far aft, while the trunk interferes with the room, and sleeping must be difficult if not absolutely impossible. As no ballast is carried and there is little weight of metal, the danger of sinking if filled is removed, especially as one air tank is carried in the after end. The weight of the hull, about 100lbs., is nearly all made up of wood. The dimensions are as follows:

Length	extreme	15ft. 10¼in.
	L.W.L.	15ft. 6 in.
Beam	extreme	28⅜in.
	L.W.L.	27¼in.
Depth, amidship		9¼in.
Sheer	bow	8 in.
	stern	5¼in.
Draft		6¾in.
Crown of deck		2¾in.
Well	width	17 in.
	length	5ft. 00¼in.
Foreside of stem to foremast		7 in.
Foreside of stem to mainmast		6ft. 6¼in.
Foreside of stem to mizzenmast		13ft. 4 in.
Foreside of stem to well, fore end		6ft. 10¼in.
Foreside of stem to well, after end		12ft.
Foreside of stem to bulkhead		12ft.
Foreside of stem to centerboard trunk, fore end		6ft. 7 in.
Foreside of stem to centerboard trunk, after end		9ft. 1 in.



Diameter of masts: The first station is 2ft. from stem, the others are each 18in. apart. The waterlines are 2½in. apart.



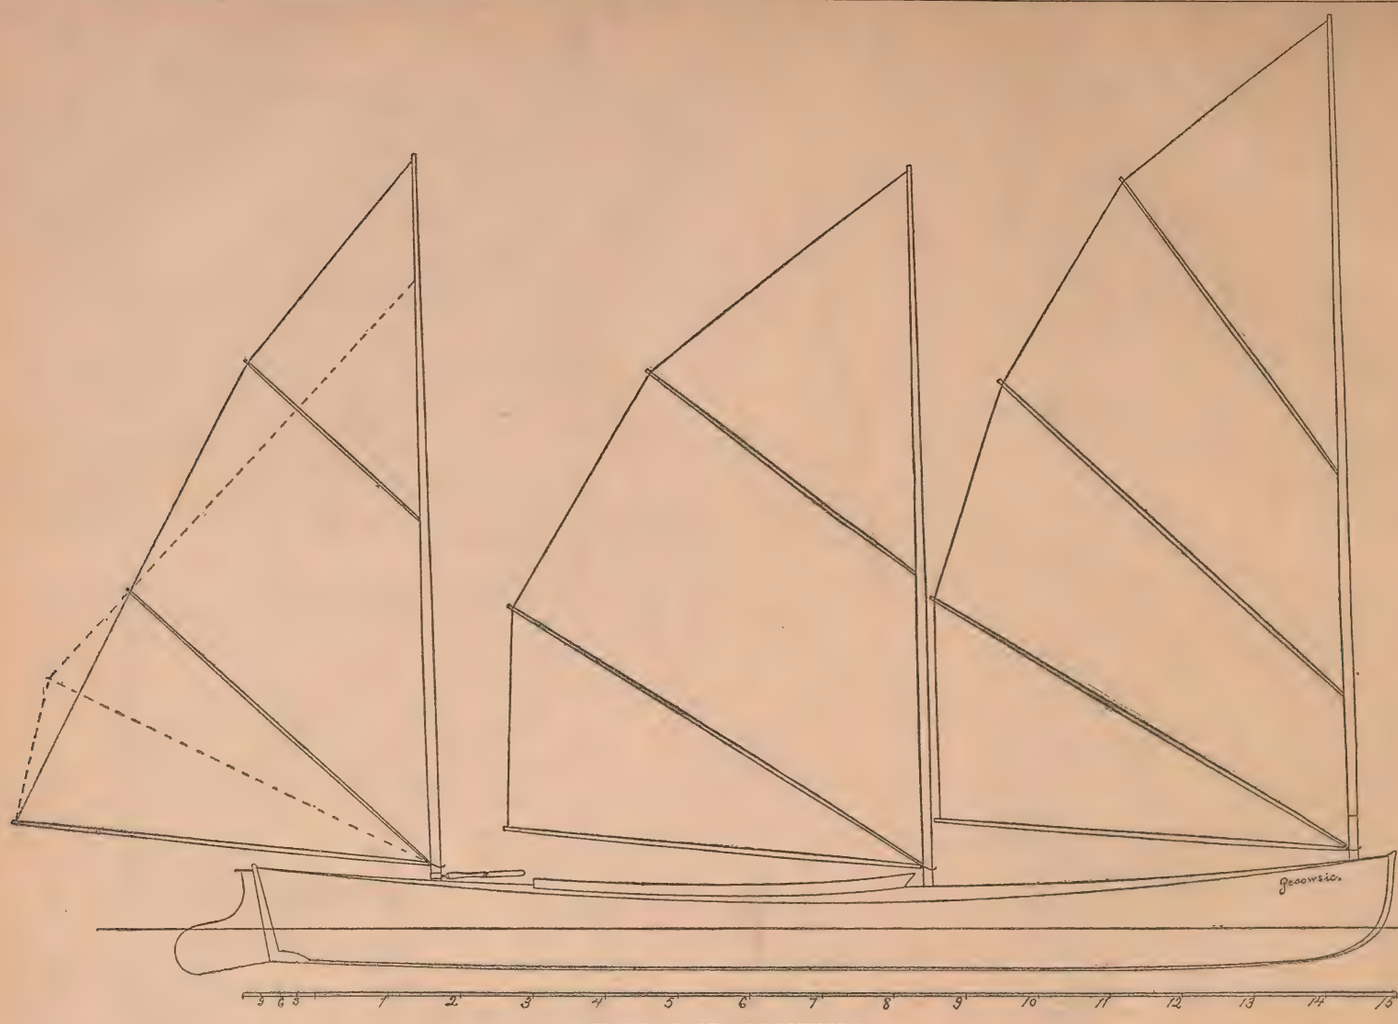
The most peculiar feature of the boat is her rig, differing as it does from anything else in canoeing. The advantages of the simple leg o' mutton sail were too apparent not to be quickly seized upon by canoeists, but a difficulty was experienced in obtaining sufficient area; besides which the sail is hard to hoist in such small sizes, the mast rings having no weight and being liable to jam very frequently. After being used for some years the sail was abandoned in favor of others; but after trying the others in turn, Mr. Barney was attracted by the simplicity and efficiency of the leg o' mutton sail, especially for an unballasted boat of narrow beam, and began to experiment with it, making his own sails. To overcome the first objection he added a third sail, thus making up the area; while it was well distributed over the length of the boat, and at the same time the center of effort is kept low, an important point in such a craft. The second difficulty, that of handling, was disposed of by lacing each sail to its mast and not attempting to hoist or lower it, the mast and all being removed and a smaller substituted if reefing was required. To do this successfully five sails are carried, the masts and tubes being all of one size. Three of the sails may be set at once, the other two being stowed below. It would seem that not only is this shifting a matter of difficulty in many cases, but that the sails below would be a serious incumbrance in so small a boat, but those who have used her state to the contrary.

The sails and spars are as follows:

Mast.	Boom.	Battens, No. of.	Area.
No. 1, 8ft.	5ft. 10in.	1	22 sq. ft.
No. 2, 10ft.	5ft. 10in.	2	28 sq. ft.
No. 3, 10ft.	5ft. 10in.	2	33 sq. ft.
No. 4, 10ft.	5ft. 10in.	2	38 sq. ft.
No. 5, 11ft. 8 in.	5ft. 10in.	3	42 sq. ft.

The sails shown are Nos. 5, 4 and 2, No. 1 being indicated by the dotted lines, while No. 3 is similar to No. 4, but smaller. The greatest possible area is 113ft., the least 22ft. The booms are limited in length by the distance between main and foremasts, and the first batten in each sail, except No. 2, is to gain more area. The other battens were added to make the sails sit properly, as they bagged in places through not being cut by a sailmaker. Mr. Barney has used very light spars, the masts being slender sticks with a quick taper, and so bearing little weight aloft. The booms are fitted with brass jaws, allowing them to top up easily. The sails are fastened to the spars by small wire staples, such as are used for blind slats. No lines of any kind are used except the sheets, and the extreme limit of lightness and simplicity is reached. Pecowsic's success at the last meet has gained her a wide-spread reputation and has provoked much discussion over her supposed merits and defects, as she differs so greatly from most of the canoes now in use. Since the meet Mr. Barney has ordered two similar canoes. Com. Jones, of Hartford, has had one built with which he is well pleased, and there promises to be a number of similar boats in use when the season opens. Several will be built in England and one will be added to the fleet of the New York C. C., with the result that the full capacities of the model for all kinds of service will be pretty accurately determined by the end of the season.

"PECOWSIC."—MR. E. H. BARNEY, SPRINGFIELD C. C.



QUAKER CITY C. C.—*Editor Forest and Stream:* The semi-annual meeting of the Quaker City C. C. was held on Dec. 30, the following officers being elected: Commodore, S. L. Leavy; Vice-Commodore, J. C. Munchen; Secretary and Treasurer, J. A. Barten; Executive Committee, A. A. Jackson and E. H. Barten. The committee on club dinner reported that the dinner will take place on Jan. 31. The committee on building have also exhibited plans of the new "barn" which will be built in the spring. After the meeting adjourned each member had "something new" to show. The Commodore and Secretary exhibited the lines of their new cedar canoes, one of which is being built by Glass, a well-known local shell and barge builder. The Commodore's boat is 30in. and will have a Radix board, while the other will probably be 28in. and will carry two plate boards, somewhat like those of Lassie. Only two sail plans were shown. Balance lugs and Mohicans were the favorites the past summer, but the Chinese sail will not be in favor this summer, judging from the sail plans. The Mohican seems to be the only sail that will be carried this season. Vixen's owner will alter her huge balance lugs to a moderate size Mohican. Scamp will carry her 75ft. Mohican in the hands of a novice. Mermaid, the new flagship, will have a small suit of Mohicans for cruising. Caprice is having a sail made, which was designed by a member, and looks very much like the sail lately published in the FOREST AND STREAM, but having the advantage of a shorter mast and the spars being all of one length. The reefing gear is so arranged to take in one or two reefs, as may be desired, with but a single reefing gear. The canoe is also having a centerboard put in in place of a keel. Malta, the Secretary's new canoe, will also carry a Mohican rig, which will keep her skipper on deck. A new member, an electrician, is building an electric motor which he intends to apply to his canoe, and according to his calculations it is expected to show good speed.—J. A. B.

MOHAWK C. C.—The annual meeting of the Mohawk C. C. was held in their new club house on Jan. 6, the following officers being elected: Captain, Geo. H. Rich; Mate, Arthur G. Vier; Secretary, Geo. C. Bascom; Purser, Wm. R. Hakes; Executive Committee—G. H. Rich, A. G. Vier, G. C. Bascom, W. R. Hakes and Louis Rich. The club is in a prosperous condition, having built a new house during the past summer with floor accommodations for twenty boats. The membership is rapidly increasing. Six or eight new boats are being built for the coming season.—GEORGE C. BASCOM, Secretary.

THE CRUISE OF THE LITTLE NAN.—Little Nan was a canoe 15×34, in which, in 1881, Mr. Ben. C. Wilkins, of Clinton, Iowa, made a cruise from St. Paul down the Mississippi for a distance of 500 miles. What her crew saw and the adventures they met is pleasantly told in a little book published by Mr. Wilkins and first printed by himself on a small press for private distribution. Since then it has met with such favor that a second edition on a larger scale has lately been issued by the Huronite Pub. Co., of Huron, Dakota.

AN AMATEUR'S CANOE.—We have received from a canoeist in Keokuk, Iowa, a photo of a very nice-looking canoe built by him from the lines and description in "Canoe and Boat Building." The builder is an amateur, and this is his first attempt, but from the photo it appears to have been very successful. The model is that of the American cruising canoe, designed by the author of the book.

RONDOUT C. C.—This club is largely interested in the R. I. Y. C., and some of the canoeists are busy now in sailing the latter slippery craft.

"SAIL PLAN OF "PECOWSIC."

KEYSTONE C. C.—The first annual meeting of this club was held at the house of the purser, on Jan. 7, 1887. The officers elected were: Captain, W. T. Norgrave; Mate, Geo. Boshart; Purser, Richard Binder. A motion was passed to change the titles of officers to captain, mate and purser, instead of commodore, vice, etc., as those titles were improperly used when referring to only one club. Our view is that all the clubs in one vicinity should unite and form a division, and then they could elect a commodore and the one presiding at the A. C. A. meet should be called admiral of the entire association. The A. C. A. should establish a rule regarding the above and no club allowed to enter the association unless complying with the above rule, but as it is now clubs call their officers by any titles they wish. The FOREST AND STREAM several weeks ago contained an article signed Chas. L. Work, regarding the slow progress of canoeing on the Delaware, and also making the remark that all the canoeists are mere boys. Now I wish to tell Mr. Work that the youngest member of the Keystone C. C. is nineteen years of age and the oldest is 45 years, and I believe that the Philadelphia C. C. has only one member under 20 years. Now if Mr. Work will pay us a visit at the boat house, managed by Mr. Geo. Louder, next summer, we will kindly show him the progress of canoeing in three years' time, and also have a friendly race with him. From what I can learn Mr. Work is the proprietor of a ducker which is one of the fastest on the river, nevertheless I doubt his ability of going two feet to our one. Two new members were admitted into the club, making the total membership 12. It was also decided to build an addition to the club house for the accommodation of several new canoes, as our present quarters are filled. I also wish to mention something in regard to the boat houses on the Delaware. They are built in rows of 10 to 15 in two or three rows, and are 20ft. deep by about 10ft. wide, and have double doors below and a second story with windows at each end, and they rent from $25 to $30 a year, and each house will hold six canoes, which makes it very cheap for each member, only $5 a year. The burgee of this club is a white keystone in a blue field.—MOHAWK.

Yachting.

Address all communications to the Forest and Stream Pub. Co.

THOSE PLANS OF THE THISTLE.

THE following telegram to the New York *Herald*, from its correspondent in Glasgow, further corroborates our statements in regard to the alleged plans published in this country:

GREENOCK, Jan. 13, 1887.—I called on Mr. Watson, the designer of the Thistle, this forenoon and showed him the pictured plans and extracts from the Boston *Herald* in regard to the Thistle, which is about to be built by Messrs. Henderson at Partick-on-Clyde to compete for the America's Cup next summer at New York. I asked him if the description given was correct. He said, "It is not correct."

I then asked him how he accounted for the publication of such minute plans. He replied, "When I had drawn up the general idea of what the yacht was likely to be, several builders on the Clyde were supplied with specifications of what the vessel would be like, and they were asked to send in offers for such a vessel, and it may be that one of these specifications was obtained by the Boston *Herald*, and doubtless in good faith. But what they printed is not at all what the Thistle will be."

"Did you expect from the beginning that a move might be attempted to get the specifications by any but correct means?"

"I did."

"Why?"

"Because pressure was put on me to get the plans of the yacht, not only by a representative of the Boston *Herald*, but also by others."

"Why is the matter to be kept secret?"

"I have no notion of letting any person know for some time the details of the vessel, but when she is nearer being finished I will give them."

"I see by the *Scottish News* of this morning," I continued, "that the Thistle is to be built in a shed," and then I read the following paragraph:

The America's Cup.—As a proof of the secrecy to be observed in the construction of the Thistle, Messrs. D. & W. Henderson & Co., of the Meadow Side Shipbuilding Yard, Partick, are, it is stated, erecting at present a large wooden building at the edge of the Kelvin River, in which the details of the racer will be wrought out.

"Do you think the workman will not give information?" I inquired.

"Only the most trusted workmen will be allowed to work on her," replied Mr. Watson, "and there is no chance of them telling much even if they wanted to do so, because the work will be done by them in sections."

He added that the shed would be built and locked so that no person could see into it from the outside.

I asked him when he would explain her plans. His answer was, "Not for at least three months."

THE OCEAN YACHT RACES.

THE Royal Thames Y. C., at a meeting on Jan. 14, decided on a course around Great Britain and Ireland, a distance of 2,000 miles, for the Jubilee Race, the date to be early in June. The start will be made from the Thames, keeping England on the port hand. Yachts of all nations will be eligible, but the conditions in regard to time allowance, if any, centerboards, etc., have not been decided upon. It is certain that some American schooners will join the Coronet in a sail across, but how many is not known. Mr. C. H. Colt, of the Dauntless, has sent the following letter to the N. Y. Y. C.:

NEW YORK YACHT CLUB.—New York, Jan. 16, 1887.—John H. Bird, Esq., Secretary, etc.: Dear Sir—In reference to the challenge of Captain Bush, of the Coronet, to sail any keel schooner yacht flying the American flag from Sandy Hook to Queenstown, I desire to state that the yacht Dauntless will be ready to sail such a race for $10,000 sweepstakes any time between the 1st and 15th of March, according to the conditions named in said challenge. Yours truly, C. H. COLT.

Mr. Bush has written to the *New York Herald* as follows in regard to the course selected:

"One thousand guineas as a premium for recklessness seems to me to be the present aspect of the coming Jubilee race. Should the Royal Thames Yacht Club lay the course for their Jubilee race around Great Britain, the inevitable outgrowth will be a good deal of reckless sailing. It must not be forgotton that the British coast is exceedingly irregular, beset with all kinds of tide currents and much of the time enshrouded by a dense fog. These objections will probably be sufficient to keep any stranger from entering his yacht in the race on such a course. If I am correctly informed a very large number of vessels are annually lost on these British coasts. The owner who is willing to take the chances of running his yacht close under the land, and perhaps, dodging through narrow passages at times, will, if he does not lose his vessel, probably win the race. On the other hand, the yacht owners who are more prudent, and direct their sailing masters to keep well off, will probably 'get left.' True, a vessel on an outer course would probably encounter better winds, but probably not enough better to make up for the extra distance that would have to be sailed.

"I trust every English and American yachtsmen would be pained by the loss of lives, particularly in a 'Jubilee race,' for there are methods enough of merrymaking without imperilling human life unnecessarily. On any course free from great danger I would be pleased to sail the Coronet in company with the yachts of our English brothers, but not on a dangerous, circular coast course.

"If an ocean race proves nothing, a race on such a course, with such tide currents, would, I think, prove still less.

"It is doubtless true that 'bathtub sailing,' such as has been recently indulged in by American sloops and English cutters, the conditions met with by all the yachts being nearly identical, is the best for testing and comparing the speed of small craft, but to determine both the seagoing and sailing qualities of large craft, I know of no way but to put them out of door, on the ocean.

"In a short ocean race of two or three days the difference in winds and currents my cause the fastest vessel to lose the race, but in crossing the Atlantic the various conditions met with by the different yachts, when taken together, will, I think, make an average for each one which will not differ materially from the average of the others.

"To and around the Azores, or even the Bermudas, would be preferable for a 'Jubilee race,' as it would give plenty of sea room in latitudes usually free from fog, hence comparatively from danger.—R. T. BUSH" (New York, Jan. 18, 1887.)"

HULL Y. C.—At the last meeting, Jan. 7, the sailing rules were amended so that racing yachts must carry their signals on the leach of mainsail, one foot below the gaff, instead of at the topmast head.

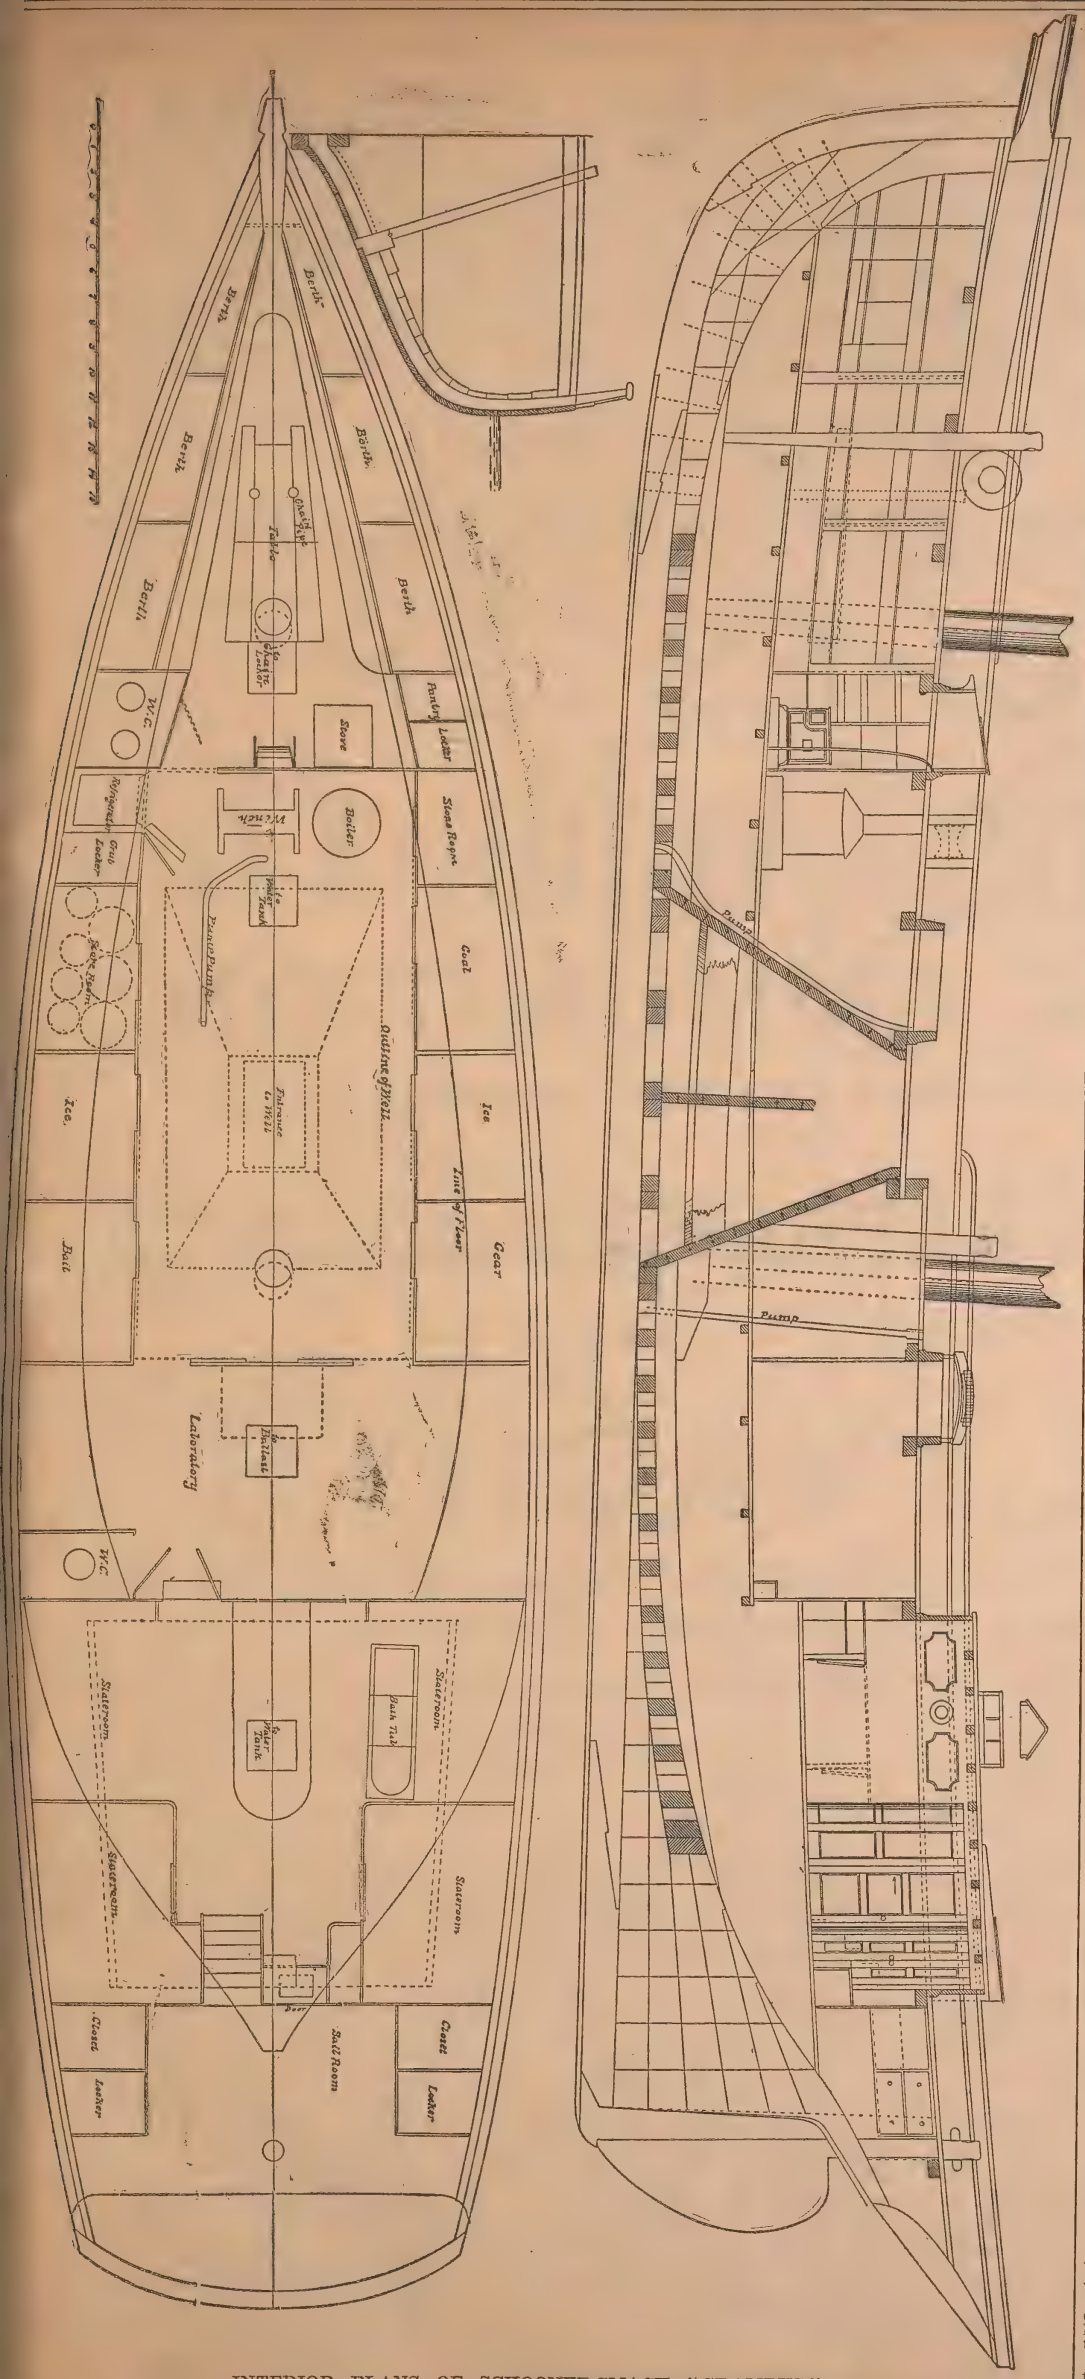
ELECTIONS OF OFFICERS.

Sandy Bay Y. C.—Commodore, L. M. Haskins, sloop Louette; Fleet Captain, Howard H. Paul, sloop Petrel; Regatta Committee, H. H. Paul, C. T. Margeson, Frank N. Griffin, George A. Lowe of Rockport, C. E. Cunningham, Melvin Haskell, I. H. Higgins and A. T. Gifford of Gloucester; Treasurer, C. W. Mills; Secretary, Robert Hoarns, government officer in charge of the work upon the new Sandy Bay breakwater.

Hull Y. C.—Commodore, C. V. Whitten; Vice-Commodore, Harry E. Converse; Rear Commodore, John J. Henry; Secretary, Peleg Aborn; Treasurer, C. C. Hutchinson; Measurer, Ambrose A. Martin; Executive Committee, C. A. Perkins, Fred. Pope, B. L. M. Tower, Gelston Whittemore; Membership Committee, E. H. Tarbell, J. L. Chadwick, J. E. Bayles, J. J. Souther; Delegates to the New England Yacht Racing Association, C. A. Perkins and Harry Hutchinson.

Yonkers Y. C.—Commodore A. J. Prime; Vice-Commodore, N. P. Quick; Fleet Captain, John Dickson; Secretary, William R. Davis; Treasurer, John Nesbitt; Measurer, William H. McVickar; Trustees, H. Skinner, Frank Ford and John F. Brennan.

Brooklyn Y. C.—Commodore, J. T. Barnard; Vice-Commodore, R. H. McMurray; Rear Commodore, R. C. Hopkins; President, Daniel O'Reilly; Treasurer, W. H. Burk; Secretary, George H. Brown.



East River Y. C.—Commodore, J. F. Sullivan; Vice-Commodore, William MacMannis; Secretary, H. T. Lewis; Treasurer, Edward Grissine; Measurer, J. J. Driscoll; Sergeant-at-arms, Peter Gillen; Regatta Committee, H. T. Lewis, A. Lamb and H. Campbell; Trustees, Edward Grissine, M. J. Clarke, H. Campbell, John Clifford and A. Lamb.

American Y. C.—The annual meeting and election of the American Y. C. was held on Jan. 18, the officers for 1887 being: Commodore, William H. Starbuck, steam yacht Tillie; Vice-Commodore, Arthur E. Bateman, steam yacht Meteor; Rear Commodore, Charles H. Osgood, steam yacht Narwhal; Secretary, Henry A. Taylor; Treasurer, William B. Dowd; Measurer, Charles H. Haswell. Trustees, Jabez A. Bostwick, steam yacht Orienta; Joseph C. Hoagland, steam yacht Lagonda; John P. Kennedy, steam yacht Viola; Henry A. Taylor, steam yacht Sphinx; Frank R. Lawrence, William B. Dowd and Washington E. Connor. Regatta Committee, George W. Hall, Thomas Manning, Thomas L. Scovill, Edward S. Innet and Ezra S. Connor.

THE SCHOONER-SMACK GRAMPUS.

THE accompanying drawings show the interior arrangements of the model fishing-smack Grampus, the lines of which were given last week. The specifications for her construction were drawn up by Capt. Collins, who also superintended the carrying out of the work. The keel is of white oak, greatest siding, 15in., least, 9in., and moulding 18in. outside of garboards, including shoe. The stem, of white oak, is sided 12in. at head and 9in. at waterline. The sternpost, also of white oak, is sided 9in. at heel and 16in. at head above rabbet, hollowed out for a 10in. rudderhead, tapering to 5in. at heel of rudder, with white pine backing to rudderport. The deadwoods are of oak and hard pine; the breasthook of oak. The frames are all of white oak, the floortimbers double, sided 8in. and snaped to 6in. at upper ends; the futtocks side 6in. and stanchions 5in. The least moulding of floors in throats is 9in., and the frame mould 7in. at side of keel, 6in. at second futtock head, and 5in. at gunwale. The frames are spaced 22in. and are bolted with ⅝in. gal. iron, except the well frames, which are bolted with yellow metal. The keelson is of hard pine, sided 10in. The beams are of white oak, sided 7 to 9in. and moulded 6in. at center and 5in. at ends, bolted to clamps with ⅞in. bolts; the ledges and carlins of hard pine, sided 3½ to 6in.; knees of hackmatack, sided 5in. All bolts in keel, stem, sternpost and deadwoods below waterline are of yellow metal; those above of gal. iron, 1in. in diameter.

The fish well in hold has well logs 9x21in., and corner posts of oak 7x7in., with inner corner of each rounded. The planking of well is 6in. thick, of selected yellow oak, fitted with 5½in. tongue of white pine in adjoining edges, and fastened with two ⅝in. gal. screwbolts in each end. The ceiling is of hard pine, the thick strakes being 12in. wide and 6in. thick, tapering to 3in. at ends. Besides these there are five 4x12 strakes on each side, two 3½x8, and three 3in., the fastenings being ⅞in. bolts. The clamps are of hard pine 3½x12in., with ⅝in. bolts. The deckplank is 3x3in. fastened with 4½in. gal. spikes and the planksheer is of white oak. The planking is all of white oak; garboards 12in. x 4in. at well and tapering to 2in. at rabbett. The bottom plank is 2½ in., fastened with 6in. composition spikes and 1½in. treenails. The ten walestrakes are 3x6in. with four 3in. strakes below 7, 8,

INTERIOR PLANS OF SCHOONER-SMACK "GRAMPUS."

9 and 10in. wide. The fastening is the same as in bottom plank, except gal. iron spikes in the upper five wales; the butts are bolted with ⅝in. copper. The bottom is covered inside, up to the upper side of frames and as high as the floor of hold and cabin, with Portland cement. All timber spaces are salted up to the deck. The ironwork of hull and spars is of the best imported Norway iron. The vessel is divided below by four bulkheads into a forecastle, hold, laboratory, cabin and sail-room, all specially fitted for the service for which she was designed. The forecastle is finished in ash and black walnut, with three lengths of berths on each side, galley, china closet, table, drawers and closets for crew under berths; w. c., and lavatory. Opening aft from it is the hold, the center of which is taken up by the fish well. There is a space at the fore end for a steam boiler for the winch, while along the starboard side is a storeroom, coal bin, ice room and a room for gear. On the opposite side there is a refrigerator, grub room, ice room, a second storeroom, and a bait pen. Abaft the hold is a large apartment, the laboratory, specially fitted up with all appliances for handling and preserving the specimens brought up by the steam trawls. Full provision is made for preserving in alcohol by racks of jars and bottles, while on each side, well lighted by deadlights, is a zinc-covered counter. A companion leads to the deck and two doors communicate with the cabin. This space is covered by a raised trunk 15ft. long and 27in. high. In it are two staterooms bulkheaded off, and two others which may be shut off by curtains. Under the floor in one of the latter is a bathtub. In the center is a large extension table with drawers under; in one corner is a roomy china closet; and the entire arrangement is convenient in the extreme. The cabin is finished in birdseye maple and cherry. The Grampus has been but a short time in commission, but in the hands of Capt. Collins she is doing good work, and has proved already a valuable auxiliary in the important labors of the United States Fish Commission.

YACHTING NOTES.—Ibis, steam yacht, is having new topsides at Lockwood's, East Boston....Dream, sloop, has reported from Southville, N. C., where she has made harbor....Marion Wentworth, schooner, will be rechristened Troubadour by her new owner, Mr. L. H. Smith....Stranger, steam yacht, will have a new deck house abaft the foremast, over which her bridge will be placed. The house will contain a dining saloon 21ft. long. She will be fitted throughout with electric lights....Sea Gull, the cutter, building by J. J. Driscoll, has been sold to Messrs. Whittaker and Hunerhoff, and her owner, Mr. E. B. Charde, will build a similar boat, but with a centerboard....Messrs. Wallin & Gorman will shortly lay the keel of a little cruising cutter 18ft. load waterline, 23ft. 3in. over all, 7ft. beam and 3ft. draft. She will have a lead keel of 1,500lbs. and a centerboard. The cabin will have over 4ft. headroom. The mast is stepped well aft, but she will be sailed with one jib only. Her name will be Primrose....The cutter Pilgrim, reported sold by G. F. Clark & Co., was not Dr. Winslow's boat, but a larger yacht, 39ft. 6in. over all, 32ft. load waterline, 11ft. beam and 7ft. draft. Her purchaser is Mr. C. F. Aldrich of New York, and she will be delivered there in the spring. Clark & Co. have also sold the keel schooner Belle, 57ft. over all, 51ft. load waterline, 16ft. beam, owned by Mr. C. Francis, to Mr. T. Harold, of Boston....Mr. Borden's little cruiser Mermaid has been sold to Mr. W. W. Anderson, of New Jersey.

AN ICE YACHT RACE was sailed on the North Shrewsbury on Jan. 18 in a strong N. W. wind, double-reefed sails being carried. The starters were: First class, Grover Cleveland, Captain George Coley, and Uncle Bob, Captain Gus Haviland. Second class, Kittie, Captain James Doughty; Zero, Captain Edmund Throckmorton, and Georgie, Captain Charles Throckmorton. The course, 12½ miles, was sailed in 24 m. 7 sec. Zero lost her mast, the others being timed as follows: First class, Grover Cleveland, 25 m. 15 sec.; Uncle Bob, 24 m. 53 sec. Second class, Kittie, 24 m. 7 sec.; Georgie, 27 min. 10 sec.

A NEW ICE YACHT RIG.—Messrs. Robert and William Chandler, owners of the Scud, which yacht has been at Poughkeepsie since last winter waiting for a race, have built a new yacht on the Shrewsbury, named Typhoon. The forestay is replaced by a spar from bowsprit end to heads of sheer legs, and the lateen sail is rigged in a new way.

AMERICAN Y. C.—At the annual meeting, Jan. 18, the sum of $2000 was added to the cup fund and the prospects for a race this year were considered. The club will soon be provided with a permanent club house on the water.

METEOR—Steam yacht, arrived at Charleston, S. C., on Jan. 16 and Fernandina on the 17th, leaving with her owner for Nassau and Cuba.

THE NEW STEEL YACHT.—Mr. Piepgrass has laid down the 70ft. yacht for Mr. Iselin and will soon have her in frame.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

CONSTANT READER, Indianapolis.—Write to Waters & Son, Troy, N. Y.

W. H., Lynn, Mass.—See FOREST AND STREAM of April 17, 1884. Also "Small Yachts."

SUBSCRIBER, Newaygo, Mich.—The boat would be much stiffer with the proposed keel.

J. W. P.—The smaller bores are as long ranged, and many prefer them for the shooting you name.

W. B., Tyngsboro, Mass.—The board need only be heavy enough to sink. Its weight is not relied on for ballast.

F. L. T.—Bird lime is made of boiled linseed oil. English sparrows have been used for trap-shooting. A match at them is reported in our trap columns.

F. H. L., South Windham, Me.—The thwarts would be placed almost the same as in Plate XV., leaving a little more space between them to allow full room for the legs.

J. W. C., JR., Boston, Mass.—The binder holds 26 numbers, one volume. The A. C. A. Book may be had of Dr. C. A. Neidé, Schuylerville, N. Y. The limit for 14ft. is 33in. A 36in. canoe can be only 12ft. long.

E. E. A., Rhinebeck.—1. Bounty on panthers in New York State is $20. 2. Either rifle will do good work. 3. There are many fur dealers in this city who will buy the skins. 4. There are good localities in the Adirondacks, but most of them are pre-empted.

R. H., West Torrington, Conn.—Are the moose and elk two different animals or are they called by the same name? Ans. In America the elk and moose are two different animals. In Europe what we call moose is there called elk. The American moose is known in science as *Alce americana*, the American elk as *Cervus canadensis*.

H. L. F., San Francisco.—I have seen in a recent issue several articles relating to the "coon cat." Last summer on the Russian River, in Sonoma county, our cook trapped an animal which would appear to be a good realization of the shape and color of a cross between the coon and wildcat; as large as a well-grown tomcat; forelegs much shorter than its hindlegs, giving a half crouching appearance when standing; head resembled that of a coon except longer in proportion, ears somewhat larger; eyes small and rather closely placed. Color brownish gray, quite dark on the back, and top of head and ears black. Muzzle and face much lighter, with a few almost white bands and blotches on the cheeks and side of muzzle. From a dark brownish gray on the back it shaded to an almost pure white on the belly and inside of the legs, with this peculiarity that the sides were mottled with dark spots arranged in bands, extending from back to belly where they faded into the prevailing color. Tail, larger in proportion than a coon's tail, was, however, almost an exact copy of the latter save that the black bands were replaced by a very dark brown. Inquiry of the oldest inhabitant produced the fact that it was called a "mountain cat" although I have known the same name to be applied to the lynx, which this was not. Ans. The animal was no doubt the "mountain cat" or "civit cat" of California and Mexico (*Bassaris astuta*. A second and more northern species (*B. sumichrasti*) is supposed to exist, but its specific difference from *B. astuta* does not appear to be very clearly known. The animal is related to the raccoon, though it is the type of a family *Bassaridide*.

INFORMATION WANTED.

1. Where can a party of six find a camping place where there is both shooting and fishing, within a radius of 250 miles of Chicago. —CONSTANT READER.

2. Can you tell me if there ever was a maker of firearms in London, named Wogdon, and if there was, what kind of a reputation he had? I have an old flint lock duelling pistol, which I think has the above name on it, but the rust makes it unintelligible.—W.

3. A CORRESPONDENT writes for the address of Mr. Forrest, "the famous tyer of salmon flies," and thinks perhaps he may be in Scotland. Can any of our readers give it?

SMALL YACHTS.
Their Design and Construction, Exemplified by the Ruling Types of Modern Practice.
By C. P. KUNHARDT.

THE FOREST AND STREAM PUBLISHING COMPANY takes pleasure in announcing the publication of a magnificent quarto volume, bearing the above title. This book covers the eld of Small Yachts, with special regard to their design, construction, equipment and keep. The opening chapters are devoted to a consideration of the model and the draft, their elations to one another, and the purposes which they subserve. Full directions are given for producing the plans of a yacht with reference to the chief points in design, and the method of taking off the lines of a boat already built is likewise described in detail.

All elements entering into design, such as Resistance, Stability, Balance of Rig, Handiness, Displacement, etc., are dealt with in separate chapters. The rules necessary for the mathematical computations, and a review of theory and practice close the first division of the book.

The second portion comprises the description of the Plates, covering the whole range of type in small yachts, from the shoal catboat and American centerboard sloop to examples of the narrowest and deepest British cutter yet built. These yachts have their lines, build and fittings depicted in the Plates, which are drawn to scale. With their aid and the specifications presented, the reader is placed in possession of accurate information concerning the mould, accommodations, rig and characteristics of all styles of yachts which have received favorable recognition. Sporting boats, combination row and sailboats, and various examples of special form are introduced.

The third division offers a comprehensive review of single-hand sailing, to which small yachts are especially adapted. Directions are given as a guide in selection of type and sail plan, and subsequent equipment and proper management.

The iron work of yachts, their gear, yawls, stearing apparatus, boat building and much other closely related matter is entered upon. The new International Rules of the Road, Signal Service, and a Bibliography appear in the Appendix.

The work is profusely and handsomely illustrated with 150 illustrations inserted in the text, besides the sixty-three plates.

A folio (size of page 14½x12½ inches), printed on paper specially manufactured for it, and with great beauty of execution and finish in every detail, making a volume vastly superior to any other work of the kind ever published. Pages 370, with 186 plate pages additional, or a total of more than 500. Price, postpaid, $7.00.

LIST OF PLATES.

A WORD IN SEASON.

Readers old and new of the FOREST AND STREAM may be pleased to know that the paper is now at the close of 1886 enjoying the support of a wider circle of friends than a any former period in its history. This is an interesting fact, for it proves, with the bes possible demonstration of success, the sound sense of the theory long ago adopted by editors and publishers, and steadfastly adhered to, that there is room in this country for a journal treating the subjects embraced by our departments, and depending for its suppor wholly upon what have been accepted by the conductors of the FOREST AND STREAM as legitimate journalistic methods. In other words, we have kept faith with subscribers by devoting our reading columns exclusively to honest reading matter, and have not given up our pages to extended paid puffs of railroad routes clumsily disguised as accounts of sportsmen's travel, nor alluring descriptions of wonderful agricultural regions, all paid by the column. The conviction that a sportsman's journal for sportsmen could be conducted without resorting to such questionable makeshift expedients have proved quite correct.

The tone and high character of the journal, as one fit for sportsmen to receive into their homes, will be jealously maintained. As there is nothing in the recreations of field and stream inconsistent with the highest type of manhood, so, the editors are convinced, there should be in a journal like the FOREST AND STREAM nothing to offend good taste.

The FOREST AND STREAM will be, in the future as in the past, thoroughly representative of the best field sportsmanship of America. It will maintain its position as the chosen exponent of those who seek recreation with gun or rod, rifle, canoe or yacht. Its character will be scrupulously preserved, and readers in 1887 may expect a rich fund of sporting sketches and stories, suggestions, bright sayings, prompt, reliable news, and interesting discussions. Angler, shooter, dog breeder, canoeist and yachtsman, may be assured that whatever is of interest in these respective fields in 1887 will find its way into the columns of the FOREST AND STREAM.

The Sportsman Tourist

columns are filled with bright sketches of travel, camp life and adventure, the reflected experience of a host of outers.

Natural History.

Papers descriptive of bird life, chapters of animal biography, notes on the ways of field, forest and water creatures as observed by sportmen, anglers and naturalists, make up these pages. The special work of the past year has been the establishment of the Audubon Society for the Protection of Birds, begun in February, and having now a membership approaching 20,000.

Angling and Shooting.

Time was when a single journal sufficed in this country for adequate discussion of all the heterogenous pastimes and practices dubbed sport. That time has long since passed away. Some of the sports have been outgrown or put under a ban, others have developed to such a degree that each class requires a special organ. The particular fields chosen by the FOREST AND STREAM are those of angling and shooting. The pages given up to these topics are rich with the freshest, brightest, most wholesome, entertaining and valuable open air literature of the day. They have the sunlight and woodsy odor of the haunts of game and fish; they picture nature as seen by sportsman and angler. One has not long to read the FOREST AND STREAM before learning its attitude with respect to game and fish protection. The editors believe in conserving, by all legitimate methods, the game of fields and woods, and the fish of brook, river and lake, not for the exclusive benefit of any class or classes, but for the public. They are earnest, consistent and determined advocates of strict protection in the legal close season, and in restricting the taking of game both as to season and methods, so that the benefits of these natural resources may be evenly distributed.

The Kennel.

This department has kept even pace with the growth of the interest of breeding field and pet dogs. Reports of trials and shows are usually given in the FOREST AND STREAM in advance of other publications, and being prepared by competent writers their intelligent criticisms are of practical utility. This journal is not hampered by personal animosities. It has no judges to "kill." It does not decide a dog's merit by asking who the owner is. It treats all kennel subjects without fear, favor or ulterior motives, and in consequence enjoys a degree of public confidence and esteem denied to such as stagger beneath the incubus of malice and flounder in the bogs of ignorance.

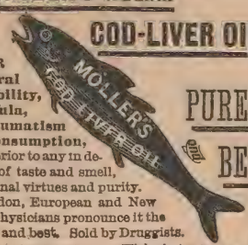
Rifle and Trap Shooting

records scores of meetings and matches, discussions of topics pertaining to the butt, gallery and trap. Secretaries of gun and rifle clubs are invited to send their scores for publication.

Canoeing.

This country is a land of magnificent water courses, and Americans are just beginning to appreciate the canoe as a means of enjoying the delectable charms of river and lake, and bay and canal. The men who are making fortunes by making canoes know best how rapidly the ranks of canoeists are multiplying. Novices and old hands will find in the FOREST AND STREAM canoeing columns, in charge of a practical canoeist, accounts of cruises, lines of new craft, and hints and helps and suggestions without number. Closely allied is

Yachting,



in which the FOREST AND STREAM is the only competent, all-the-year-round, intelligent exponent. Our reports of races are full, prompt and accurate. The numerous illustrations of lines of new yachts make an invaluable record of the development of yacht building.

Weekly, $4 per year; $2 for six months.

The Kennel.

Grand Bon-Secours Kennels.

Near Péruwelz (Hainault), Belgium.

ESTABLISHED IN 1865.

Property of Mr. Aug. Tondreau Loiseau, BANKER AT PÉRUWELZ.

These kennels enjoy a wide-spread fame, and hundreds of sportsmen of the highest authority in the doggy world can bear witness to the scrupulous good faith which governs their operations, and the remarkable merit of many of the dogs which have gone out from them since 1865. The collection consists exclusively of English sporting dogs. Besides a splendid collection of English stud and field dogs—Laverack, Gordon and Irish setters, large and small pointers, Clumber, Sussex, Norfolk and black spaniels, large curly or wavy-coated retrievers, all of the most noted blood—which are employed for breeding and whose young are offered to the public, these kennels always have for sale a large number of other English dogs, warranted to be of pure and noble blood, handsome and good, of full pedigree, thoroughly trained to obey, to charge at the uplifted hand, and to retrieve perfectly all kinds of game.

The kennels are constantly open to visitors.

Adult and trained dogs can be shipped at Antwerp (Belgium) destined for the principal ports of the two Americas.

Mastiff For Sale,

C. F. HODSDON. 742 & 744 Water St., (near Grand St. Ferry) New York.

The Puritan's Bottom

When she beat the Genesta last year was coated with

DIXON'S BLACKLEAD.

"Blackleading" is of value in proportion to the quality of the article used. DIXON'S BLACKLEAD is a pure graphite ground to a fine and even grain so that there is no waste, and a vessel's bottom treated with it will be of surprising smoothness. It will also be found a protection to the bottom.

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for eighty-four years. Manufacture the following celebrated brands of powder:

Dupont's Crystal Grain.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass ball and pigeon shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breech-loaders. Packed in 1 lb. and 5 lb. canisters and 6¼ and 12½ lb. kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes only, Nos. 7 and No. 5, No 7 being the coarsest. Packed in 6¼ lb. kegs and 1 lb. canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. canisters and 6¼ lb. kegs.

Dupont's Rifle Fg. "Sea Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ⅛ lb., 1 lb. and 5 lb. canisters, 6¼, 12½ and 25 lb. kegs. Fg. coarse, FFFg. fine.

Dupont's Sporting, Mining, SHIPPING and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder U. S. Govt. Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States.

Sportsmen's Goods.

New Minnow-Casting Reel.

Our Imperial Steel Pivot Reel

WITH INDEPENDENT SPOOL.

Size No. 3.

We have perfected and patented this simple device for throwing a multiplying reel in and out of gear at will.

In casting a minnow or other bait, more force has to be used than really necessary to cast the bait, as so much of the power used is absorbed in starting the handle running, which when started causes the reel to overrun.

This trouble is overcome by our device, which is applied by simply pushing a lever or index one way to ungear the reel, and the reverse way to gear it for reeling in or playing the fish.

This must commend itself to anglers for casting a long distance or for casting a light bait.

Prices, . .	$21.00	$19.50	$18.00 Each.
Sizes, . . .	2	3	3½
		100	75 yds. No. G. line.

This improvement we are also applying to our New Salt-Water Reels. Call and see them.

The Hazard Powder Co.

MANUFACTURERS OF

Gunpowder

Hazard's "Electric Powder."

Nos. 1 (fine) to 7 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound *only*.

Hazard's "American Sporting."

Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 6¼ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to short guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly*, and very clean, shooting remarkably close and with *great penetration*. For field, forest or water shooting it ranks any other brand and is equally serviceable for muzzle or breechloaders.

Hazard's "Kentucky Rifle."

FFFG, FFG and "Sea Shooting" FG in kegs of 25, 12½ and 6¼ lbs. and cans of 5lbs. FFFG is also packed in 1 and ⅛ lb. canisters. Burns strong and *moist*. The FFFG and FFG are favorite brands for ordinary sporting and the "Sea Shooting" FG is the standard *Rifle* Powder of the Country.

HINDS'

BLACK-FLY CREAM,

For Repelling
Flies, Mosquitoes, Midges and other Insects, and protecting the Skin from Sunburn, Irritation and Infection.

No Tar. No Stain.

GLENS FALLS, N. Y., June 15, 1884.
Mr. A. S. Hinds, Portland, Me.:

DEAR SIR—I have not sooner acknowledged the receipt of box of "Black-Fly Cream," as I desired to first test it; this I have now done on two fishing trips where I found the Mosquitoes, Black Flies, Punkies and Moose or Deer Flies in great abundance. Although all these pests swarmed about me, I found the *Cream a perfect preventive* against their bites when it was applied to face, hands, ears and neck. For many years I have sought after *the* insect repellent, and have tried all manner of compounds but yours is the most thorough, at the same time cleanly and not disagreeable.

Yours truly, A. NELSON CHENEY.

Pictures of the Field.

Phototypes of the Pictures by John M. Tracy.

MR. JOHN M. TRACY has won a reputation for his faithful portraits of dogs and his beautiful and sympathetic delineations of the incidents of the field. All the poetry and grace of a pointer or setter in the stubble have been caught with the eye of the artist and the enthusiasm of the sportsman, and transferred to the living canvas with a skill which has given Mr. Tracy a name above that of any other American artist in the same field.

We have for sale a series of admirable phototypes (photographs in printer's ink), of these paintings, which preserve with admirable fidelity the spirit of the originals. The phototypes are 15x20 inches. They are as follows:

Title of Picture.	*Name of Dog or Dogs.*
Quail Shooting in Tennessee,	Gladstone and Peep o' Day
On the Grouse Moor,	Emperor Fred
Prairie Chicken Shooting in Minnesota,	Dash III. and Countess May

Sent securely packed, postpaid, on receipt of price, $1.00 each.

707 BROADWAY,

NEW YORK.

Kennel Record and Account Book.

THE KENNEL RECORD AND ACCOUNT BOOK consists of a series of carefully prepared blank entry forms for the use of the breeder. Pages are devoted to the registration of pedigrees, the record of stud visits, whelps, sales, prize winnings, receipts and expenses, and other memoranda, the great practical utility and permanent value of which are recognized by every experienced breeder. Ample provision is also made for recording other minor transactions, which may at the time appear trivial, but afterwards prove of the highest importance. There are few breeders, even among those most systematic in preserving records of their Kennel transactions, who have not repeatedly felt the need of just such a detailed series of memoranda as that provided in the Kennel Record.

In the preparation of the blank forms, and in the arrangement of the book, special care has been taken to facilitate convenience both in making the entries and in subsequent reference to them. It is hoped that with such a book at their command, breeders may generally adopt a more careful system of record than they have been accustomed to preserve. 200 pages (size 9x11½ in.), price $3. Sent postpaid by the Forest and Stream Publishing Company.

Specimen Pages Free on Application.

SENSATION.

We have for sale a few copies of an elegant steel engraving of the celebrated pointer Sensation. Size of plate, 14x20; size of sheet, 22x28. Price, $1 each.

Challenge Dog Food

UNEQUALLED AS A PREPARED FOOD.

The combination is such that all breeds of dogs eat it greedily, and are greatly benefitted by its use, enabling them to endure hard field work. **Does not disturb the most delicate stomach, causes no bowel complaint,** (as is done by other preparations). The tendency is to tone up all the organs, and give them a healthy and natural movement. It is particularly beneficial for puppies, **preventing the pest of worms,** avoiding the evils of a young dog's life. The process of cooking is so perfected that no waste of nutritious properties takes place, and yet so thoroughly cooked that it will keep in the hermetically sealed cans in any climate. For hunting parties it is indispensable. It is pronounced by men of experience to be the greatest boon ever brought to their notice, and they have endorsed it in the strongest terms. The following are a few of our references: Dr. Frank Perry (Ashmont); Gen. Shattuc, Washington Coster, Flatbush, L. I.; J. H. Whitman, 3330 Wabash Ave., Chicago; H. E. Hamelton, Hackensack, N. J.; W. W. Titus, Cherry Creek, Miss.; H. E. Cook, Hillsdale, Mich.; Geo. H. Hill, Madeira, Ohio; T. Donohue, La Salle, Ill.; Henry L. Goodman, Mohawk Kennels, Auburn, Ill.; New Haven Kennel Club, New Haven, Conn. Prices:

Seven-pound cans.....50c. Two-pound cans.....20c.

Special prices to dealers and to kennels buying in large quantities.

AN APPEAL TO FAIR SPORTSMEN.

We have reasons for believing the agent of at least one rival target company has bribed trappers so to manage our traps and targets as to cause same to appear to be a failure. If therefore any of you, having relied solely upon your hired trappers, have found they could not work our clay pigeon No. 1, efficiently, we ask you to try the same individually and you will thus verify our claims, not only as to having the ORIGINAL flying target, but as to its being the MOST SATISFACTORY in every regard, as attested by the hundreds of testimonials from the U. S., Canada, Great Britain, Germany, France, India, Mexico, etc.

C.P. No. 1, $15.80 per 1,000 at Factory.

Illustrated descriptive circular on application. Ask your dealer for them. **H. F. PRICE**, No. 29 Murray street (Box 2,308), New York.

HOW CAN A BOOT BE WATERPROOF AND NOT SWEAT THE FEET? Common waterproof boots keep the perspiration in as well as the water out, and perspiration that finds its way through leather is kept in the rubber boot. This renders the sock wet, and, when the wearer ceases walking, causes the cold clammy feeling which is so objectionable and unhealthy.

THE HANNAFORD VENTILATED
RUBBER BOOT,

while it is waterproof and as warm as any boot made, provides a way for the perspiration to escape; at each step the foul air is forced out of the boot, and when the weight of the body is removed from the compressible top sole, fresh air is admitted to the foot; thus the sock is kept free from the moisture which causes the feet to become cold, sore, and tender. Send for circular.

HANNAFORD VENTILATED BOOT CO.
79 Milk Street, Boston.

MOLLER'S NORWEGIAN COD-LIVER OIL

FOR **General Debility, Scrofula, Rheumatism or Consumption,** is superior to any in delicacy of taste and smell, medicinal virtues and purity.

MUSKOKA LAKES.

MUSKOKA, JOSEPH, ROSSEAU.

Reached only by the

Northern & Northwestern Railway,

From Toronto or Hamilton, Ont.

The Muskoka District, famous for its innumerable lakes and streams, has long been known as the best **FISHING, HUNTING AND CAMPING RESORT** on the continent. It is within five hours ride of Toronto or Hamilton. At Muskoka wharf connection is made with the steamers of the Muskoka Lakes Navigation Co. for Bracebridge, Bala, Port Carling, Port Cockburn and Rosseau, all famous fishing places. Hotel rates, $1.00 to $1.50 per day. Camping parties can live at half those figures

MOOSE, DEER, BEAR, PARTRIDGE, DUCK, BROOK TROUT, MASKALONGE, SALMON TROUT, BLACK BASS, PICKEREL.

These can be had in abundance; no long, tedious journeys needed; you will not be disappointed.

TOURISTS' RATES.

Tourists' or sportsmen's tickets are good to stop over at any point north of Barrie and for return up to close of navigation. Camp equipage, stores and sportsmen's dogs are carried free when accompanied by owners. Baggage checked through to principal points on Lakes. For tickets, rates, time tables, etc., apply to agents at all principal ticket offices in Canada or the United States, or

Maine Sportsmen's Resort

SMITH'S FARM.

Tim Pond and the Seven Ponds.

A limited number of guests can obtain good board with pleasant rooms newly furnished at the farm house. Beautiful mountain scenery as can be found in New England. Pure spring water, high mountain air, no hay fever or malaria, pleasant drives to good trout brooks. Expert fly-fishermen who have fished Tim and the Seven Ponds pronounce it the best fly-fishing in America. The camps have been thoroughly renovated and everything put in perfect order. Tim Pond in care of Mr. Lambert, Seven Ponds in care of my son Edgar Smith. With faithful attendants we are prepared to give better satisfaction than ever before. In these ponds trout rise to the fly through the entire season. We refer by permission to Prof. A. M. Mayer, Stevens Institute of Technology, Hoboken, N. J.; E. Lunitz, 50 Centre st., New York; E. M. Messenger, Bromfield House; A. W. Robinson, 33 Winter st., Boston, Mass.; Wm. Goldthwait, Springfield, Mass.; Rev. C. L. Goodell, 123 Clifford st., Providence, R. I.; F. S. Dickson, 3739 Chestnut st., Philadelphia, Pa. For further information address KENNEDY SMITH, Stratton, Me.

GURRIES HOTEL.—LAKE ST. JOSEPH. Brook Trout, Lake Trout, Black Bass.

The finest Lake and Brook Trout Fishing in Canada. Sportsmen who have cast a fly or trolled a spoon in the waters of Lake St. Joseph will come again without solicitation. All lovers of the rod are invited to try these waters, wherein the above named fish abound without let or hindrance. The hotel accommodations, while plain, are, as a rule, good, far surpassing the average in countries new enough to afford the finest of fishing. Telegraph communication to the hotel. It is my aim to make sportsmen at home. Four boats and four guides are at the hotel in full information of fishing grounds, etc. P. GURRIE, Lake St. Joseph, P. Q.

References, Commodore J. U. Gregory, J. G. Scott, Esq., Quebec & Lake St. John Ry., A. Watters, Merchant, Quebec.

MAPLEHURST HOTEL.

ROSSEAU, MUSKOKA, CANADA.

First class in all its appointments. This hotel has just been erected regardless of expense, with a view to the comfort of tourists and sportsmen in this wild and romantic region. The fishing, deer and bear hunting are unrivalled. Competent guides can be obtained. Billiards, tennis, croquet, reading room. Daily mail and telegraph. A fleet of boats and canoes at the house. A sumptuous table spread. Halls and rooms are large and lofty and the view is magnificent. J. P. BROWN, Proprietor.

NEW ST. LAWRENCE HOTEL.—Thousand Islands, River St. Lawrence, Cape Vincent, N.Y. At this particular place the fishing is conceded by all anglers to be the finest fishing grounds at the famous 1000 Islands. Experienced fishermen with new boats and tackle furnished at reasonable prices. Also "Bill St. Lawrence" will tow fishing parties out from hotel dock, or take out parties in the river or lake. For further particulars address JOHN O. PLANK, Prop., or call at 71 Broadway, Mr. A. F. HIGGS, Pres. Hotel Co.

Hotels and Routes for Sportsmen.

THE FISHING LINE.

TAKE THE

Grand Rapids & Indiana Railroad,

THE DIRECT ROUTE TO

TRAVERSE CITY, PETOSKEY, MACKINAC, MARQUETTE, and Other Delightful Health and Summer Resorts of

Northern Michigan,

And the Celebrated Trout and Grayling Streams, Beautiful Lakes and Grand Forests of this Famous Country.

The waters of Northern Michigan are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

The TROUT season begins May 1 and ends Sept. .

The GRAYLING season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE also abound in large numbers in the many lakes and lakelets of this Territory.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing.

THE CLIMATE is peculiarly beneficial to those suffering with HAYFEVER and ASTHMATIC AFFECTIONS.

New hotels with all modern improvements have been erected, as well as many extensive additions to the older ones, which will guarantee ample ACCOMMODATIONS FOR ALL.

The completion of this line to Mackinaw City forms the most direct route to Mackinac, St. Ignace, and in connection with the Detroit, Mackinac & Marquette R. R. to Houghton, Hancock, Marquette, Negaunee, L'Anse, and all points in the Upper Peninsula of Michigan.

During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to tourists and sportsmen.

CRUTTENDEN FLY ROD.

It has Nickle Plated Patented Solid Reel Plate which prevents Reel getting fast by swelling of wood, if rod should get wet. Full Nickle Plated, Patented Ferrules, allowing the wood to be used the full size, thus preventing rod breaking where wood and ferrules join. Metal Tenons which prevent joints getting stuck together. The entire rod is made from the best selected lancewood, left natural color, varnished and polished. This makes a handsome finish, and is less liable to be seen by the wary fish than a dark rod. The butt is wound with cane and silk in an artistic manner, which not only gives it the appearance, but also the feeling of the high-priced rods. The complete rod has a look of beauty, which is a joy to every fisherman's heart while using it. It is well and neatly ringed throughout, and has an extra winding between each ring. There has been so many rods made of an inferior quality that resemble this, that all from this date will have stamped on reel plate "W. H. Cruttenden," and none genuine unless so stamped. Length, 10½ft; weight, 9½ to 10ozs. All the parts are interchangeable, and if, by accident, any part should get broken, can send duplicate without rod being returned. The best made rod in the United States, and we will guarantee it in every way. With short tip it makes an excellent bass rod. Sent to any part of U. S. in case, 1 bass, 1 trout tip, prepaid, for $5.35; bass tips, $1.00; trout tips, $1.25. General agent for Card's Rotating Trap. Guns, Pistols and Fishing Tackle. Gunmaking and repairing of all kinds by competent workmen. New illustrated Catalogue in colors now ready, and sent free on application.

WILL H. CRUTTENDEN, Cazenovia, Madison County, N. Y.

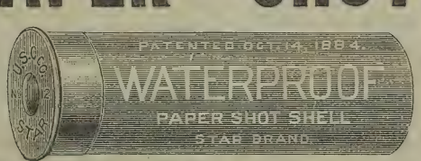
Government Contractors.

CLIMAX. CLIMAX. CLIMAX.



Thoroughly Waterproofed

BLACK PAPER SHOT SHELLS.

SURE FIRE.

WILL NOT SWELL.

The U. S. Paper Shells are intended to overcome a very GREAT disadvantage which all OTHER paper shells are subjected to when USED in DAMP weather. They are so COMPLETELY waterproof that water cannot PENETRATE into the POWDER when entirely SUBMERGED. BLACK paper experience shows it to be the STRONGEST paper for Shot Shells. U. S. Shells are made of all grades.

Successors to POWELL & DOUGLAS,
WAUKEGAN, ILL.

Sole Agency and Depot for the U. S., Canada and Mexico, 35 Broadway, N. Y., Room 70.

THE "BERTHON" FOLDING BOAT. Unrivalled for strength, durability, and seaworthiness. Used by navies of Great Britain, France, Germany, Italy, Chili, Greece, etc. Over 6,000 in use in all climates. Ship's boats, yacht dinghies, shooting and fishing boats, canoes. Largely used as tenders for Small Yachts.

White Cedar Boards for Yachts' Boats and Canoes.
Also Oak and other Lumber used in Boat Building,
HACKMATACK AND OAK KNEES.
C. F. HODSDON. 742 & 744 Water St., (near Grand St. Ferry) New York.

The Puritan's Bottom
When she beat the Genesta last year was coated with
DIXON'S BLACKLEAD.

"Blackleading" is of value in proportion to the quality of the article used. DIXON'S BLACKLEAD is a pure graphite ground to a fine and even grain so that there is no waste, and a vessel's bottom treated with it will be of surprising smoothness. It will also be found a protection to the bottom.

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for eighty-four years. Manufacture the following celebrated brands of powder:

Dupont's Crystal Grain.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass ball and pigeon shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breech-loaders. Packed in 1 lb. and 5 lb. canisters and 6¼ and 12½ lb. kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes only, Nos. 7 and No. 5, No 7 being the coarsest. Packed in 6¼ lb. kegs and 1 lb. canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. canisters and 6¼ lb. kegs.

Dupont's Rifle Fg. "Sea Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ⅛ lb., 1 lb. and 5 lb. canisters, 6¼, 12½ and 25 lb. kegs. Fg. coarse, FFFg. fine.

Dupont's Sporting, Mining, SHIPPING and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder U. S. Govt. Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States.

Sportsmen's Goods.

New Minnow-Casting Reel.

Our Imperial Steel Pivot Reel

WITH INDEPENDENT SPOOL.

Size No. 3.

We have perfected and patented this simple device for throwing a multiplying reel in and out of gear at will.

In casting a minnow or other bait, more force has to be used than really necessary to cast the bait, as so much of the power used is absorbed in starting the handle running, which when started causes the reel to overrun.

This trouble is overcome by our device, which is applied by simply pushing a lever or index one way to ungear the reel, and the reverse way to gear it for reeling in or playing the fish.

This must commend itself to anglers for casting a long distance or for casting a light bait.

Prices, . .	$21.00	$19.50	$18.00 Each.
Sizes, . . .	2	3	3½
		100	75 yds. No. G. line.

This improvement we are also applying to our New Salt-Water Reels. Call and see them.

The Hazard Powder Co.

MANUFACTURERS OF

Gunpowder

Hazard's "Electric Powder."

Nos. 1 (fine) to 7 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound *only*.

Hazard's "American Sporting."

Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 6¼ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to short guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly*, and very clean, shooting remarkably close and with *great penetration*. For field, forest or water shooting it ranks any other brand and is equally serviceable for muzzle or breechloaders.

Hazard's "Kentucky Rifle."

FFFG, FFG and "Sea Shooting" FG in kegs of 25, 12½ and 6¼ lbs. and cans of 5lbs. FFFG is also packed in 1 and ⅛ lb. canisters. Burns strong and *moist*. The FFFG and FFG are favorite brands for ordinary sporting and the "Sea Shooting" FG is the standard *Rifle* Powder of the Country.

Superior Mining and Blasting Powder.

GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

GLENS FALLS, N. Y., June 15, 1884.

Mr. A. S. Hinds, Portland, Me.:

DEAR SIR—I have not sooner acknowledged the receipt of box of "Black-Fly Cream," as I desired to first test it; this I have now done on two fishing trips where I found the Mosquitoes, Black Flies, Punkies and Moose or Deer Flies in great abundance. Although all these pests swarmed about me, I found the *Cream a perfect preventive* against their bites when it was applied to face, hands, ears and neck. For many years I have sought after *the* insect repellent, and have tried all manner of compounds but yours is the most thorough, at the same time cleanly and not disagreeable.

Yours truly, A. NELSON CHENEY.

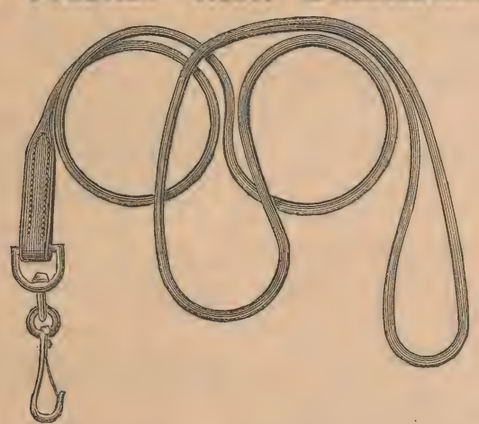
Pictures of the Field.

Phototypes of the Pictures by John M. Tracy.

MR. JOHN M. TRACY has won a reputation for his faithful portraits of dogs and his beautiful and sympathetic delineations of the incidents of the field. All the poetry and grace of a pointer or setter in the stubble have been caught with the eye of the artist and the enthusiasm of the sportsman, and transferred to the living canvas with a skill which has given Mr. Tracy a name above that of any other American artist in the same field.



We have for sale a series of admirable phototypes (photographs in printer's ink), of these paintings, which preserve with admirable fidelity the spirit of the originals. The phototypes are 15x20 inches. They are as follows:

Title of Picture.	*Name of Dog or Dogs.*
Quail Shooting in Tennessee,	Gladstone and Peep o' Day
On the Grouse Moor,	Emperor Fred
Prairie Chicken Shooting in Minnesota,	Dash III. and Countess May

707 BROADWAY,
NEW YORK.

Kennel Record and Account Book.

THE KENNEL RECORD AND ACCOUNT BOOK consists of a series of carefully prepared blank entry forms for the use of the breeder. Pages are devoted to the registration of pedigrees, the record of stud visits, whelps, sales, prize winnings, receipts and expenses, and other memoranda, the great practical utility and permanent value of which are recognized by every experienced breeder. Ample provision is also made for recording other minor transactions, which may at the time appear trivial, but afterwards prove of the highest importance. There are few breeders, even among those most systematic in preserving records of their Kennel transactions, who have not repeatedly felt the need of just such a detailed series of memoranda as that provided in the Kennel Record.

In the preparation of the blank forms, and in the arrangement of the book, special care has been taken to facilitate convenience both in making the entries and in subsequent reference to them. It is hoped that with such a book at their command, breeders may generally adopt a more careful system of record than they have been accustomed to preserve. 200 pages (size 9x11½ in.), price $3. Sent postpaid by the Forest and Stream Publishing Company.

Specimen Pages Free on Application.

SENSATION.

We have for sale a few copies of an elegant steel engraving of the celebrated pointer Sensation. Size of plate, 14x20; size of sheet, 22x28. Price, $1 each.

DR. WITHERS'

Challenge Dog Food

UNEQUALLED AS A PREPARED FOOD.

The combination is such that all breeds of dogs eat it greedily, and are greatly benefitted by its use, enabling them to endure hard field work. **Does not disturb the most delicate stomach, causes no bowel complaint,** (as is done by other preparations). The tendency is to tone up all the organs, and give them a healthy and natural movement. It is particularly beneficial for puppies, **preventing the pest of worms,** avoiding the evils of a young dog's life. The process of cooking is so perfected that no waste of nutritious properties takes place, and yet so thoroughly cooked that it will keep in the hermetically sealed cans in any climate. For hunting parties it is indispensable. It is pronounced by men of experience to be the greatest boon ever brought to their notice, and they have endorsed it in the strongest terms. The following are a few of our references: Dr. Frank Perry (Ashmont), Gen. Shattuc, Washington Coster, Flatbush, L. I.; J. H. Whitman, 3330 Wabash Ave., Chicago; H. E. Hamelton, Hackensack, N. J.; W. W. Titus, Cherry Creek, Miss.; H. E. Cook, Hillsdale, Mich.; Geo. H. Hill, Madeira, Ohio; T. Donohue, La Salle, Ill.; Henry L. Goodman, Mohawk Kennels, Auburn, Ill.; New Haven Kennel Club, New Haven, Conn. Prices:

Illustrated descriptive circular on application. Ask your dealer for them. **H. F. PRICE,** No. 29 Murray street (Box 2,308), New York.

HOW CAN A BOOT BE WATERPROOF AND NOT SWEAT THE FEET? Common waterproof boots keep the perspiration in as well as the water out, and perspiration that finds its way through leather is kept in the rubber boot. This renders the sock wet, and, when the wearer ceases walking, causes the cold clammy feeling which is so objectionable and unhealthy.

THE HANNAFORD VENTILATED
RUBBER BOOT,

while it is waterproof and as warm as any boot made, provides away for the perspiration to escape; at each step the foul air is forced out of the boot, and when the weight of the body is removed from the compressible top sole, fresh air is admitted to the foot; thus the sock is kept free from the moisture which causes the feet to become cold, sore, and tender. Send for circular.

HANNAFORD VENTILATED BOOT CO.
79 Milk Street, Boston.

Maine Sportsmen's Resort

SMITH'S FARM.

Tim Pond and the Seven Ponds.

A limited number of guests can obtain good board with pleasant rooms newly furnished at the farm house. Beautiful mountain scenery as can be found in New England. Pure spring water, high mountain air, no hay fever or malaria, pleasant drives to good trout brooks. Expert fly-fishermen who have fished Tim and the Seven Ponds pronounce it the best fly-fishing in America. The camps have been thoroughly renovated and everything put in perfect order. Tim Pond in care of Mr. Lambert, Seven Ponds in care of my son Edgar Smith. With faithful attendants we are prepared to give better satisfaction than ever before. In these ponds trout rise to the fly through the entire season. We refer by permission to Prof. A. M. Mayer, Stevens Institute of Technology, Hoboken, N. J.; E. Lunitz, 50 Centre st., New York; E. M. Messenger, Bromfield House; A.W. Robinson, 33 Winter st., Boston, Mass.; Wm. Goldthwait, Springfield, Mass.; Rev. C. L. Goodell, 123 Clifford st., Providence, R. I.; F. S. Dickson, 3739 Chestnut st., Philadelphia, Pa. For further information address KENNEDY SMITH, Stratton, Me.

GURRIES HOTEL.—LAKE ST. JOSEPH. Brook Trout, Lake Trout, Black Bass.

The finest Lake and Brook Trout Fishing in Canada. Sportsmen who have cast a fly or trolled a spoon in the waters of Lake St. Joseph will come again without solicitation. All lovers of the rod are invited to try these waters, wherein the above named fish abound without let or hindrance. The hotel accommodations, while plain, are, as a rule, good, far surpassing the average in countries new enough to afford the finest of fishing. Telegraph communication to the hotel. It is my aim to make sportsmen at home. Four boats and four guides are at the hotel in full information of fishing grounds, etc. P. GURRIE, Lake St. Joseph, P. Q.

References, Commodore J. U. Gregory, J. G. Scott, Esq., Quebec & Lake St. John Ry., A. Watters, Merchant, Quebec.

MAPLEHURST HOTEL.

ROSSEAU, MUSKOKA, CANADA.

First class in all its appointments. This hotel has just been erected regardless of expense, with a view to the comfort of tourists and sportsmen in this wild and romantic region. The fishing, deer and bear hunting are unrivalled. Competent guides can be obtained. Billiards, tennis, croquet, reading room. Daily mail and telegraph. A fleet of boats and canoes at the house. A sumptuous table spread. Halls and rooms are large and lofty and the view is magnificent. J. P. BROWN, Proprietor.

NEW ST. LAWRENCE HOTEL.—Thousand Islands, River St. Lawrence, Cape Vincent, N.Y. At this particular place the fishing is conceded by all anglers to be the finest fishing grounds at the famous 1000 Islands. Experienced fishermen with new boats and tackle furnished at reasonable prices. Also "Bill St. Lawrence" will tow fishing parties out from hotel dock, or take out parties in the river or lake. For further particulars address JOHN O. PLANK, Prop., or call at 71 Broadway, Mr. A. F. HIGGS, Pres. Hotel Co.

Hotels and Routes for Sportsmen.

THE FISHING LINE.

TAKE THE

ELKHART Ill., Feb. 13, 1884.

J. C. Petmecky:

DEAR SIR—I have used your cleaner and find it one of the best I ever used, and I think it will take the place of all other cleaners.

CAPT. A. H. BOGARDUS.

GAINSVILLE, Ark., May 5, 1884.

Mr. J. C. Petmecky:

DEAR SIR—I have just received the two gun cleaners, and I admire them very much. They are the best thing I have ever seen. I have tried almost everything imaginable, but this simple invention after using it has become indispensable with me. For removing lead on the interior of gun barrels I am quite certain its equal has not yet been produced. Most truly yours,

CAPT. E. E. STUBBS.

AUSTIN, Tex., March 31, 1885.

Mr. J. C. Petmecky, Austin, Tex.:

DEAR SIR—At my recent shoot in your city it afforded me pleasure to speak of the merits of your late invention, the "Petmecky Gun Cleaner." After trying all others I find it the best, and cheerfully recommend it to all sportsmen. I remain, yours truly,

DR. W. J. CARVER,
Champion Shot of the World.

The Parker Gun.

PARKER BROTHERS,

MAKERS,

Meriden, Conn.

At the Second International Clay-Pigeon Tournament, held at New Orleans, La., Feb. 11 to 16, 1885, the First Prize and Diamond Badge in the Individual Championship Match, open to all the world, was won by B. Tiepel with a Parker gun. Among the contestants shooting other guns were such champions as Carver, Bogardus, Cody, Stubbs, Erb, and others. During the entire tournament more prizes were won with Parker guns, in proportion to the number used, than with any other gun.

AGENTS FOR GENUINE

W. & C. Scott & Sons' Hammerless Guns,

With their patented Safety Block Lock, rendering premature discharge impossible, thus doing away with the principal objection to Hammerless Guns. The most perfect lock yet. We are having a great demand for these guns.

ABSOLUTE SAFETY.

BLOCK SAFETY LOCK.

This gun is always safe from any chance of accidental discharge. In opening the gun for loading, the Block Safety A interposes itself between the hammer B and striker E, which is only removed when the trigger is pulled. The drawing is intended to show the hammer accidentally discharged, other than by the trigger, and caught by the Block Safety.

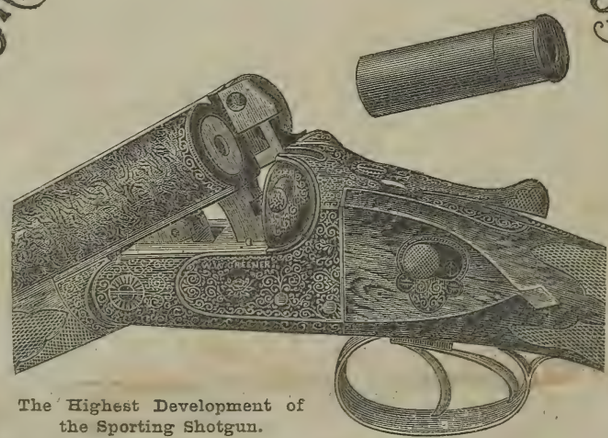
Send stamp for circulars of this gun and second-hand list.

GUNS WITH HAMMERS TAKEN IN TRADE.

GREENER'S PATENT EJECTOR GUNS

CHIEF ADVANTAGES:
CELERITY! COMFORT! ECONONY!

Prices of the Ejector Guns.



THE "EJECTOR" GUN is made in one quality only, in three styles of finish, and is sold at lower prices than ordinarily charged by leading makers for Hammerless Guns, viz:

A. QUALITY, very best finish, Fancy or Plain, $350
1. QUALITY, best style of London finish..... 300
2. QUALITY, ordinary plain finish..... 275

A Second Edition of "THE GUN" now ready. 770 pages, 550 illustrations. Price $2.50; post paid $2.85. Thoroughly revised and corrected, with an Appendix containing Notes on Novelties, Ignition, Steel Barrels, Proof of Guns, etc.

CARTRIDGES.

Loaded in the best manner with English or American Powder, and put up in packages of twenty-five with full particulars as to load and quality of ammunition at reasonable prices. Artificial Birds of all kinds for practice shooting.

The Highest Development of the Sporting Shotgun.

Throws out the fired cases, very advantagous in a hot corner; one gun will do the work of two. Simple, durable, safe, no hitch in any weather, in every way a great convenience. Hundreds of these guns are now in daily use and give complete satisfaction.

PRICES OF GUNS.

THE prices of W. W. Greener's renowned "Facile Princeps" Hammerless and Patent "Treble Wedgefast" Guns are as below. Quality in every case guaranteed. Shooting equal to that obtained at any public trial at home or abroad.

Prices for Hammer or Hammerless.

A. Quality, Special Best Gun	$300.00
1. Ordinary Best Gun	275.00
2. Ditto, with less engraving and more plainly finished	250.00
3. Moderately engraved and well finished	200.00
4. Engraved and plainly finished	150 00
5. Plainly mounted and finished, no engraving	125.00
Cheapest quality Treble Wedgefast Gun	100.00

THE TREBLE WEDGEFAST ACTION.

Increases the strength of the breech action enormously; there can be no gaping at the breech, and with all the thousands of guns so made since introduced in 1873, NOT ONE has been DESTROYED by any explosive. With Wood Powders it is perfectly safe, giving complete immunity from danger to the users of these explosives. Guns can be made lighter and safer and stronger than on any other principle.

TRAP GUN, $85.

10-Bores, Extra.....$5.00.

HENRY C. SQUIRES, Agent, 178 Broadway, New York.

SPORTSMEN

CANOE HANDLING.

By C. B. VAUX ("DOT").

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners: and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for eighty-four years. Manufacture the following celebrated brands of powder:

Dupont's Crystal Grain.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass ball and pigeon shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breech-loaders. Packed in 1 lb. and 5 lb. canisters and 6¼ and 12½ lb. kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes only, Nos. 7 and No. 5, No 7 being the coarsest. Packed in 6¼ lb. kegs and 1 lb. canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. canisters and 6¼ lb. kegs.

Dupont's Rifle Fg. "Sea Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ½ lb., 1 lb. and 5 lb. canisters, 6¼, 12½ and 25 lb. kegs. Fg. coarse, FFFg. fine.

Dupont's Sporting, Mining, SHIPPING and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder U. S. Govt. Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States.

Sportsmen's Goods.

New Minnow-Casting Reel.

Our Imperial Steel Pivot Reel

WITH INDEPENDENT SPOOL.

Size No. 3.

We have perfected and patented this simple device for throwing a multiplying reel in and out of gear at will.

In casting a minnow or other bait, more force has to be used than really necessary to cast the bait, as so much of the power used is absorbed in starting the handle running, which when started causes the reel to overrun.

This trouble is overcome by our device, which is applied by simply pushing a lever or index one way to ungear the reel, and the reverse way to gear it for reeling in or playing the fish.

This must commend itself to anglers for casting a long distance or for casting a light bait.

Prices, . .	$21.00	$19.50	$18.00 Each.
Sizes, . . .	2	3	3½
		100	75 yds. No. G. line.

This improvement we are also applying to our New Salt-Water Reels. Call and see them.

The Hazard Powder Co.

MANUFACTURERS OF

Gunpowder

Hazard's "Electric Powder."

Nos. 1 (fine) to 7 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound *only*.

Hazard's "American Sporting."

Nos. 1 (fine) to 2 (coarse). In 1 lb. canisters and 6¼ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to short guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly*, and very clean, shooting remarkably close and with *great penetration*. For field, forest or water shooting it ranks any other brand and is equally serviceable for muzzle or breechloaders.

Hazard's "Kentucky Rifle."

FFFG, FFG and "Sea Shooting" FG in kegs of 25, 12½ and 6¼ lbs. and cans of 5lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *moist*. The FFFG and FFG are favorite brands for ordinary sporting and the "Sea Shooting" FG is the standard *Rifle* Powder of the Country.

Superior Mining and Blasting Powder.

HINDS'

BLACK-FLY CREAM,

For Repelling

Flies, Mosquitoes, Midges and other Insects, and protecting the Skin from Sunburn, Irritation and Infection.

No Tar. No Stain.

GLENS FALLS, N. Y., June 15, 1884.

Mr. A. S. Hinds, Portland, Me.:

DEAR SIR—I have not sooner acknowledged the receipt of box of "Black-Fly Cream," as I desired to first test it; this I have now done on two fishing trips where I found the Mosquitoes, Black Flies, Punkies and Moose or Deer Flies in great abundance. Although all these pests swarmed about me, I found the *Cream a perfect preventive* against their bites when it was applied to face, hands, ears and neck. For many years I have sought after *the* insect repellent, and have tried all manner of compounds but yours is the most thorough, at the same time cleanly and not disagreeable.

Yours truly, A. NELSON CHENEY.

Pictures of the Field.

Phototypes of the Pictures by John M. Tracy.

Mr. John M. Tracy has won a reputation for his faithful portraits of dogs and his beautiful and sympathetic delineations of the incidents of the field. All the poetry and grace of a pointer or setter in the stubble have been caught with the eye of the artist and the enthusiasm of the sportsman, and transferred to the living canvas with a skill which has given Mr. Tracy a name above that of any other American artist in the same field.

We have for sale a series of admirable phototypes (photographs in printer's ink), of these paintings, which preserve with admirable fidelity the spirit of the originals. The phototypes are 15x20 inches. They are as follows:

Title of Picture.	*Name of Dog or Dogs.*
Quail Shooting in Tennessee,	Gladstone and Peep o' Day
On the Grouse Moor,	Emperor Fred
Prairie Chicken Shooting in Minnesota,	Dash III. and Countess May

Sent securely packed, postpaid, on receipt of price, $1.00 each.

Forest and Stream Publishing Co.

Kennel Record and Account Book.

The Kennel Record and Account Book consists of a series of carefully prepared blank entry forms for the use of the breeder. Pages are devoted to the registration of pedigrees, the record of stud visits, whelps, sales, prize winnings, receipts and expenses, and other memoranda, the great practical utility and permanent value of which are recognized by every experienced breeder. Ample provision is also made for recording other minor transactions, which may at the time appear trivial, but afterwards prove of the highest importance. There are few breeders, even among those most systematic in preserving records of their Kennel transactions, who have not repeatedly felt the need of just such a detailed series of memoranda as that provided in the Kennel Record.

In the preparation of the blank forms, and in the arrangement of the book, special care has been taken to facilitate convenience both in making the entries and in subsequent reference to them. It is hoped that with such a book at their command, breeders may generally adopt a more careful system of record than they have been accustomed to preserve. 200 pages (size 9x11½ in.), price $3. Sent postpaid by the Forest and Stream Publishing Company.

Specimen Pages Free on Application.

SENSATION.

We have for sale a few copies of an elegant steel engraving of the celebrated pointer Sensation. Size of plate, 14x20; size of sheet, 22x28. Price, $1 each.

ENGLISH SETTER PUPPIES.

From imported Flora, by Roy (Dash III.—Bessie), whelped March 3, 1886. Dogs or bitches. Will guarantee these pups to be just right; strong nose, natural hunters, and very staunch, requiring but little training. They are not sold to close out any scrub stock or to make room, but were bred especially for the trade, and to show as well in the field as on paper. Address, H. J. PIERRE, Winsted, Conn.

Prize-Bred Collies.

A choice litter by Bounce (sire of Braw an' Bonnie, 1st and special, New Haven) out of Raspberry Girl, by Rutland out of Strawberry Girl; five dogs and three bitches. They are as promising a lot as the Eclipse—Nesta litter, which includes Glengarry, Heather, Clipper and Lintie. Price on application.

At the Stud.—CLIPPER, the only one of the Eclipse—Nesta litter at public service. Fee, $25. Also BOUNCE, by Tramp, averages nine pups to the litter and gets winners. Fee $15.

DR. WITHERS'

Challenge Dog Food

UNEQUALLED AS A PREPARED FOOD.

The combination is such that all breeds of dogs eat it greedily, and are greatly benefitted by its use, enabling them to endure hard field work. **Does not disturb the most delicate stomach, causes no bowel complaint,** (as is done by other preparations). The tendency is to tone up all the organs, and give them a healthy and natural movement. It is particularly beneficial for puppies, **preventing the pest of worms,** avoiding the evils of a young dog's life. The process of cooking is so perfected that no waste of nutritious properties takes place, and yet so thoroughly cooked that it will keep in the hermetically sealed cans in any climate. For hunting parties it is indispensable. It is pronounced by men of experience to be the greatest boon ever brought to their notice, and they have endorsed it in the strongest terms. The following are a few of our references: Dr. Frank Ferry (Ashmont;), Gen. Shattuc, Washington Coster, Flatbush, L. I.; J. H. Whitman, 3330 Wabash Ave., Chicago; H. E. Hamelton, Hackensack, N. J.; W. W. Titus, Cherry Creek, Miss.; H. E. Cook, Hillsdale, Mich.; Geo. H. Hill, Madeira, Ohio; T. Donohue, La Salle, Ill.; Henry L. Goodman, Mohawk Kennels, Auburn, Ill.; New Haven Kennel Club, New Haven, Conn. Prices:

HOW CAN A BOOT BE WATERPROOF AND NOT SWEAT THE FEET? Common waterproof boots keep the perspiration in as well as the water out, and perspiration that finds its way through leather is kept in the rubber boot. This renders the sock wet, and, when the wearer ceases walking, causes the cold clammy feeling which is so objectionable and unhealthy.

THE HANNAFORD VENTILATED
RUBBER BOOT,

while it is waterproof and as warm as any boot made, provides a way for the perspiration to escape; at each step the foul air is forced out of the boot, and when the weight of the body is removed from the compressible top sole, fresh air is admitted to the foot; thus the sock is kept free from the moisture which causes the feet to become cold, sore, and tender. Send for circular.

HANNAFORD VENTILATED BOOT CO.
79 Milk Street, Boston.

SMITH'S FARM.

Tim Pond and the Seven Ponds.

A limited number of guests can obtain good board with pleasant rooms newly furnished at the farm house. Beautiful mountain scenery as can be found in New England. Pure spring water, high mountain air, no hay fever or malaria, pleasant drives to good trout brooks. Expert fly-fishermen who have fished Tim and the Seven Ponds pronounce it the best fly-fishing in America. The camps have been thoroughly renovated and everything put in perfect order. Tim Pond in care of Mr. Lambert, Seven Ponds in care of my son Edgar Smith. With faithful attendants we are prepared to give better satisfaction than ever before. In these ponds trout rise to the fly through the entire season. We refer by permission to Prof. A. M. Mayer, Stevens Institute of Technology, Hoboken, N. J.; E. Lunitz, 50 Centre st., New York; E. M. Messenger, Bromfield House; A.W. Robinson, 33 Winter st., Boston, Mass.; Wm. Goldthwait, Springfield, Mass.; Rev. C. L. Goodell, 123 Clifford st., Providence, R. I.; F. S. Dickson, 3739 Chestnut st., Philadelphia, Pa. For further information address KENNEDY SMITH, Stratton, Me.

GURRIES HOTEL.—LAKE ST. JOSEPH. Brook Trout, Lake Trout, Black Bass.

The finest Lake and Brook Trout Fishing in Canada. Sportsmen who have cast a fly or trolled a spoon in the waters of Lake St. Joseph will come again without solicitation. All lovers of the rod are invited to try these waters, wherein the above named fish abound without let or hindrance. The hotel accommodations, while plain, are, as a rule, good, far surpassing the average in countries new enough to afford the finest of fishing. Telegraph communication to the hotel. It is my aim to make sportsmen at home. Four boats and four guides are at the hotel in full information of fishing grounds, etc. P. GURRIE, Lake St. Joseph, P. Q.

References, Commodore J. U. Gregory, J. G. Scott, Esq., Quebec & Lake St. John Ry., A. Watters, Merchant, Quebec.

NEW ST. LAWRENCE HOTEL.—Thousand Islands, River St. Lawrence, Cape Vincent, N.Y. At this particular place the fishing is conceded by all anglers to be the finest fishing grounds at the famous 1000 Islands. Experienced fishermen with new boats and tackle furnished at reasonable prices. Also "Bill St. Lawrence" will tow fishing parties out from hotel dock, or take out parties in the river or lake. For further particulars address JOHN O. PLANK, Prop., or call at 71 Broadway, Mr. A. F. HIGGS, Pres. Hotel Co.

The Sportsman's Canadian Paradise.

MUSKOKA LAKES.

MUSKOKA, JOSEPH, ROSSEAU.

Reached only by the

Northern & Northwestern Railway,

From Toronto or Hamilton, Ont.

The Muskoka District, famous for its innumerable lakes and streams, has long been known as the best **FISHING, HUNTING AND CAMPING RESORT** on the continent. It is within five hours ride of Toronto or Hamilton. At Muskoka wharf connection is made with the steamers of the Muskoka Lakes Navigation Co. for Bracebridge, Bala, Port Carling, Port Cockburn and Rosseau, all famous fishing places. Hotel rates, $1.00 to $1.50 per day. Camping parties can live at half those figures

MOOSE, DEER, BEAR, PARTRIDGE, DUCK, BROOK TROUT, MASKALONGE, SALMON TROUT, BLACK BASS, PICKEREL.

These can be had in abundance; no long, tedious journeys needed; you will not be disappointed.

TOURISTS' RATES.

Tourists' or sportsmen's tickets are good to stop over at any point north of Barrie and for return up to close of navigation. Camp equipage, stores and sportsmen's dogs are carried free when accompanied by owners. Baggage checked through to principal points on Lakes. For tickets, rates, time tables, etc., apply to agents at all principal ticket offices in Canada or the United States, or

What the Champions of the World Say:

ELKHART, Ill., Feb. 13, 1884.

J. C. Petmecky:

DEAR SIR—I have used your cleaner and find it one of the best I ever used, and I think it will take the place of all other cleaners.

CAPT. A. H. BOGARDUS.

GAINSVILLE, Ark., May 5, 1884.

Mr. J. C. Petmecky:

DEAR SIR—I have just received the two gun cleaners, and I admire them very much. They are the best thing I have ever seen. I have tried almost everything imaginable, but this simple invention after using it has become indispensable with me. For removing lead on the interior of gun barrels I am quite certain its equal has not yet been produced. Most truly yours,

CAPT. E. E. STUBBS.

AUSTIN, Tex., March 31, 1885.

Mr. J. C. Petmecky, Austin, Tex.:

DEAR SIR—At my recent shoot in your city it afforded me pleasure to speak of the merits of your late invention, the "Petmecky Gun Cleaner." After trying all others I find it the best, and cheerfully recommend it to all sportsmen. I remain, yours truly,

DR. W. J. CARVER,
Champion Shot of the World.

The Parker Gun.

PARKER BROTHERS,

MAKERS,

Meriden, Conn.

At the Second International Clay-Pigeon Tournament, held at New Orleans, La., Feb. 11 to 16, 1885, the First Prize and Diamond Badge in the Individual Championship Match, open to all the world, was won by B. Tiepel with a Parker gun. Among the contestants shooting other guns were such champions as Carver, Bogardus, Cody, Stubbs, Erb, and others. During the entire tournament more prizes were won with Parker guns, in proportion to the number used, than with any other gun.

CRUTTENDEN FLY ROD.

It has Nickle Plated Patented Solid Reel Plate which prevents Reel getting fast by swelling of wood, if rod should get wet. Full Nickle Plated, Patented Ferrules, allowing the wood to be used the full size, thus preventing rod breaking where wood and ferrules join. Metal Tennons which prevent joints getting stuck together. The entire rod is made from the best selected lancewood, left natural color, varnished and polished. This makes a handsome finish, and is less liable to be seen by the wary fish than a dark rod. The butt is wound with cane and silk in an artistic manner, which not only gives it the appearance, but also the feeling of the high-priced rods. The complete rod has a look of beauty, which is a joy to every fisherman's heart while using it. It is well and neatly ringed throughout, and has an extra winding between each ring. There has been so many rods made of an inferior quality that resemble this, that all from this date will have stamped on reel plate "W. H. Cruttenden," and none genuine unless so stamped. Length, 10½ft; weight, 9½ to 10ozs. All the parts are interchangeable, and if, by accident, any part should get broken, can send duplicate without rod being returned. The best made rod in the United States, and we will guarantee it in every way. With short tip it makes an excellent bass rod. Sent to any part of U. S. in case, 1 bass, 1 trout tip, prepaid, for $5.35; bass tips, $1.00; trout tips, $1.25. General agent for Card's Rotating Trap. Guns, Pistols and Fishing Tackle. Gunmaking and repairing of all kinds by competent workmen. New Illustrated Catalogue in colors now ready, and sent free on application.

WILL H. CRUTTENDEN, Cazenovia, Madison County, N. Y.

The Maynard Rifles & Shotguns.

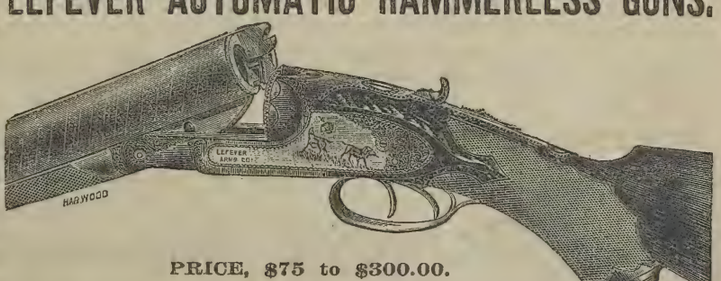
NEW OFF-HAND TARGET RIFLE, MODEL OF 1882.

PRICES REDUCED.

With Pistol Grip Stock, Tip Stock and Swiss Butt Plate.

For **Hunting** and **Target Practice** at all ranges the **"MAYNARD"** more completely supplies the wants of **Hunters and Sportsmen generally**, than any other Rifle in the world, as many barrels can be used on one stock, and for accuracy, convenience, durability and safety, is not excelled.

Send for Illustrated Catalogue describing the **new attachment for using rim and center-fire ammunition.**



Lyman Sight.

MASS. ARMS CO., Box 500, Chicopee Falls, Mass.

Lefever Arms Co.

W. & C. Scott & Sons' Hammerless Guns,

With their patented Safety Block Lock, rendering premature discharge impossible, thus doing away with the principal objection to Hammerless Guns. The most perfect lock yet. We are having a great demand for these guns.

ABSOLUTE SAFETY.

BLOCK SAFETY LOCK.

This gun is always safe from any chance of accidental discharge. In opening the gun for loading, the Block Safety A interposes itself between the hammer B and striker E, which is only removed when the trigger is pulled. The drawing is intended to show the hammer accidentally discharged, other than by the trigger, and caught by the Block Safety.

Send stamp for circulars of this gun and second-hand list.

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 96 pages. Price $1.00.

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for eighty-four years. Manufacture the following celebrated brands of powder:

Dupont's Crystal Grain.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass ball and pigeon shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breech-loaders. Packed in 1 lb. and 5 lb. canisters and 6¼ and 12½ lb. kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes only, Nos. 7 and No. 5, No 7 being the coarsest. Packed in 6¼ lb. kegs and 1 lb. canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. canisters and 6¼ lb. kegs.

Dupont's Rifle Fg. "Sea Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ½ lb., 1 lb. and 5 lb. canisters, 6¼, 12½ and 25 lb. kegs. Fg. coarse, FFFg. fine.

Dupont's Sporting, Mining, SHIPPING and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder U. S. Govt. Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States.

Sportsmen's Goods.

New Minnow-Casting Reel.

Our Imperial Steel Pivot Reel

WITH INDEPENDENT SPOOL.

Size No. 3.

We have perfected and patented this simple device for throwing a multiplying reel in and out of gear at will.

In casting a minnow or other bait, more force has to be used than really necessary to cast the bait, as so much of the power used is absorbed in starting the handle running, which when started causes the reel to overrun.

This trouble is overcome by our device, which is applied by simply pushing a lever or index one way to ungear the reel, and the reverse way to gear it for reeling in or playing the fish.

This must commend itself to anglers for casting a long distance or for casting a light bait.

Prices,	**$21.00**	**$19.50**	**$18.00 Each.**
Sizes,	**2**	**3**	**3½**
		100	**75 yds. No. G. line.**

This improvement we are also applying to our New Salt-Water Reels. Call and see them.

The Hazard Powder Co.

MANUFACTURERS OF

Gunpowder

Hazard's "Electric Powder."

Nos. 1 (fine) to 7 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound *only*.

Hazard's "American Sporting."

Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 6¼ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to short guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly*, and very clean, shooting remarkably close and with *great penetration*. For field, forest or water shooting it ranks any other brand and is equally serviceable for muzzle or breechloaders.

Hazard's "Kentucky Rifle."

FFFG, FFG and "Sea Shooting" FG in kegs of 25, 12½ and 6¼ lbs. and cans of 5lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *moist*. The FFFG and FFG are favorite brands for ordinary sporting and the "Sea Shooting" FG is the standard *Rifle* Powder of the Country.

HINDS'

BLACK-FLY CREAM,

For Repelling
Flies, Mosquitoes, Midges and other Insects, and protecting the Skin from Sunburn, Irritation and Infection.

No Tar. No Stain.

GLENS FALLS, N. Y., June 15, 1884.
Mr. A. S. Hinds, Portland, Me.:

DEAR SIR—I have not sooner acknowledged the receipt of box of "Black-Fly Cream," as I desired to first test it; this I have now done on two fishing trips where I found the Mosquitoes, Black Flies, Punkies and Moose or Deer Flies in great abundance. Although all these pests swarmed about me, I found the *Cream a perfect preventive* against their bites when it was applied to face, hands, ears and neck. For many years I have sought after *the* insect repellent, and have tried all manner of compounds but yours is the most thorough, at the same time cleanly and not disagreeable.

Yours truly, A. NELSON CHENEY.

7. The Shrike and the Hawk.

A series of seven fables in prose and to every one a picture. All of them have pith and point best appreciated by anglers and sportsmen, but not a one of them is without a moral for the wise and foolish of the world in general. Price 10 cents.

FOREST AND STREAM PUBLISHING COMPANY,
39 Park Row, New York.

Kennel Record and Account Book.

THE KENNEL RECORD AND ACCOUNT BOOK consists of a series of carefully prepared blank entry forms for the use of the breeder. Pages are devoted to the registration of pedigrees, the record of stud visits, whelps, sales, prize winnings, receipts and expenses, and other memoranda, the great practical utility and permanent value of which are recognized by every experienced breeder. Ample provision is also made for recording other minor transactions, which may at the time appear trivial, but afterwards prove of the highest importance. There are few breeders, even among those most systematic in preserving records of their Kennel transactions, who have not repeatedly felt the need of just such a detailed series of memoranda as that provided in the Kennel Record.

In the preparation of the blank forms, and in the arrangement of the book, special care has been taken to facilitate convenience both in making the entries and in subsequent reference to them. It is hoped that with such a book at their command, breeders may generally adopt a more careful system of record than they have been accustomed to preserve. 200 pages (size 9x11½ in.), price $3. Sent postpaid by the Forest and Stream Publishing Company.

Specimen Pages Free on Application.

SENSATION.

ENGLISH SETTER PUPPIES.

From imported Flora, by Roy (Dash III.—Bessie), whelped March 3, 1886. Dogs or bitches. Will guarantee these pups to be just right; strong nose, natural hunters, and very staunch, requiring but little training. They are not sold to close out any scrub stock or to make room, but were bred especially for the trade, and to show as well in the field as on paper. Address, H. J. PIERRE, Winsted, Conn.

Prize-Bred Collies.

A choice litter by Bounce (sire of Braw an' Bonnie, 1st and special, New Haven) out of Raspberry Girl, by Rutland out of Strawberry Girl; five dogs and three bitches. They are as promising a lot as the Eclipse—Nesta litter, which includes Glengarry, Heather, Clipper and Lintie. Price on application.

At the Stud.—CLIPPER, the only one of the Eclipse—Nesta litter at public service. Fee, $25. Also BOUNCE, by Tramp, averages nine pups to the litter and gets winners. Fee $15.

DR. WITHERS'
Challenge Dog Food

UNEQUALLED AS A PREPARED FOOD.

The combination is such that all breeds of dogs eat it greedily, and are greatly benefitted by its use, enabling them to endure hard field work. **Does not disturb the most delicate stomach, causes no bowel complaint,** (as is done by other preparations). The tendency is to tone up all the organs, and give them a healthy and natural movement. It is particularly beneficial for puppies, **preventing the pest of worms,** avoiding the evils of a young dog's life. The process of cooking is so perfected that no waste of nutritious properties takes place, and yet so thoroughly cooked that it will keep in the hermetically sealed cans in any climate. For hunting parties it is indispensable. It is pronounced by men of experience to be the greatest boon ever brought to their notice, and they have endorsed it in the strongest terms. The following are a few of our references: Dr. Frank Perry (Ashmont); Gen. Shaftne, Washington Coster, Flatbush, L. I.; J. H. Whitman, 3330 Wabash Ave., Chicago; H. E. Hamelton, Hackensack, N. J.; W. W. Titus, Cherry Creek, Miss.; H. E. Cook, Hillsdale, Mich.; Geo. H. Hill, Madeira, Ohio; T. Donohue, La Salle, Ill.; Henry L. Goodman, Mohawk Kennels, Auburn, Ill.; New Haven Kennel Club, New Haven, Conn. Prices:

Seven-pound cans.....50c. Two-pound cans.....20c.

Special prices to dealers and to kennels buying in large quantities.

Adapted to all lengths and kinds of paper or brass shells, 10 and 12-gauge. Funnel and block boxed with tool. Reduced price of the "kit" by mail, $2. Circulars free. D. BROWN, Oneyville, R. I.

HOW CAN A BOOT BE WATERPROOF AND NOT SWEAT THE FEET? Common waterproof boots keep the perspiration in as well as the water out, and perspiration that finds its way through leather is kept in the rubber boot. This renders the sock wet, and, when the wearer ceases walking, causes the cold clammy feeling which is so objectionable and unhealthy.

THE HANNAFORD VENTILATED
RUBBER BOOT,

while it is waterproof and as warm as any boot made, provides a way for the perspiration to escape; at each step the foul air is forced out of the boot, and when the weight of the body is removed from the compressible top sole, fresh air is admitted to the foot; thus the sock is kept free from the moisture which causes the feet to become cold, sore, and tender. Send for circular.

HANNAFORD VENTILATED BOOT CO.
79 Milk Street, Boston.

SMITH'S FARM.

Tim Pond and the Seven Ponds.

A limited number of guests can obtain good board with pleasant rooms newly furnished at the farm house. Beautiful mountain scenery as can be found in New England. Pure spring water, high mountain air, no hay fever or malaria, pleasant drives to good trout brooks. Expert fly-fishermen who have fished Tim and the Seven Ponds pronounce it the best fly-fishing in America. The camps have been thoroughly renovated and everything put in perfect order. Tim Pond in care of Mr. Lambert, Seven Ponds in care of my son Edgar Smith. With faithful attendants we are prepared to give better satisfaction than ever before. In these ponds trout rise to the fly through the entire season. We refer by permission to Prof. A. M. Mayer, Stevens Institute of Technology, Hoboken, N. J.; E. Lunitz, 50 Centre st., New York; E. M. Messenger, Bromfield House; A. W. Robinson, 33 Winter st., Boston, Mass.; Wm. Goldthwait, Springfield, Mass.; Rev. C. L. Goodell, 128 Clifford st., Providence, R. I.; F. S. Dickson, 3739 Chestnut st., Philadelphia, Pa. For further information address KENNEDY SMITH, Stratton, Me.

IS AT THE

ANDROSCOGGIN LAKES

When you get there, stop at the

Angler's Retreat, Middle Dam,

Lower Richardson Lake. Near the best trout fishing, and centrally located for excursions. Beds and table unsurpassed. Daily mail, stage and steamers.

The Lakeside, Cambridge, N. H.

Splendid location at the foot of Lake Umbagog. New house and furniture. Elegant rooms, restful beds. Splendid table. Brook trout fishing through the season. Partridge, woodcock and duck shooting for September and October. Also deer, caribou and moose.

Rates at either of these two houses, $2.00 per day. Address A. L. T. Co., Andover, Me., or P. O. Box 1,467, Boston, Mass., for further particulars. Pamphlet containing routes, etc., to both these houses mailed free to any person. Address P. O. Box 1,467, Boston, Mass.

GURRIES HOTEL.—LAKE ST. JOSEPH. Brook Trout, Lake Trout, Black Bass.

The finest Lake and Brook Trout Fishing in Canada. Sportsmen who have cast a fly or trolled a spoon in the waters of Lake St. Joseph will come again without solicitation. All lovers of the rod are invited to try these waters, wherein the above named fish abound without let or hindrance. The hotel accommodations, while plain, are, as a rule, good, far surpassing the average in countries new enough to afford the finest of fishing. Telegraph communication to the hotel. It is my aim to make sportsmen at home. Four boats and four guides are at the hotel in full information of fishing grounds, etc. P. GURRIE, Lake St. Joseph, P. Q.

What the Champions of the World Say:

ELKHART, Ill., Feb. 13, 1884.

J. C. Petmecky:

DEAR SIR—I have used your cleaner and find it one of the best I ever used, and I think it will take the place of all other cleaners.

CAPT. A. H. BOGARDUS.

GAINSVILLE, Ark., May 5, 1884.

Mr. J. C. Petmecky:

DEAR SIR—I have just received the two gun cleaners, and I admire them very much. They are the best thing I have ever seen. I have tried almost everything imaginable, but this simple invention after using it has become indispensable with me. For removing lead on the interior of gun barrels I am quite certain its equal has not yet been produced. Most truly yours,

CAPT. E. E. STUBBS.

AUSTIN, Tex., March 31, 1885.

Mr. J. C. Petmecky, Austin, Tex.:

DEAR SIR—At my recent shoot in your city it afforded me pleasure to speak of the merits of your late invention, the "Petmecky Gun Cleaner." After trying all others I find it the best, and cheerfully recommend it to all sportsmen. I remain, yours truly,

DR. W. J. CARVER,
Champion Shot of the World.

Prices of the Ejector Guns.

THE "EJECTOR" GUN is made in one quality only, in three styles of finish, and is sold at lower prices than ordinarily charged by leading makers for Hammerless Guns, viz:

A. QUALITY, very best finish, Fancy or Plain, $350
1. QUALITY, best style of London finish..... 300
QUALITY, ordinary plain finish..... 275

A Second Edition of "THE GUN" now ready. 770 pages, 550 illustrations. Price $2.50; post paid $2.85. Thoroughly revised and corrected, with an Appendix containing Notes on Novelties, Ignition, Steel Barrels, Proof of Guns, etc.

CARTRIDGES.

Loaded in the best manner with English or American Powder, and put up in packages of twenty-five with full particulars as to load and quality of ammunition at reasonable prices. Artificial Birds of all kinds for practice shooting.

The Highest Development of the Sporting Shotgun.

Throws out the fired cases, very advantagous in a hot corner; one gun will do the work of two. Simple, durable, safe, no hitch in any weather, in every way a great convenience. Hundreds of these guns are now in daily use and give complete satisfaction.

PRICES OF GUNS.

THE prices of W. W. Greener's renowned "Facile Princeps" Hammerless and Patent "Treble Wedgefast" Guns are as below. Quality in every case guaranteed. Shooting equal to that obtained at any public trial at home or abroad.

Prices for Hammer or Hammerless.

A. Quality, Special Best Gun	$300.00
1. Ordinary Best Gun	275.00
2. Ditto, with less engraving and more plainly finished	250.00
3. Moderately engraved and well finished	200.00
4. Engraved and plainly finished	150.00
5. Plainly mounted and finished, no engraving	125.00
Cheapest quality Treble Wedgefast Gun	100.00

THE TREBLE WEDGEFAST ACTION.

Increases the strength of the breech action enormously; there can be no gaping at the breech, and with all the thousands of guns so made since introduced in 1873, NOT ONE has been DESTROYED by any explosive. With Wood Powders it is perfectly safe, giving complete immunity from danger to the users of these explosives. Guns can be made lighter and safer and stronger than on any other principle.

TRAP GUN, $85.

10-Bores, Extra.....$5.00.

HENRY C. SQUIRES, Agent, 178 Broadway, New York.

SPORTSMEN

Use the Luminous Flies, Spoons, Rubber Minnows, Insects, etc., in preference to all others for reason of the combination quality, good for day or night.

Our rivals in business talking to the contrary only advertise them. Descriptive circular with testimonial sheet mailed upon application.

4. The Foolish Fish.
5. The Robin and the Pewee.
6. The Unlucky Bass.
7. The Shrike and the Hawk.

A series of seven fables in prose and to every one a picture. All of them have pith and point best appreciated by anglers and sportsmen, but not a one of them is without a moral for the wise and foolish of the world in general. Price 10 cents.

FOREST AND STREAM PUBLISHING COMPANY,
39 Park Row, New York.

Kennel Record and Account Book.

THE KENNEL RECORD AND ACCOUNT BOOK consists of a series of carefully prepared blank entry forms for the use of the breeder. Pages are devoted to the registration of pedigrees, the record of stud visits, whelps, sales, prize winnings, receipts and expenses, and other memoranda, the great practical utility and permanent value of which are recognized by every experienced breeder. Ample provision is also made for recording other minor transactions, which may at the time appear trivial, but afterwards prove of the highest importance. There are few breeders, even among those most systematic in preserving records of their Kennel transactions, who have not repeatedly felt the need of just such a detailed series of memoranda as that provided in the Kennel Record.

In the preparation of the blank forms, and in the arrangement of the book, special care has been taken to facilitate convenience both in making the entries and in subsequent reference to them. It is hoped that with such a book at their command, breeders may generally adopt a more careful system of record than they have been accustomed to preserve. 200 pages (size 9x11½ in.), price $3. Sent postpaid by the Forest and Stream Publishing Company.

Specimen Pages Free on Application.

SENSATION.

We have for sale a few copies of an elegant steel engraving of the celebrated pointer Sensation. Size of plate, 14x20; size of sheet, 22x28. Price, $1 each.

ENGLISH SETTER PUPPIES.

From imported Flora, by Roy (Dash III.—Bessie), whelped March 3, 1886. Dogs or bitches. Will guarantee these pups to be just right; strong nose, natural hunters, and very staunch, requiring but little training. They are not sold to close out any scrub stock or to make room, but were bred especially for the trade, and to show as well in the field as on paper. Address, H. J. PIERRE, Winsted, Conn.

Prize-Bred Collies.

A choice litter by Bounce (sire of Braw an' Bonnie, 1st and special, New Haven) out of Raspberry Girl, by Rutland out of Strawberry Girl; five dogs and three bitches. They are as promising a lot as the Eclipse—Nesta litter, which includes Glengarry, Heather, Clipper and Lintie. Price on application.

At the Stud.—CLIPPER, the only one of the Eclipse—Nesta litter at public service. Fee, $25. Also BOUNCE, by Tramp, averages nine pups to the litter and gets winners. Fee $15.

HOW CAN A BOOT BE WATERPROOF AND NOT SWEAT THE FEET? Common waterproof boots keep the perspiration in as well as the water out, and perspiration that finds its way through leather is kept in the rubber boot. This renders the sock wet, and, when the wearer ceases walking, causes the cold clammy feeling which is so objectionable and unhealthy.

THE HANNAFORD VENTILATED RUBBER BOOT,

while it is waterproof and as warm as any boot made, provides a way for the perspiration to escape; at each step the foul air is forced out of the boot, and when the weight of the body is removed from the compressible top sole, fresh air is admitted to the foot; thus the sock is kept free from the moisture which causes the feet to become cold, sore, and tender. Send for circular.

HANNAFORD VENTILATED BOOT CO.
79 Milk Street, Boston.

The Bat.

Thrown from a Clay-Pigeon Trap or our own Trap.

SMITH'S FARM.

Tim Pond and the Seven Ponds.

A limited number of guests can obtain good board with pleasant rooms newly furnished at the farm house. Beautiful mountain scenery as can be found in New England. Pure spring water, high mountain air, no hay fever or malaria, pleasant drives to good trout brooks. Expert fly-fishermen who have fished Tim and the Seven Ponds pronounce it the best fly-fishing in America. The camps have been thoroughly renovated and everything put in perfect order. Tim Pond in care of Mr. Lambert, Seven Ponds in care of my son Edgar Smith. With faithful attendants we are prepared to give better satisfaction than ever before. In these ponds trout rise to the fly through the entire season. We refer by permission to Prof. A. M. Mayer, Stevens Institute of Technology, Hoboken, N. J.; E. Lunitz, 50 Centre st., New York; E. M. Messenger, Bromfield House; A. W. Robinson, 33 Winter st., Boston, Mass.; Wm. Goldthwait, Springfield, Mass.; Rev. O. L. Goodell, 123 Clifford st., Providence, R. I.; F. S. Dickson, 3739 Chestnut st., Philadelphia, Pa. For further information address KENNEDY SMITH, Stratton, Me.

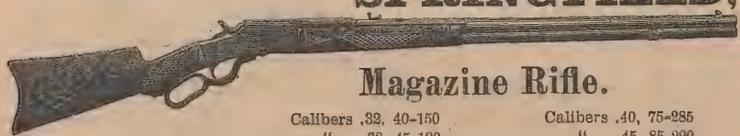
The Lakeside, Cambridge, N. H.

Splendid location at the foot of Lake Umbagog. New house and furniture. Elegant rooms, restful beds. Splendid table. Brook trout fishing through the season. Partridge, woodcock and duck shooting for September and October. Also deer, caribou and moose.

Rates at either of these two houses, $2.00 per day. Address A. L. T. Co., Andover, Me., or P. O. Box 1,467, Boston, Mass., for further particulars. Pamphlet containing routes, etc., to both these houses mailed free to any person. Address P. O. Box 1,467, Boston, Mass.

GURRIES HOTEL.—LAKE ST. JOSEPH. Brook Trout, Lake Trout, Black Bass.



The finest Lake and Brook Trout Fishing in Canada. Sportsmen who have cast a fly or trolled a spoon in the waters of Lake St. Joseph will come again without solicitation. All lovers of the rod are invited to try these waters, wherein the above named fish abound without let or hindrance. The hotel accommodations, while plain, are, as a rule, good, far surpassing the average in countries new enough to afford the finest of fishing. Telegraph communication to the hotel. It is my aim to make sportsmen at home. Four boats and four guides are at the hotel in full information of fishing grounds, etc. P. GURRIE, Lake St. Joseph, P. Q.

What the Champions of the World Say:

ELKHART, Ill., Feb. 13, 1884.

J. C. Petmecky:

DEAR SIR—I have used your cleaner and find it one of the best I ever used, and I think it will take the place of all other cleaners.

CAPT. A. H. BOGARDUS.

GAINSVILLE, Ark., May 5, 1884.

Mr. J. C. Petmecky:

DEAR SIR—I have just received the two gun cleaners, and I admire them very much. They are the best thing I have ever seen. I have tried almost everything imaginable, but this simple invention after using it has become indispensable with me. For removing lead on the interior of gun barrels I am quite certain its equal has not yet been produced. Most truly yours,

CAPT. E. E. STUBBS.

AUSTIN, Tex., March 31, 1885.

Mr. J. C. Petmecky, Austin, Tex.:

DEAR SIR—At my recent shoot in your city it afforded me pleasure to speak of the merits of your late invention, the "Petmecky Gun Cleaner." After trying all others I find it the best, and cheerfully recommend it to all sportsmen. I remain, yours truly,

DR. W. J. CARVER,
Champion Shot of the World.

The Parker Gun.

PARKER BROTHERS,

MAKERS,

Meriden, Conn.

At the Second International Clay-Pigeon Tournament, held at New Orleans, La., Feb. 11 to 16, 1885, the First Prize and Diamond Badge in the Individual Championship Match, open to all the world, was won by B. Tiepel with a Parker gun. Among the contestants shooting other guns were such champions as Carver, Bogardus, Cody, Stubbs, Erb, and others. During the entire tournament more prizes were won with Parker guns, in proportion to the number used, than with any other gun.

CRUTTENDEN FLY ROD.

It has Nickle Plated Patented Solid Reel Plate which prevents Reel getting fast by swelling of wood, if rod should get wet. Full Nickle Plated, Patented Ferrules, allowing the wood to be used the full size, thus preventing rod breaking where wood and ferrules join. Metal Tennons which prevent joints getting stuck together. The entire rod is made from the best selected lancewood, left natural color, varnished and polished. This makes a handsome finish, and is less liable to be seen by the wary fish than a dark rod. The butt is wound with cane and silk in an artistic manner, which not only gives it the appearance, but also the feeling of the high priced rods. The complete rod has a look of beauty, which is a joy to every fisherman's heart while using it. It is well and neatly ringed through out, and has an extra winding between each ring. There has been so many rods made of an inferior quality that resemble this, that all from this date will have stamped on reel plate "W. H. Cruttenden," and none genuine unless so stamped. Length, 10½ft; weight, 9½ to 10ozs. All the parts are interchangeable, and if, by accident, any part should get broken, can send duplicate without rod being returned. The best made rod in the United States, and we will guarantee it in every way. With short tip it makes an excellent bass rod. Sent to any part of U. S. in case, 1 bass, 1 trout tip, prepaid, for $5.35; bass tips, $1.00; trout tips, $1.25. General agent for Card's Rotating Trap. Guns, Pistols and Fishing Tackle. Gunmaking and repairing of all kinds by competent workmen. New illustrated Catalogue in colors now ready, and sent free on application.

WILL H. CRUTTENDEN, Cazenovia, Madison County, N. Y.

The Maynard Rifles & Shotguns.

NEW OFF-HAND TARGET RIFLE, MODEL OF 1882.

PRICES REDUCED.

With Pistol Grip Stock, Tip Stock and Swiss Butt Plate.

For Hunting and Target Practice at all ranges the "MAYNARD" more completely supplies the wants of Hunters and Sportsmen generally, than any other Rifle in the world, as many barrels can be used on one stock, and for accuracy, convenience, durability and safety, is not excelled.

Send for Illustrated Catalogue describing the new attachment for using rim and center-fire ammunition.
